Seventh, and in some respects most important of all, the wage and price and profit policies of private enterprise must be geared to the concept of economic expansion. The same analysis of goals for the economy and requirements to meet these goals which will furnish a better guide to public economic policies, will also provide a better orientation for collective bargaining and other private economic policies. Once management and labor start working together with a high goal in sight, they will have a frame of reference for the resolution of their secondary differences and for the placement of prime emphasis upon their common stake in a larger prosperity for the country as a whole.

My understanding of those seven basic elements in the effort to achieve a $300,000,000,000 economy should not be misinterpreted to imply vast new efforts in central planning or direction from the top. The seven matters to which I have referred have long been the subject of treatment through both private and public economic policy. But better perception of the relationship of these seven elements to the general purpose of a steadily expanding economy will provide a better environment for both private and public policy. Instead of judging a policy solely by its internal composition, it will become feasible to judge it in terms of its impact upon vastly important national economic considerations. This will bring to our farm policy, our fiscal policy, our wage-price policy, etc., a keener perception of their significance and a better judgment of their consequences.

Most important of all, this weighing of various policies in terms of the objective of a $300,000,000,000 economy will promote a better working relationship between enterprise and Government, and among businessmen, workers, and farmers. It will substitute, instead of vague preachments that each should consider the general interest rather than his own self-interest, a clearer vision of the stake which each and everyone of us has in the general interest.

It will thus provide an answer to the central and paramount problem of a modern democracy, which is to achieve accord without force, purpose without compulsion, and unity without stereotype.

The challenge we now face is not how to avert a depression so much as how affirmatively to advance prosperity. This poses a great moral test, because it is not so difficult to act in the face of disaster as it is to reach out for higher goals when the going is not particularly bad. Yet the latter obligation is forced upon us by the compulsions of the world situation and by the needs and desires of our own people. We can afford to do no less than our best, and if we do our best the next decade can witness the practical liquidation of the "economic problem" in America and the turning of more and more of our energies to the cultivation of those attributes of civilization for which material sufficiency is only the foundation.

SPEECH OF HON. JAMES E. MURRAY, OF MONTANA

On July 11 of this year President Truman, in his Midyear Economic Report, pointed out that unemployment has been gradually rising and that production, profits, and farm income have been gradually falling. He warned against our relying on "letting nature take its course" and advised that "the way to prevent our economy from shrinking is to take affirmative action that will help it to expand." He gave us as a target for the immediate years that lie ahead a national economy running at the level of $300,000,000,000 a year.

In making economic expansion the keystone of the Fair Deal, President Truman gave expression to the aims and ideals of an overwhelming majority of the American people.

Most American businessmen want economic expansion.

The farmers of America know that they can sell their products only in an expanding economy.

The workers of America know that only in an expanding economy can they improve working conditions and obtain a more adequate standard of living.

But let us not blissfully deceive ourselves into thinking that everyone is for economic expansion.

There exists in this country today a small but powerful minority who look forward eagerly to recession and growing unemployment. This group is made up of finance capitalists who know how to ride the business cycle and pick up "depression bargains." It is made up of monopolists who view a depression as the easiest way of putting their small competitors through the wringer and forcing them out of business. It is made up of those economic Bourbons who see depression as a means of weakening organized labor. It is made up of those economists who view the recent increases in unemployment as a "healthy readjustment."

There is much talk about who is loyal and who is disloyal to America. There is much talk today about subversive activity. I submit that the most dangerous type of disloyalty and subversion can be found among those who work toward scarcity instead of abundance, who regard booms and busts as inevitable, and oppose the objective of a sustained expansion in the American economy.

I submit that it is disloyal to America to maintain that "depressions are the price we pay for freedom." It is alien to the hopes and aspirations of our people to maintain that the American system "needs a floating pool of unemployed."

I submit that there could be no more subversive philosophy than the declaration by a leading American banker that "corrective recessions are necessary to reduce costs and prices." There could be no more subversive propaganda than the editorial in the Wall Street Journal observing that a recession to dispel the boom psychology would be "a welcome guest."

I submit that those wild-eyed, harebrained reactionaries who propagate the philosophy of corrective recessions are the most dangerous enemies of American capitalism. If they succeed in their efforts they will lead us down the road to fascism or communism.

Fortunately for the future of our country, there are Members of Congress who believe in the good old American idea that this great country of ours should be a land of expanding and abundant opportunity. Fortunately, there is a growing group of Senators and Representatives who are dedicating themselves to the task of saving American capitalism by working toward the President's goal of a $300,000,000,000 national economy.

On Friday, July 15, on behalf of 16 Democratic Senators and two Republican Senators, I laid before the Senate the Economic Expansion Act of 1949. This measure is designed to carry out 7 of the 11 points in President Truman's legislative program and to provide a number of additional measures needed to achieve the President's objectives and carry into action principles he has often advocated.

Those who joined with me in sponsorship of this measure are Senators ELBERT D. THOMAS, Democrat, of Utah; CLAUDE PEPPER, Democrat, of Florida; THEODORE F. GREEN, Democrat, of Rhode Island; LISTER HILL, Democrat, of Alabama; HARLEY M. KILGORE, Democrat, of West Virginia; WILLIAM LANGER, Republican, of North Dakota; WARREN G. MAGNUSON, Democrat, of Washington; WAYNE MORSE, Republican, of Oregon; GLEN H. TAYLOR, Democrat, of Idaho; JOHN J. SPARKMAN, Democrat, of Alabama; J. HOWARD MCGRATH, Democrat, of Rhode Island; GUY M. GILLETTE, Democrat, of Iowa; HUBERT H. HUMPHREY, Democrat, of Minnesota; ESTES KEFAUVER, Democrat, of Tennessee; MATTHEW M. NEELY, Democrat, of West Virginia; FRANK P. GRAHAM, Democrat, of North Carolina; and DENNIS CHAVEZ, Democrat, of New Mexico.

On Monday, July 18, this measure was introduced in the House of Representatives by Congressman WRIGHT PATMAN, Democrat, of Texas, supported by a substantial number of other Members of the House.

The economic expansion bill is a broad and well-rounded measure. It addresses itself in a comprehensive and wholehearted fashion to the promotion of economic expansion through private investment, production, and employment. It provides methods of helping to maintain purchasing power at a level adequate to absorb the products of industry. It provides methods of placing the budgetary policies of the Federal Government on a sound and businesslike basis. It provides for the long-range planning and regularization of resources development and public works projects. It equips us with the weapons needed to deal with serious unemployment wherever and whenever it arises in any industry or area of the country. Its enactment would be the single greatest contribution that could be made to dealing with the present economic situation.

But it would be a great mistake to regard the bill as merely an emergency measure. It is a bill not only to deal with declining employment and production but to prevent declining employment and production. If it is true that its provisions are needed today to deal with the present economic situation, it is also true that its provisions were needed 4 years ago when the war came to an end. It is also true that the bill's provisions will be seriously needed once the present downward trend in the economy has been reversed. They will be needed then to promote the steady and sustained expansion in employment and production required for the health and survival of American capitalism.

Some of the more important points in the bill are as follows:

1. The extension of payments to unemployed veterans under the GI bill of rights, with benefits raised from $20 a week to $25 a week (sec. 203).

2. A requirement that the States liberalize unemployment compensation by raising maximum benefits to $30 a week and maximum duration to 26 weeks. Provision is made for Federal supplementary payments to the States to extend the duration of benefits from 26 weeks to 52 weeks (sec. 204–5).

3. The creation of an emergency reserve fund for urban and rural unemployment. This fund could be used in emergency situations in expanding authorized Federal programs in the field of resources development, public works and public services. It could be used for stepping up Government procurement programs. Part of the fund would be allocated to the Secretary of Agriculture for a conservation works program in rural areas (sec. 503).

4. The creation of a $1,000,000,000 fund in the RFC to help city and State Governments obtain long-term, low-interest funds for the construction or operation of public works and resources development projects (sec. 404).

5. A large-scale shelf of city, State, and Federal public works and resources development projects. With $500,000,000 to help cities and States in preparing blueprints and acquiring sites, and with $100,000,000 for advance planning by Federal agencies, the goal would be to have at all times a reserve of useful projects valued approximately at $30,000,000,000 (sec. 403).

6. A program to provide the capital needed for the economic development of the under-

developed countries of the world. This would be done primarily through authorizing the United States to guarantee or purchase the securities of the World Bank, thereby freeing the World Bank from its present dependence upon the Wall Street securities market. The lending authority of the Export-Import Bank would also be increased (sec. 105).

7. The development under the RFC of an FHA-type of insured loan industry, designed particularly to aid small business in obtaining long-term capital at low interest rates. This would be of great help in fostering business expansion in industrially underdeveloped areas of the United States (sec. 103).

8. Accelerated amortization for tax purposes of private business investment in plants and equipment. Small and independent producers need an incentive of this type to put them in a stronger competitive position in relation to the big monopolistic enterprises which currently exercise such a dominating force in American industry (sec. 102).

9. Broad provisions to assist in combating monopolistic restrictions upon economic expansion. These include the promotion of technological research, regional surveys of developmental needs and market potentials, a new inventory of Government-built war plants which are not in substantial operation and which may be leased to small and competitive business enterprises, and a continuing investigation of monopolistic restrictions by the Federal Trade Commission (sec. 104).

It is my hope and that of my colleagues that everyone who participates in this conference will study this measure very carefully. We do not regard this bill as the last word. We know that certain of its provisions may, upon careful examination, prove to be in need of improvement. We intend to make such improvements before the bill becomes law.

The sponsors also recognize that the economic expansion bill is not the only measure that must be written into law if we are to reverse the present trend toward contraction and promote a steady and stable expansion of our national economy.

The farm program proposed by President Truman and our great Secretary of Agriculture, the Honorable Charles F. Brannan, is also essential. In fact, the Brannan farm plan and the economic expansion bill can be regarded as companion measures. Both are required to carry out the Fair Deal program; both are required to assure a prosperous future for American industry, agriculture, and labor.

To supplement these two key measures, prompt action is also needed in the field of taxation, on minimum wages, and on the MVA and CVA legislation.

With so many important legislative matters before the Congress, it is difficult to see how anyone could seriously propose that the Congress adjourn for the rest of the year. If the Congress does take a brief recess later in the summer, it should be expected to come back in September and go to work on those measures, the enactment of which is essential in the interests of our people. So far as the economic expansion bill is concerned, it is the hope of the sponsors that preliminary hearings might be arranged for in the very near future and that these hearings could serve as the basis of an intensive set of studies and investigations backing up every section of the bill. Shortly after Labor Day, we could then press forward for full and complete hearings and for passage in both Houses well before the end of the year. Such a schedule is called for by the possibility—and I make no predictions—that unemployment may increase. Such a schedule will be entirely feasible if full employment conferences similar to today's conference can be convened throughout the country for the purpose of telling the people at the grass roots about the economic expansion bill and the other measures essential to the prosperity and well-being of the American people.

Excerpts From Speech by Gov. Chester Bowles, of Connecticut

The No. 1 question facing America and the world today is whether our Nation can maintain a high and expanding level of production and employment.

The importance of this question cannot be overstressed. Unless we as a nation are able to keep our economic activity at a healthy, dynamic level, we will have to materially reduce our individual living standards.

Equally serious, we may also be forced to rewrite our entire foreign policy and forfeit our position of world leadership.

Should the United States become subject to a disordered internal economy, we would lose the strength which is absolutely necessary to shoulder the heavy world responsibilities we have assumed since before the Second World War.

The cause of democracy at home and abroad requires that the blood and bone of our American economy remain healthy and continue to grow in vitality. The leaders of Soviet Russia recognize—in some ways better than we—the significance of this crucial question of American prosperity. They are watching us closely and hopefully to see what our economy does next.

Their reasoning is simple, cold, and logical. They know that their best hope of a smashing, bloodless victory in the cold war against the democracies lies in an America beset with severe economic problems which it is either unable or unwilling to face.

I sincerely believe that their hopes are misplaced. We have in our country both the power and imagination to solve our problems. But we must utilize this power and imagination. The time to do so is now.

The handwriting on the wall is already beginning to take shape. As Governor of a highly industrialized State—Connecticut—which is in the midst of a serious unemployment problem, I can report from first-hand observation that we must come forth with some new thinking and vigorous action.

It is not enough to go back to the days of the New Deal for the answers. We must face up honestly to the fact that all the New Deal achievements, while great, never succeeded in eliminating large-scale unemployment.

I am glad to be able to say that already top people in our Government have taken forthright steps to insure our economic health and prosperity. President Truman's message on the economic situation was particularly gratifying.

He emphasized in clear-cut language the need for broadened social security, of minimum wage legislation, and other national measures to stabilize our national economy. He also proposed the elimination of transportation taxes, and a special effort to channel Government orders wherever possible to those sections of the country where unemployment is most serious.

The employment and production riddle we face today is more than a short-range one. Perhaps we may solve in a short time the unemployment and production problems that at present affect certain areas of our national economy. But we still have the long-range questions to answer.

One of those long-range questions is: What happens if and when our cold war spending program is cut back severely?

A sharp reduction in our military requirements would confront us with a major economic problem. We will have two alternatives. We shall have to find new outlets for capital investment, in order to keep up a high level of production. Or we shall have to cut back our industrial output so severely that its effect on our employers, working people, and consumers alike would be devastating.

I am sure that we do not want to take the latter alternative. If we do not, then it is our problem to use all of our ingenuity and natural resources to make the transition from military and reconstruction production to the normal production of a peacetime economy.

A challenging approach to this problem is the bill proposed by Senator James Murray, which seeks to establish a full and expanding level of production and employment. Likewise, the farm plan advanced by Secretary of Agriculture Brannan, to assure farmers a steady income and lower food prices to the consumer, is a bold effort to solve the problems of the farmer whose prosperity means so much to all of us.

In my opinion, we have met here to discuss the ways and means whereby this goal may be reached.

Speech of Lawrence Tibbett, President, American Guild of Music Artists, AFL

Mr. Chairman and fellow participants in this very important conference on full employment, I come here today to talk briefly about the problem of unemployment as it exists today in one of the most depressed industries in America, the entertainment industry.

I have read statements to the effect that from the national viewpoint the rise in unemployment has been nothing to worry about. That is certainly not true in the entertainment field. The members of my own union, the American Guild of Music Artists, have already been hard hit; 90 percent of our employers are nonprofit civic organizations which are finding it extremely difficult to maintain their sources of revenue. Last week in Cincinnati the long-established and highly successful summer opera series closed down after losing an average of $3,000 a day for the first 2 weeks. We are afraid that a similar fate may be in store for other groups in other cities.

The other unions in the entertainment field face an even more grievous predicament. I am informed that only 50 percent of the members of the Screen Actors' Guild are currently employed. Only 10 percent of the members of Actors Equity are currently employed in theater productions. The membership of the American Guild of Variety Artists has been hit by the decline in the operations of night clubs. The members of the American Federation of Radio Artists have been seriously affected not only by the fact that the coming of television has channeled more funds toward new equipment than toward the production of entertainment, but also by the fact that the advertising budgets upon which the radio industry subsists are being drastically slashed.

I am afraid that there is a mistaken notion that the people in the entertainment industry make so much money when they are working that they can easily afford long periods of unemployment. This is sheer nonsense. I recently checked through the records of the American Guild of Music Artists and found that 80 percent of our membership make less than $2,000 annually. Another 10 percent are paid less than $3,000 a year. Only 2 percent make over $7,500 a year. Remember, this is gross pay; taxes and personal expenses must be deducted before you reach the amount of money that our members can take home to pay for food, clothing, medical care, and the other necessities of life. We cannot afford unemployment. We cannot afford corrective recessions or periods of healthy readjustment.

In large part, the predicament of the entertainment industry is a symptom. It is a symptom of the general contraction in the American economy. When business and employment start to turn down, cultural activities are the first to be curtailed. Hence

our union and the other unions in the entertainment field are of necessity intimately and deeply concerned with any effort that can be made to restore prosperous conditions.

When the preliminary draft of the economic expansion bill was first made public, we set up a joint committee representing our various unions to study it carefully. Although we have not yet had an opportunity to make a full analysis of the bill as finally introduced, I should like to make a few brief comments on it.

First of all, the bill, as I understand it, provides for Federal assistance to cities and States for both the planning and the construction of public works. This could go a long way toward meeting the shortage of community centers and other modern facilities for the theatrical arts.

Second, the bill provides for an unemployment emergency reserve fund that could be used for stimulating useful employment in the field of public services as well as of public works and resources development.

I am informed that under this provision city or State governments could obtain grants from the Federal Government for a broad variety of public service operations in the recreational, cultural, and entertainment field. This would be of tremendous benefit to members of my union and the other unions in my industry.

I hope that the sponsors of this measure will look into the question as to whether or not the requirement that $30 in non-Federal funds be supplied for every $70 in Federal grants may not be too limited. In certain cases a larger proportion of Federal funds—possibly even 100-percent grants—may be needed.

Finally, the economic expansion bill as a whole is geared toward providing a steady annual increase in job opportunities and in the production of goods and services. All of its provisions that would help achieve this goal would be of direct assistance to our people. We cannot have steady employment in the entertainment industry—nor a flourishing cultural life in the United States—unless we succeed in maintaining maximum employment and production.

Of course, the economic expansion bill by itself—and its sponsors are the first to admit it—is not enough. Other legislative action is also essential. The most immediate additional step that our members are interested in is the removal of Federal excise taxes upon cultural and entertainment activities—particularly those excise taxes which are levied upon public and nonprofit civic enterprises. We are also interested in the development of a long-range Federal program for the promotion of the arts.

In conclusion, I appreciate the opportunity of being with you today. The people in the entertainment industry have as much to gain from economic expansion—and as much to lose from economic contraction—as the workers in the automobile, steel, or construction industries. We stand ready to work with you at all times in mapping out a practical program for the restoration of full employment. In every city and town in which we have members, we stand ready to work with you in dramatizing for the American people the necessity of affirmative action to maintain a healthy and expanding economy.

Address by Secretary of Labor Maurice J. Tobin

The President's economic expansion program

In a statesmanly report to the American people on the economic condition of the Nation, the President took stock of recent changes in our national economic health. It was a noteworthy report because it embodied a discriminating analysis of economic developments during a very complex period of economic transition.

The President struck a delicate balance between the elements of strength in the economic situation and the potential dangers. He noted the downtrend in production and employment during the past half year, but concluded the trend could be reversed. The situation is not a depression. Hence the economic measures that would be appropriate for doing something about a depression are not appropriate now.

But this does not mean, the President was careful to point out, that there is nothing that needs to be done now. Thus in discriminating fashion the President distinguished between appropriate and inappropriate measures for dealing with the actual problems we face today as we seek to achieve our national economic objective of full employment and production.

This approach to the problem of employment and economic policy is extremely important. If we are to succeed in achieving the objectives of the Employment Act of 1946, to maintain conditions of maximum production, employment, and purchasing power, we must at all times apply those measures which are appropriate to the situation we are in and consistent with the objectives of a balanced, stable, and growing economy.

The kind of economic situation we are now in, which is neither too good or too bad, provides perhaps the most difficult test of national policy in furtherance of the objective of full employment.

If we were faced by the immediate danger of a serious depression, there would be little disagreement as to the need for vigorous governmental action.

Now we are in a position where production is declining, with employment below what it should be, and with unemployment rising. It is exactly this kind of situation that provides the real test of our ability as a people, acting through our Government, to take the right kind of action, and to take it soon enough, to maintain a healthy economy.

The goal of national economic policy is not to do something about depression once we find ourselves in that situation. The real goal is to make our economy operate, so far as we can, at the highest level possible at all times, in order to assure a growing standard of living for the Nation's families and to make us strong both against the physical force of aggressors and against the anti-democratic propaganda directed against a free and democratically managed economy.

The President was not complacent, and we cannot afford to be complacent, about the drop in production and employment, and the rise in unemployment, that has taken place in the last 6 or 9 months. "There is nothing healthy," the President said, "about more unemployment or less production."

The President then outlined a program of action to deal with the special problems of the present situation and to provide a sound basis for the expansion of the economy in the years ahead.

Perhaps the most significant feature of the President's program was his vigorous recommendation that the Federal Government itself, in its own activities, should help to offset the current downward tendencies in business activity and purchasing power, rather than to aggravate or accentuate such tendencies. The fiscal policy of the Federal Government ought to be used to maintain a stable economy, and not to unstabilize it. This is a time to go ahead with those socially important enterprises, such as housing, which we postponed before. It is not the time to withdraw funds from the consuming public by increased taxes.

To remedy one special shortcoming of Federal policy, the President recommended enactment of legislation to facilitate the advance planning of necessary public works by Federal agencies and States and localities. If public works are to be initiated promptly when and where they are required, the plans ought to be prepared well in advance. Moreover, resource development and public works are not simply emergency measures but are basic to the normal expansion of our economy, and ought to be planned in an orderly fashion in close cooperation with the States.

The President's program includes specific recommendations for dealing directly with the problem of unemployment, in addition to his general recommendations for stabilizing the economy by appropriate fiscal measures, by encouragement of private investment at home and abroad, and by strengthening underlying supports to purchasing power in the form of minimum-wage legislation, more adequate unemployment compensation and social-security programs, and an improved agricultural income-support policy.

While pointing out that unemployment is not now at a very high level for the country as a whole, the President pointed out that there are many localities and some States where it is serious. This calls for concentration of special efforts to deal directly with unemployment in those areas where unemployment is particularly serious.

Many a mayor and governor will tell you that with unemployment between 3 and 4 million nationally, as at the present time, they have situations in their cities which they would not like to regard as normal. They will also tell you that without the cushion to community purchasing power which has been provided by unemployment compensation, the situation would be much more serious than it is. The President has already taken action to direct special assistance to local areas within the limits of existing Federal procurement and construction programs.

The new Federal programs of the past 15 or 20 years, such as social security and the farm support programs, have proved a strong defense against the kind of economic collapse we experienced in 1920–21. There is quite general agreement on this fact. I read from the Monthly Letter of the National City Bank for June: "These elements of strength have been widely discussed and recognized."

It is a curious fact about American politics—or human nature—that these economic reforms which are so praised in retrospect have always raised cries of socialism or—in the phrase now popular—the "welfare state" when they are first proposed.

Bankers, investors, and big and little business alike, including the butcher, the baker, and candlestick maker, have all benefited from these economic reforms and activities of Government.

If the unemployment-compensation and social-security programs have proved such a boon to economic stability, as they have, there should be no objection to extending these programs to make them more adequate.

If the Tennessee Valley Authority has proved such a dynamic force in the economic development of the South, as it has, we should explore the possibilities of public capital investment in resource development in other underdeveloped areas of the Nation.

If there are measures of general economic policy, as contemplated in the Employment Act of 1946, such as Federal fiscal policy, which can contribute to the objective of maximum production, employment, and purchasing power, we should use them to whatever extent practicable.

The American enterprise system, throughout our whole history, has combined the initiative of both private and public enterprise. Private enterprise has been given the broadest possible role consistent with the public interest as determined by legislative policy. The expansion of the economy we look forward to in the future requires the cooperation of Government, business, labor, and farmers for the fullest utilization of our economic resources. The objective is not simply maximum production, employment,

and purchasing power, but the strengthening of democratic society at home and abroad.

EXCERPTS FROM REMARKS OF MILES PENNYBACKER

In the opening remarks which Mr. Lawrence Tibbett made in his illuminating talk, he expressed surprise that he should be invited to speak at such an important conference when he represents a relatively small group. You can imagine my surprise at being asked to speak for a still smaller group—liberal businessmen. Mr. Tibbett also indicated—and quite properly—that the artists whom he represents carry weight in our society far beyond their numbers. If I were representing reactionary business interests, I could say this also.

It is certainly true that businessmen in general do have recognition and prestige beyond that accorded to other equally significant specialists in our culture, such as educators, legislators, economists, etc. In searching for the cause of this, I am reminded of advice given me by an old professor at MIT when I asked him about the choice of a career. "Miles," he said, "a career if it is to be most significant has to be chosen with regard to the era in which one happens to have been born. There was a time when the greatest recognition went to the explorer, the adventurer; at another time it was the military man, the conqueror; then the churchman; later the political leader, the statesman. Today, and probably during your lifetime, it will be the businessmen."

Now, I am not one of those who believes that the ability to meet a pay roll is a criterion for understanding economic affairs. The problems of meeting a pay roll and operating a business are in an entirely different category from those of maintaining purchasing power in the economy as a whole. As a businessman, I have learned to depend on experts with regard to various phases of my business—for example, engineering, accounting, law, etc. Hence I should like to leave the discussion of the economic aspects of full employment and of the Murray bill to the competent experts who are here today. If I have a contribution to make, it is perhaps along the line which was repeatedly emphasized in the conference this morning—the need for public education.

One of the things that is needed most in this connection is to have the public realize the contrast between what business says in opposition to social legislation and what business does. Businessmen are usually so busy meeting pay rolls that they do not have time for the study of broad or abstract economic problems. Hence they are inclined to echo the voice of big business as spoken by the National Association of Manufacturers and the United States Chamber of Commerce, for example. There are many exceptions to this general rule. Even though their views do not achieve much prominence, many small or independent businessmen are beginning to recognize that what is good for the American people is good for American business, though more conservative business leaders do not seem to recognize this fact. But, regardless of the differing sentiments expressed by businessmen, their actions under similar economic conditions bear an astonishing resemblance. In many cases this is quite contrary to what their statements have predicted.

Business leaders repeatedly make the assertion that Government intercession in economic affairs—for example, the increase of public works during recessions — would "shake business confidence." As a result of this loss of confidence, they say, private investment in plant equipment and inventories would be drastically curtailed, thus more than offsetting any favorable effect from Government investment. This argument assumes that the businessman makes his decisions not on the basis of the market and purchasing power but on the basis of political preference. I can assure you that in my acquaintanceship Republican businessmen, Democratic businessmen, and even socialistic businessmen base their decisions entirely on the market for their products.

As an example of this, I can give you the story of one of my friends in Connecticut who has had absolutely no confidence in our Federal policies since 1932. He had a complete lack of confidence in Washington before the war. He had a complete lack of confidence during the war, and he has had a complete lack of confidence since the war. When taxes were increased one time about 1940 he actually took a week off to meditate as to whether he should continue in business or not. He felt that with the high taxes then in effect he would merely be working for the Government. Needless to say, he continued in business. Today he is the largest manufacturer of X-ray tubes in the world. Obviously no alert and energetic businessman will quit business through lack of confidence as long as the market for his products has a chance of expanding. If he should do so, or if he should curtail activities, he knows that some competitor will fill the need.

We have a very striking example of this drawn from the recession of 1937–38. You recall the very sharp recession which developed in the fall of 1937. At first the Government did nothing about it. But finally in April of 1938 President Roosevelt persuaded a reluctant Congress to authorize a vastly expanded WPA program together with a new PWA program. The WPA immediately set to work putting out its increased appropriations, and the PWA was a bit slower. Many of the businessmen were quite skeptical of the effect of this Government pump priming. I recall a letter that Alfred Sloan, chairman of General Motors, sent out on June 13 to his stockholders in which he said: "The recession has now become a depression." He went on to say that the Government spending program had undermined business confidence, and that there was no hope whatsoever. That was June 13. In the meantime Harry Hopkins and his aides kept expanding the WPA program, and business started to improve.

Then during the first week of October the New York papers carried a big story about General Motors calling back tens of thousands of its laid-off workers and expanding its production. The market in Wall Street responded with a burst of optimism.

In short, "the recession which had turned into a depression," as Alfred Sloan had told his stockholders, had been stopped dead in its tracks by Government action. And who was the first to recognize the fact? Why, none other than the head of General Motors himself.

Another objection to any kind of Government spending is the statement that if the money, whether raised by taxes or by borrowing, were left in private hands, it would be spent more wisely. Let's see how business action differs from business words on this. If a businessman thinks that prices are going down, he curtails his buying and he defers investment in new construction and new machinery. This is obviously sound business practice for him and, unless he follows sound business practice, he is not likely to stay in business very long. However, what is sound for him is unsound for the economy as a whole, since curtailment when prices start to decline accelerates the drop in business. The Government, on the other hand, can time its spending so that it increases to compensate for any declines in private spending. What is unsound for business is sound for the Government on this question of investment timing.

The objectors say also that taxes will increase. The answer is that decreasing taxes in 1930 and 1931 did not stop the depression at that time any more than the substantial decrease in the higher brackets of individual income taxes last year prevented the present recession. Businesses and individuals who have high earning power are well able and should pay high taxes during a period of prosperity, and their doing so counteracts inflationary tendencies. I would far rather pay high taxes during a period of prosperity than medium or even very low taxes during a depression. The Murray bill will not call for higher taxes now nor during any period of recession. From the standpoint of public education, the thing to remember is that cries from business about higher income and corporate taxes should not be taken too seriously, since such taxes will come only when they will be well afforded.

There is a very interesting argument used by business leaders against Government action to bring about full employment. They say full employment produces inefficiency, that "moderate" employment such as we have now is necessary to achieve maximum productivity. They cite instances showing that output per man-hour is increasing, and these figures are true. If we follow this line of reasoning, we would be content to keep on improving the output per man-hour by increasing unemployment. No doubt the ultimate productivity per man-hour might be achieved by selecting a single remarkable worker and putting him on part time, with everyone else out of a job. This would make good statistical material in terms of output per man-hour, but I am sure that even the most conservative business leaders do not want to practice what they preach on this subject.

It is said by the objectors that Government intervention will bring about a complete loss of the freedom which we now enjoy. You may be sure that many business leaders who say that now will not hold to it firmly in the event we have a depression serious enough for them to seek RFC loans or other Government aid.

The people of this country have repeatedly voted their overwhelming confidence in the ability of the Government to intercede in economic affairs. The obligation is definitely on the shoulders of our political leaders. Failure to make good this obligation is a loss of freedom, since it is contrary to the democratically expressed will of the people.

Another favorite argument is that natural forces will eventually bring about a healthy correction of a slump in business. As Senator MURRAY so ably pointed out this morning, there is a minority group in business who are so well-heeled financially that they can take over a still higher percentage of the Nation's assets in times of depression. People who speak for this group certainly do not speak for the interests of small-business men who are driven to the wall in such large numbers in times of war or depression.

It is the fear of these natural cyclic trends in business which causes me and other businessmen to withhold our earnings rather than plow them into expanded plants. It would be of the greatest help to me to know that the Government is committed to a long-range program which will insure a gross national product of $300,000,000,000 per year. This would be the best possible assurance I could have for the long-range planning which is so essential if my plant is to have maximum productivity in the years ahead. The guaranty of positive and adequate action by the Government would serve to release private savings. Just as with Federal Deposit Insurance, the mere act minimizes the need. The more positive the guaranty, the less money the Government will need to spend. Note that this would not in the least remove the element of competition. It would simply mean that I would be competing for a share of an expanding

market instead of a diminishing market as at present.

The word "expansion" leads me to a final thought, which I should like to leave particularly with our luncheon chairman, Senator HUMPHREY, and the other Congressmen who are sponsoring the Murray bill. I have been corrected by some of the conservative members of the Business Advisory Committee when, during meetings at which this group consults with the Council of Economic Advisers, I have cited the Full Employment Act of 1946. They have pointed out to me that the word "full" was omitted from the title of this act. I hope, Senator, that when the Economic Expansion Act of 1949 becomes law the word "Expansion" will not be omitted.

SPEECH BY EMIL RIEVE, PRESIDENT, TEXTILE WORKERS UNION OF AMERICA, CIO; CHAIRMAN, CIO FULL EMPLOYMENT COMMITTEE

Let me begin by expressing my thanks to the ADA for calling this meeting. Many of us in the CIO have been astonished by the calm and rather blase way in which people in Washington seem to be treating unemployment at the present time.

Too many people in this country have fallen into a rut of believing that unless unemployment hits the six, eight, ten, or twelve million mark, it is nothing to worry about. As the president of a union which is operating in an industry already hard hit by unemployment, let me assure you that this is no problem for the future. It is here with us already.

There is nothing more galling to an unemployed worker or an organization which is trying to care for and assist large numbers of unemployed workers than to read that the present situation we are passing through is "merely a healthy readjustment." Don't anybody tell me that, when as many as 200,000 textile workers are unemployed and thousands of others are working short hours, there is something healthy about the present situation.

Even if there was some reassuring evidence that the present situation would work itself out, and we would return to full employment and full production once more, the situation would be unsatisfactory. You simply cannot take four or five million people, put them on the shelf, and tell them that they are being readjusted. They won't stand for it, and they shouldn't stand for it.

From the experience of the union which I am privileged to serve, I think certain lessons can be learned. As some of you doubtless know, several of the textile cities of New England and elsewhere have been very badly hit. In several instances, our people live in what are sometimes described as one-industry towns and even in some cases one-company towns. Shut-downs and lay-offs in such towns generally have a particularly disastrous nature. In a sense, they give us a preview of what this country may face if unemployment once again reaches the monster proportions it attained in the thirties.

Here are some of the things we have found on the basis of the experience of unemployment in some such towns. In the first place, the unemployment-compensation system, which was one of the major achievements of the New Deal, is proving its worth. Mind you, we are by no means satisfied with 48 different State systems with different benefits and different qualifications in every State, but the fact remains that in even some of the textile towns that have been very hard hit, people have been able to preserve at least a modicum of decency and self-respect, primarily because they have been able to draw unemployment-compensation benefits. A writer surveying Lawrence, Mass., for example, recently noted that in spite of tremendous lay-offs the city still had a reasonably prosperous appearance since stricken workers were managing to get by on their unemployment-compensation benefits. Naturally, they were trimming purchases to an extent, but the difference between what unemployment meant to them back in the early thirties and what it was doing to them today was simply enormous. Experience with unemployment compensation certainly points up the fact that there is a role for government action. Indeed, it should encourage us to look beyond and see what else can be done.

As I have indicated, in some of the New England textile towns many workers have been riding out the present recession without as yet falling onto relief rolls or into the arms of poverty and charity. But I think any fair-minded American who might look into the situation in these towns must also conclude that they are a wonderful breeding ground for communism. All the agitation in the world by the Communist Party in the United States during the years of full employment bore almost no results. During the past few months, however, it is clear that in desperation many of the unemployed workers are at least giving an ear to demagogic appeals of the Communists. You don't have to like communism or be sympathetic to it to realize that so long as unemployment continues and grows in the United States, the Communists will have a field day. I am speaking of this now simply on the domestic scene. I need hardly say that from an international point of view unemployment in the United States is perhaps an even more disastrous development.

While I have already mentioned the fact the unemployment-compensation system which was set up during the New Deal has been a great help in this period, I think it goes without saying that labor, and, indeed, any sensible American, can never be content with this method of tackling unemployment. It is clear that our country must work its way toward a system which will make use of all the abilities and talents of all the people.

These four or five million people who are on the shelf are a two-way drain on all of us. They are not producing and contributing to the general welfare, on the one hand. On the other hand, they are a drain on the production of all those who are still fortunate enough to have jobs.

In conversations with Government officials over the past few months I have heard much talk about the need for preserving businessmen's confidence. Somehow, it is argued, if we don't talk about this unemployment, businessmen will experience a renewed surge of confidence, and recovery will be at hand.

Meanwhile, so the argument runs, we must undergo this sometimes cruel but necessary readjustment.

Well, let me say that I agree, to some extent, that business confidence is a volatile factor, and we must take it into our plans. But I can't forget that back in the late twenties every element in the picture was calculated to give confidence to businessmen. The great engineer was in the White House; taxes on business and businessmen had been lowered almost to the vanishing point. Businessmen had loads of confidence, but no orders, and our economic luck ran out.

I believe that maintaining the housewife's confidence is every bit as important as the businessman's. I also feel that nothing undermines this confidence of the housewife so much as unemployment and the failure to do something about it.

I simply refuse to accept the notion that four or more millions Americans must be unemployed in some kind of readjustment. It is inconceivable to me that free men cannot order their lives well enough to stamp out unemployment. Must we abdicate this field to the totalitarian?

Elsewhere I have had the opportunity of expressing my views on the bill being sponsored by Senators MURRAY, SPARKMAN, HUMPHREY, and others. I feel it makes a very important step in the direction we must move—the direction which takes as its cue the conviction that unemployment is not an inevitable or healthy adjustment.

I am hopeful that this meeting can serve as a springboard to improve this proposed bill, and make other necessary proposals which may add up to an all-out attack on the present unemployment and recession.

EXCERPTS FROM THE RESOLUTION ADOPTED JULY 19, 1949, BY THE AMERICANS FOR DEMOCRATIC ACTION FULL EMPLOYMENT CONFERENCE

I

The downhill turn of production and employment in 1949 is a stern warning that we have not yet learned to manage our economic affairs wisely. Already we are losing production at the rate of $20,000,000,000 a year.

We face today a twofold challenge: First, reversing the present decline in economic activity; second, providing for a high and expanding volume of economic activity in coming years. This is not simply a domestic problem. Upon our response to the challenge depends the future of democracy the world over. If we fail, Stalin wins; for the yardstick by which the world measures the effectiveness of our way of life is the economic well-being of our people.

In this struggle between the democratic and totalitarian ways of life, we are handicapped by blindness and selfishness in our midst. They invited inflation by destroying price controls. They intensified it by an ill-timed $5,000,000,000 tax cut. These are the dangers we warned against—and the consequences which we predicted have come to pass.

II. NINE STEPS TOWARD MEETING THE IMMEDIATE ECONOMIC PROBLEM

Our immediate economic problems call for immediate action and not for a wait-and-see policy. We strongly commend the recommendations of the President in his midyear economic report. We agree with him that existing cushions against economic decline must be strengthened promptly. We agree with him that a reduction of Government expenditures at this time to appease the false-economy bloc would merely speed the current decline. Fully to meet the President's objectives now calls for the following program:

1. Unemployment compensation should be federalized, increased in amount, its coverage broadened to include more workers, and its period of payment lengthened. The present program of GI unemployment payments, scheduled to expire shortly, should be extended another year and increased in amount. Minimum wages should be increased to at least 75 cents and the area of the law's protection extended.

2. Our system of social security for the old, the disabled, and the needy must be overhauled and equalized. Payments should be lifted well above the present disgracefully low level; coverage should be extended to all those who need assistance.

3. Congress should enact the Brannan farm income support and production program which will not only assure farmers a decent and stable income but will assure consumers a high volume of farm products at reasonable prices.

4. To insure a high level of consumer buying, we strongly support wage increases wherever they can be absorbed without raising prices. The Taft-Hartley Act must be repealed in order to reestablish our system of free collective bargaining as the best means of achieving a healthy balance among prices, profits, and income. Stable industrial relations are a requirement for a stable economy. We commend the action of the President in

refusing to permit the use of the Taft-Hartley Act to destroy the bargaining power of the steelworkers. Moreover, wartime experience has shown that full employment does not guarantee fair employment, and full employment without fair employment will divide our people. We strongly urge the enactment, at this session of Congress, of a Federal Fair Employment Practices Act.

5. The Federal Government should give special emphasis in its public works programs and purchasing activities to the goal of eliminating unemployment in those industries and geographic areas where help is needed most. As the Nation's biggest buyer, the Government should put its dollars to work where private business needs orders and where men need jobs.

6. All those wartime-excise taxes which were designed to curb consumption should be repealed immediately. Our goal today is to increase consumption, not to discourage it.

7. Congress must provide money for the new housing program, and the administration must act swiftly to get the program under way. This program must serve both to provide more housing and more jobs.

8. Congress must take action to help American business to do business abroad. With adequate safeguards for the democratic rights of the people of other nations, legislation should be enacted to protect and to stimulate private investment abroad. Handicaps imposed by the Eightieth Congress on the existing reciprocal trade-agreements program should be removed. A high level of international trade will contribute to a high level of domestic employment and production.

9. We call upon private business to cut excessive prices to reasonable levels as one of the immediate steps which can be taken to end the hold-back of consumer and business spending, to provide a broad stream of orders to business and to transform lay-offs into rehiring. Last year's fabulous earnings prove that there is ample room in the present cost-profit structure for substantial price cuts. Without such cuts, business will suffer further volume reductions and profits may vanish altogether.

III. IMMEDIATE STEPS TOWARD LONG-TERM GOALS

We cannot be content merely with steps to reverse the current economic tide. We must also take action now toward the larger goal of a fully-employed and ever-expanding economy. Attainment of the goal demands a high and rising level of consumer buying and of fruitful investment by both private industry and Government. We must plan now for the welcome day when the present high level of military expenditures for the cold war can be sharply reduced. We will then face the problem of replacing these expenditures by others. But, more important, we shall then have the opportunity to forge ahead more rapidly toward higher living standards for all of our people.

The two most important steps which we can take at once are the enactment of the Brannan farm program and the enactment of the Economic Expansion Act of 1949, with such safeguards and improvements as the hearings may show are advisable. Taken together, these measures will go far toward insuring a larger degree of security and prosperity for both our farm and urban population. And businessmen no less than farmers and labor have a stake in expanding markets. We call attention specifically to the following features of more long-term importance in the Economic Expansion Act:

1. The setting of high and expanding economic goals to serve as guides for private and public planning and action.

2. Creation of machinery for examining specific needs of our declining and underdeveloped areas and industries, coupled with measures for meeting these needs.

3. The preparation of a large shelf of local, State, and Federal public works and resource development projects.

4. Stimulation of investment by private enterprise with priority for small, new, and competitive business.

5. More effective weapons for removing monopolistic road blocks to private investment expansion and higher consumer real income.

The nine steps listed earlier (in part II) toward meeting our short-term problems are also vital in meeting our longer term needs. Beyond these steps we need to reexamine our entire tax structure with the aim of closing loopholes, insuring adequate business incentives and reducing the tax burden on lower-income groups.

We must be ever mindful that America's production gains to date—and our promise of economic progress in the future—are founded upon our rich endowment of human and physical resources. We must work increasingly toward the protection and strengthening of these resources and toward their full and efficient use.

There is vast room for strengthening our human resources through broad programs of health, housing, education, and recreation. Such programs will provide profitable outlets for our productive energies while at the same time raising our ability to produce and above all increasing human enjoyment of our production resources.

Our physical resources—our stores of mineral deposits, our river valleys, our fields and forests—have been subjected to scandalous waste and plunder. This waste must be stopped.

We see in Congress an evolving pattern of events which indicates a concerted drive to deliver public sources of power into the hands of private monopolists. Public power projects have been gutted by the Senate Appropriations Committee; the Kerr bill favoring the natural-gas industry has been favorably reported out of committee; there has been ominous inactivity in the Senate Commerce Committee on the renomination of Leland Olds to the Federal Power Commission; the attack on David Lilienthal, a known advocate of public ownership of power resources, goes on; the monopolists have not given up in their fight to grab tidelands oil and to prevent the future use of atomic power under public control and for the maximum public good.

We call these matters to the attention of the Celler Monopoly Investigating Committee and to the proposed Special Congressional Committee on Lobbying. We ask them to probe fully into these manifestations of growing monopoly power, which make for a contracting economy rather than an expanding one, and which jeopardize our democratic political institutions.

We reject the morbid theory that depressions are the price we must pay for freedom. We assert, on the contrary, that our freedom will become the price we pay for depressions unless we eliminate them.

But the goal we seek is not merely to eliminate depressions, not simply to stabilize our economy within its present limits. We seek to raise those limits steadily through economic expansion.

We firmly believe that these are the goals the majority of our voters accepted when they went to the polls last November. We call upon our fellow citizens now—businessmen, labor, and farmers alike—to demand of the Congress immediate action to provide the highest living standards which the vast human and material resources of our country can provide.

Deficit Financing Ominous

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include editorial comment by Mark Sullivan, published in the Rochester Democrat and Chronicle, warning of the serious effect of continued deficit financing on everyone who has $100 invested in bonds or in a bank account, or who owns a $1,000 life insurance policy to protect his widow and children.

The program recently announced by the administration, through the President, reaches in every such bond or bank account and takes out a part of its value. It discounts the face value of every insurance policy.

DEFICIT FINANCING OMINOUS

(By Mark Sullivan)

Preceding President Truman's radio address to the country and message to Congress last week, and causing him to make them, was a condition of the country. The condition had been growing for some 5 months, the core of it was:

Government expenditures under way, with additional expenditures proposed by President Truman and some of them under consideration in Congress, make a total which would be more than the Government's income. In other words, anticipated deficit, anticipated increase of the Government debt.

For meeting the condition there were three possible courses. Each of them was dealt with by Mr. Truman.

One possible course, the most direct and surely effective one, was to reduce Government expenditures. This Mr. Truman did not adopt. While giving qualified assent to reduction as an idea, he specifically urged some new expenditures. As respects Mr. Truman, reduction of Government expenditures as a cure for the country's condition is out. If that course is yet to be followed it must be by Congress and through pressure of public opinion.

The second possible course is increase of Government income by increase of taxation. This Mr. Truman dismissed. He withdrew the proposal for an increase which he made 6 months ago. Increase of taxation is in fact impracticable under present conditions.

The third course is to go on with Government expenditures in excess of income and get the money by increasing the Government debt, spoken of as "deficit financing." This is the course Mr. Truman adopts. He in part tries to justify it. He said he would favor ending deficit financing after economic conditions are better. He said that some of the Government expenditures which create deficit contribute to the national economy. "The total of Government expenditures," he says, "is already the most influential single factor in the current operation of the economy." Thus arguing, he puts his acceptance of deficit financing in a curious form of words. "The appearance of Government deficit must be accepted." Mr. Truman's qualifying words, "appearance of," can be dismissed as a soft condoning of something disagreeable to face.

Acceptance by Mr. Truman of a course of deficit financing contains the seed of a

potential future condition, extremely serious if it is not averted by Congress and public opinion. The three possible courses—reduction of Government expenditures, increased taxation, and deficit financing—were carefully surveyed last April by the realistic Senator HARRY F. BYRD, of Virginia. About deficit financing, he spoke a solemn warning, saying that course is unthinkable. He explained why.

There were deficits, increases in the public debt, every year from 1932 until 1941. With the war, the deficits continued and increased greatly. With the ending of the war, deficits ended in 1947. That ending was thought to be permanent. The country expected that there would be no further increases in the Government debt, that on the contrary the debt would be greatly reduced, and in fact reductions were made in 1947 and 1948. This created confidence.

If it now turns out that the ending of deficits was not an ending but only an interruption, an apprehension might arise. Such an apprehension is what Senator BYRD warns about. His warning is blunt:

"Under current circumstances it (resumption of deficit financing) would shatter public confidence in Federal securities. * * * Citizens who own bonds would ask themselves: If the Government cannot balance its budget in this period of prosperity and in time of peace, will it ever be balanced again?"

The possible apprehension Senator BYRD alluded to has to do with the purchasing power of money invested in bonds, or in savings banks or insurance policies or similar securities. Increase of the Government debt, especially if there should be apprehension that the increase might go on indefinitely, is a primary cause of inflation; it tends to reduce the purchasing power of money, whether as money or as invested in this kind of securities. The very large group who hold such securities, in the aggregate nearly everybody, have a direct concern in preventing continuation of deficit financing.

Alleged Invasion of Sovereign Rights by Regulation of Money Spent Abroad

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, July 28 (legislative day of Thursday, June 2), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Sovereign Rights Not Necessarily Invaded if We Have Say on How Much Is Spent Abroad," written by Ralph Hendershot and published in the New York World-Telegram of July 27, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOVEREIGN RIGHTS NOT NECESSARILY INVADED IF WE HAVE SAY ON HOW MUCH IS SPENT ABROAD

(By Ralph Hendershot, financial editor)

When a corporation runs into financial difficulty and seeks credit from a bank, it usually is prepared to accept the terms of the bank in order to secure the loan. And these terms at times may be rather harsh. If the banker knows his business, however, such loan provisions usually work out to the benefit of the borrower.

But even when we are willing to make gifts of money, or its equivalent in goods, to the nations of Europe, we are told that we must not interfere in the manner in which this money is spent because that would be a violation of their sovereignty.

It might be smart for the people of this country to look into the validity of that argument a bit more closely. True, we do not wish to interfere with the affairs of others. But their affairs cease to be strictly personal when our interests also are involved. When they come to us for assistance they automatically make their affairs our affairs.

MUST SEE THE RECORD

The banker does not go about the country butting into the affairs of corporations or individuals. But when the corporation or the individual goes to the banker for a loan, he knows in advance that he must put his record on the line. The banker has no other way of determining whether to accept the risk. And if certain changes are necessary to justify the loan, the borrower must be prepared to make them or sweat it out in his own way.

Some of the nations in Europe either have accepted Socialism formally or under some other name. This means that their industries have been taken over by their governments. Our experience has been that serious inefficiencies creep in when this happens, with the result that money is wasted.

Should we, as a Nation, tax our people to make good the losses of another nation under such a set-up? Should we weaken our own economy to support another which shows little promise of standing on its own feet and which was created to bring a new group of politicians into power? Are the affairs of such a nation no affair of ours under the circumstances?

A COMMON-SENSE APPROACH

Selfishness does not enter into the picture when the banker insists that a borrower conduct his business on sound principles. Nor is that an invasion of the rights of the borrower to live his life any way he pleases. It is only a common-sense approach to a problem which should be solved in the interest of all concerned.

Nevertheless, this approach has been called dollar diplomacy. It has been made to appear as something very low and base. In other words, it has been worked over by the propaganda bandits. We seem to need someone occupying a high place in our Government who has the courage to say, "if this be dollar diplomacy, make the most of it."

The Excise Tax on Furs

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, July 28 (legislative day of Thursday, June 2), 1949

Mr. O'CONOR. Mr. President, ever so often, among the many communications received from our constituency, one will be most impressive, in that it seems to express pertinently the true picture of a problem concerning which legislation is pending in the Congress.

One such letter received today, from a furrier in Baltimore, Md., Alfred A. Greenhood, voices the conviction that the excise tax imposed upon his particular industry is not only destructive of the business of that industry but thoroughly discriminatory in that other costly apparel items in the higher price ranges, in some of which furs are used lavishly, escape the heavy tax which has burdened the fur industry since the early years of the war.

I ask unanimous consent that the letter of Mr. Greenhood, who is a respected citizen of our State, be inserted in the Appendix of the RECORD because it points up clearly a matter which I hope we will soon have an opportunity to pass upon.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

GREENHOOD'S FURS,
Baltimore, July 21, 1949.

Hon. HERBERT R. O'CONOR,
United States Senate,
Washington, D. C.

DEAR SENATOR O'CONOR: As one of your constitutents who has voted for you consistently since 1932, for whatever public office you were running, I am writing to you to enlist your help in a struggle that could be labeled "life or death." I write not only for myself but for hundreds of Marylanders in the same position as I am and for thousands upon thousands throughout this country.

I am a retail furrier. I started in business in 1946, (after the war years during which it would have been possible to build up a reserve), when the country was in strong economic condition. Income was so high that the weight of the burdensome millstone in the form of the 20 percent excise tax was not yet felt.

Then the President declared the official cessation of hostilities. Despite the announcement that the excise taxes—which were promised and intended to be removed at the end of the war—would be continued, a great majority of consumers felt that excise tax relief was around the corner. This feeling was engendered by injudicious reporting in the public press and by irresponsible statements made by certain Members of Congress. On the front page of many newspapers—and also from the mouths of nonthinking radio commentators—would be a story that Representatives or Senator So and So was in favor of reducing or removing excise taxes and that there was a chance of such a bill going through. After a short time, when it was apparent that these mouthings were just so much eyewash for the folks back home, the story would die, maybe on page 3 or 10, or perhaps no mention made of it at all. Yet the seed of doubt and confusion had been planted, by that page 1 story in the minds of millions. This mass teasing has happened so many times during the last two and a half years that it begins to look like a game or experiment in mass psychology.

The sum total of all of this has been to suffocate and hamstring the fur industry. It has grown to such a point today that the great majority of the industry—wholesale and retail—is in financial stress. We have a real depression on in our industry when 50 percent of the workers are unemployed and when only 33⅓ percent are working full time. We are in urgent need of relief, even if only a reduction in the tax, to spur the public into buying furs they want and can afford but are delaying their purchase because of the exorbitant tax. I venture to say, without any fear of overstatement, that if some kind of relief is not forthcoming in the near future, there will be a wave of bankruptcies among the various branches of the fur industry seen only during the depths of the depression.

The fur tax is so discriminatory and hypocritical that it approaches the ludicrous. The theory behind it presupposes furs to be luxuries. If so, what about men's overcoats

for $300 to $400. (no tax)? What about ladies dresses for $700 to $1,000 (no tax)? What about ladies shoes for $40 to $60 a pair (no tax)? What about infants' christening dresses for $100 to $200 (no tax)? These are all examples of merchandise that has been advertised in the public press. If they are not luxuries then there is an awful lot to be learned about how the other half lives.

The hyprocritical angle of the fur tax is its application to fur-trimmed cloth coats. It farcically permits and condones the manufacture of garments retailing to the hundreds of dollars without being taxable. Because a garment is lined with fur inside of a cloth shell it is nontaxable. Yet if this same fur were used as an outer shell with an ordinary lining it is taxed 20 percent. Is it not ridiculous?

As you know there is a bill known as H. R. 3905 to whilch an amendment has been added by Senator JOHNSON and which was reported upon favorably in committee. This amendment would reduce the percentage of excise taxes.

I ask—even beg—of you to act favorably upon his bill (or amendment) when it comes to a vote. I ask of you, too, to please try to convince your colleagues of its merit and advisability now when conditions are so deplorable and discouraging. Its passage and subsequent enactment would be a veritable shot in the arm to not only ours but many allied industries. Despite the cry that will be raised among the die-hards that this is no time to cut taxes, and reduce revenues—such would not be the case. The resultant increase in fur sales and income returns would take care of the difference and, perhaps, then some.

Moreover, it will put thousands of people back to work and alleviate the ever-increasing drain on unemployment funds. It will save hundreds, if not thousands, of small businesses from collapsing, thereby eliminating the possibility of chain-reaction when such things happen on a broad scale. Above all, it will give thousands of people new hope and encouragement, a brighter outlook, and a new faith in our Government, a Government that is mindful of the problems of its smaller people, not only of Big Steel, big this, or big that.

This has not been a crank letter—it is the first I have ever written to a Member of the Senate or Congress. I have been motivated by the extreme necessity of the moment, knowing it as I do first-hand.

I again implore you to do your utmost to see that H. R. 3905 with the Johnson amendment is passed. The unfailing gratitude of thousands affected by it will be yours.

Respectfully,

ALFRED A. GREENHOOD.

County Agricultural Building Program

REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. HAYS of Arkansas. Mr. Speaker, I want to talk about the county agricultural building bill for a moment. There is a great deal of interest in this measure (H. R. 402), and hearings were begun today by a subcommittee headed by the gentleman from Alabama [Mr. GRANT]. Mr. Arthur B. Thatcher, of the Department of Agriculture, submitted an excellent statement regarding this program.

Mr. Speaker, I ask unanimous consent to include his statement as a part of my remarks.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

The statement is as follows:

STATEMENT BY ARTHUR B. THATCHER, CHIEF, OFFICE OF PLANT AND OPERATIONS, ON H. R. 402

Mr. Chairman, I appreciate the opportunity of appearing before your committee to testify in behalf of H. R. 402. Secretary Brannan has asked me to convey to you his support of the bill and his belief that its objectives will substantially aid in the administration of agricultural programs at the county level. In considering long-range plans for agricultural programs, consolidated housing of all agricultural agencies has received favorable consideration. This is particularly important because of the democratic process which the Department of Agriculture uses in the administration of its programs at the county level.

On October 8, 1947, the then Secretary of Agriculture stated to the House Committee on Agriculture and the subcommittee of the Senate Committee on Agriculture and Forestry that he hoped the Congress would consider a cooperative building program with the States and counties. He pointed out that it might be necessary for the Federal Government to provide as much as half the cost of construction, excluding the cost of land.

I think it might be well to take a few minutes to give you a bit of background concerning the program which is now crystallized in the purposes of H. R. 402. Prior to 1939, a rather spotty interest developed at the grass roots concerning this problem of housing agricultural activities at the county level. I say "spotty" because it was confined to a very few States and a very few agricultural agencies. As a result thereof, there was constructed under the WPA program quite a number of so-called county agricultural buildings. They were generally small in size and limited as to occupancy by agricultural agencies. In view of this interest at the grass roots, and the apparent need for further consideration in this field, the larger concept of consolidated housing of agricultural agencies developed in the Department subsequent to November 1940. The success of the limited number of county agricultural buildings which were of sufficient size and possessed the maximum facilities for administration of agricultural programs provided much valuable information for consideration in the planning of a more comprehensive program of housing agricultural activities at the county level.

Since November 1940 there has been considerable correspondence with practically every State concerning the potential possibilities and advantages of consolidated housing of agricultural activities. The Department has endeavored to answer each query as intelligently as possible in the light of the fact that no legislative authorization was in existence for concrete action. We have, however, developed an inexpensive booklet which reflects the need for better housing at the county level and indicates some lines of thinking as to what might be done to meet the problem.

Throughout the period of time which the Department has given consideration to the problem which H. R. 402 seeks to solve, there has been ample evidence provided by the counties to confirm our belief that there is an inadequate housing situation at the county level which should be met in some way. It seems incredible at times that the Federal, State, and local offices administering agricultural programs at the county level should be so widely separated in their physical location. We have found this to be true, however, in the vast majority of counties, and in comparison with the limited number where the agencies are housed together, it demonstrates quite boldly the problem of effective coordination of administration of farm programs and the problem to the farmer in getting the type of assistance which he is after.

We have lived through an era of all kinds and types of housing at the county level, ranging from basements of post-office buildings and county courthouses and other free space, generally not adequate to the needs, to rented quarters in commercial buildings of all types. It would seem that as important an industry as agriculture merits facilities of a more adequate type of servicing farm programs.

We have been able to secure adequate housing in some Federal post offices but, as you know, occupancy of these buildings is restricted by law to Federal agencies.

It has seemed important to us, as we depend more and more on farmer committees, that the facilities for administering programs should be sponsored, owned, and managed by the local people. In so doing, there is greater flexibility in meeting the needs of agencies which occupy space in a county agricultural building. It would seem that a county agricultural building would go far in aiding the farmer to secure the help which his Federal or State Government has provided in his interest.

Probably the best way to find out just how great the need exists would be if it were possible to have every local community testify as to the merits of this bill. Certainly, if the correspondence we have in our files is any true indication of interest, I think you would find real support for the purposes of H. R. 402.

I was particularly interested in an incident which took place a year or so ago when after testimony as to the need for consolidated housing at the county level, one of the farm journals published a picture of a county agricultural building in one of the county seats in New York State which had a caption over it, "We are way ahead of you, Mr. Secretary." Below it was described their county agricultural building and its value in service to the community. Representatives of my office visited that county and found that even though they did not have the finest county agricultural building that could be built, the spirit of cooperation and service on the part of all agricultural agencies housed in the building was of the very highest order.

In another case, local people acquired a large residence for a county agricultural building. Other cases might be cited where the ingenuity of the local people has been amply demonstrated as they developed ways and means for bringing the administration of agricultural programs under one roof for the convenience and facility of the farm people. If our farm people will go to such lengths to accomplish this purpose, then I say it must be good and should have the support of the Congress in providing even better facilities wherever possible.

The Department recognizes that many problems would be involved in the administration of the proposed legislation should it be enacted by the Congress. It might be well to state here that we are not presently advised as to the relationship of the proposed legislation to the program of the President. Because the purpose of the bill is dedicated to the proper housing of the agricultural agencies serving the farmers, it is believed that its administration should, therefore, be vested in the Secretary of Agriculture. On the other hand, however, there will be the many technical phases with which the Department of Agriculture is not familiar and has not had day-by-day experience. For that reason, a very recent conference was had with the Bureau of Community Facilities of the General Services Administration with a

view to utilizing the technical services of that agency should Congress give favorable action to this proposed legislation. Obviously, by the very nature of the work of the Bureau of Community Facilities, it becomes apparent that there are valuable skills in that agency which would facilitate the technical phase of the administration of this program. Whereas the legislation, as proposed, contemplates grants not to exceed 50 percent of the construction cost, exclusive of land, it may be desirable to consider legislation which may permit loans to counties as well.

It might be well to mention right here that one of the most severe problems which has confronted counties which now have county agricultural buildings has been that of maintenance and upkeep of the buildings. As you are readily aware, it is possible for a building, even the newest building, to have a run-down appearance in a very short time if it is not properly maintained.

It is natural for agencies of the Department which may be limited as to their funds to seek free rent whenever possible. I think it is worthy of consideration that if this program of county agricultural buildings should be legislated favorably, some consideration should be given to payment by the Federal Government of at least a maintenance rental for Federal occupancy in order to insure upkeep of the building.

It might be that in some communities, although the building would be known as a county agricultural building, other local activities would be housed therein, such as county boards of welfare, health, or education. Whenever this is desirable, we favor it because these types of activities are also concerned with the farm families of the community.

I feel that the value of this program cannot be measured in terms of dollars, but I do know from the experience gained so far in those counties where county agricultural buildings are in existence, that service to the farmers has been greatly facilitated and there is a higher degree of coordination possible than where agencies have to operate from many and varied locations. We need to give agencies administering farm programs in the field good tools with which to work. The enactment of H. R. 402 would be a desirable step in meeting this need.

Adjournment of Congress

REMARKS

OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. CHURCH. Mr. Speaker, I take this time to urge as strongly as I know how upon the leadership of the House that a resolution be promptly adopted to provide for the sine die adjournment of Congress on Saturday, August 20. For this purpose I am introducing such a resolution. And I make this appeal for its immediate adoption because I am anxious that we proceed in such manner that there may be no question whatever as to the validity of our proceedings after July 31, which is the date set by the Legislative Reorganization Act for the usual adjournment of each session. And I also believe that the American people are anxious that Congress adjourn at the earliest possible date.

I listened attentively to the discussion yesterday with respect to the question of the adjournment of this session of Congress. As I listened to the statement of our able minority leader, the gentleman from Massachusetts [Mr. MARTIN], and that of our distinguished Speaker [Mr. RAYBURN], it was evident that this matter of adjournment presents two distinct questions: When should Congress adjourn and, secondly, what is the proper procedure under the rules of the House for postponing adjournment.

As explained by the Speaker and the minority leader, the Reorganization Act provides that Congress adjourn sine die on the last day of July "except in time of war or during a national emergency proclaimed by the President," or "unless otherwise provided by Congress." The Speaker expressed the view that there is no necessity for Congress to "otherwise provide" by a formal resolution in order to continue this session beyond the last day of this month, because this is a period of national emergency proclaimed on several previous occasions.

I do not intend to engage in any legalistic argument as to whether this is or is not a period of national emergency within the meaning, purpose, and intent of the sine die adjournment provision. But this may well be a legal point upon which someone will rely at some future date in challenging some act we may pass or some other action we may take after July 31. While I can think of several answers to such a challenge in the courts and while I believe the courts should overrule such a challenge to the legality of our proceedings, it seems to me that we should settle this question so that it may never even be raised. It seems to me we should definitely remove the possible uncertainty. And all that need be done is simply to pass before July 31 a resolution, such as I have introduced, for the adjournment of the session at some date after July 31.

I cannot understand why the Democratic leadership is unwilling to bring in such a resolution. It would remove this uncertainty, and at the same time, it would give definiteness to the adjournment date. I suppose it is the unwillingness of the administration for political reasons to set any definite date for adjournment that the leadership has seen fit to rely on the questionable national emergency feature of the law. In view of the little that has been done by this Democratic Eighty-first Congress, in comparison to the splendid record of notable accomplishments of the Republican Eightieth Congress, I well understand the administration's political embarrassment as we approach the regular adjournment date.

It is my conviction, and I believe it is shared by the vast majority of the American people, that Congress should adjourn at a very early date. The reason I am not urging adjournment at the end of this month and have suggested it be postponed until August 20 is the fact that there are reorganization plans pending that will not become effective until August 19. These plans are important for economy, and I should at least like to realize the savings they would accomplish.

There are eight reorganization plans pending. All except the last, Reorganization Plan No. 8, which was submitted on July 18, will become effective on August 19, unless affirmative action is taken to set them aside. We need not concern ourselves too much with Reorganization Plan No. 8 as the essence of it is embodied in the so-called Tydings bill, which has passed the Senate and is pending with the House Committee on Armed Services. And we have already passed a bill which embodies a reorganization of the budget and fiscal management of the National Military Establishment. In other words, we have already passed the economy section, so to speak, of the Tydings bill. In a few days it can be made law.

I can see no valid reason why this Congress should not adjourn on August 20. There are compelling reasons why it should.

The obvious intent and purpose of the adjournment provision in the Legislative Reorganization Act of 1946 is to put some compulsion on the Congress to avoid extended sessions. The purpose of requiring adjournment after 7 months in session is not to give the Members of Congress a vacation or to avoid work. Its purpose is to make it possible for the representatives of the people to get back to their districts to learn what the people themselves are thinking and want done.

This is a representative Government. If it is to function properly we, the representatives of the people, must keep in close touch with the people we represent. There must be opportunity to discuss with the people their various problems, possible solutions, and the various national and international issues.

It may be that the Democrat leadership of this Eighty-first Congress wants to keep us in extended session so that we will not know what the people are really thinking, how discouraged they are over what has been done and how alarmed they are over what has been proposed. The administration appears fearful that once we go home and come in intimate contact with the public sentiment in the country against extravagant spending and socialization much of the proposed legislative program will necessarily fail of enactment.

It was not until the opening of this session of Congress last January when President Truman submitted his message embodying his legislative program that the people began to realize the extent to which he would impoverish the people and socialize our economy. It was not until this Congress opened that the American people realized the reckless, dangerous promises he made in a campaign for votes. And let me remind you that many of his recommendations to this Congress, notably the Brannan plan for the nationalization of agriculture and the extensive military-aid program, were not even mentioned in the last election campaign. Nor did the people then realize that President Truman would go so far in his spending as to have us follow the dangerous road of deficit financing.

If to keep the Congress out of touch with the people, and continue with these closed sessions where the people themselves cannot even see the Congress in operation—if to keep the Congress in

Washington under the whip of the administration—is not the reason to extend this session to a late adjournment, what other reason is there? The excuse may be offered that there are several pending bills in the administration's program not yet acted on. Such an excuse is a confession of a weakness on the part of the administration. You will recall that President Truman, at his Democrat convention last July, told the people that the Eightieth Congress, which he called into special session, could adopt his extensive program in something like only 10 days. We have been here 7 months in this Eighty-first Congress and very little of that program has been passed. Practically the only thing of any importance this Congress has done is to devise ways and means to spend more of the people's money. The people want us to come home. They know the shorter time this Eighty-first Congress is in session the better off the country will be and the fewer the dollars that will be spent.

Some of us have been trying in every way possible to obtain some economy. Thus far our efforts have been without success. A good way to economize from the point of view of the people is for the Eighty-first Congress to stay in session as short a time as possible.

I urge early adjournment. I urge the immediate adoption of my resolution for the adjournment of this session of Congress on August 20. I urge it in the interest of orderly legal procedure, and I urge it in the interest of the country as a whole.

The People Want Real Economy

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. JENKINS. Mr. Speaker, on many occasions I have said on the floor of this House that at no time during the term of Mr. Roosevelt did he in person or by message recommend economy in any expenditures.

Now, I am afraid that Mr. Truman, who apparently wants to outspend Mr. Roosevelt, is never going to do anything or say anything about economy.

Just recently two great American newspapers conducted a widespread poll on several national spending programs. The following is a copy of the results of these polls:

REAL ECONOMY DRIVE

Heretofore Congress has merely talked economy. Now it is going into action. Before first session of Eighty-first Congress ends, President Truman, by joint resolution, will be directed to make over-all reduction of "not less than 5 percent or more than 10 percent" in Government expenditures. With a 1949–50 budget of over $40,000,000,000, this economy move would mean a saving of $2,000,000,000 to $4,000,000,000. If Mr. Truman complies with congressional directive, it would probably forestall a tax hike, help offset 1948–49 budget deficit of about $1,000,000,000.

Democratic Senator MCCLELLAN, of Arkansas, is circulating petition in Senate to force consideration of 5-to-10-percent plan. Sixty-one Senators (24 Democrats and 37 Republicans) out of total Senate membership of 96 have already signed. Says MCCLELLAN: "I hope the leadership will be responsive to the will of the great majority and immediately bring it out and reach a final vote." Majority Leader LUCAS, Democrat of Illinois, will oppose plan; he thinks it is duty of Congress, not President, to cut costs. But MCCLELLAN has votes to put plan over in Senate. House will speedily follow suit.

Sudden congressional interest in economy is caused by big barrage of mail from back home. For first time in many years, constituents are putting on the heat. They are demanding that Congress cut costs to prevent tax increases. Indicative of public temper are two recent polls. One was conducted by Detroit News, published in heart of a great industrial center where CIO has great strength. Other was run by Omaha World-Herald, published in large farming community. Both newspapers asked specific questions and requested their readers to send answers not to Detroit News or Omaha World-Herald, but to their Senators and Representatives. Here are questions asked and division of votes:

Do you favor—	Detroit News		Omaha World-Herald	
	Yes	No	Yes	No
Spending to arm western Europe	3,982	5,293	980	4,886
Large Economic Cooperation Administration appropriations	3,832	5,553	553	4,927
Administration's housing bill	1,265	8,265	214	5,704
Federal aid to education	2,293	6,959	514	5,320
Brannan farm program	528	8,870	102	5,834
Administration's health plan	------	------	99	5,828
Increased taxes to pay for Truman social program	------	------	96	5,876
Proposal to cut Government spending by 10 percent	8,941	559	------	------
Adoption of Hoover Commission reorganization plan	9,251	245	------	------

Members of Michigan's congressional delegation say ballots reach them appear to come from ordinary citizens. One Senator received 20 letters with returned ballots critical of administration spending policies. Nebraska's Senator WHERRY, Republican, says he received 6,003 pieces of mail as result of World-Herald poll.

Is Farm Income Dependent on Hand-Outs?

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. KEATING. Mr. Speaker, the farmers in my area want to stand on their own feet and do not want to have their income voted to them each year by Congress. That is the essence of the article by L. B. Skeffington, published in the Rochester Democrat and Chronicle, which follows under leave to extend my remarks.

Mr. Skeffington, one of the leading agricultural journalists in New York State, knows the farmer's problems. He speaks with authority. Along with the American Farm Bureau Federation and the National Grange, he has opposed the administration's farm program from the outset, as have the vast majority of those who are more interested in the true welfare of the farmer and the maintenance of a sound economy than they are in political advantage gained through the purchase of votes.

The article referred to is as follows:

IS FARM INCOME DEPENDENT ON HAND-OUTS?

(By L. B. Skeffington)

Opposition of the principal farm organizations to the program of Agricultural Secretary Charles F. Brannan has been made clear. Essential of the Brannan plan is to let farm prices fall where they will, and then for the Government to make up the difference between farm prices and a fair price to farmers. Consumers would get the benefit, but the cost to the Treasury might be almost beyond reckoning.

Objections of the farm groups have been on the cost basis and against the controls which such a program would impose upon farmers. Without controls the program would get out of hand, with farmers producing surpluses of easy crops primarily to receive Government checks. To prevent this, the Secretary proposed controls which in effect would tell each farmer how much he could produce or how much he could sell.

With little chance of the program being adopted by Congress, the next move of the Brannan supporters was for a trial run on certain selected commodities. (A Senate subcommittee has rejected this.) They made it sound nice: "Let's take two or three commodities, including hogs, so we can get an idea of what will happen."

What would happen, in the view of producers of competitive commodities, is that the bottom would drop out of the market for them. With the skids put under pork prices, they say, there would be no markets for beef, poultry, eggs, cheese, and such things.

This brings out the fact that prices of single products seldom stand by themselves. If consumers think the price of cream is too high they buy the cheaper whip substitutes. If they don't care to pay the price for butter and oleo sells for much less they will buy oleo. If pork took a nose dive in price, lots of folks would buy pork and prices of other meats or meat substitutes would come tumbling down.

Likewise when the Government supported hog prices at high levels it made it more profitable to feed corn to hogs than to sell it for making dairy and poultry products. So prices of the latter rose. When there were ceiling prices on corn and black market swung into operation and prices mounted more than they would have in a free market.

So any price-control program that affects one major commodity is bound to affect many others.

The American Farm Bureau Federation has told Congress that the proposed trial run of the Brannan program would be to set a precedent for extending the program to all other commodities. Producers of these commodities naturally would turn to the Government for relief, it says.

The federation is opposed to direct subsidies, or compensatory payments, to farmers. It believe that any such plan has the tendency to make farmers more dependent upon Government, with necessary imposition of more controls. It favors the flexible support program enacted by Congress last year and due to become effective next January 1. Under this plan prices to farmers would be supported at levels varying from 60 to 90 percent of parity, instead of at a straight 90 percent as now.

The theory here is that when a commodity is scarce the higher range would be invoked to encourage production, while the lower

range would discourage excess production for sale to the Government. The flexible supports were designed to put the farmer more nearly on his own feet, and at the same time to give him some protection against going broke.

The Brannan plan is looked upon by several of the national farm organizations as a political expedient to win votes by providing cheap food to consumers and easy money to farmers. The farm organization spokesmen know that the general public would regard it as merely farm relief, and that if its costs reached staggering proportions, farmers would be blamed for it.

The Farm Bureau position was reiterated to a Senate committee by Hassill E. Schenck, president of the Indiana Farm Bureau Federation. He said: "Income of American farmers should not be made dependent upon an annual appropriation from the Federal Treasury. No economic group in this country would be willing to stake its future welfare on such a precarious possibility."

Of the trial run on hogs, he said: "If such a plan were tried on hogs, producers of other livestock would find themselves in serious price trouble.

"If this happened, as we believe it would, recommendations presumably would be made to extend the subsidy plan to cattle, sheep, poultry, eggs, and dairy products.

"This has been the pattern of development in foreign countries which have had experience with this type of program. None of us want to get into a situation which will provide an excuse for the adoption of this sort of crisis experiment."

Schenck told the congressional committee the Government is committed to supporting hog prices at 90 percent of parity March 31, 1950. He said it has the power and authority to do this under existing legislation. Hog prices now are well above parity.

Secretary Brannan's proposal originally was that the Government fix the income of farmers, rather than support prices. The Farm Bureau directors have opposed this bitterly on the basis that "the farmer's only hope for a fair income would depend upon Government hand-outs from annual appropriations by Congress."

This would mean that in any given year farmers would have no idea of what their income might be until Congress had voted the money—and in any year it might see fit to change its mind.

The American Family, 1949

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. HOEVEN. Mr. Speaker, the breakfast group of the House of Representatives has heard many fine speeches throughout the several years of its existence. One of the finest speeches dealing with a subject in which every person in America should be vitally interested was given by Mr. Samuel R. Davenport, of Falls Church, Va., at the group meeting on July 28, 1949. Mr. Davenport is a former resident of Sioux City, Iowa, in my congressional district and only last year was awarded the title of "Father of the Year" by the Washington Post. His speech is herewith included as a part of my remarks:

THE AMERICAN FAMILY, 1949

The institution of the family has become so much a part of our lives that it has become increasingly difficult for any of us to look at it objectively.

We even think of the family with a sort of tolerant irony. We are prone to paraphrase a statement attributed to President Lincoln: "God must have loved families. He made so many of them."

The family has been accepted, and, with that acceptance, our appreciation of its deeper values has been stored away in some seldom-used attic of our minds. We know we have it with us. Yet the miracle of its existence has been dulled by its very nearness.

This is not an isolated situation. In fact, it closely follows the pattern of thought common to all overcivilized peoples. Wonders, continually employed, become commonplaces. The intricate mechanism of the alarm clock is forgotten as soon as it is shut off. The marvels of the electric light, the safety razor, the gas stove, the electric refrigerator, the printed newspaper, the automobile are thrust out of mind when we have finished using them. We walk out of the heat into an air-conditioned building. The comfort we get is not considered. We take it as our right. We ride the elevator to our offices without appreciating its mechanism. We use our phones constantly without mental tips of the hat to Alexander Graham Bell.

All these great boons to mankind we take in stride. They will still be around whether or not we decide to use them.

The modern attitude toward the family is no different.

We set the family aside. When we need it it will be there. Why bother about it? The family is accepted.

Now, let us examine another—and a distinctly related—aspect of present-day thought. What happens if we are deprived of the conveniences which we have come to expect? What takes place if there is a cave-in on the water main or the gas main? What do we do if lightning strikes the wires, temporarily halting our electricity and telephone service?

Without water we send Johnny or Mary across the street with a pitcher. Without gas for cooking we reluctantly eat cold meals. Without electricity we scurry about looking for candles. Without phone service we feel shut off from the world.

When our conveniences are taken away we first grumble, then adapt ourselves to their absence. Above all, we appreciate them, remembering how they helped us when we had them.

This chain reaction of modern living also applies to the family. Any accident, any tragedy, any change in the family circle, causes us to take the family by itself out of its figurative mothballs and makes the family the center of all of our waking hours. Then the family is no longer accepted; it is appreciated. The change may be a death. It may be a son going away to college. It may be the daughter getting married and leaving home. It may be illness which sends the husband and father or the wife and mother to the hospital. It may be even the entertaining of guests in the home.

Whatever the change is, the more permanent it is in nature, the more difficult it is for us to adapt ourselves to that change. There is no substitute, no improvisation, for son, for daughter, for husband, for wife. And, once such a change has taken place, there can be no returning of the family to its former resting place in a mental or emotional attic.

Those of us who have experienced these changes in the family circle can more readily understand that passage in the Scripture which tells us that he who would find life must first lose it.

For our own peace of mind, for our individual psychological well-being, the family should be kept to the forefront. It should never repose in an obscure storehouse. It should be out in the open, with each of us always. That is little enough to do for those who mean so much.

Keeping the family on the institutional active list contributes to the advancement of the most significant human association we have thus far achieved. The 1949 family represents a high point of progress. It is one of the truly reliable yardsticks of our civilization.

We are too apt to think, while reading of divorces, of the incidence of broken homes, of juvenile delinquency, that the family has deteriorated today. Yet, the very fact that these maladjustments are news cannot help calling to our attention that they would not be news unless they were considered sufficiently different from the usual to attract attention. It isn't sensational to be a good mother nor is it deemed newsworthy to be a good son, a good daughter, or a good father. Apparently, the good are still not the exceptions.

It has become an axiom of anthropology that the tribe is older than the family: that is, the family as we know it. Moral relationships were nonexistent in prehistoric times. Quick likes and short memories were the rule. The child, therefore, was the child of the tribe and not the child of a particular family. The males hunted and foraged while the female tended the fires and cared for the community children. Variations of this situation prevail even now among primitive peoples.

Over a long period of years changes were made in the family concept. A single strong man assumed leadership over the tribe. If he was not actually the father of the younger males, he was certainly their master. If he was not the mate of the females, he was in a position to determine what males should mate and what males should not. He was feared and hated. And, when his strength waned, he was killed by one of the younger males who, then, took his place. He was the "old man." He was the Patriarch. This stage had not been left far behind at the dawn of written history.

There is little doubt that genuine affection found its way into the family group early in mankind's recorded history. Among other indications of this within-family attraction is the Joseph-Benjamin relationship. But, alongside of this story, we see the ease with which Abraham could deny he was the husband of Sarah and abandon her to the Pharaoh. We can see the priest-father in action in the dramatic story of Abraham and Isaac.

These early peoples were striving to perfect the family. The commandment to honor thy father and thy mother was one of the Ten Commandments. Family law occupies an important part of Hammurabi's Code. A significant portion of the first books of the Bible has been devoted to procedures and practices to be followed and to be avoided in family life.

Yet, in spite of these specific regulations, there was one law for the rich and another for the poor; one law for the ruler and another for the peasant. There was little difference between the polygamy practiced by Solomon in his harem than that practiced by the cave dweller patriarch thousands of years before Solomon. The oriental customs of pagan neighbors were openly practiced in Solomon's Jerusalem to the extent that honor thy father and thy mother was, to all intents and purposes forgotten.

It was only in the centuries of adversity which followed the glory of Solomon—where parents were torn from children, where

homes were broken—that the Hebrew family become strong again. The ideal of father-priest, which had been embodied in Abraham, was almost reattained.

Rome, especially early Rome, gave discipline to the family. A Roman father could legally kill a child for disobedience. But the Roman father ruled by law. Most of them were stern, yet just. That combination of traits left its mark on humanity. I can never forget that my father often referred to his strict father as "my old Roman." Monogomy gained a powerful foothold in old Rome under the pater familias. The Roman wife, while not as free as the 1949 American wife, knew her rights. They were set down in black and white in Roman law.

But the most far reaching of all steps in the progress of the family stemmed directly from Jesus Christ. He lived for, taught, and died for the fatherhood of God and the brotherhood of man.

The Roman Catholic Church was the first to utilize to the full the direct gift of our master to the family. Monastics were known as sisters and brothers. The presiding official of a nunnery was Mother Superior. Priests were fathers of their flocks. Images of the Virgin Mary and the Infant Jesus appeared in every church.

Yet, greater than any of these outward symbols was the association of ideas which was clear to the knight in his castle and to the serf in his hovel—God the Father, and God is love. Love of another had become the cornerstone of the family.

There have been other contributions to the development of the family since Christ, but none which could compare with the power of His concept of the fatherhood of God.

Knighthood brought chivalry to the family, encouraging courtesy among its members. The guilds of the Middle Ages made the family a depository for skills. Our own American gift to the family has been to make it a timeless vehicle for carrying on to future generations the ideals of patriotism contained in the Declaration of Independence and the Constitution.

The American family, 1949, is a cumulation of all progress factors contributed in all ages. It is a culmination as well as a cumulation. My faith in the American family, 1949, is strong, unwavering, abiding—in spite of all the assaults against it.

This is my family creed. Yours may be different. This is mine:

I believe in the American family, 1949, because it draws from the early Biblical idea of the priest-father.

I believe in the American family, 1949, because it fosters courtesy and understanding.

I believe in the American family, 1949, because it is the time capsule of devotion to democracy and the republican form of government.

I believe in the American family, 1949, because it maintains Christ's gift of the fatherhood of God and the brotherhood of man.

I believe in the American family, 1949, because it is based on love.

That Gold Standard

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. REED of New York. Mr. Speaker, it is most encouraging to those of us who believe in a sound currency system to note the favorable editorial response to the proposal contained in H. R. 3262 designed to provide the United States with a gold-coin monetary standard and system. The approval of this proposed legislation by a long list of distinguished economists is most gratifying to me and others who believe in a sound currency.

I am inserting an editorial in the RECORD, under unanimous consent, which appeared in the July 25, 1949, issue of the Olean Times Herald, an outstanding publication, which has served a large area of the Forty-fifth Congressional District of New York since 1860:

THAT GOLD STANDARD

Of more than passing interest to all of us in this Forty-fifth Congressional District is the fact that Representative DANIEL A. REED, ranking Republican member of the potent House Ways and Means Committee, has placed in the CONGRESSIONAL RECORD a statement of 45 members of the Economists' National Committee on Monetary Policy, endorsing Mr. Reed's bill that would provide for a return of this country to the gold standard.

This measure, it might be explained, is designed to restore the right of American citizens to freely own gold and gold coins, return control over the public purse to the people, restrain further deterioration of our currency, enable holders of paper money to redeem it in gold coin on demand, and to establish and maintain a domestic gold coin standard.

Representative REED believes that the enactment of such a measure not only would confer tremendous benefits on the people of this country, but that a return of this country to the gold standard is necessary to stabilize world economy.

In fact, the Dunkirk solon is convinced that there will be no stabilization of economic affairs, either here or abroad, until such a standard is adopted and maintained.

But let the Economists' National Committee on Monetary Policy take the floor for a moment.

These experts believe that the Reed bill would reestablish integrity in the promises to pay issued by the Treasury Department and Federal Reserve banks.

They point out that most of the paper money in the United States carries promises to pay which, under present laws, are not and cannot be honored.

They give it as their conviction that profligate Government spending and depreciation of the Nation's currency in terms of goods and services are natural consequences of the issuance of such a currency.

And they are convinced that the restoration of the gold standard in the United States would bring the following results:

First, it would return to the people a high degree of control over the Government's use and abuse of the people's purse. Such control, they add, should provide them with a potent weapon against socialization and regimentation by their Government.

Second, as far as any currency would be able to do so, a resumed gold standard in this country would inspire confidence and encourage saving, investment, production, employment, and trade.

And third, a gold standard regime would expand foreign trade and enable other nations to develop their own trade sooner than otherwise would be the case.

More and more, those who should know the intricacies of national and international currencies and finance seem to be veering to the opinion that one of the best moves this country could make, not only in its own behalf but in that of the other nations of the world, would be to return the American financial to a gold standard base.

As to the difficulties that there may be in the way of such return most of us laymen are not qualified to speak.

But when large groups of expert economists advocate such a course, it would seem that the utmost consideration should be accorded it by the powers that be in Washington—and that Congress, especially, should give every consideration to the bill that is being sponsored by Representative REED which would return this country to a basic standard of gold.

Basic Church-State Issue

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. BRYSON. Mr. Speaker, I attach hereto one of the most logical presentations of the controversial issue of Federal aid to education that I have seen.

This editorial comes from my home-town newspaper, the Greenville News, Greenville, S. C., with which I am in full accord:

BASIC CHURCH-STATE ISSUE

As numerous American citizens will undoubtedly see it, Cardinal Spellman, of New York, is taking an indefensible position in denouncing as bigoted or anti-Catholic those who wish to see Federal school-aid funds restricted to the public schools.

But this whole controversy brings up an issue which is of basic importance to the people of this country. It has grown, as will be recalled, out of the school-aid bill offered by Representative BARDEN, of North Carolina, which contains provisions limiting the distribution of these funds to public schools only.

Cardinal Spellman reportedly has expressed the view that Catholic schools should share in these Federal-aid funds. Granting his sincerity, of course, in that belief, he can hardly fail to recognize that if such a policy were adopted, the schools of any religious sect, denomination or faith would have just as much claim to share in these funds as Catholic schools. And our constitutional principle of separation of church and state certainly appears to preclude the use of public funds for the support of any sectarian educational or other institution.

Those who oppose the use of public funds for private or religious educational institutions are therefore no more "anti-Catholic" then they are anti-Baptist of anti-Methodist or anti-Jewish or anti any other religious group.

They simply believe, with great conviction, that if taxpayers' money is used to support religious schools, any religious schools, it would be a grave impairment of our principle of separation of church and state. And it seems to this newspaper that this position is entirely sound.

This newspaper has often disagreed with the views of Mrs. Franklin D. Roosevelt, but it seems to us that she has taken a completely logical stand in this controversy and that she in no way deserves the cardinal's charge that she is conducting an "anti-Catholic campaign."

Mrs. Roosevelt said that "those of us who believe in the right of any human being to belong to whatever church he sees fit, and to worship God in his own way, cannot be accused of prejudice when we do not want

to see public education connected with religious control of the schools, which are paid for by taxpayers' money." And she pointed out that "the separation of church and state is extremely important to any of us who hold to the original traditions of our Nation. To change these traditions by changing our traditional attitude toward public education would be harmful, I think. If we look at situations which have arisen in the past in Europe and other world areas, I think we will see the reasons why it is wise to hold to our early traditions."

And we think the basic question is: Can we use taxpayers' money to support the teaching of the religious doctrines of any sect or faith without violating the principle of separation of church and state?

Democracy's Challenge to the Educated

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. YATES. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I quote an article which appeared in the Lincoln-Belmont Booster, Chicago, Ill., written by Leo A. Lerner, entitled "Democracy's Challenge to the Educated":

THE FIRST COLUMN
(By Leo A. Lerner)
DEMOCRACY'S CHALLENGE TO THE EDUCATED

I have been looking forward to an opportunity to say what is on my mind about the results of the educational process in this country.

We have taken a statistical approach, boasting of the larger number of schools, the larger number of graduates, and the fact that these graduates seem on the whole to get the best jobs and make the most money.

Our progress in education has been measured the way a rich man measures his money, in figures only, yet I am sure we can all agree that it is no more possible to measure the results of sending young people to school with numbers than it is to pull the rich man, like the proverbial camel, through the needle's eye.

We have hypnotized ourselves into believing that the very fact we have many schools, including many good schools and many free schools, and that we are graduating numerous young people into commerce, trades, technology, and home life with a so-called education, necessarily means we have a better world, or at least better people in the same old world.

I ask you to consider a few very simple facts, like the one that in the period between 1910 and 1950 the world built the largest number of colleges and turned out the largest number of graduates, but had the two worst wars in world history and the worst depression.

Against the number of colleges are the number of submarines, bombers, and battleships; against the number of educated are the number of dead. Against promoted toleration, look at the promoted hate.

The statistics about the number of colleges and the number of graduates are impressive, unless you compare them with the statistics about the number of jails and the number of inmates (growing enormously, I assure you), or the number of insane asylums and the number of patients (also growing enormously).

I think it is time right here to say that I don't want to be misunderstood. I believe in education, and I have spent a lot of my life trying to help expand and extend it from the kindergarten to the adult education level. It is simply that I have higher hopes for the results of learning than we have thus far realized.

Not long ago a learned teacher at the University of Chicago, Dr. Bernard Iddings Bell, took the foundation out from under our educational institutions, putting down in plain words the failures of modern educated society to deal with its simplest problems.

Dr. Bell suggested to us that it was possible to be educated and at the same time to be a fool.

My belief is that education has been overadvertised and under-done. It has been sold to the public as a cure-all for the sicknesses of civilization. But I'm sorry to say that civilization is not cured.

At Harvard they have been worried about this for a long time. Some of the important educational experts at Harvard got together and studied this problem for several years and came out with a book called "Education in a Free Society."

They concluded that the day of the gentleman and the scholar is past, that the only thing that counts today is citizenship—worthwhile, constructive citizenship, and that, therefore, we must forget about the "gentleman and scholar," and think only in terms of the gentleman and the citizen.

It is the failure of educated people to accept their responsibility as citizens which has put us in a pickle at a time when we ought to be getting the advantages of having spent so many billions and billions of hours educating ourselves.

A man named Pace at the University of Minnesota made a survey of some 900 graduates of the University of Minnesota to see what they were interested in long after graduation. He called this book "They Went to College," a significant title. Mr. Pace found that more than two-thirds of the graduates freely admitted that they had no interest in community affairs outside their own families and their own selfish living problems.

Do me a favor sometime and go down to the city council and spend an hour. Go down to Springfield for a day and listen to our State senators and State representatives, or go to Washington and spend a day or two in Congress. Just listen and think, then come back and tell me how well you think our statistically educated world has handled itself in the selection of representatives who govern our lives and help determine our futures.

You will find, with some exceptions, educated morons, more intent upon log rolling and pork barreling than upon solving sincerely the problems of the day.

The republican form of government we call democracy (the Republicans prefer to call it a republic, and the Democrats prefer to call it a democracy, but I don't think the labels matter) requires people who will get as much pleasure from active citizenship as they do from bowling, going to strawberry socials, or breaking open a keg.

Democracy needs the active help of those who have been selected for education and those who have been given superior opportunities for knowledge and wisdom.

Democracy has paid out in cold, hard cash free education for millions of American boys and girls from prekindergarten to college level. It could be a wonderful step forward that would benefit all of us, if those who have been treated so royally by the treasury of democracy would feel their responsibility for the community after they have taken their education home with them in their heads.

It's wonderful to go to college. It's a pleasure to be with teachers, to read the great books, to learn to find information and to learn how to think and analyze. Education is the most wonderful thing that has ever been bought with money, more precious than rubies. But if afterward we lock in a vault what is more precious than rubies, what good does it do?

I think those who have sought education for the purpose of making a living, or beating the next fellow in competition or being able to answer quiz programs on the radio have made a mistake. They will join the legions of the educated dunces. They live in the never, never land that Jonathan Swift described in "Gulliver's Travels," where solemn looking professors in caps and gowns go around beating each other over the head with balloons half filled with water.

To avoid being reduced to the (alas!) common denominator of stupid though educated, each of us must feel his own deep down inside obligation to help build a better world and to make living worthwhile.

There is one more thing that should be said about education. I learned this most poignantly in the days when I served on the Chicago public library board. And that is that education is a continuing process—it does not end with a diploma.

Life is a continuous, endless constructive process, and so is education, which is destined to take man to undreamed-of heights of peace and prosperity after we find out how to use our education to live together successfully and to respect one another as human beings.

Guide to Confident Living

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, Guide to Confident Living, by Dr. Norman Vincent Peale, which appeared in the Durham Morning Herald, Durham, N. C., on July 25.

Today, we still live in a world distraught with fear and apprehension, and such guides as outlined by Dr. Norman Vincent Peale are very helpful and worthy of adoption.

GUIDE TO CONFIDENT LIVING
(By Dr. Norman Vincent Peale)
CHAPTER 16—TEN RULES FOR MASTERING THE ART OF CHURCH GOING

To attend church successfully, skill is required. Worship is not a hit-or-miss affair. There is an art to it.

Those who study and practice to become expert in churchgoing master one of the greatest of all skills, that of spiritual power. That you may learn to go to church efficiently, I suggest the following 10 rules to guide you in mastering the art of churchgoing. Consequently put these rules into practice and one of these days the great thing may happen to you.

1. I think of churchgoing as an art, with definite rules to follow, an art you can acquire.

2. Go regularly to church. A prescription designed by a physician to be taken at regular intervals is not effective if taken once a year.

3. Spend a quiet Saturday evening and get a good sleep. Get in condition for Sunday.

4. Go in a relaxed state of body and mind. Don't rush to church. Go in a leisurely manner. The absence of tension is a requisite to successful worship.

5. Gain a spirit of enjoyment. Church is not a place of gloom. Christianity is a radiant and happy thing. Religion should be enjoyed.

6. Sit relaxed in the pew, feet on floor, hands loosely in lap or at the side. Allow the body to yield to the contour of the pew. Don't sit rigid. God's power cannot get through to your personality through a tied-up body and mind.

7. Don't bring a "problem" to church. Think hard during the week, but let the problem "simmer" in the mind over Sunday. God's peace brings creative energy to help the intellectual process. You will receive insight to solve your problem.

8. Do not bring ill will to church. A grudge blocks the flow of spiritual power. To cast out ill will, pray in church for those you do not like or who dislike you.

9. Practice the art of spiritual contemplation. In church do not think about yourself. Think about God, think of some beautiful and peaceful thing, perhaps even of the stream where you fished last summer. The idea is to get mentally away from the world into an atmosphere of peace and refreshment.

10. Go to church expecting some great thing to happen to you. Believe that a church service is the creation of an atmosphere in which a spiritual miracle can take place. Men's lives have been changed in church through faith in Christ. Believe it can happen to you.

Increase in Duck-Stamp Fee

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1949

Mr. PHILLIPS of California. Mr. Speaker, when S. 1076 came up on the Consent Calendar last week, a request was made that it be passed over without prejudice and I understand it is the intention of the Committee on Merchant Marine and Fisheries to bring it up again on the Consent Calendar on Monday, August 1.

In the meantime I have been asked by several Members of the House to secure and place in the RECORD a statement of the expenditures of the Fish and Wildlife Service for the past several years. I therefore ask unanimous consent to extend these remarks in the Appendix and to include the table which shows the funds available and the sources of the money, for the fiscal years 1942 to 1949 inclusive, together with the expenditures for those same years.

The bill itself was introduced in the Senate and provides an increase in the cost of a duck stamp, from $1 to $2. The arguments in support of the bill include the following:

First. It would permit the acquisition of more management areas.

Second. It would increase the number of birds.

My secretary, to whom I referred the bill for analysis, adds the following third reason; apparently based on a few years experience, as the secretary to a member of the Appropriations Committee, with the inclinations of many Government agencies:

Third. It would increase the tax from $1 to $2.

Apparently, the only opposition to the bill was based on a general opposition to the theory of conservation and the desire to shoot as many ducks as possible, or the feeling in some areas that ducks are nuisances. The gentleman from North Dakota [Mr. LEMKE] has introduced a somewhat similar bill, the object of which is to reimburse the farmers for the damages the ducks may do to their crops.

I have long been a friend and supporter of conservation and of the Fish and Wildlife Service. I have no objection to the intent of this bill. Whether or not, as its proponents say, the farmers and hunters all know that they will have to pay twice as much for a duck stamp next year, and are satisfied to have this cost doubled, remains to be seen. If they do not know about this bill and they do not like the idea of paying $2 instead of $1 for a duck stamp, I have no doubt but the Members of Congress will hear direct from them, without any of us having to think about it today. Personally, I do not think many of them will be concerned, as one of the uses of this money is to provide for management areas, which not only increase eventually the number of ducks available for hunting, but protect the crops, by providing other feeding grounds.

There is, however, one detail of the bill in which I am interested, and to which I intend to offer an amendment. That amendment will strike out the period on page 1, at line 6, and will insert a semicolon and add the following:

Provided, That the money derived from the sale of such stamps shall not be spent without specific authorization from the Appropriations Committees of the Congress.

The intent should be obvious. Like almost all Members of the House Committee on Appropriations, I am allergic to revolving funds.

During the Eightieth Congress, the Committee on Appropriations was able to improve bookkeeping methods, and accounting methods, and to wipe out various revolving funds. I am not at all sure that this has ever been considered, by the Fish and Wildlife Service, as other revolving funds have been considered I think in all probability the Fish and Wildlife Service has presented its justifications and that the expenditures have been approved, just as they have had direct appropriations approved.

However, my amendment removes any uncertainty.

If the Congress adopts the amendment, then there is no question but that the expenditures from this particular revolving fund will be made only on specific approval of and with the knowledge of the Appropriations Committees of the House and the Senate.

I am glad to add that I am informed by various members of the Committee on Merchant Marine and Fisheries that they approve of the amendment and that they will support it on the floor on Monday. I have also been informed that the representative of the Fish and Wildlife Service approved it.

Under those circumstances, I think, so far as I know, that the bill S. 1076, can go through on the Consent Calendar on Monday without objection.

Department of the Interior—Appropriations, Fish and Wildlife Service, and obligations, by objects, fiscal years 1942 through 1949

[2] Includes $517,896 for Columbia Basin flood repair and $1,100,000 for work in connection with flood-control projects in the Columbia Basin.

[3] Excludes prior-year balances available.

What We Owe Our Country

EXTENSION OF REMARKS
OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I offer an item which appeared in the August issue of the Reader's Digest of 1949, by Gen. Omar N. Bradley, entitled "What We Owe Our Country," which is a pertinent item on the responsibility in which every American home should be interested:

WHAT WE OWE OUR COUNTRY

(By Gen. Omar N. Bradley, Chief of Staff, U. S. Army)

At Fort Myer, where I have my home, I sometimes slip down to the post movie. Dressed in a civilian suit, I am treated to soldier talk, especially when the lights are out. One evening an 18-year-old, who let it be known he was a 1-year volunteer, complained to his companion that he had put his neck in a noose when he came into the Army. "What's it going to get me?" he asked. "Not even the GI bill. My old man was in the First World War—and what did he get out of it?"

By some standards the young man was a realist. He was simply asking the question it is the fashion to ask today: "What's in it for me?" It is time we provided the answer for that youngster and thousands like him, time we reminded him—as well as ourselves—that freedom is not a prize to be given a man for his distinguished achievement in having been born an American.

A nation's strength is not to be found in its treasury statements. It lies instead in the character of its people, in their willingness to sacrifice leisure, comfort, and a share of their talents for the welfare of the nation of which they are part. Democratic self-government tries its people with a sterner challenge than any other system in the world. It is weighted as heavily with obligation as with privilege. Scorning the brutal coercion of totalitarian states, it asks that its people cooperate willingly and voluntarily in order that each person may benefit equitably according to his merits. And while the imperfections of our system—like all man-made institutions—have brought injustices to some, advantages to others, it nevertheless has helped us to achieve greater personal dignity and more material wealth than any other nation in the world.

Why have we come to believe that democracy is a free ride without the need for earning our way? Probably the greatest single cause for delinquency in citizenship can be traced to our declining sense of responsibility in the home, the church, the school, and the community in which we live. Although many turn their eyes toward the mountainous issues that crowd our national scene, few have the humility to start down where citizenship counts.

Because the family is the basic unit of our society, it is there that responsibility begins. The necessity for doing one's daily round of little jobs made the youngster of earlier generations feel part of the household and planted in his mind the seed of responsibility to someone other than himself. Much as we welcome the leisurely comforts of indoor plumbing, oil heat, electric lights, and the family car, we nevertheless lost a primary lesson in good citizenship when twentieth-century convenience rendered the tradition of chores old-fashioned.

When I was a youngster in the farm lands of Missouri, my chores were neither painful nor unpleasant. Each morning I filled the wood box with chips and kindling for the big kitchen stove. I kept the buckets filled with water from the deep well out back. When there were cows in the barn I helped with the milking. I helped feed the chickens, kept the henhouse clean. At the end of summer I combed the woods in search of bee trees; one August I put down, in the great earthen crocks Mother gave me, 200 pounds of wild-bee honey. I knew that if there was no wood by the stove, no water in the kitchen, there would be no breakfast of home-cured ham, warm milk, and bright yellow-yoked eggs. If I didn't find the bee trees, there would be no honey-bread after school. And if I didn't help Mother clean the lamps, there would be no light for the evening.

The modernization of our living habits has made too many of today's youngsters look upon their home as a shelter, a meal ticket, a refuge during their period of adolescence. A family is no longer a group whose members depend on one another for companionship. The urge of each individual to pamper his own wants has put the emphasis on selfishness and suffocated the instincts of good citizenship at the very source.

The church, too, has suffered in our automobile age. No longer is it the civic and social center of the community. Today the impermanence of transient family groups has denied to millions a church in whose activities and problems they can share responsibility.

A friend told me that during the depression, when the church he belongs to was hard pressed by mortgage payments and too poor to keep a janitor, each member of the vestry devoted one Saturday every month to cleaning and scrubbing the building for the Sunday service. Those who loved the church best worked the hardest—and loved it all the more.

Today that church is fully paid for and a janitor is hired to keep it clean. The congregation contributes far more liberally than it did because now it can afford to. But the devotion of its members has faded with a waning of their obligations. Two dollars in the Sunday offering has replaced those Saturday labors. And another of the compelling obligations which produce a sense of responsibility in that community is gone.

When I recall the political illiteracy of our young troops at the start of the war I am moved to charge education with gross dereliction in its responsibility to teach the value of the great spiritual possessions to which we are born. As the Army struggled through the summer of 1941 with rebellious soldiers who muttered constantly of their raw deal it became apparent that the fault lay not with the Army but with the failure of the American people to grasp the threat facing free, democratic self-government.

The blame does not lie on education alone. It must be shared with the people as a whole. Their shocking apathy to the sterility of their school curricula is responsible even today for the political immaturity, the economic ignorance, the philosophical indifference and the spiritual insolvency of so many young men. Throughout Europe, wherever our armies were stationed, the people were bewildered by Americans who appeared indifferent to the political and philosophical origins and nature of the most powerful and progressive nation in the world. When driven into a corner intellectually our soldiers were forced to fall back on our wage scale, our automobiles, our refrigerators—and eventually and triumphantly to the American bathroom—for their defense. Here is an indictment not only of American education but of irresponsible citizens who have permitted this vacuum to remain.

Recently, when I charged education with these derelictions, my audience of leading citizens nodded comfortably.

"How many of you," I asked, "are members of a school board?"

Of the more than 60 men in the room, not one raised his hand.

"How many of you know the name of your child's teacher?"

There was a showing of a scant half-dozen hands.

"How many of you," I pressed, "have ever asked your child's teacher home to dinner to measure her worth for yourself?"

Not a single hand went up.

Here was an audience of successful business and professional men, too busy each in his own affairs to determine for himself the character and quality of education furnished his sons and daughters. Victims of the checkbook habit, each was quite content simply to pay the bills. This is citizenship by the dollar sign; it cannot and will not work. The American people must shake themselves out of this appalling lethargy and make their schools a matter of their personal concern.

Many men of good will today admit having a fear that our wartime generation has become too dependent upon Government, that initiative has waned, and that too many of us are inclined to see Washington as the source of the bountiful life. Apart from its economic implications, this habit of turning to Washington with our troubles conceals a political danger as well. We cannot look to Government purely for its benefits and deny it our obligations, for overdependency on Government is the road to enslavement.

Good citizenship under democratic government springs from an appreciation of the great values of our institutions and from active participation in them. It is immoral for us to claim freedom of the ballot unless we are ready to share that freedom with every other American. It is ungodly for us to claim freedom of religion unless we are prepared to be tolerant of all beliefs that differ from ours. It is hypocritical to insist upon freedom of opinion unless we grant equal freedom to those who oppose us. And it is fraudulent to insist upon freedom of the press if we deny that right to others. Democratic institutions will continue to prosper and flourish only so long as they are fed on freedom for all, not on abridgment for some.

This contest that we are engaged in today over the integrity of the individual versus the integrity of the state is one that can conceivably last to the end of our lifetime. Theoretically the odds lie with us. For, where the state is an instrument of government employed by individuals for their common welfare, the progress of the state is propelled by the progress of the individual. And there can be no doubt in our minds that a free people, unfettered by fears, threats, and terror, will advance further and faster in spiritual truths, social improvement, and material reward than any slave people, irrespective of the lash under which they labor.

A democracy such as ours cannot be defeated in this struggle; it can only lose by default. It can only lose if our people deny through indifference and neglect their personal responsibilities for its security and growth.

Our danger lies not so much in a fifth column whose enmity is avowed. It lies in a first column of well-meaning American citizens. A first column of unconscionable men who are 100-percent Americans in their daily protestations and 10-percent citizens in their daily routine of neglect.

New Hampshire Old Home Week

EXTENSION OF REMARKS
OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article written by me entitled "New Hampshire Old Home Week," which recently appeared in some of the New Hampshire newspapers.

NEW HAMPSHIRE OLD HOME WEEK

During the month of August 1949 the State of New Hampshire will celebrate with appropriate ceremonies in the cities and towns the observance of the fiftieth anniversary of its outstanding and unique institution—Old Home Week. The commemoration of this anniversary will be recorded as a landmark in the history of the Granite State. Due to its great significance, the attention of the Nation will be focused on the notable and highly commendable New Hampshire practice of conducting an Old Home Week.

ORIGIN

His Excellency, Frank W. Rollins, Governor of New Hampshire from 1899–1900, was the first to suggest the idea of an Old Home Week. He did this at a banquet of the Sons of New Hampshire held in Boston. In explaining his idea, the Governor stated:

"I have a scheme which I think promises to help the State and which I hope to see put into execution. It is this, to have a week set apart, to be called Old Home Week, and to make it an annual affair. I would have every town and city in the State make up lists of all its native-born sons and daughters living in other States and send them an urgent invitation to be present through the week. I would have at Concord during the week appropriate exercises of a literary character, and also an exhibition of the products and industries of the State. I would make it a carnival week there. Is it not possible that such a plan would result in much benefit to the State and also in the returning to her of many of her sons who have wandered afar?"

Governor Rollins suggested that the State board of agriculture take charge of the first meeting, and in response to the call of the board hundreds of people from all parts of New Hampshire met in the statehouse at Concord on June 6, 1899. Governor Rollins presided over the meeting and summarized the purposes of his proposed new organization. Speakers who voiced approval of his plan included: N. J. Bachelder, secretary of agriculture; F. E. Roby of Chester; Hon. John C. Linehan; Hon. Joseph B. Walker, and Hon. Moses Humphrey of Concord; Hon. Charles McDaniel of Springfield; Charles B. Hoyt of Sandwich; George A. Tyrrell of Grantham; E. C. Hutchinson of Milford; E. C. Bean of Belmont; James Drew of Newington; Dr. O. B. Douglass of Pembroke; Curtis B. Child of Henniker; Col. W. B. Rotch of Milford; and S. B. Whittemore of Colebrook.

In commenting upon Old Home Week at the initial meeting, Governor Rollins said:

"During this week, I hope we may have a more or less elaborate program to interest the visitors—a review and parade of the National Guard, for instance, a musical program by New Hampshire musicians, a literary program, with orations by talented native and resident speakers. These exercises would take place in Concord and occupy 2 days. Then the vistors would go to their old homes in the towns, where there would be reunions and picnics and all sorts of pleasant entertainment. This would help the towns by bringing in money or by stimulating interest in the old home among the visitors, who might be induced to benefit the town by building a library or a schoolhouse or a town hall, or by doing something to improve the roads. We need to secure everybody's cooperation to make the idea a success. I do not think it is a fad, but I think it is possible of great and beneficial development."

OLD HOME WEEK ASSOCIATION

The Old Home Week Association which was formed in 1899 has continued for half a century without interruption. An annual meeting is held in Concord, the State capital, every June. The first officers of the Old Home Week organization were:

President: Gov. Frank W. Rollins, Concord.

Vice presidents: Joseph B. Walker, Concord; Joseph D. Roberts, Rollingsford; John W. Sanborn, Wakefield; Charles McDaniel, Springfield; Bertran S. Ellis, Keene; George T. Cruft, Bethlehem; Gordon Woodbury, Manchester; True L. Norris, Portsmouth; Charles E. Tilton, Tilton; Chester E. Jordan, Lancaster.

Treasurer: Harry H. Dudley, Concord.

Secretary: Nahum J. Bachelder, Concord.

Executive committee: Edward N. Pearson, Concord; William N. Stinson, Dunbarton; Henry H. Metcalf, Concord.

Coincidentally, the annual meeting for 1949 was held in the city of Concord on June 6, the same date as the first meeting of the association. The following officers for the ensuing year were elected:

President: Dr. Robert O. Blood, Concord.

Vice Presidents: Gov. Sherman Adams; Charles A. Rollins, West Alton; Dr. M. Gale Eastman, Durham; Mrs. Sarah W. Fisk, Charlestown; A. Clifford Hudson, Canterbury; Charles R. Eastman, Kensington; Miss Ethel Johnson, North Stratford; Edwin B. Edgerly, Tuftonboro; Mrs. Marie H. Wells, Deering; Mrs. Sherman Fletcher, Bridgewater.

Secretary: Perley I. Fitts, commissioner of agriculture.

Assistant secretary: Clement A. Lyon, Concord.

Treasurer: F. Gordon Kimball, Concord.

Executive committee: Arthur W. McDaniel, Nottingham; John A. Reid, Litchfield; Mrs. Eva J. Felker, Laconia; Mrs. Marion H. Atwood, Sanbornton; Fred W. Fitzpatric, Belmont; George L. Frazer, Monroe; W. LeRoy White, Sandwich; Wallace P. Mack, Londonderry; Lewis C. Shaw, Boscawen; Lucius Nichols, Lempster; Dr. J. Duane Squires, New London; Mrs. Lena A. Read, Plainfield; William Haskell, Jr., Plymouth; Alfred L. French, Henniker; Mrs. Emily Hinze, Newport.

Auditors: Herbert D. Swift, New London; Lewis C. Shaw, Boscawen.

THE CONSTITUTION

A constitution of seven articles was adopted at the initial meeting in 1899. This document is as follows:

"ARTICLE 1. This association shall be known as the New Hampshire Old Home Week Association.

"ART. 2. The object of this association is to promote the welfare of New Hampshire by increasing the interest in the State among her citizens and among natives of the State located in various parts of the world.

"ART. 3. Any resident of New Hampshire, or any person born in New Hampshire, is eligible to membership in this association.

"ART. 4. The State association may have subordinate branches known as Local Old Home Week Associations.

ART. 5. The officers of the State association shall consist of a president, one vice president from each county of the State, secretary, treasurer, and executive committee of three, who shall constitute the executive board.

"ART. 6. The annual meeting of the association shall be holden upon Tuesday of the week designated as Old Home Week at such place and hour as the executive board may determine.

"ART. 7. Local Old Home Week Associations may be formed and managed under such rules and regulations as the State association may prescribe, and the presiding officers of local associations shall be voting members of the State association."

This constitution was printed in the first published report of the Old Home Week Association of New Hampshire. A report is published annually by the association. In the report for 1948, an article by George W. Parker (this first appeared in the Concord Monitor, August 1948) was reprinted. Mr. Parker wrote an excellent article on Old Home Week and many of the facts which he presented are included in this statement.

LEGISLATIVE ACTION ON OLD HOME WEEK

The first observance of Old Home Week in New Hampshire was held from August 26 to September 1, 1899. On February 20, 1901, the State legislature voted that "Towns may raise money to defray expenses of observing Old Home Week (New Hampshire Session Laws, sec. 1, ch. 17; Revised Laws, 1942, ch. 51, sec. 4).

Prior to 1913 the officers of the Old Home Week Association designated Old Home Week and no State appropriation was made for the purpose of financing a program. From 1913 to 1947 the legislature made an annual appropriation of $300 to assist in the observance of Old Home Week. In 1947, this grant was increased to $600.

The legislature in 1913 enacted the following law:

"CHAPTER 261

"Joint resolution relative to Old Home Week and appropriating money therefor

"Whereas the custom of observing what is known as Old Home Week originated in, and was inaugurated by the people of the State of New Hampshire in 1899 and has since spread throughout the country and to foreign lands, and

"Whereas this custom has been of immense benefit sentimentally and practically in the State of New Hampshire, and

"Whereas the value of this observance has never been fully realized or officially recognized by the State, Therefore be it

"Resolved by the Senate and House of Representatives in General Court convened That the week beginning on the third Saturday in August is hereby designated as Old Home Week in New Hampshire, and that the sum of $300 annually be and hereby is appropriated to be expended by the New Hampshire Old Home Week Association for promoting Old Home Week observance and for publishing and distributing reports thereof, subject to the approval of the Governor and council, and the Governor is authorized to draw his warrant for the same out of any money in the Treasury not otherwise appropriated.

"Approved May 21, 1913."

OLD HOME WEEK PROGRAMS

Every year, over the last half century, the people of New Hampshire have sent invitations to the sons and daughters who have moved out of the State asking them to return during the time designated as Old Home Week. Each year during this period, the towns arrange a variety of programs including dinners, picnics, entertainments, athletic tournaments, parades, receptions,

exercises by school children, plays, family dinners, band concerts, musicals, and speeches by prominent citizens and political leaders. Religious services are conducted in the churches on Old Home Week Sunday. Many families are brought together for reunions at this time.

Many towns and cities in New Hampshire have observed an Old Home Day in Old Home Week for years without interruption. This Granite State institution has proved of inestimable value in bringing back to the State the people who have moved away to seek their livelihood elsewhere. The exercises of an athletic, literary, and musical character, the exhibits of the products of the State, and the general good time enjoyed by all who attend the festivities of Old Home Week are of a distinct benefit to the social and cultural life of the community.

FIFTIETH ANNIVERSARY

Mr. A. C. Hudson, president of the Old Home Week Association for 1948 in his message printed in the Old Home Week Association report for that year stated:

"Old Home Week in New Hampshire in 1948 was an outstanding success and will long be remembered by the many friends of New Hampshire who participated in the local Old Home Day associations' programs.

"The report indicates that many additional towns and communities observed Old Home Day during 1948 and it is especially gratifying to note the large number of family reunions that occurred throughout the State of New Hampshire.

"We plan to celebrate the fiftieth anniversary of Old Home Week in New Hampshire during the month of August 1949, and programs are in preparation for a State-wide observance which will be outstanding in our history * * *."

In the mid-century mark of Old Home Week observances, it is proper that particular attention be accorded this significant and cherished custom. It is anticipated that during the month of August 1949 there will be many and varied activities in connection with this anniversary. From one end of the State to the other, these observances will give new impetus to this valuable custom. Old Home Week will continue in future years as one of our most important Granite State events.

The idea of Old Home Week has developed constantly since its inception in 1899 and will continue to grow in the years that lie ahead. With its emphasis on pride in the State, on religious and home life, and on reunions of families, it touches a responsive chord in the hearts of all our citizens. It would be most commendable if this custom were adopted by all of the 48 States. New Hampshire takes pride in Old Home Week and the people of the Granite State are convinced that this unique custom has made an invaluable contribution to the life of New Hampshire. Old Home Week is symbolic of and calls attention to the ideas and ideals which constitute the core of the American way of life.

Reorganization Plans

REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1949

Mr. JUDD. Mr. Speaker, it has been repeatedly stated that one reason the Congress must not adjourn by July 31, 1949, as required by law, is because adjournment before August 19 would kill the Hoover reorganization plans. Under the Reorganization Act they do not go into effect until 60 days have elapsed without the passage of disapproving resolutions by both Houses. There is, however, another way to adjourn earlier than August 19 without killing them. I am today introducing a joint resolution which provides that the provisions of Reorganization Plans Nos. 3, 4, 5, 6, and 7 of 1947, submitted to the Congress on June 20, 1949, shall take effect at the close of August 19, 1949, notwithstanding the provisions of the Reorganization Act of 1949. If that resolution is passed, and I think it will be passed easily if brought to the floor, it will eliminate any confusion in anybody's mind lest these most important reorganization plans be lost through an early adjournment.

The House will note that I did not include plans 1 and 2. There are two reasons for that. One is that there is controversy about each, the second is that neither would save any money. Plan 1 just changes the name of the Federal Security Agency to the Department of Welfare. The Hoover Commission recommended that health activities be separated from the other functions of that agency. Plan 2 shifts the Bureau of Employment Security from the Federal Security Agency to the Department of Labor. There is opposition to that which will require extended debate. Since the adoption of neither of these two plans is urgent, there should be no objection to setting them aside while acting at once on the other five plans which are not particularly controversial, I understand, and which are important from the standpoint of economy.

Mr. Speaker, it seems to me it would be wise for us to pass this joint resolution promptly and settle matters beyond doubt.

Deficit Financing and Shrinking Dollars

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement distributed by the Committee for Constitutional Government:

DEFICIT FINANCING AND SHRINKING DOLLARS

According to John W. Snyder, Secretary of the Treasury, the Federal Government incurred a budget deficit of $1,811,000,000 in the fiscal year ended June 30, 1949. This means that, in time of peace and outstanding prosperity, our Government is not paying off part of its enormous debt. On the contrary, in the last 12 months it spent nearly $2,000,000,000 more than its income.

The administration says that tax reduction is to be blamed for the deficit. The fact remains, however, that the year's revenue receipts amounted to $38,246,000,000. If we deduct from this sum the $6,000,000,000 required to pay fixed charges such as interest on the public debt and social security disbursements, and also the twelve billions for national defense, and then divide the remainder by 2, to allow for the fact that the price level has doubled since 1939, we arrive at a total not far from ten billion prewar dollars. This is more than three times what it cost to pay the nonmilitary expenses of the Federal Government in 1927. Since that date, our population has increased less than 25 percent. Therefore, it seemed hard to dodge the fact that our $1,811,000,000 deficit in the fiscal year just closed has not been due to any shortage of revenues, but is, instead, the result of reckless overspending.

During the last score of years, Americans have become so accustomed to seeing our Government finances in the red that the report of a $1,800,000,000 deficit in the last year, with a much larger one in prospect for the coming year, is likely merely to provoke the comment: "So what?"

The answer is that there is grave danger that our Government will cover the deficit by creating new money or money substitutes.

"But," someone will say, "never since Civil War days has our Government printed money to pay its bills." Perhaps this is literally true, but it has repeatedly arrived at the same end by using a slightly devious route.

Between the beginning of 1934 and the end of 1946, the Federal Government (mainly by borrowing from the banks) increased our supply of circulating medium by more than $111,000,000,000. Nearly $88,000,000,000 of this addition consisted of demand bank deposits—that is checking accounts—but more than $23,000,000,000 was pocket-book money, mostly new Federal Reserve notes turned out by the printing presses.

Twenty years ago, the average American family possessed about $160 of real money (not counting bank deposits). Now, it has around $760. Under the circumstances, we are not in good position to cast too many aspersions on the Germans, the French, and the Italians for printing money to pay Government expenses. People who live in glass houses should not throw stones.

And remember that the $88,000,000,000 of new demand deposits which our Government induced the banks to create out of thin air had effects just as inflationary as did those produced by the $23,000,000,000 of new pocket-book money. The creation of that $111,000,000,000 of new money and money substitutes explains fully why your dollars, your insurance policies, your bonds, and your bank accounts, when valued in terms of goods in general, are today worth only half as much as they were before World War II. And this inflation, like inflation in other countries, has had just one basic cause—Government deficits—that is spending in excess of revenues.

Most authorities agree that the incurring of a Government deficit in time of peace and prosperity indicates bad financial management. But the Keynesians hold that sound policy calls for deficit financing during depression—the resulting debt to be paid off from surpluses accumulated during the next period of prosperity. Ample experience both here and abroad shows, however, that the auspicious moment when the surplus is available for debt retirement never arrives. It follows that the only sound policy is to balance the budget every year—whether times are good or bad.

But, today, all the signs indicate that the Truman administration, in an endeavor to check the recession, will go in for deficit financing on a huge scale. The chances are, therefore, that the banks will soon be called upon to conjure up out of nothingness billions of new money to pay for unemployment insurance, farm subsidies, veterans' bonuses, boondoggling projects of one kind or another, and direct relief for the needy. All these measures will discourage production, and hence will intensify and prolong the depression. And, in addition, they will debase

the currency, and thus rob thrifty Americans of their savings.

Centuries of experience throughout the world prove that, without sound money, it is practically impossible to have prolonged prosperity, and that, furthermore, it is extremely difficult to maintain the soundness of a paper currency unless it is kept freely redeemable in gold or silver on demand.

If the depression grows worse, and if overspending makes our dollars shrink in value, most Americans will denounce the President, his economic advisers, or Congress. But who will really be to blame? It will be the voters who are demanding that Uncle Sam dish out billions of dollars to pay for unemployment insurance, aid to education, farm subsidies, socialized medicine, public works, low-rent housing, and relief to the indigent. Have you, by any chance, given aid and comfort to any of the pressure groups asking for some of these hand-outs? Have you? Think it over.

WILLFORD I. KING.

Were We Justified in Demanding Germany's Unconditional Surrender?

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. SADOWSKI. Mr. Speaker, to the question "Were we justified in demanding Germany's unconditional surrender?" my answer is an emphatic "Yes."

My answer remains the same, whether the question is measured by the historical context of the meeting at Casablanca; by the record of cruel oppression established by the German nation over the years; by the failure of the Allied Powers to destroy the German war potential after the First World War; or by the danger of war and conquest in the future.

At this moment, my greatest concern is that in our anxiety to establish postwar stability, and to avoid world depression, we seem to have unconditionally surrendered Germany's unconditional surrender.

The lessons taught by World War I were not well learned by the American people. The basic lesson is that neither the German leaders nor the German people can be trusted by the rest of the world. Some Americans, however, learned that fearsome lesson, and never let its sharpness dull against the dead weight of pan-German propaganda and hypocrisy. One of those Americans was Franklin D. Roosevelt, and another was Gen. John Pershing.

Pershing as allied commander and Roosevelt as Assistant Secretary of the Navy, through the First World War, and in their public life in the uneasy peace which followed until Hitler destroyed even the fiction, recognized the unending threat of German aggression. Both believed that German imperialism, in all its manifestations, should have been crushed in 1919, beyond hope of revival.

Certainly that is my own opinion; and certainly it is my own opinion that one of the major postwar tasks of the United Nations is to make sure that Germany shall not arise from the dead rubble of the Hitler empire into a new force of aggression.

The battle cry of unconditional surrender was proclaimed at the Casablanca conference in January 1943. Go back in memory to those critical days. All Europe, and most of Asia and the Pacific, was in the hands of the Axis Powers; and there was nothing yet to show that the Axis Nations had exhausted their strength, that the tide had turned to victory for the Allied Nations.

Rommel held north Africa. The Nazis had been thrown out of Morocco. Italy had been virtually untouched. England was in agony; Nazi armies were deep in Russian territory. The allied supply lines were so overextended that our collective muscles strained with the effort of feeding and arming fighting men in every quarter of the globe.

Seldom has the power of words been so dynamically proved as in the electrifying effect of "Unconditional surrender."

Col. Elliott Roosevelt tells us in his book, As He Saw It, that the phrase was President Roosevelt's own; that Winston Churchill and the other VIP at Casablanca approached the phrase coolly, but were won over by its smashing impact on their own imaginations.

Not only did the magic words summon new and superhuman efforts from the people of the democratic world; they also clarified the issues; they separated the true crusaders for democracy from the latent sympathizers with the Nazis in the civilized world.

The latter denounced "unconditional surrender" as inhuman and baldly declared it would incite the German people to new efforts of resistance; the former hailed the phrase for its clarion ring of total victory after total war, and knew that it had struck terror to the hearts of Hitler and his base companions of the Nazi horror.

We know from the testimony of the survivors of the Nazi holocaust that "unconditional surrender" demoralized the German home front, and that only the rigid system of police spies and swift punishment maintained the appearance of a living nation.

"Unconditional surrender" as the battle cry of freedom did, in fact, in my belief, shorten the war by years.

It took the heart out of the German defenses. It put heart into the world at bay against Nazi terror and conquest.

Germany collapsed under the onslaught of the armies of the free world; but the Nazi spirit has never surrendered. At this moment the Junkers, the pan-Germans, the Nazi die-hards, the fanatics of hatred and retrogession, the gnarled souls who hate and distrust the people, are deviously trying to rob humanity of the fruits of the war. They are trying to betray the Atlantic Charter, the Potsdam agreement, and our bold and challenging declarations to a new and challenging world of peace and opportunity. They are white-washing Germany and her criminals and smearing our allies. They are trying to rebuild Germany; they are trying to surrender world peace to a new war potential, for Germany is, and must be, by definition and history, a potential warmonger whenever Germany has the strength to make war—total war—on helpless neighbors.

Certainly we were justified in demanding unconditional surrender of Germany in 1943; and we are justified in demanding that no conditions be granted now to the reviving Nazis of postwar German chaos.

Truman, a Terrific Spender

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. JENKINS. Mr. Speaker, a very capable editor of one of the newspapers in my district has written a very interesting editorial showing that Roosevelt spent three times as much money as all the Presidents preceding him put together.

This editorial also shows that Truman, during his short tenure, has spent nearly fourteen billion more than the Government has collected during his tenure.

The editorial to which I refer is, as follows:

WORLD'S MOST COSTLY LUXURY

President Roosevelt was considered the greatest spender in history. First, he had a depression to whip, and he did it with money. Then he had a World War to prepare for and to win, and that was pretty costly. So that during the 12 years he was president, FDR spent an annual average of $31,020,854,000.

By comparison with Harry Truman, however, Franklin D. Roosevelt was a penny-pinching piker. Mr. Truman has managed to spend a total of $45,016,855,863 per year.

The 30 presidents who preceded Roosevelt, namely Washington to Hoover during 144 years, spent a total of $112,203,000,000. Mr. Roosevelt then spent during his 12 years a total of $372,242,000,000. It might be excusable considering everything that Roosevelt's deficit spending (in excess of revenue, that is) totalled $206,482,000,000, but—

Mr. Truman in 4 years has spent $180,067,000,000, which is $13,314,000,000 more than the revenue during his time. So the public debt is still $252,770,000,000.

George Washington spent at the rate of about $4,000,000 (four million dollars) a year. Had he taken office 9,000 years before the Christian era, and if he had spent money at that rate right up to the present day, he would by now have drained the Treasury of exactly the same sum of money that Mr. Truman spends in 1 year—every year.

Of course the country has grown a lot since George Washington's day. Geographically the area of the United States and its possessions and territories is 4 times as large, and it has nearly 40 times as many people. Also, the national income of all these people perhaps is 400 times as much as it was in 1789. But nothing about the United States has grown as much as has the Treasury. Under President Truman, it spends nearly 11,000 times as much as it did under Washington, and collects more than 10,000 times as much from its people.

Home Rule for the District of Columbia

EXTENSION OF REMARKS
OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. AUCHINCLOSS. Mr. Speaker, in the Eightieth Congress I had the great privilege of serving on the Subcommittee on Home Rule of the District of Columbia Committee of the House with my very able colleague the gentleman from North Carolina [Mr. DEANE], and that association has ripened into a warm friendship between us.

The members of that committee did not always agree on the various matters which we discussed but the gentleman from North Carolina was always ready with constructive and helpful suggestions. He contributed in no small degree to the thoughtful legislation on home rule which was finally developed and which now, after various revisions, is under the consideration of the Subcommittee on the Judiciary of the House Committee on the District of Columbia.

Recently, Mr. DEANE appeared before this committee and made a statement, which, under the permission already granted to me, I am glad to append to these remarks. It is written in his clear, concise, and logical style and I hope that the Members of the House will read it, and I feel sure they will then have a better idea of just what the proposal for home rule in the District of Columbia means.

STATEMENT OF HON. CHARLES B. DEANE, OF NORTH CAROLINA, ON S. 1527, TO PROVIDE HOME RULE AND REORGANIZATION FOR THE DISTRICT OF COLUMBIA

At the outset, Mr. Chairman and gentlemen of the committee, I desire to express my appreciation for this opportunity to appear before your committee.

I do not come contending that I know all the answers to this exceedingly important subject of home rule, but I do come with the belief that I am conversant with the subject of home rule for the District.

During the Eightieth Congress it was my pleasure to serve on the House District Committee. I gave up my assignment on this committee with a great deal of reluctance, and did so only in order to accommodate the leadership of the House incident to the Democratic majority in this Eighty-first Congress.

If the opportunity should come, I would again welcome an opportunity to serve the people of Washington, representing as they do a great cross section of this Nation of ours.

You gentlemen of the committee recall that I was a member of the home rule subcommittee during the Eightieth Congress, that reported out H. R. 6227, introduced by the gentleman from New Jersey [Mr. AUCHINCLOSS]. I hesitate to burden the committee with the details about those hearings. I hope that I will not appear presumptious in pointing out that there were 28 days of hearings on H. R. 6227 introduced by Mr. AUCHINCLOSS. I was present on 21 of those days. Our subcommittee heard 178 witnesses, received 51 statements and resolutions, and developed 1,178 pages of testimony. In making reference to these lengthy hearings and recalling the outstanding service rendered to the committee by an expert and sincere staff, it is my opinion that no other committee gave a more complete, full, and thorough study of the problem of local self-government for the District of Columbia than did this subcommittee of the Eightieth Congress.

My participation in those days and days of hearings convinced me beyond any reasonable doubt that the citizens of the District of Columbia should have restored to them the right to participate in their own local government. I repeat, the citizens of the District of Columbia should have restored to them the right to participate in their own local government. It can be rightly stated that the proposed legislation is an effort to promulgate to some degree, at least, what the founding fathers contemplated for the Nation's Capital. Surely Madison had this in mind when he stated that a "municipal legislature for local purposes derived from their own suffrage" would be extended to the residents of the District of Columbia.

Local self-government was promised the people of Washington by James Madison, chief architect of the Constitution. This District Committee, therefore, will not be setting up any precedent in adopting the principle of home rule because, when the Federal Government moved into Washington, the people of this city enjoyed self-government from 1802 until 1874, a practical construction of the Constitution.

Far be it from me to pose as any constitutional authority, but I am constrained to point out, in view of statements that have been made before this committee, that the home-rule bill of the Eightieth Congress and the bill now pending before you have been upheld by the Attorney General of the United States, by House and Senate legislative counsel, and by several eminent constitutional lawyers with whom this distinguished committee is most familiar. For my part, these eminent authorities immediately dispel the constitutional doubts that may be expressed by others.

A study of S. 1527, frequently referred to as the Kefauver bill, will show that in many respects it is largely patterned after H. R. 6227 that I have mentioned before. I shall not take up the time of the committee to compare the two bills or argue their special merits so far as construction is concerned.

To me both bills represent an intelligent and sincere effort to make democracy real and make it work in the Nation's Capital. A denial of the right of some form of self-government to the disfranchised citizens of this great city violates every principle of democracy.

My colleagues of the committee, I have often wondered what the many thousands of young people reaching voting age here in the Nation's Capital, who have had the advantage of the very best educational opportunities, think of Members of Congress who stand on the floor of the House and demand that free elections be granted to certain down-trodden people of Europe and Asia and then deny any form of local self-government to the people of this great city, the only capital in the world where the voices of the citizens are completely silent. I regret, gentlemen, that I had to make that statement because this is the best fuel that Moscow needs to show that democracy and freedom are denied in the very Capital of the Nation that champions the "four freedoms."

The urgent plea I make, gentlemen, in behalf of a teenie-weenie voice in local government for this great city, I make not so much in behalf of the adults of our Capital City but for the many thousands of choice young people now present in the District of Columbia, and who will be joined by countless thousands in the immediate years ahead.

Frequently, since I became a Member of Congress, in contemplating the plight of voteless Washingtonians, I have pictured myself as a disfranchised father in Washington, the father of a son of voting age. This son has fought through the battles of Africa, Normandy, and the isles of the Pacific. He did so in order to preserve and make free the ballot and to have a voice in his Government. This son wants to know why he is denied some participation in the operation of his Government. He recalls the sacrifices he made to preserve democracy and the right to vote. I am forced to admit that he is entitled to this participation as an American citizen; yet, an intelligent Congress continues to deny him one of the most cherished rights given to an American citizen.

Gentlemen of the committee, that illustration is multiplied many, many times in this Capital City. In my opinion our continued failure to extend some form of home rule to the District of Columbia is going to warp and stint scores of youthful minds in this great city. I am convinced that the continued denial of some voice in their government is going to lead them into organizations that will not be healthy. On the other hand, it is my candid belief that if we extend home rule and thereby invite the two great major political parties to come in and compete for the loyalties of the people, young and old, of this District, you are going to set up a healthy city government that the Congress and the Nation will be proud to recognize.

The recent passage of a sales tax is going to greatly emphasize among the people of the District that they are denied the right to have a part in their government, and they are not going to feel good about it. Yet, on the other hand, if they are given some form of self-government, they are not going to voice much objection to this sales tax. And furthermore, I am convinced that the intelligent people of this District will seek out and elect the outstanding citizens of this community to run the affairs of this beautiful metropolis.

Time will not permit me to go into the type of opposition made against home rule. It generally falls into two categories. One group contends that it will be dangerous to grant home rule. As indicated previously, I contend it is going to be dangerous if the Congress does not grant home rule. The others who oppose home rule are not sincere when they say, "We don't want home rule as contained in the bill because it represents only half a loaf." These "half a loaf" individuals who contend that they are opposed to home rule because it does not give the District representation in Congress are shadow boxing. It indicates a lack of courage to oppose outright home rule. You distinguished lawyers on this committee know that these "half a loaf" individuals who talk so much about national representation for the District know full well that we will never have national representation until there is some type of home rule. National representation will come only through a constitutional amendment passed by two-thirds of the House and Senate and approved by three-fourths of the States. Such a resolution likewise must emanate from the Judiciary Committees and not from the Committees on the District.

The second division of my statement, that I appreciate the opportunity of expressing to the committee, concerns the cumbersome city government.

The Congress is highly commendable in its praise of the work of the Hoover Commission. The Congress saw fit to appropriate a large sum of money for the careful study of the many bureaus and commissions of the Federal Government in an effort to streamline and make more efficient and more economical the operations of the Government agencies. It may be interesting to the members of the committee to know that early in the deliberations of the Hoover Commission, Prof. James K. Pollock, of the University of Michigan, a member of the Hoover

Commission, conferred with Dr. George B. Galloway, staff director of the Subcommittee on Home Rule and Reorganization of the House District Committee in the Eightieth Congress, and raised the question of whether or not the Commission should make a study of the organization of the government of the District of Columbia. Dr. Galloway advised Professor Pollock of the extensive investigations of the District government during the Eightieth Congress by the House District Committee. The lengthy hearings, including the extensive investigations carried on by the members of the staff of the District Committee during the Eightieth Congress, and the House District Subcommittee recommendations were made available to the Hoover Commission. The upshot of the matter was that the Hoover Commission decided not to make a study of the District government. I am led to believe, therefore, that the Hoover Commission recognized as being worthy of consideration the findings and recommendations of the House District Committee in the Eightieth Congress concerning the complex structure and interrelationships of the District government.

I do not wish to burden the committee with too many details, but I have heard members of the present House District Committee who oppose home rule say without reservation that there is urgent need for the complete reorganization of the District government.

Our subcommittee in the Eightieth Congress made an exhaustive study of Washington's government. We found that it was incredibly complicated and cumbersome. From a mere handful of agencies in 1878, it has grown haphazardly until today there are about 125 major units of government rendering services in the District of Columbia, of which 48 are Federal and 77 are District agencies. And there are as many more subunits.

Washington's government baffles description. It is unique among American cities. Federal, State, county, and municipal functions are scattered among a host of governmental agencies without any apparent rhyme or reason. Authority over District affairs is divided among many independent boards and commissions. A dozen agencies share the ordinance-making power and executive authority is likewise splintered. At the top of this set-up is a Board of three Commissioners who exercise a split supervision of local affairs. None of the local officials is elected. Members of the Board and other key posts in the District government are appointed by the President. Vacancies in local posts are often left unfilled for long periods by a busy President preoccupied with larger affairs and outsiders are frequently selected for these places to the neglect and disappointment of local talent.

At the present time, five governmental agencies in the city of Washington are charged with police protection, three with recreation, two with water supply, two with road building, and two with the care of trees. Nor is there any unified personnel system for the employees of the local government.

Intertwined with this tangled network of local agencies are more than two score Federal agencies which operate in the District of Columbia and render services to it, such as National Capital Housing Authority and the United States Employment Service. At the hearings held by the subcommittee last July, it took Federal officials 4 days and 120 printed pages to explain the intricate relationships of their agencies and services to the government and people of the District.

Mr. Chairman and gentlemen of the committee, a challenging opportunity equal to the commendable work of the Hoover Commission rests on this committee's doorstep in coming to grips with the cumbersome government of this city.

Washington is today a great city with almost 1,000,000 inhabitants, yet it is still trying to function through bureaus, boards, and agencies that are not only hoary with age but antiquated to the *n*th degree. In outward appearance it is the fitting Capital of a Nation now at the pinnacle of its power and prestige; yet, it is still governed by a charter adopted almost three-quarters of a century in the past.

Mr. Chairman, I am very grateful for this opportunity to express these views.

In a Land of Plenty, Where Are We Drifting?

EXTENSION OF REMARKS

OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an excellent address by Mr. T. M. Medford of Salem, Oreg.:

IN A LAND OF PLENTY, WHERE ARE WE DRIFTING?

Let me say in the beginning that I speak for no political party or economic group, I am just an ordinary, everyday kind of American citizen who is proud of his country's past, but who thinks we are straying from the tried and true path that leads to fundamentally sound national security.

America is a land of plenty. No other race, no other people have been nor are so fortunate. It is very important for all of us to understand why our America is a land of plenty, so that we may not get off the high road that has brought us safely this far and that can take us still farther.

America is a land of plenty because adventurous and sturdy people have come to our shores since the days of Plymouth Rock, because the brave and the strong have escaped from oppression to America's blessed shores while the timid and the weak stayed in their own countries—in their own homes.

The mingling of the blood of adventurous and sturdy people of many races has brought us something of the genius of each race.

The United States has a temperate climate and great natural resources. But this, while important, explains little.

Across the seas, to the north, to the south, around the globe other peoples, other nations have temperate climates and natural resources equal to ours but have made much less progress.

The American savage and civilized Indian had our productive climate and our same rich natural resources of iron, coal, copper, zinc, aluminum, lead, and forests, yet they were living in the Stone Age of arrowheads, war paint, and tomahawks, when Columbus landed on America's blessed shores, and yet, some as late as Custer's Last Fight in 1876.

There are other reasons than temperate climate and natural resources for the unexcelled progress, for the material and spiritual greatness of America:

The Declaration of Independence.

The Constitution of the United States.

And the fact that we are the greatest tool-using people of all ages on the face of the earth.

The Declaration of Independence freed us from the planned economy of British kings. The writing and adoption of the Constitution was the greatest act of statesmanship in the world's history. It combined on a continental scale the strength of a central government in matters of national and international concern, together with the freedom of people of our local and State governments to plan and manage their own affairs.

The Constitution was the greatest blueprint for prosperity mankind has known.

The chief virtue of the blueprint was that it gave Americans freedom to plan their own lives rather than have their lives planned for them.

The Constitution brought opportunity to men with ambition. The Constitution released the wellsprings of energy and invention in the breasts of millions of men and women. The Constitution protected patents and copyrights. The Constitution protected men with ideas.

The result astonished the world. Work, sweat, thrift, ambition, and hope were turned loose in this rich and blessed land.

With the further results that we have become the greatest emancipators in progressive history. Inventing mechanical slaves of iron and steel to lift the burden of soul-killing drudgery from human backs, inventing devices and gadgets which have turned luxuries into mass production within the reach of everybody, inventing mechanical slaves that do not tire as human workers do, mechanical slaves that work 24 hours a day, 7 days a week, months into years, mechanical slaves that have taken women out of coal mines and children out of factories, mechanical slaves which have emancipated man from a life of hopeless, ceaseless drudgery.

These mechanical slaves, these tools, these inventions, these luxuries we call capital, our system that encourages free men to invent, improve, and create new tools, new mechanical slaves is called capitalism.

This country the envy and marvel of the whole world was built by men willing to risk their capital—their very shirts on the chance to make their pile.

Now what has this capitalism done for us as a nation? Capitalism has made way for Edison, Ford, Packard, Ben Franklin, Chrysler, Whitney, Fulton, Westinghouse, McCormick, Watt, Burbank, Goodyear, Babe Ruth, the Wright brothers, and untold other inventors and creators. Henry Ford who was still born while Lincoln lived. Henry Ford who built his empire with no capital except courage. Henry Ford who enriched peoples' lives everywhere by low-cost transportation. Henry Ford who reinvested capitalism in better tools, better manufacturing, lifted wages, and raised everybody's scale of living.

Henry Ford whose career was possible only in America with constitutional government and competitive free enterprise unhampered by present-day Government harness and regulation.

What governmental bureau back in the 1890's, for example, would have picked Henry Ford, the powerhouse helper, to pioneer the production of low-priced automobiles?

Capitalism produced Thomas Edison, the inventor of the incandescent light bulb, Thomas Edison who turned night into day. Thomas Edison who exerted the most far-reaching and beneficial influence of any man since the Constitution was written. Thomas Edison whose life's work should cause every high school and college student, every business and professional man and every editor to thrill with inspirational pride.

Capitalism which has been reinvested in better tools to raise output per worker, to cut working hours almost in half to usher in the greatest rise in the scale of living the world has ever known.

Capitalism which has made us a nation on wheels. Capitalism which has proven that system of business is going to survive that does most for most people.

Capitalism which has proven that the miracle of economics is high production per man-hour which brings costs down.

Capitalism which has proven that high production per man-hour is possible only

because of better tools, better mechanical slaves, more mechanical horsepower helping human backs to do the work.

Capitalism which has proven that workers' high wages and purchasing power come from enterprises created by savings of the rich.

Capitalism which has brought telephones, bathtubs, radios, gas stoves, refrigerators, electric lights, vacuum cleaners, automobiles, and medical care within the reach of everybody.

Capital invested in new tools has cut physical workers' time 43 percent since the Constitution was written. Capital invested in new tools has given the physical worker 30 hours per week additional time for leisure and recreation and transformed the factory worker from a worn-out drudge to a self-respecting citizen who can do his work without undue physical fatigue and sufficient time left to enjoy fully. Capital invested in new tools has made it possible for today's worker to put in 16 hours of labor per week and live as well as his great-grandfather who worked 69 hours per week.

Today, in America, there are tools, mechanical slaves, and power equal to the strength of at least four horses at work in the service of every man, woman, and child. One horsepower equals the strength of 10 men. Therefore, there is at work for every man, woman, and child the equivalent of at least 40 human slaves. A 60-horsepower motor under the hood of an automobile is equal to the labor of 600 men.

In America to a greater degree than in any other country there has been opportunity for self-expression, self-development, and advancement on the basis of merit. It has been estimated that our superior tool equipment (mechanical and labor-saving devices) have expanded our natural human energies to the equivalent of 1,000,000,000 extra human workers.

A railroad moves 1 ton of freight 1 mile for 1 cent. That's why Americans are not forced, like Chinese coolies, to slave from dawn to dark carrying heavy burdens long distances on their backs.

Man's material progress equals natural resources plus human energy multiplied by the use of mechanical tools created by our savings which we call capital.

President Truman said recently we need to invest $50,000,000 in new tools, machinery, factories, inventions, and mechanical slaves. But investment in new tools is drying up in this country.

In 90 years—1850 to 1940—the investment in tools per factory worker increased 10 times—$500 to $5,000. But in 1940 it was $1,100 less per worker than in 1930.

The reason investment in new tools is drying up in America is because of high taxation.

Since 1939 the total gross Federal taxes paid annually by the American people have increased from $5,500,000,000 to $40,000,000,000. Direct taxes on individuals for this same period have increased from one to nineteen billion. Direct taxes on corporations have increased 400 percent since 1939.

Industry pays 75 percent of all taxes collected in the United States.

Our Federal Government employs over 2,000,000 civilian workers with an annual payroll of over $6,000,000,000. Has 1,800 special bureaus, occupies 48,000 separate offices. The combined area of these equal 170 times the space occupied by the Empire State Building.

Interest on our national debt is $5,000,000,000 annually. That is more than the annual cost of operating the entire Federal Government before 1934.

It costs over $42,000,000,000 to run your Government each year, that's $1,500,000,000 more than the Federal Government collects in annual taxes. The ablest men in the United States predict it will cost $50,000,000,000 in 1951. One of your greatest and most respected authorities in the United States predicts a $60,000,000,000 budget in 1954 without undertaking to do any new things before the Congress.

In 1929 Federal expenditures equaled two-thirds of income of all Californians. In 1938, United States expenditures equaled all income of citizens of Washington, Oregon, Nevada, California, Idaho, Utah, Arizona, Montana, Wyoming, Colorado, and New Mexico.

In 1947 United States expenditures equalled the earnings of all citizens of Washington, Oregon, Nevada, California, Idaho, Utah, Arizona, Montana, Wyoming, New Mexico, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, and Texas; the total annual earnings of 17 States.

Today all taxes, Federal, State, and local are taking 31 cents out of every dollar the average American earns.

The weight of this Government burden becomes more apparent when we realize that we pay out more to Washington annually than we do to all of our 6,000,000 farmers for the food we eat.

The Post Office Department employs 498,000 people and has an annual deficit of $500,000,000. Every time you buy and mail a 1-cent post card, it costs the Government 2½ cents. It takes 20 percent more money to operate the Post Office Department's fleet of motor vehicles than it does to operate large-scale private transport fleets.

Machinery is available which can sort 3,000 items per man-hour as compared to 1,600 items per man-hour by hand. But the Post Office Department has few of these mechanical slaves—these labor-saving inventions.

Not only private enterprise, but also churches, YMCA's, colleges, and philanthropies previously supported by free enterprise face the prospects of at least partial liquidation.

A spendthrift Government marching toward national socialism is stabbing a knife in the back of the Christian church, the mother of democracy.

With $67,000,000,000 more income in 1942 over 1929, the gifts to churches was $160,000,000 less. High Federal taxes are competing in every family budget with the individual church contribution.

It is a solemn situation when we find after 16 years of profligate spending that the American church as an institution is going down hill financially.

Its future is becoming less and less secure. United States citizens who hold in high esteem our schools, churches, and colleges should bear in mind that no government ever spent its people rich or taxes them to prosperity.

There is startling evidence of repeated attempts by Federal officials to make big governments bigger and to extend, by another vast grant of power, the authority of the state over the lives of all of us.

Government employees have backed and are backing a campaign to pressure Congress into passing a national compulsory health insurance law. This campaign was and is planned inside the Government, on Government time, supported by the Government's publicity and propaganda machine and paid for by the taxpayer.

Compulsory health insurance—cornerstone of every socialist regime—proposes to solve our health problems, not from the community up but from Washington down.

Socialized medicine has been tried and used in Russia, Germany, Austria, Great Britian, France, and New Zealand.

Karl Marx worked out the theory of socialized medicine in Russia in 1848—just 100 years ago.

Bismarck introduced it in Germany in 1883.

Austria tried it in 1888. Socialized medicine started in Great Britian in 1911—it was started in France in 1918.

Each attempt has been a dismal, heartbreaking, tax heaping failure.

Reliable estimated costs to set up the personnel machinery for this socialized medicine, compulsory insurance run as high as $7,000,000,000 annually. It would swell by over 1,000,000 the number of employees in the Federal bureaucracy.

There are at least 10 Communist fronts working for social insurance. Do you think they are trying to improve conditions in the United States? Do you have the idea they are trying to build a strong nation able to stand up against Soviet Russia?

Millions of American citizens today propose to subject your education to the healing strength of money and call on the compulsory power of the Federal Government to make the towns, counties, cities, and States do what the Federal Government think they should do.

The principal registered lobbyist for Federal aid is the National Education Association. It has a membership of 370,000 (many Communists) paying annual dues of one and one-third million dollars. The headquarters and personnel are greater than the Republican and Democratic headquarters combined.

It is the vicious circle of statism. Add to the present 2,000,000 Federal employees, one and one-third million for processing socialized medicine and compulsory health insurance, a million Government controlled or influenced teachers and public-school personnel. Then add a million tenants in the proposed $7,000,000,000 Federal housing program; keep on pouring new billions into—

1. Expanded social security;
2. Veterans' bonuses and pensions;
3. Maintenance of farm prices at wartime levels;
4. Subsidies to shipping;
5. Larger donations or loans to foreign Socialist governments;
6. Support for tottering European currencies; and
7. Expansion of Federal bureaucracy; and then you will have attained the socialized state which you will probably have to keep indefinitely, and you will have completely forgotten Abraham Lincoln's philosophy on limitation, when he said:

1. You cannot bring about prosperity by discouraging thrift.
2. You cannot strengthen the weak by weakening the strong.
3. You cannot help small men by tearing down big men.
4. You cannot help the poor by destroying the rich.
5. You cannot lift the wage earner by pulling down the wage payer.
6. You cannot keep out of trouble by spending more than your income.
7. You cannot further the brotherhood of man by inciting class hatred.
8. You cannot establish sound security on borrowed money.
9. You cannot build character and courage by taking away a man's initiative and independence.
10. You cannot help men permanently by doing for them what they could and should do for themselves.

If you are a supporter of constitutional government as established by Washington, Jefferson, and Lincoln; if it is your desire to escape paying still higher taxes and to retain economic freedom, then write your Representatives and Senators, wire your Representatives and Senators, and tell them repeatedly to vote against spending projects which will unbalance the budget and enlarge the sphere of Government. Because America's future will be just what you make it, not necessarily what your Congressmen are willing it should be.

Only organization, community by community, and willingness of individuals to do the work themselves can ever stop the undermining of our constitutional freedom.

You cannot hire someone else to save your liberty. You yourself must fight for it or you will lose it.

You have a vote. You have influence. Please take advantage of the pamphlets I have placed at your plate. Use them. Join the Committee for the Extension and Perpetuation of Constitutional Government.

Again, I want to state: I speak for no party or economic group. My client and your client is our country. And I close with all the words of a great lawyer of the old South:

"He who saves his country, saves all things, and all things saved shall bless him. But he who lets his country die, lets all things die, and all things dying shall curse him."

Fair Deal Is a Misdeal

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. DAGUE. Mr. Speaker, in asking leave to extend my remarks in the Appendix of the RECORD, I am pleased to call to the attention of the House an editorial which appears in the current issue of the Saturday Evening Post. Particular emphasis is placed on the fact that much of the legislation urged upon us and many of the messages we receive are largely for propaganda purposes and it behooves us to regird ourselves for the campaigns of 1950 and 1952 so that we may be able to meet these absurdities with facts and truths. The able article herein referred to follows:

THE FAIR DEAL IS PART OF TRUMAN'S PROPAGANDA MILL

Those who have read George Orwell's fascinating and terrifying book, Nineteen Eighty-four (Harcourt, Brace), must have noted disquieting resemblances between the excesses of statism in Orwell's hideous Utopia and conditions which already exist practically everywhere. The perpetual war which didn't exist except as a figment of public relations, with occasional bombs dropped by the Government to keep up morale; the portentous economic plans which could never be fulfilled, but were useful as a pretext for liquidating deviating officials; the bureau whose duty it was to rewrite history in accord with the latest dictates of the party line; are these so unfamiliar that we can afford to haw-haw at Mr. Orwell's cute concepts?

As a matter of fact, there is a considerable amount of 1984 in the so-called Truman program, which appears less and less like a program and more and more like the raw material for future Fair Deal propaganda. The administration introduces a fantastic and unworkable measure like the Spence control-everything bill, knowing perfectly well that it has no chance in Congress. In fact, the administration would probably go crazy if its passage were remotely possible. But in 1950 and 1952, Mr. Truman, or whoever takes over his role, can beat the bushes from one end of the country to the other, explaining to the customers that "we had a program of great benefit to the people, but the reactionaries, Fascist beasts, and Wall Street speculators, not to mention the real-estate lobby, beat its brains out."

It's an old idea, but the means of implementing it are improving. More disquieting still, the disposition of supposedly responsible officials to put power before principle is increasing. This trend has terrified an old Democratic wheel horse like Jimmy Byrnes.

The conduct of the Truman administration on the Taft-Hartley law is a case in point. Had the administration wanted a fair and workable labor law, it had its chance to put one on the statute books. The White House knew from the outset that there was no chance of persuading Congress to surrender to the labor leaders on every issue and leave the Government without any means to stop even such a strike as the drastic affair which has strangled the economy of Hawaii. It is doubtful that the Truman forces wanted any such surrender, but they wanted to pose as the uncompromising friends of labor—or rather of the labor leaders. In contrast to the wise and courageous statesmanship of Senator TAFT, who was always willing to compromise wherever that was possible in the public interest, and whose purpose was to write a decent labor law, the Truman administration stood pat on the position that nothing short of complete Government impotence in time of emergency would do. The more charitable judgment is that this stand was pure fakery, designed to lay the groundwork for another Dave Niles campaign. To accuse the Truman forces of sincerity in such a dubious cause would be a judgment too harsh for humane men to accept.

There are times when 1984—a time when, according to Orwell's book, achieving power and keeping power will be admittedly the be-all and end-all of our new and determined governing class—seems just around the corner.

Are They Traitors or Patriots?—What Are the Motives and Objectives of Those Responsible for Our Policy in the Orient?—The American People Have a Right to Know

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. SANBORN. Mr. Speaker, I believe the American people are entitled to know the motives and objectives of those responsible for our policy in China and the Orient.

While directing all our attention to Europe which has nothing that we need or want, the pro-Russian group in our State Department has delivered Asia into the hands of the Communists who can now seize and control the tin, raw rubber, manganese, bauxite, and other critical materials so essential to our economy and our national safety.

There is not the slightest doubt but that the State Department has been suppressing the news and misrepresenting the facts in Indonesia and playing directly into the hands of the Indonesian Communists; and when 13 top-flight American newspaper men went down there to investigate and were prepared to tell the American people the truth, their plane was wrecked and they were all killed in an accident that had every indication of sabotage and murder.

Moreover, there is much ground for suspicion that international banker cartels, or their agents, have been financing the Indonesian Communists and that their price for such financing is to be a monopoly on those strategic materials so that they can make American business and industry pay through the nose for them.

The following article by Constantine Brown, eminent authority on international affairs, which appeared in the Washington Evening Star of July 24, 1949, gives a restrained and conservative appraisal of the effect of the policy of our State Department in the Orient:

STORM SIGNALS ARE RAISED BY OUR AGENTS IN FAR EAST—ACCELERATED WORK BY SUBVERSIVES IN ASIA BLAMED ON DISASTERS OF CHINESE NATIONALS AND LACK OF UNITED STATES SUPPORT

(By Constantine Brown)

From India, Burma, Indonesia, and Siam, American diplomats and other agents are sending alarming reports to Washington.

All of them, in effect, say the same thing: The disasters of the Chinese Nationalist Armies have strengthened the Communist subversives in those countries and unless something is done to restore the prestige of the United States—which is the main prop of western democracy—it will not be long before these countries also fall behind the iron curtain.

In spite of the State Department's formal statements that it is doing its utmost to support the new democracies in the Far East, the record is not particularly favorable to those who formulate and apply our foreign policies.

TRAGEDY SILENCES PRESS

The tragedy which occurred nearly 2 weeks ago near Bombay, when 13 top American reporters were killed in an airplane accident on their way back from Indonesia, silenced our journalistic fact finders. All of them had looked into the situation in Indonesia and had obtained much material for an extensive exposé of our blunders in that part of the world.

Little had been published about their findings before their deaths. They had gathered material proving conclusively that we were acting ideologically rather than rationally in our policies toward Indonesia. The few dispatches which reached the United States from these correspondents made it clear that official observers in the field were reporting their findings factually to their superiors, but that these reports were doctored to suit an ideological pattern aimed at showing the Dutch completely in the wrong and the Indonesian politicos—mostly inexperienced emotional men who easily could fall into the Communist trap—completely in the right.

The Netherlands Government has been taken harshly to task in official and unofficial quarters for having used high-handed methods when it intervened in the affairs of the Indonesian Republic, which was threatened with Red infiltrations in spite of the sincere desire of its leaders to keep the Communists out.

DUTCH REVEALED CONDITIONS

Nations which have become free without ever enjoying the benefits of home rule know little of the pitfalls of Communist imperialism. The Indonesians have been under Dutch tutelage for nearly 300 years. Before the Dutch came in their own satraps gave them no freedom, because in those days the people were the servants of their rulers.

The Dutch Government last year approached the Joint Chiefs of Staff with the true facts of the situation that was brewing behind the backs of the leaders of the Indonesian Republic. They placed substantiated evidence squarely before our top military

men, who, after consulting President Truman, are believed to have told the Dutch that as police operations were necessary, they had better go ahead, provided that the Netherlands Government's pledge to give the Indonesians freedom was respected.

On the strength of that approval the Dutch began their police operations, which were bitterly denounced by our own State Department as well as the governments of western Europe. At the January meeting of the United Nations in Paris the American representative, Dr. Philip Jessup, was instructed to make a strong statement against the Netherlands Government, which was threatened with dire actions, including the denial of Marshall plan funds, unless it changed its policies in Indonesia. The State Department's draft was toned down considerably by President Truman, who knew the background of the Dutch police operations, having been apprised of them beforehand.

CAUSED CONFUSION

The uncertainty of our policies, which at first quietly encouraged the Dutch authorities in their police action and later brought an official spanking, has caused more confusion than anything else in Indochina. It also encouraged Communist agents to continue their work, fully realizing that the West would not disavow its official stand.

Outside of a minority of western-educated persons, the Asiatics have not yet had the opportunity to become familiar with self-government and the real meaning of democracy. Among these educated persons there are some who are so utterly selfish that they would join any movement or any country which offers the best promise of rise to power. Soviet agents are taking full advantage of this.

Political leaders in the West—particularly in the United States—say that we all look to improvement of the lot of the common man and are offering economic and ideological support for the creation of a better world in the Far Eastern countries. The Russians use these same pleasant words in their broadcasts, but they, in fact, support with arms and ammunition all those who are willing to serve Russia's imperialistic aims.

REDS HELPED WITH ARMS

While the American Government lamented the fact that the Nationalist Government could not be helped properly because it was undemocratic and corrupt, the politburo was sending all kinds of help to the Communists, after making sure that they were reliable tools in its hands. The result has been a spectacular defeat for the Nationalist forces.

In the eyes of all the Asiatics who remember how much we helped the same corrupt government in by-gone days, the defeat in China was not Chiang's, but ours. And with this deeply embedded belief, Moscow's agents are working now throughout the Asiatic Continent.

MOSCOW'S AGENTS OVERRUN ASIA

Moscow's agents in India, Indochina, Burma, Siam, and Indonesia are losing no opportunity to incite people to follow Moscow's hand-picked leaders and rid themselves of the domination of the west. Even President Truman's program to assist the economically backward nations is being used against us. Soviet agents explain that Mr. Truman's plan is nothing but an attempt to enslave forever the people who happen to possess raw wealth.

The consequences are visible to the naked eye. In India, where a group of statesmen are at the helm and know the score, there is increasing agitation. Premier Nehru, while expecting to weather the storm; is in a difficult position which, according to reliable reports from all ports of India, will become untenable if one of those periodical famines occurs again. As things now are, he is being harassed and bitterly attacked by a small but active group of Communists who have infiltrated India in the last 10 years.

Prime Minister Nehru, faced with this serious potential problem, has put between 5,000 and 8,000 saboteurs in concentration camps. But he has only scratched the surface, as we have in this country, by sentencing a few proven Communist spies or by exposing their subversive front organizations. In a country like India, which suffers from hunger perennially, the work of these agents is not difficult.

OPEN WARFARE STIRRED UP

A similar situation exists in Burma, which also became independent of Britain after the war ended, as well as in Siam, where the government has to deal with a cleverly organized subversive organization. In Indochina and Malaya, the remaining outposts of British and French colonial empires, there is open warfare stirred up by Moscow. Communist bands from China reinforce the native elements. This warfare is draining the French treasury and is causing a severe headache for the London government.

So long as the United States was willing to support the Nationalist Government of China these movement in other parts of Asia were negligible. The Russians were preparing the ground, sending their agents to the most strategic spots. But it was only after the summer of 1946, when the American Government decided to abandon military support for China, that Communist work became aggressive and more effective.

Up to that time whatever assistance was given the Chinese Communists was surreptitious. But when it became obvious that the forces of the Nanking governmen' would have to fight on their own, assistance to the Reds in the form of war material was speeded up and military strategy was applied more extensively.

At the same time cells in the other far eastern countries, which had just obtained their freedom were increased. Arms were sent from Soviet ports in Asia by freighter and submarine, and the people were encouraged to rise against the established governments.

MORE TROUBLE EXPECTED

Nothing spectacular has happened in India yet, although serious trouble is expected after all China falls into the hands of Russia. But in Burma, Siam, Indochina, and Malaya full-fledged guerrilla warfare already is in progress and the government forces are fighting with their backs to the wall.

The responsibility for this tragedy—which could still be averted by positive and energetic actions—falls to a great extent on our State Department. Our diplomats in the field and many trained officials in Washington have seen the writing on the wall. But their advice is obscured by policy makers who insist on making over the world. These men speak glibly about liberating hundreds of millions of Asiatics from exploitation by the colonial powers, but they do not bother to determine whether those peoples are ready to enjoy the same freedoms we do in this country, or whether a change in their leaders will mean simply a change of masters.

STATE DEPARTMENT WOULD RECOGNIZE CHINESE COMMUNISTS

No one in the State Department seems to bother about whether the Asiatic leaders are Dimitrovs, Bieruts, Rakosis, and Paukers with different colored skin. None of our policy makers appears to worry about a period of political transition in those countries, which are backward not only economically but politically as well.

A number of high-ranking State Department officials would like very much to see the Chinese puzzle solved by recognizing the Chinese Communists, but they never ask whether Mao Tze-tung and the other Moscow-appointed leaders of the Reds are as venal and corrupt as the Kuomintang crowd.

Meanwhile, storm signals are reaching Washington from all of our observers who are stationed in Asia.

Address of Hon. Antoni N. Sadlak, Congressman at Large, Connecticut, at State Convention of Disabled American Veterans, Bridgeport, Conn.

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address that I delivered at the State convention of Disabled American Veterans at the Hotel Stratfield, Bridgeport, Conn., Sunday, June 12, 1949:

I'm very happy to address this fine gathering of patriotic Americans. I emphasize "patriotic Americans," because I am sure that each one here carries in the book of his life glowing chapters of heroism, valor, and the kind of spirit that helped us, as a country, to defeat the enemy and to achieve victory in two world wars.

I want to assure you that Congress and the American people have not forgotten your great sacrifices in the war. In the past, Congress has passed laws benefiting all veterans. And continually, it is planning legislation to provide the returned veteran with many opportunities for happy living. Today, I'd like to discuss with you some of the opportunities, particularly, for the disabled veteran. Opportunities in education, employment, and in everyday life.

First, let us consider a disabled veteran's chances for an education. The Government provides five different types of schooling. They are: (1) classroom education in schools, colleges, and universities, plus foreign duty; (2) apprentice training, combining actual shop work with classroom work; (3) on-the-job training as distinguished from regular apprentice training; (4) vocational rehabilitation, available only to veterans having a compensable service-connected disability and in need of vocational rehabilitation; (5) institution on-farm training, which combines classroom instruction with practical farming.

These opportunities are afforded each veteran under the GI bill and Public Law 16. In all cases, the Government not only takes care of the tuition, but also provides a subsistence allowance for the veteran. Education is a benefit of which every veteran should avail himself. It's an opportunity of a lifetime.

Secondly, let us look into the employment opportunities for the disabled veteran. As you all know, civil-service positions are now based on a system of veterans' preference. In other words, a system of rights and benefits established by various acts of Congress by which most veterans are given advantage over the general public in obtaining and keeping jobs in the Federal Government. Most veterans' widows, certain widowed mothers of deceased or totally disabled veterans and a few wives of disabled veterans also may benefit under the preference system. Every honorably discharged veteran who served in wartime is entitled to a 5-

point preference; whereas, a disabled veteran, who served in peace or war and who is honorably discharged, is entitled to a 10-point preference. His disability can range from 1 percent to 100 percent. A Purple Heart veteran is entitled to 10-point preference even if his disability is only 0 percent.

I'd like to add here that veterans are receiving their share of civil-service jobs. There are now more than 900,000 veterans on the Federal pay roll; about two-thirds of whom are World War II veterans. The percentage of Government jobs held by veterans increased from 13 percent in 1944 to approximately 45 percent in 1949. While obviously, there is not a Federal job for every veteran, veterans did receive 55 percent of the permanent appointments made in 1948.

In connection with veterans' preference, I introduced a bill last January, H. R. 547, which provides that the name of a veteran eligible shall not be deemed to have been passed over if another preference eligible is selected from a certification of eligibles by the Civil Service Commission. Very fine hearings were held on this measure last Thursday before the subcommittee, of which I am a member, and executive sessions will take up this issue next week.

Veterans also have many other rights and privileges relating to Government employment. Various types of Government work reserved for them exclusively include patrolman, guard, railway postal clerk, custodian, VA contact representative, and lockman. Nonveterans can be appointed to these positions, only if there are not enough eligible veterans available for appointment. A disabled veteran and other 10-point preference eligibles have the right to reopen most examinations, after they have been closed to the general public. This privilege, applying to a more limited number of examinations, is extended to nondisabled veterans for a period of 120 days following discharge.

Now that we've discussed briefly education and employment opportunities, let's see what other benefits the disabled veteran can enjoy.

One law, due to expire the 30th of June allows amputees of World War II up to $1,600 for a new automobile. I am hopeful that this benefit will be extended for a longer period. As a matter of fact, I introduced H. R. 3641, which would authorize payments by the Administrator of Veterans' Affairs on the purchase of automobiles by certain disabled veterans for another 3 years. In my bill, I also ask that the Government pay the tax on vehicles in addition to the $1,600. Also that this benefit be extended not only to arm and leg amputees but to veterans who lost their eyesight in the war. I understand that many of the veterans who would be eligible for this benefit are still undergoing treatment in hospitals. If this law was extended, as I earnestly hope it will be, it would enable these veterans to benefit by it as soon as they are discharged.

Also, the Government provides for special homes for paraplegics. A veteran of peacetime service or wartime service may qualify for Federal aid to buy a home especially designed for wheel-chair living, if he has a permanent, total, service-connected disability due to a spinal cord disease or injury which results in paralysis of the legs and the lower part of the body. The Government will allow this disabled veteran up to $10,000.

The Committee on Veterans' Affairs has many bills pending that would benefit disabled veterans; some of these are: H. R. 288, to encourage employment of veterans with tensionable or compensable service-connected disabilities through Federal reimbursement to any employer, insurer, or fund, of amounts or workmen's compensation paid on account of disability or death arising out of such employment; H. R. 1574, to grant permanent and total disability ratings to veterans suffering from severe industrial inadaptability as a result of war service; H. R. 3050, a bill to amend Public Law 702, Eightieth Congress, to extend assistance to certain veterans with wartime service-connected blindness in acquiring specially adapted housing which they require by reason of the nature of their service-connected disability; H. R. 4837, to provide electric typewriters for veterans of World War II who, by reason of the loss of an arm, have suffered an impairment in their ability to write. The Veterans' Affairs Committee is now awaiting reports which were requested from the Veterans' Administration on all these measures, which reports must be submitted before further action can be expected.

I can't promise you that all of this legislation will be heard and brought to the floor for action during this session of Congress, but I will urge you to write to your Congressman and your Senators to try to expedite action on any bill that is of particular interest to you. For my part, I'd like to offer my cooperation in introducing any legislation beneficial to you. I feel that we owe the disabled veterans a great debt of gratitude which we can never repay by material means. I also do feel that if we, as a country, can afford to spend billions of dollars in building up foreign countries wrecked by the war, then, by the same token, we can afford to spend a few million dollars to make life more comfortable for our boys who fought so bravely to win the war. Their sacrifices preserved for us our democracy. I, for one, cannot lend a deaf ear to your voice now.

As for your organization, the Disabled American Veterans, I have only the highest respect and esteem. It has consistently, over the years, concerned itself only with the purpose for which it was chartered by the Congress of the United States, the aid and assistance of the wars' disabled, their widows and orphans.

Here in Connecticut you have on numerous occasions brought to my attention, and that of other legislators, various inequities that exist with reference to the wars' disabled, their widows and orphans and I have consistenly endeavored to aid and assist in correcting them whenever possible. This I shall continue to do.

I congratulate you on your selection of auxiliary and department officers and I wish them a most successful and harmonious administration.

Reorganization Plan

EXTENSION OF REMARKS
OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. SCUDDER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article published in the New York Times of July 26, 1949:

FEDERAL AGENCY MOVE OPPOSED—REORGANIZATION PLAN CRITICIZED AS NOT IN INTEREST OF PUBLIC HEALTH

To the EDITOR OF THE NEW YORK TIMES:

Government by default has never been the American way. Yet unless the people of the United States, through their elected representatives in Congress, assert themselves quickly on a vital matter of public health, they may be saddled with an undesirable change in he executive branch of our Government.

There is before Congress at present a request from the President that the Federal Security Agency be given full Cabinet status as a Department of Welfare. The present Federal Security Administrator would become acting Secretary of Welfare until the President appointed a Secretary of Welfare.

This request has been referred to the Committee on Expenditures in the form of Reorganization Plan No. 1 under the recently enacted reorganization law. It will automatically go into effect unless the House of Representatives or the Senate by affirmative action of a majority rejects it before August 19. No modification or amendment of the request is possible under law; it must be accepted as drafted or wholly rejected.

I believe the public is entitled to know the implications of this little publicized request.

HEALTH AGENCY ADVOCATED

Since 1884 the American Medical Association has advocated the creation of a Federal Department of Health with a Secretary who is a physician. It has always believed that the health of the American people is sufficiently vital to justify an independent executive department. Point No. 1 of the 12-point program for the advancement of public health adopted last February by the American Medical Association recommended the establishment of such a department.

We have always been opposed, however, to having health activities of the Government combined with other governmental affairs, because we believe such activities can best be administered by a physician occupying high Government office dealing exclusively with health. It was the recommendation of the Hoover Commission that such a policy be adopted.

We believe that this reorganization plan would nullify the very purpose of the Reorganization Act of 1949.

This plan does not follow the Hoover Commission's recommendation. It states correctly that the Commission "recommended the creation of a department to administer the social security and education functions of the Federal Government." By giving the proposed Department of Welfare all the functions and duties of the present Federal Security Agency it is, however, going far beyond the Commission's recommendation.

CHECK TO PROGRESS

There is real danger in combining health activities with other important activities in an executive department. We believe that a physician is better equipped to deal with a health emergency, for example, than a layman who is not solely concerned with problems of health. In a mixed department there is also the danger that public health would be subservient to other departmental interests and, finally, it would probably long postpone establishment of an independent health department which we believe would be of inestimable advantage to the health of the American people.

The American Medical Association is strongly of the opinion that a Department of Health with a Cabinet officer who is a physician at its head, is warranted. It recognizes, however, that such a department might not be feasible at the present time. Therefore, it believes it would be preferable to group-health activities in an independent bureau instead of bringing them within the jurisdiction of an executive department that is not primarily concerned with health.

Since, by law, amendment or modification of the current reorganization plan is not possible, the only alternative is rejection of Reorganization Plan No. 1.

Surely our people are entitled to full information on the meaning of so important

a proposal before it is adopted. Surely Congress, recognizing this right of the people to know, will not permit enactment by default.

GEORGE F. LULL, M. D.,
Secretary and General Manager American Medical Association.
CHICAGO, *July 20, 1949.*

Letter of Prof. Albert B. Newman

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JULY 5, 1949.

Mr. FREDERICK J. LIBBY,
Executive Secretary, National Council for Prevention of War, Washington, D. C.

DEAR MR. LIBBY: Only within the past few days I have seen for the first time part of the Washington Agreement of April 13, 1949, dealing with prohibited and restricted industries. I am amazed to learn that the so-called Fischer-Tropsch process has been prohibited in Germany by agreement of the United States, Great Britain, and France, and that the western zone plants are to be removed from Germany or destroyed as soon as possible.

I can conclude only that the American authorities who consented to this provision must have been misinformed as to the nature of the process. At a time when American policy is supposed to favor peacetime economic activity in Germany for the purpose of establishing that country as a self-supporting democratic unit and to relieve the American taxpayer of underwriting the German deficit, it is not possible for me to see any justification in destroying the existing Fischer-Tropsch plants which are now partly in operation and which could probably produce about $80,000,000 worth of peacetime products annually, and probably double that value of refined products when the necessary industrial research gets well under way. These eighty to one hundred and sixty million dollars worth of values would otherwise have to be imported into Germany largely at the expense of American taxpayers.

Somewhere along the line these plants were called "war plants," presumably because they made some contribution to Germany's war supply of gasoline. It should have been noted, however, that all synthetic fuels constituted only 29 percent of Germany's requirements at the peak of the war and that only about 6 percent of the 29 percent came from the Fischer-Tropsch process. The balance was made from coal by the Bergius hydrogenation process. It should have been also noted that there was no wartime expansion of Fischer-Tropsch facilities, as they were not considered important in the synthetic-fuel picture on account of the fact that it was more feasible to expand Bergius capacity.

To understand the economic role of the Fischer-Tropsch process in Germany, it is necessary to give a brief description of the process. In the process itself a gaseous mixture of hydrogen and carbon monoxide is processed through a bed of catalytic material. The main operating variables are the ratio of hydrogen to carbon monoxide in the synthesis gas, the nature of the catalyst, the temperature, and the pressure. By controlling the variables, the process can be made to produce mainly gasoline or mainly a mixture of oils and waxes which can be converted by known chemical industrial processes into detergents, plastics, solvents, plasticizers, and many other commercial products. In Germany, the economics of the situation make it more profitable to operate the process in such a way as to produce a minimum of gasoline and a maximum of the materials which form a basis for a very substantial peacetime chemical industry.

The hydrogen and carbon monoxide mixture is normally made from coke and steam, and the coke used can be of low grade, unsuitable for metallurgical purposes.

The Fischer-Tropsch process, modified to a large-scale operation by American engineers, is being developed in the United States. The only interest here is apparently to use the process for synthetic fuel. The economics of chemical industry raw materials in the United States does not make Fischer-Tropsch operation for this purpose feasible at this time. The enormous steel production in this country as compared with Germany means a correspondingly greater production of coke and the byproducts of the coke production furnish correspondingly great quantities of raw materials for American chemical industry. The Fischer-Tropsch plants are owned by the coal-mining industry of Germany, one of the reasons being the opportunity for profitable disposal of the lower grades of coal and coke.

The question naturally arises why the Humphrey committee did not recommend the preservation of this industry. As far as I can gather, the instructions to the Humphrey committee restricted its study to a comparatively small group of the industrial plants remaining in Germany. Among other groups of plants, they were not instructed to investigate the so-called "prohibited industries," and I believe that they did not study the Fischer-Tropsch plants.

As you know, I was chief of the chemical-industry section of the American Military Government in Germany for the first year of the occupation. By an arbitrary division of functions to which I was not a party, synthetic fuels were not under the chemical-industry section, but were made a petroleum section. I had my hands full trying to work out with the Russians, British, and French some kind of orderly approach to the very complicated chemical industry for which we were responsible. I had no special knowledge of Fischer-Tropsch, but assumed that it was almost entirely a synthetic fuel project. If at that time I had known what I know now, I certainly would have had that process transferred to the chemical-industry branch. Unfortunately, Fischer-Tropsch installations were all in the British and Soviet zones, and, therefore, the matter did not come to my attention. I feel sure that this entire matter would have had a very different outcome if one or more of the plants had been in the American zone.

When I left Berlin the chief of the petroleum section was a man whose background for the job was filling-station experience in the United States. If the advisers at the Washington conference were men with those qualifications, it is not difficult to understand why the chemical-industry aspects of Fischer-Tropsch were not understood.

The recent phrase "a vested interest in error" is appropriate to this situation, and it appears that Members of the Congress, who were not parties to this series of errors, are the only ones who can call a halt to this needless destruction of productive property. I shall be glad to have you use this letter in any way you think best.

There is no doubt in my mind that the British and French authorities are aware of the implications of Fischer-Tropsch destruction in Germany, and it is possible that the pressure they exerted was due to agreement between the two great chemical companies, British and French, to eliminate a peacetime competitor in an important chemical development. This elimination of competition by force is contrary to American ideals and should be repugnant to every American.

Sincerely yours,

ALBERT B. NEWMAN,
Professor of Chemical Engineering, College of the City of New York, and Past President of the American Institute of Chemical Engineers.

The Pulp and Paper Industry in the United States

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1949

Mr. MACK of Washington. Mr. Speaker, during the first year of ECA the ECA nations of Europe are reported to have purchased pulp and paper valued at $59,700,000.

Of this total only $10,229,000 was spent with the United States pulp and paper mills. Canadian mills, I understand, received orders for most of the remaining 75 percent of this pulp and paper.

Furthermore, Canadian mills received their orders at a time when the pulp and paper industry of Canada was operating at full capacity, while similar pulp and paper plants in the United States were operating at only 80 percent of capacity and that lower rate of operations still was continuing to decline.

WORKERS LOSE EMPLOYMENT

As a result of this favoring of Canadian pulp and paper producers over those of the United States, many workers in United States pulp and paper plants have lost their employment and many others, who are still employed, are working on curtailed working schedules which have materially reduced their take-home wages.

To produce one ton of pulp requires 22.8 man-hours or 2.85 man-days of work by those employed in the industry. When one considers that approximately three people are supported by each pulp company employee, one finds that approximately 8.55 persons are entirely supported for 1 day by each ton of pulp that is manufactured. Furthermore, many suppliers of materials and services also are dependent on the operators and employees of the pulp and paper mills for their livelihood.

When one considers that thousands of tons of pulp are being purchased in Canada by the ECA nations that could be bought just as well as not in the United States, the unemployment created by this discrimination against the United States pulp and paper industry adds enormously to the number of the American unemployed.

Not only are these thousands of American pulp and paper workers thrown into unemployment but we, the American people, who supply by our taxes the money to European nations to buy this pulp and paper, must then pay additional taxes to provide unemployment benefits

to those American workers who have been made idle by this discrimination by the ECA nations against the American pulp and paper industry and their favoritism to the Canadian producers.

ECA was not instituted to aid Canada, which the record will show has an abundant supply of American dollars.

MANY TOWNS HARD HIT

The American pulp and paper industry, dependent as it is on a bulky raw material drawn from the forest, has as a matter of sound economy established most of its plants in small cities of 5,000 to 20,000 population.

A single large pulp and paper mill in a small city of such population is usually the only industry in the city. When that industry closes down, the whole community suffers.

It is important to the American economy that these plants be kept operating.

If such plants do not operate the Federal Government loses the corporate taxes that the owners of such plants, if operating, would pay.

If these plants do not operate the personal income earned by the workers in such plants declines and the Federal Government loses personal income taxes it otherwise would collect.

Also, the Federal Government will be called upon to pay out large sums in relief or in unemployment taxes while the Canadians, who get the business we should have, prosper. The Canadians already, due to their increased prosperity because of ECA, removed all excise taxes on railroad fares, telephone and telegraph charges, jewelry, cosmetics, and furs, while our President has urged a $4,000,000,000 increase in taxes on the American people.

In my own district there are pulp and paper mills at Hoquiam, Shelton, Longview, Vancouver and Camas which normally give steady employment to thousands of workers. Already these workers have suffered, some by losing their jobs entirely due to close-downs and others by having their incomes reduced due to curtailed operations of the mills. Others will be adversely affected if present ECA practices continue.

They want to support the Government in every way possible, but they cannot support it financially as much as they would like to if ECA nations are permitted to place most of their orders for materials with Canadian industries that do not need American dollars and while our American workers do need jobs.

A Friendly Comment on the President's Speech

EXTENSION OF REMARKS
OF
HON. HARRIS ELLSWORTH
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial column written by Mr. Frank Jenkins, publisher of the Herald and News at Klamath Falls, Oreg. The daily column written by Mr. Jenkins appears also in the Medford (Oreg.) Mail-Tribune and in the Roseburg (Oreg.) News-Review. All three newspapers printed the following editorial which, I believe, is worth careful reading:

(By Frank Jenkins)

President Truman, in his fireside chat, laid the blame for everything that may be wrong with us on the Republican Eightieth Congress. These wicked highbinders, he tells us, cut taxes. They refused to give him spurs and a Spanish bit with which to ride the inflation broncho.

Then he adds:

"Now these same selfish interests are urging us to commit a third great blunder. They are urging drastic cuts in Government spending—cuts which would fall hardest on those expenditures which are most important to our domestic economy."

I understand the President's position, of course. Last fall, when it seemed that he didn't have a chance, he pulled his belt a couple of holes tighter and went out and, in his own words, "gave 'em hell."

It worked. People love to see hides hung on the fence (except, of course, those whose hides are being hung). President Truman is a workmanlike hide-hanger. He has the knack for it.

He has been having some trouble with his own Eighty-first Congress and so it seems quite reasonable that he should revert now to the strategy that worked as well last autumn. No one can hold that against him.

But, in all seriousness and with complete good will, I should like to offer this comment as an individual:

Mr. President, I think you're wrong in your views on spending. I'm a businessman. Like most businessmen, I've been in bad business trouble more than once. Always it has been because I had spent too much in relation to what I was taking in.

I've tried your way of getting out. I've said to myself that the way to make money is to spend money—recklessly, if need be. It never worked. It just got me deeper into the hole. I know it sounds good, but it just doesn't seem to work.

The only way I've ever been able to pull myself out of a business situation that was beginning to go sour has been to tighten up on my spending, to see to it that each dollar goes further than it has been going in the past; in a word, to spend less than I'm taking in.

That way works. The other way—the spend it with both hands in an effort to play even way—just doesn't seem to work. I think most American businessmen have had the same experience. I think, in your insistence on spending and your somewhat biting references to the penny pinchers who want to spend less, you're off on the wrong foot.

I hope, Mr. President, that you won't take amiss what I'm saying. I like you. I'm fond of you. We owe it to those we like to speak plainly in an effort to help them. Plain speaking nearly always does more good than lally-gagging.

You were a businessman yourself in your younger days before you got into politics. If I'm not mistaken, you got into bad business trouble, like a lot of the rest of us. You went broke, as I recall it.

I think, Mr. President, that if you had had the right kind of advice, and had taken it—if some tough old bird who had been through the mill had convinced you in time that the thing to do was to cut down your spending until it was less than your income—you might have escaped the harrowing experience of going bankrupt.

Again, please, don't get me wrong, Mr. President. There is nothing discreditable about going broke as an individual—especially when, as I understand you did, you pay up all your honest debts so that no one else suffers by your lack of business acumen. Many a good man has gone broke and has come back better than ever.

But here is something I feel I must say to you, and I think you will agree that I am right:

The difference between running an individual, private business into bankruptcy and running a nation of 150,000,000 people into bankruptcy is as wide as the distance between our earth and the farthest tiny twinkling star in the solar system—and that distance has to be measured in millions of light-years.

An individual who goes broke can come back. The nation that goes broke never comes back. Greece and Rome point that moral for us. The sorrow, the suffering, the grinding poverty that ensue when nations go broke are beyond description.

I don't think you want to be responsible for anything like that, Mr. President. But when you talk of spending more than we take in in a time like this when our debt is already physically greater than any nation's debt ever was before, you're steering our boat into a rapid at whose lower end lies a destroying cataract.

I hope you'll pardon me, but I just couldn't help saying this to you as a friend.

Paternalism in Government

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. AUCHINCLOSS. Mr. Speaker, under authority granted me by the House, I am very glad to have printed in the RECORD an address made by Mortimer E. Sprague, president of the New York Board of Trade, before the Fort Worth Chamber of Commerce, Fort Worth, Tex., on May 18, 1949. Mr. Sprague is also vice president of the Home Insurance Co. of New York City, he being only another example of a citizen of Texas who has been given a position of responsibility in the industrial East.

Mr. Sprague clearly sets forth the objections to paternalism in Government and deplores in his remarks our trend toward socialism. It is very appropriate that this warning comes from a Texan, because the people of Texas are a free people who enjoy the development of their own lives and their own businesses along the lines of the American system. It has been my observation that the people of Texas have big minds and generous hearts, and are always in favor of Americans standing on their own feet and working out their destiny without paternalistic interference of a centralized Federal Government.

I hope my colleagues will read this excellent address by an excellent citizen.

The address follows:

It is with a deep and sincere feeling of appreciation that I am here today in response to your invitation to address this distinguished body. Although I am supposed to do so in the capacity of President of the New York Board of Trade, I would rather think

of it as one fellow Texan talking with another. We should have no difficulty these days in finding a subject in which all Americans should have an undivided interest.

Perhaps it would be appropriate to open my remarks with a quotation of a great American: "How little do my countrymen know what precious blessings they are in possession of which no other people on earth enjoy."

This reflection and timely warning might have come recently from one of our representatives at the halls of the United Nations. They might have been an expression of a so-called reactionary observing the wheels going around in Washington where a new and changing philosophy of American Government seems to be emerging. They may have been the soulful words of someone attached to Judge Medina's Federal Court in New York City where 11 top Communists have been on trial since January 17, charged with the indictment of seeking to overthrow the Government of the United States by force and violence.

This lament, however, does not spring from any of these. This regret that some of our countrymen do not appreciate their precious blessings, which no other people on earth enjoy, was expressed by none other than Thomas Jefferson. It is from the inspiration of his words that I have chosen my theme of today—"Paternalistic Government."

We have heard, on many occasions in the past few months, that commerce and industry are faced with another struggle with socialistic forces—that business will be conducted in an unfriendly or even antagonistic climate—that an internal cold war is inevitable. That there is some basis for this belief is undoubtedly true.

We should have matriculated in the schools of international politics and policies through our experience in the past decade or so. Certainly, we should have become more astute in economics as well. Our observation of state socialism in other countries, as well as our own exposure to some modified measures prior to and during the late war, should cause us to look to the future with a careful eye. Unwittingly, perhaps, but nonetheless true, we have paid little attenion to the advance of special group interests in the control and administration of our Government policies.

The danger today lies in the general inertia and passive attitude on the part of the great mass of people, particularly the businessman, which allow these special groups to assume the voice of the great majority as they make up in intensity of effort that which they lack in sound backing.

We have been alerted to the more obvious attacks on our ideals and standards in government, education, and general way of life, but we seem to have a blind side when presented with evidence of the more insidious attacks upon our economic system. Perhaps it is a willful blindness for usually such attempts are cloaked in plans which hold out the promise or gain for a particular group or class. Perhaps it is the unthinking acceptance of the belief that we may accept parts, but not the entire scheme of state socialism. It is a common experience of all of us to hear someone damn the absolute state with fervor and, in the next breath, to endorse some phase of economic control at complete variance with his basic tenets. Can he be totally blind to fail to see the connection between Government control of industry and the eventual and corollary control of the freedoms in the Bill of Rights?

I need not come to an audience in Texas and warn them of the potential dangers of this problem, nor to ask that we in America gird and defend ourselves against this aggression to our American way of life and free enterprise. However, I do not feel that it would be amiss if you and I should take counsel between ourselves.

We businessmen in New York, you businessmen down here in Texas, the men on the west coast, the Great Lakes—yes, from one end of the country to another—should ask ourselves seriously if we may not be yielding, and by this yielding, destroying some of the basic foundations of America by permitting the growth of paternalism in our midst. Not all of our future is dependent on that which takes place east of the Oder River. We should give even more consideration to the socialistic philosophies in Washington, which already have been diagnosed as malignant to our freedom.

Please let me make it emphatically clear that nothing I say here today is intended to have the least partisan political tinge. I am not so much concerned with which party is elected as I am with the socialistic philosophies of the individuals who are put into public office. I want to be sure, and I hope that you will want to assure yourselves, that the quality of public service which is being rendered is consistent with those concepts of government which we term American and that they are not changing us or ultimately destroying us.

As a fellow Texan, I believe that we have even a greater feeling for free enterprise, the Constitution and the Bill of Rights. We all share in the pride of the accomplishments of the Lone Star State. We are proud of the history of Texas, for through the years the indomitable spirit, the courage, and the faith of Texans have molded and built a tremendous empire. Here, men took risks, ventured capital, and in the main, prospered under a system of free enterprise. The culture of this State has benefited materially with the growth of wealth in the State. Churches, hospitals, museums, and educational institutions have all received part of the award. Texas University at Austin has a private endowment of $88,000,000; Rice Institute $30,000,000; Texas Christian, Baylor, and Southern Methodist all have sizable endowments.

I did not come here today to eulogize my native State and boast of your accomplishments (for that I like to do in New York), but rather to say that thoughtful businessmen all over the country are becoming more and more gravely concerned by this insidious growth of paternalism in government.

We took our first faltering step on the road to paternalism when the WPA went into operation, giving to those out of work opportunities for employment and frequent occasions to lean on shovel handles. Relief was handed out by the Federal Government. Through the whole history of America, up until those occurrences, the American people were imbued by the sound philosophy that the people supported a government. This was the beginning of the theory and practice that government could, should, and would support citizens.

This individual dependence on government was like a shot in the arm. Expressed in the vernacular, it was taking social and political dope. It was, therefore, much easier as we took succeeding doses of these same opiates, more insidious than the most vicious habit-forming drugs.

Voters quickly learned the power of organization and politicians quickly learned the art of counting the votes of the "gimmies."

We, in New York, witnessed hundreds of spectacles of demonstrations by the unemployed. Our city hall was picketed on dozens of occasions, as were the offices of the Relief Administration. "Something for nothing and let the other fellow pay" became the rallying cry of those who would go to the polls and vote for the candidates who pledged the greatest return.

The past 20 years has seen in America a radical departure from our original concepts of the functions of government. We seem to have departed from a desire to elect to public office the most capable statesmen, the wisest administrators and, generally speaking, we are electing those who make the greatest number of promises to the greatest number of people.

It seemed to be the aim and purpose of both parties last November to attract the greatest number of labor votes because of their pledges of what they would do or refrain from doing which organized labor demanded.

Appeals were made to agriculture that somehow or other farm prices would be maintained arbitrarily "come hell or high-water" to the rest of our economy. Appeals were made to race prejudice—appeals were made by both parties for the votes of those who had strong nationalistic leanings.

So this virulent opiate which we started to employ in the early 1930's has become such a fixed habit on our people that we have yielded our responsibilities to government in the vain hope that government, in some form or other, will be responsible for its citizens beyond the objectives of protecting life, securing liberty and affording the opportunities for happiness.

If we are honest in our thinking and if we are fair to ourselves and to our country, we must conclude that all authoritative and, therefore, paternalistic government is not located within he boundaries of some foreign state. We must conclude that its roots are going deeper into the soil of free America.

Is it not time that our individual States concern themselves with this growth of paternalism in our Federal Government, for sooner or later we must gird ourselves to resist the Federal Government usurping the rights, inherently and constitutionally, reserved for the States alone?

With this as a background, let us briefly examine a few of the main problems before our Congress today.

We should be encouraged by the recent failure of the Administration to pass its labor law and by the very welcome support that the Wood labor law received in Congress. However, we should not be lulled into a false sense of assurance.

Gentlemen, we Americans must ask ourselves, in all fairness, if the America conceived here in liberty and justice should be changed to an America yielding to the demands of certain self-appointed and politically anointed labor leaders. Do we want a law which is fair and just and equitable to employer, employee, and to the public—or do we want a law which will give all the advantages to organized labor which will tie the hands of employers behind their backs? Do we want a law which will countenance violence? Do we want a law which will permit Communists and other subversive leaders to dictate labor policies in this country?

Please believe that the purpose of this address is not a defense of the Taft-Hartley law, nor a condemnation of the old Wagner law. What I mean to convey is that the concept of America has been one of equality, justice, and freedom—and I do not want to see those attributes of government, our American Government, surrendered because of political expediency.

We, in this country, used to make a rather sharp distinction between the field of politics and the field of economics. We believed that politics was a science of living together under an organized state and that economics was the production, distribution, and exchange of goods serving that society.

Today, we are confusing politics and economics. We are now flirting with the idea that because we have elected an officeholder who has promised to be all things to all people, we should now turn over to him the complete destinies of this American enterprise system.

I have just recently had the occasion to study very carefully a bill currently before

the Congress of the United States, identified as H. R. 2756. Here is a bill designed to place in the hands of the President unprecedented and sweeping powers of control over practically every line of business in the United States.

This bill would enable the President to say that which was going to be produced and, in a large measure, how it should be produced. It would empower the President to lend your money and mine, meaning from the Treasury, up to an amount of 75 percent to any person or any company to engage in business and give the President power to cancel not only interest, but principal of that loan. It would not only determine the items which would be made and who could make them, but it would say who could buy them and the President could set the price.

The President may obtain such information from, require such reports and the keeping of such records by, make such inspection of the books, records, and other writings, premises or property of any person and make investigation and conduct such hearings as may be necessary or appropriate, in his discretion, to the enforcement and administration of the provisions of this legislation.

Sixty days' notice must be given of intention to raise prices and the President may require any seller who has filed such a notice to appear at a public hearing with respect to the justification for such price increase.

Whenever in the judgment of the President the conditions set forth in section 402 for the establishment of maximum prices for a commodity have been satisfied, the President may, by regulation or order, establish such maximum price for the commodity as, in his judgment, will be generally fair and equitable and will aid in effectuating the purpose of this act.

The adjustment of wages and salaries—through collective bargaining to reflect increases in productivity, to protect and improve standards of living, and to afford an equitable distribution between wages and profits—is stated to be in accord with the policy of the United States.

This bill would empower the President to determine wages, and the bill states specifically that an increase in wages would not mean increased production costs, except under certain conditions.

Gentlemen, this is paternalism in a dangerous degree. It is frightening to one who conceived of an America founded on a few clear, simple concepts of government.

We, in the New York Board of Trade, at our last directors' meeting early this month, passed the following resolution with respect to this proposed legislation:

"Be it resolved, That the New York Board of Trade, Inc., is opposed to the enactment of H. R. 2756 introduced by Congressman Spence, which is entitled 'A bill to implement the established national policy of promoting maximum employment, production, and purchasing power, and for other purposes.'

"This bill proposes to vest in the President of the United States the power to delegate all and any authority to various departments, the power to make rules and regulations with respect to complete control over promotion, production, and supply of industry and agriculture, and the power to regulate prices and wages, all of which in peacetime is contrary to our form of Government and is socialistic in substance. The vesting of such extraordinary power in the Federal Government will retard and inevitably revolutionize the economy of the United States and change the relationship of the Government to a form detrimental to America.

"The result and effect of such control in peacetime over American economy would be the creation of a paternalistic state. During wartime the people gladly submit to all authority and controls necessary in the emergency. But no continuing emergency exists in this peacetime justifying this legislation and it should not be enacted."

The administration is also insisting upon the passage of another bill, known as the public health bill, which will cost billions of dollars. You have been reading about it in papers and magazines because the floodgates of Government propaganda have been opened.

We have read a lot about the operation of socialized medicine in England. I often wonder if the economy of England could long withstand the impact of this and other social measures without the continuing financial aid of the United States. Last year, our Government advanced to Great Britain $1,263,000,000. Significantly, our Government's tax collection for the State of Texas last year was $1,285,123,000. In other words, all except twenty-two-million-odd dollars of the enormous Federal tax income from Texas was used under the Marshall plan for Great Britain.

In no place in the world have hospitals and charitable institutions grown to the extent which they have here in this country under our private American enterprise system where they have been supported by public benefactors and have been the logical fruits of our American economic system. Should we now yield that system for one born of a philosophy of despair?

General of the Army Dwight D. Eisenhower, in a recent speech at Columbia University, made this significant prediction, "If we are ready to accept the paternal atitude of government, if we allow this constant drift toward centralized and bureaucratic government to continue, there will be a swarming of bureaucrats all over the land." He warned that finally a dictatorship would be necessary to manage the bureaucracy adding, "This is what we must guard against."

Dr. Edwin G. Nourse, the Chairman of the President's Council of Economic Advisers, said recently in a Chicago speech that he did not believe that a group of bureaucrats in Washington could replace the functions of the free enterprise system. "What the country needs is a new set of workable price and income relations which can be accomplished only by the managerial skill and ingenuity, by the courage and the moderation, of many men in the myriad operational posts of America's gigantic business system." And he adds that, in his opinion, it is through "the tirelessly wagging jawbone of publicly debated legislation and privately but collectively negotiated wage bargains, or radio commercials and voluble salesmen that we find out how to fit production and supply to demand and consumption, that we raise standards of living and believe that we can maintain maximum employment, production and purchasing power on the basis of free competitive enterprise enjoined in the Employment Act of 1946."

Indecision and a sense of futility must be overcome if we are to be successful in combating this menace of governmental paternalism and return to democracy in economics which we call the private-enterprise system.

There must come a time when each faction in our country will cease to believe that its future lies only in the continuation of its vested interests. Never in the Nation's history has there been presented a more latent opportunity to merge the forces of American labor and business with an enlightened government in moving ahead toward the goal of a greater America for all Americans. Business has its responsibility to do its share in this unified effort. We should move toward that goal with a feeling of confidence and enthusiasm.

The Living Theater a Forceful Argument for American Democracy in Germany

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. JAVITS. Mr. Speaker, the need for country-wide theater is eloquently testified to by the appended letter from a high military source. It was written on the occasion of the ANTA performance of Hamlet on June 6, 1949, at the Wiesbaden Opera House in Germany for American forces stationed there. Coming from a completely unbiased source, it strongly supports the reason for my efforts and those of Senator IVES, of New York, and Senator THOMAS of Utah to bring theater to the people of the United States and our sponsoring of the national theater bill, House Joint Resolution 104 and Senate Joint Resolution 40.

HEADQUARTERS, UNITED STATES
AIR FORCE IN EUROPE,
OFFICE OF THE COMMANDING GENERAL,
APO 633, July 15, 1949.

Mr. BLEVINS DAVIS,
American National Theater,
New York, N. Y.

DEAR MR. DAVIS: Many people tend to underestimate the receptivity of our American troops to the very finest and highest entertainment. It was a matter of great pride to me to observe the keen enthusiasm our men exhibited during and after the presentation of your production of Hamlet at the Wiesbaden Opera House on June 6. You could have heard a pin drop during the quiet moments, and the ovation at the final curtain was proof of their thorough enjoyment.

The soldier, sailor, and airman audience is an uninhibited audience. If they are not pleased, if they detect a false note or become bored, the rest of the audience and the actors know it immediately. I am very conscious, therefore, of the danger you faced in presenting not only a classic but a great tragedy. I realize that you and your director and designer could very easily have used the traditional approach. That you presented the production with certain innovations to make it continually exciting, yet kept the full integrity of this immortal tragedy was both astute and in keeping with the highest artistic standards.

How well you and your company have succeeded is demonstrated not only by the tremendous enthusiasm of the audience and the packed houses, but also by the great number of highly favorable reports which have come to my ears. I have heard armed forces personnel stationed here for some time say that your production was the finest entertainment they have had to date.

That other productions of high caliber, if presented with the acumen used in preparing Hamlet, are needed and wanted, there is not a shadow of a doubt. Over and above the reception from troops, and very important indeed is the effect on the German civil population. The Germans begin to understand that America is not devoted solely to better plumbing and more chewing gum, but that it also has artistic vitality and creativeness. We Americans have been all too reticent about our own cultural accomplishments, bowing before those of the European Continent.

The Hamlet production was a great triumph for you and Mr. Breen and everyone of the other artists involved. We hope that you will find ways to bring us many more such productions.

Sincerely,

JOHN K. CANNON,
Lieutenant General, USAFE, Commanding.

Military Aid Program

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. ADDONIZIO. Mr. Speaker, with hearings on the military-aid program scheduled to commence tomorrow before the House Foreign Affairs Committee, I think it is timely to call the attention of the members to the editorial on the subject which appeared in the Newark News of July 26. The editorial, which is inserted below, summarizes the President's arguments for the program and recommends its adoption:

MILITARY-AID PROGRAM

President Truman makes a convincing case for the appropriation of $1,450,000,000 for various kinds of military aid to nations vital to American security. Here, summarized, are his arguments:

Economic recovery requires a peaceful environment. The creation of such an environment has been prevented by Russia, whose policies have caused many nations to fear another war and the loss of their freedom. To overcome this fear, they need military force to defend themselves. The nations of western Europe are spending for defense all they can afford. This is not enough. The deficit must be met by the United States, in the form of dollar aid to increase their own military production, of the transfer of certain essential items of equipment and in the services of production and training experts.

The President contemplates no indiscriminate distribution. In his message to Congress he lays down important limitations on American aid. It must go only to those in greatest need. It must be carefully allocated. It must not be wasted. It must be initiated promptly. Unless we act without delay, we may lose the momentum already gained toward recovery and political stability, especially in western Europe.

In approving the Atlantic defense pact, we accepted the thesis that we have a community of interest with other nations struggling to defend western political and economic ideals, to retain the right to live as they choose without interference or intimidation. With or without the treaty, as we have learned from experience, we cannot long remain aloof while an aggressor sets in motion forces which threaten our own freedom and independence.

In two world wars we delayed too long in going to the aid of our friends. Lend-lease and the destroyer deal with Britain came late. Premier Reynaud's 1940 plea for clouds of airplanes was met, but not until years after it was made, and then at terrible cost.

The history of the last three decades sustains President Truman when he says:

"It must be made clear that the United States has no intention in the event of aggression of allowing the peoples of western Europe to be overrun before its own power can be brought to bear. The program of military assistance now proposed is a tangible assurance of our purpose in this regard."

There may be room for honest differences about the bill which spells out the terms of the military-aid program. Congress properly may ask for more assurance against waste. The amounts and kinds of equipment that are to be transferred may require discussion. But on the message itself, on the President's basic premises, there can be no intelligent dissent. Not, certainly, without contradicting the whole course of our foreign policy since the end of the war. Not without retreating to that isolationism which we have learned is mere self-deception.

Farmers Have a City Stake

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from California Grange News for June 20, 1949:

FARMERS HAVE A CITY STAKE

Facts brought out in a study of urban consumer's spending habits are of great import to farmers. It is to the urban dwellers in our centers of population, themselves nonproducers of food and fiber, the farmer must look for his prime market. A fully employed, well-paid urban population means a greater effective demand for farm products at good prices. But even full employment and fair income for this great bulk of consumers of farm products can mean a diminishing market for food at fair prices if too great a demand is made on them for other necessities of life. Food, clothing, and shelter remain, and always will be, the prime essentials of living, with food first named because everyone must eat. Clothing is second and that item, also, is prime with the farmer because he produces the fiber from which clothing is made. The third item, shelter, seems more remote from the farmers' interest. In the complex problems surrounding that human necessity, shelter, the entire modern industrial and commercial structure is enwrapped and interwoven. In fact, so complex has become the problem of shelter, the so-called housing situation has held the center of the stage in the public mind for the past 3 or 4 years, ever since World War II brought about unprecedented congestion of population with attendant housing shortages. But when the cost of shelter, for any reason, soars out of proportion to the costs of the other two prime essentials of living, food and clothing, an economic unbalance quickly upsets the family budget. Hence, when city landlords clamor for an end of rent-control laws so that they can demand a lion's share of the average family income for shelter, the farmer, producer of food and clothing fiber, has a vital stake at issue. The current rent-decontrol hearings now being held to determine how much of the city family's budget the landlords are to be allowed to demand, and get, are or should be of almost equal interest to the farmer as they are to the tenant. Stated cold-bloodedly, it is just plain good business for the farmer to help see to it that his city customers are not gouged out of too large a share of their buying power for any one of the three basic living essentials. Food comes first.

Arcadia Means Contentment

EXTENSION OF REMARKS
OF
HON. CECIL M. HARDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mrs. HARDEN. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include the following editorial which recently appeared in the Indianapolis Star, Indianapolis, Ind.:

ARCADIA MEANS CONTENTMENT

The year 1849 was notable for two events, the discovery of gold in California and the founding of Arcadia in Hamilton County, Ind. A hundred years later there is no question as to which cast the greater shadow on history. Neither is there any doubt in the minds of Hoosiers who know the prosperous up-State farming community as to which assays highest in unalloyed blessings conferred on pioneers and their descendants.

Arcadia today is typical of the small towns which have been the backbone of the Nation in a century of progress, shaping its character and nurturing its genius. The values it gave do not rise and fall in the market places. They are the root of all that is lasting in this land of the free.

Like Fortville, Peru, Fairmount, and other adornments of the Hoosier scene which are 100 years old in 1949, Arcadia has much to remember. Its centennial program, which opened yesterday to run through Sunday, will honor the stout-hearted men who founded the community and their sons and the sons of newcomers who made its slogan—Arcadia has everything that a good town should have—no idle boast. Old-timers will recall the natural gas boom-and-bust of the nineties and the changes that have come with each passing decade.

But native Arcadians returning from the outside for the celebration will find their home place basically unchanged. Like its counterpart in ancient Greece, Arcadia signifies peace and contentment. "Love must kiss that mortal's eyes who hopes to see fair Arcady," a poet once sang. Love of family, neighbor, and country remains the key to modern Arcadia's pleasant charms, a century after its birth. It would be a fine thing if we all could live in Arcadia.

A Tribute to Manitowoc, Wis., Originator of I Am An American Day

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. BYRNES of Wisconsin. Mr. Speaker, the whole State of Wisconsin—and I am sure the whole Nation—is proud of the fact that the idea for I Am An American Day, or, as it was originally called, Citizenship Day, was born in Manitowoc, Wis., and was fostered and developed by the forward-looking citizens of that city.

Manitowoc is a thriving, alert, and patriotic community situated on the shores of Lake Michigan in the district I have the honor to represent. Not the

least of its contributions to a better America has been the pioneer role it played in the development of this special day dedicated to impressing our youth with the responsibilities and privileges of citizenship.

Manitowoc not only originated the idea for I Am An American Day; it was instrumental in the spread of this celebration throughout the Nation. Its efforts for national recognition of the importance of this day culminated in the establishment of Citizenship Day, later changed to I Am An American Day, by Congress in May of 1940. The first Citizenship Day celebrated anywhere was held in Manitowoc on May 21, 1939. In a simple but impressive ceremony, attended by dignitaries from throughout the State, the oath of citizenship was administered that day to young men and women of Manitowoc. It was the first community attempt to bring to these future leaders the full meaning of their rights and duties as good American citizens.

I know the Members will join me in saluting the city of Manitowoc and its patriotic citizens for giving to all of the Nation the inspiration we find in I Am An American Day. The full story of the origin of this day is graphically told in a letter I have received from the mayor of Manitowoc, Mr. George Sladky. Mayor Sladky's letter is included as part of my remarks so that the Nation will know the splendid role of Manitowoc in the establishment of I Am An American Day:

CITY OF MANITOWOC, WIS.,
OFFICE OF MAYOR,
July 21, 1949.

HON. JOHN W. BYRNES,
Member of Congress,
Washington, D. C.

DEAR CONGRESSMAN BYRNES: For the purpose of the record and, in the event that future claims may be made regarding the origin of Citizenship or I Am An American Day, I would like recorded, on behalf of the citizens of the city of Manitowoc, the facts leading up to, and the establishment of, a national Citizenship Day.

I think it important that these facts be recorded at this time, considering the ever-increasing numbers of individuals seeking credit for such origin.

We are fully aware that an occasional celebration has been held honoring newly naturalized citizens; also, that the Indians considered it a cause for celebration when one of their braves attained his majority, but nothing has ever been done in a concerted way to bring together at a special ceremony both newly naturalized and the youth of a community or communities upon attaining the voting age of 21, in an effort to impress upon them the importance of their new assignment and privilege.

It was during an adult class in government at the Manitowoc Vocational School, conducted under the direction of Prof. R. J. Colbert, head of the University of Wisconsin's extension social science department in the fall of 1938, that Dr. Colbert, in stressing the importance of citizen participation in local government, remarked, "I think it would be fine if we, by counties, annually would induct all boys and girls becoming 21 into the electorate after giving them some idea of what a democratic government expects of them, especially explaining to them the issues and problems of local government. If democracy bogs down in local rule, it certainly can't work on a broader scale."

This chance remark gave the class food for thought, and a newspaperman, a member of the class, commented on Dr. Colbert's idea in an editorial, which set other people to thinking.

When the class met again, former Judge Albert H. Schmidt, now retired, proposed that the class sponsor, as a project, Dr. Colbert's plan for a Citizenship Day for Manitowoc County. The motion passed unanimously and Mr. A. L. Nimtz, director of the vocational school, was drafted to head the general committee. A diligent search was then begun in an effort to round up all persons eligible to vote for the first time, and all received a personal invitation to attend classes in citizenship. Thirty-eight different classes were organized in the county and were conducted by businessmen, municipal and county officials, and teachers, under the guidance of Dr. Colbert. A handbook of procedure and instruction was provided by Dr. Colbert through the University of Wisconsin. Things moved right along with the program being given much radio and press publicity throughout the country, in an effort to promote and spur other communities to follow step during a period when war hung heavy over the Nation. A resolution was sent to Washington requesting that a National Citizenship Day be observed and which also requested that the American Vocational Association to be assembled in convention at St. Louis, Mo., November 30, 1938, to December 3, endorse this new movement.

After many months of continuous work the classes culminated in a single yet very impressive and colorful ceremony on the third Sunday of May 1939 (May 21, 1939), the first Citizenship Day. Chief Justice Marvin B. Rosenberry, of the Wisconsin State Supreme Court, was on hand to administer the oath of citizenship, with President Clarence A. Dykstra, of the University of Wisconsin, Gov. Julius P. Heil, and Judge Albert H. Schmidt as well as other dignitaries taking part in the ceremonies. Homes and business places alike displayed the American flag and buntings and, while bands played, a very lovely parade, in keeping with the spirit of the day and including the young and newly naturalized citizens alike, wound its way to the beautiful campus grounds of the Lincoln High School where the ceremony was to be held in the bowl. This marked the first community attempt in America to bring citizens to a realization and awareness of their duties and privileges as citizens.

Following the program in Manitowoc, Mr. Hugh S. Bonar, our superintendent of city schools, carried on correspondence with the National Education Association of the United States, stressing the importance of such program for each community in the Nation. He also prepared an exhibit of materials used in planning and carrying out the project here and set this up for the San Francisco convention of the National Educational Association. The officers and executive committee of the National Education Association were so impressed with the possibilities of this project known as the committee on induction into citizenship, and appointed Mr. Bonar as chairman, under which committee all States in the Union provided preparation and recognition projects for their new voters, as correspondence on file indicates.

The support of the American Legion and various other organizations was enlisted in order to bring to the fore the great importance of undertaking such program on a national scale. Thereupon a resolution was sent to Congress asking that citizenship day be observed throughout the Nation on a day especially set aside for that purpose.

To bring this project to its ultimate conclusion, and which was an inspiration to the Nation as a whole, meant many months of constant vigil on the part of our educators, finally meeting with success in the passage of a joint resolution in Congress, House Joint Resolution 427, Senate Joint Resolution 227, in May 1940 becoming Public Resolution No. 67 of the Seventy-sixth Congress, third session. (United States Statutes at Large, vol. 54; pt. 1, p. 178, ch. 183). The measure was introduced in the House by Representative Joshua L. Johns, Republican, Wisconsin, while Senator LISTER HILL, Democrat, Alabama, introduced it in the Senate. Suggestion for the joint resolution coming from the State of Wisconsin. Senator Hiram W. Johnson, Republican, California, proposed amendment changing Citizenship Day to I Am An American Day (H. Rept. 2008, 76th Cong., 3d sess.) (Foregoing information secured from Library of Congress.)

I take the privilege of quoting excerpts from several of the many editorials on the event held in Manitowoc in 1939:

Manitowoc Herald-Times, October 24, 1938, Judge Albert H. Schmidt said, referring to Dr. R. J. Colbert's proposal that Manitowoc institute an annual program to install persons who have reached the age of 21 into the status of citizenship: "Let us organize at once this initial, promising, vitalizing youth citizenship fraternity, not only for Manitowoc and Wisconsin, but on a national scale for the whole United States."

Manitowoc Herald-Times, December 17, 1938, referring to Mr. Bruce Catton's editorial Manitowoc Does Something for the American Way under the NEA service which enjoyed a daily circulation of 730 newspapers in the United States, "will spread the name of Manitowoc and Manitowoc's citizenship program throughout the country," and "all of which adds up to a first-rate idea—one which, judging by the inquiries the Manitowoc people have received, is going to be widely copied in other cities. and which fully deserves to be copied."

Tulsa Tribune, Tulsa, Okla., January 15, 1939, editorial by Richard Lloyd Jones, Colbert Has the Big Idea, and letter to R. T. Bayne, editor of Manitowoc Herald-Times, January 16, 1939:

"DEAR MR. BAYNE: If you fellows up there can do this thing with the drama and richness and color that our traditions deserve, and so sell America to the voters of tomorrow, Manitowoc will have launched a national practice and education which will become universal in the land.

"If the news reports, on which I base this editorial, are true, Manitowoc today bears the flag in the forefront of our national procession.

"Congratulations and good wishes.

"Cordially yours,

"RICHARD LLOYD JONES."

December 31, 1938, Mr. Clarence Dykstra as president of the University of Wisconsin hailed a National Citizenship Day as the answer to the very apparent need not only for the youth of the Nation but also as a time for all citizens to reaffirm their belief in America, and offered the services of the university to promote and assist in carrying out such program, as did John Studebaker, United States Commissioner of Education.

Also submitted for inclusion in the record are the thoughts expressed by Dr. Colbert in an interview with the reporter from the Christian Science Monitor in an editorial dated December 31, 1938:

"I

"Question. Is this a new idea in this country? Is there any similar movement in the United States?

"Answer. I think the idea of Citizenship Day, as planned here, is something new to the United States. Here and there, and now and then, we hear of a patriotic organization, a political party local, a social settlement, a church, or a local school, staging an evening program in honor of a small class of foreigners who have completed their naturalization requirements and, sometimes, as a round-up

of voters just before a primary or an election. Then, too, there are several national movements which aim, in one way or another, to intensify a sort of nationalistic zeal; for example, a national committee on Constitution Day, the national rededication committee. However, Citizenship Day, as here planned, is quite a different idea:

"(a) It is based on and emphasizes the county and local government—unless democracy is a success in these units, it cannot be expected to function effectively in State and Nation.

"(b) It is fostered and carried out under the leadership of the public-school authorities—the agency that has long been recognized as being responsible for citizen training.

"(c) It is developed and staged through community organization and cooperation, including participation of every agency and organization in the county—it is, in other words, a demonstration of community spirit and responsibility.

"(d) It is planned as a twofold program: (a) To reach and instruct the new voters (native-born) and (b) to give all citizens an opportunity to think together and get a livelier interest in governmental affairs.

"(e) It is staged after spring primaries and elections are over to purposely avoid any possible political tampering. It is nonsectarian and nonpartisan.

"II

"Question. Do you expect the idea to spread? Do you hope to make the ceremonies an annual event?

"Answer. There seems little question about the idea spreading. It has already received favorable newsplay and editorial comment in papers from coast to coast. There are two ways in which social movements are started: (a) by proclamation or turning ideas loose to be acted upon as interested groups see fit; (b) by setting a pattern from which it may spread. We have discussed the merits and weaknesses of each and concluded to set an example. It is expected to make Citizenship Day an annual event all over America.

"III

"Question. What is the prime purpose? Is it something to the effect of making Americanism active rather than passive, as are the nationals in other nations? Is there any situation in the United States which calls for such a move?

"Answer. The prime purpose of this movement does not relate to nationalism, the way in which the question implies. It is not a flag-waving, eagle-screaming sort of active Americanism we desire—quite the contrary. The point is, each year the duties and responsibilities of government become more complex and affect the citizen's daily life at an increasing number of points. Therefore, self-government today requires that the voter take a more active and more intelligent interest in his government than was required of the citizen of yesterday. He needs to know more about the new demands on elected officials as well as the duties of the increasing number of appointed officials. He should know something about civil service and what it means to build a modern democracy which requires the skills of highly trained minds. The old saddlebags standards do not meet modern needs—'Time makes ancient good uncouth.' All citizens are interested in the tax dollar, in what it buys, and how it can be made to buy more. The aim of this program is to give the voters a chance to get acquainted with their government, beginning at home, and to learn how to run it to their liking—and take a wholesome pride in it. We are not concerned about what Italy or Germany is doing. We are not spreading dreads, fears, and prejudices. We are not mentioning these nationalistic nightmares. We need not fear any 'isms' if our citizens are enthusiastically active in their local governments, and we believe that this will insure their intelligent participation in State and national affairs. Emphasis, therefore, is on local government, township, village, city and county—the county unit. The State and Nation rightly have their place next, and so it is arranged in the program.

"We cannot be blind to the fact that there is much sentiment abroad these days tending to confuse and undermine the confidence of the young American in regard to his government. This leads to all sorts of negative actions and organizations. It gives the rabble-rouser fertile soil to cultivate. We are attempting to find a sound, wholesome, genuinely democratic way to cure this negativism.

"IV

"Question. Is the purpose of the instructional meetings of new voters similar to that of youth camps and organizations in other countries? (That is, in the teaching of nationalism. There is a difference, of course, in the kinds of nationalism taught.)

"Answer. The purpose of the meetings with the young voters is not similar to that of youth camps and organizations in other countries. This fact should be very clear. The materials we are assembling for the 38 discussion groups of new voters of Manitowoc County (one for each township, village, and city ward) reflect three aims: (a) To acquaint the new voters (and others) with the set-up of their local government—as to what officers are elected, which ones are appointed, and their respective duties and their place in the daily lives of the citizens. It also, through charts and brief outlines, gives them a view of the State and Federal Governments. (b) The plan is arranged to encourage and stimulate discussion and questions without partisan prejudice or effort to restrain expression of viewpoints. (c) It also aims to inspire and create a more dynamic enthusiasm in governmental affairs. Each discussion group will elect its own chairman and plan its participation in the events of Citizenship Day. Some competition among these units will be a bit of the spice of Citizenship Day.

"V

"Question. How many persons are expected to take part? Young voters only, or new citizens and perhaps the general public?

"Answer. Participation in Manitowoc County is involving the whole community—young and old. There are now several hundred people meeting weekly to discuss various aspects of the plan and program. Such an event is not achieved by merely sending out invitations. It is a continuous educational project with Citizenship Day as the climax each year. As to the program itself—there are approximately 1,200 new voters in Manitowoc County; the music organizations are to be massed, bands, drum corps, and choruses; the entire citizenry, individually and by organization, are helping both prior to and during Citizenship Day. It is hardly possible to estimate the number who will have a hand—some have guessed 40,000 at least.

"VI

"Question. Who will the instructors and directors of the educational program be?

"Answer. The directors of instruction will be University of Wisconsin extension teachers, high-school civics and history teachers, farm agents, and other qualified persons in the community. A committee of school administrators of the county and city systems select these discussion leaders, and approve the materials that have been developed from the weekly round-table discussions. The school buildings, as far as possible, will be used for meetings."

I thought it well to include the foregoing in the record as it explains more clearly than I could Dr. Colbert's aims and ideals in promoting a project of this type to bring about a more alert and better informed individual, and therefore a better citizen and ultimately a greater America.

Respectfully submitted.

GEORGE J. SLADKY, *Mayor.*

Proponents of Aid to Education Should Watch Their Figures

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I bring to the attention of the House an editorial appearing in the Saturday Evening Post for July 30, 1949. This article points up the inaccuracy of figures used by the proponents of Federal aid to education and serves to substantiate the belief of many of us that there is small justification for this program which has been urged upon the American people. The editorial follows:

EDUCATION-BILL SUPPORTERS USE SOME QUEER FIGURES

For months on end we have had to dig the desk out from under heaps and heaps of propaganda, most of it sent out by the National Education Association, in favor of the bill to set up a Federal subsidy for education in the United States. Sometimes we wish we had saved more of this voluminous material from the rendering works because, had we done so, we might not have missed a nice piece of statistic fixing which caught the eye of President Laurence M. Gould, of Carleton College.

The item, which was not from NEA but is contained in the report by the Senate Committee on Labor and Public Welfare, was this:

"According to United States Census estimates for 1947, about 4,000,000 children between the ages of 5 and 17 attend no school whatever."

This was obviously intended to set everybody to moaning and groaning about how many underprivileged children there were in the United States of America and how they would never become privileged until education had passed under the control of another costly Federal bureaucracy.

President Gould thought about it long enough to analyze the figures. In an address in Washington in May he pointed out that "in many States compulsory education does not start until 6 or 7 years of age and some end compulsion at 16. Of the 4,000,000 referred to above, 2,063,000 were only 5 years old, 156,000 were 6, and 1,406,000 were 16 and 17." In sum, 3,625,000 of these 4,000,000 underprivileged were either too young to go to school or old enough to be legally excused from further education. Of the remaining 375,000 children not in school in 1947, it is likely that many were physical or mental defectives. Certainly not all of them were tiny blue-veined waifs or sharecroppers' slaveys denied an education and whimpering pitifully for Uncle Sam to give them one. At any rate, the figure isn't 4,000,000.

It is possible to make a case for limited Federal support of school systems in poor States which ask for such support. Grants to State-highway systems and Federal subsidies of agricultural education have worked well in the past and, with actual administration left by statute in the hands of the

local authorities, similar aid might safely be advanced to necessitous communities.

However, the advocates of Federal aid do their cause no good by crooking the figures and belittling the progress which the States, even the so-called backward ones, have made in recent years. Further, their disclaimers of any intent to interfere with local school administration or to use school systems for propaganda purposes have not allayed the suspicions of those who predict that the old rule will still prevail, that he who pays the piper calls the tune. So deep is this suspicion of Federal intent that, according to Representative GWINN, of New York, a member of the House committee which dealt with the bill, "not a single State authority of any kind, no State board of education, no county or municipality has appeared to support it."

Tung Nuts Mit Honey

EXTENSION OF REMARKS
OF
HON. BENJAMIN F. JAMES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. JAMES. Mr. Speaker, I have a problem—a terrifying problem.

How can I explain to the Pennsylvania Dutch farmers why I vote for price support for tung nuts when they ask me, "Was iss der tung nuts?"

How can I save my political skin when my suburban constituents ask, "What if we ain't got no tung nuts? Who cares?"

What can I say to all of them if I vote to drop a few dimes of their taxes into the tin cups of the tung nutters when not more than a dozen of them know what a tung nut is?

My people know about potatoes and such things, but I will have to know the answers to a lot of questions if I vote for this "tung nuts mit honey" bill. Do you eat them raw or do you cook them? If you do not eat them, what are they good for?

A kind colleague has told me you make paint out of them, but I think he was kidding. Another told me something I must not repeat here, and I am going nuts about this thing because I think I ought to vote for every bill that gives away money to everybody for nothing.

I know I can talk my way out of voting billions of dollars for this and that, and I know I can make my people weep and wring my hand in pride when I explain my heroic stand in building a solid gold road block across the path of Stalin's march into Europe. I can even get away with voting away millions and millions for anything my people have read about—heard about or seen about—but a tung nut is something else again.

Now, Mr. Speaker, I ask to know:

Just what would happen to this country of ours if the price of tung nuts just went along with the craving for tung nuts. It cannot be that every taxpayer in the country is so nuts about tung nuts that he would want them at the highest possible cost.

And now about the honey. I have noticed that the bees do about all the work of making honey, and they don't belong to unions, so the wages have not changed in the past several thousand years—furthermore, they do not vote.

If the guy who owns the bees wants to live a little better than he does—all he has got to do is get some more bees. He just cannot miss. Like most everybody except farmers, the keeper of the bees and the tung nutter are just common businessmen—and therefore not entitled to any consideration whatever.

I hope I can find a good line to feed my constituents—if I vote for this bill.

Melt the Irish Border Peacefully Away

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. FALLON. Mr. Speaker, there recently appeared in the Irish Press an article concerning the discussion by Sir Basil Brooke, the six-county premier in Belfast, of a statement made by Mr. Frank Aiken in the Irish Dail. Mr. Aiken, who besides being a member of the Dail is also an outstanding leader of the Irish bar, replied in an open letter which frankly answers Sir Basil and refutes any attempt of the officeholders in Belfast to justify the continuance, or even the existence, of the northern border.

Because the letter of Mr. Aiken is so frank in calling the shots on the reasons for partition, the evil results which ensued, and the undemocratic processes by which those in office contrive to retain their jobs, I feel that this article including the letter should be made available to my colleagues. I am therefore requesting that this article from the Irish Press be included as a part of my remarks.

The article reads as follows:

Mr. Frank Aiken has written under yesterday's date an open letter to Sir Basil Brooke. The letter arises from a speech at Belfast by the six-county premier in which he referred to recent statements by Mr. Aiken in the Dail.

Mr. Aiken, on the motion for the adjournment of the Dail, on Wednesday night week last, raised the matter adjourned from the previous Thursday—his appeal to the Taoiseach to get in the guns in the possession of the "I. R. A."—and again urged that this be done, so that the temptation to use force for the restoration of territorial unity would be taken from the young men who have the force.

Mr. Aiken said that the undoing of partition would have to be accomplished by constitutional methods.

Speaking at a Unionist meeting in Belfast on Wednesday night last, Sir Basil said: "Should any young men attempt to create trouble in this country as we are told by Mr. Aiken, I can only assure you that the Government will deal with them in such a way that they will regret ever having come here to disturb the peace."

QUESTION OF FORCE

Mr. Aiken's letter is as follows:

"MY DEAR SIR BASIL: Referring to your allusion the other day to a recent speech of mine, there's no need for you and me to beat about the bush on the question of force. You claim the right to use force to maintain partition in spite of the wishes of the Irish people, and I hold they have a thousand times better right to use force to restore unity.

"In order to keep your party in power you want, subconsciously perhaps, a little force to be used ineffectively against partition. Just what would keep the B men out of bed an odd night a week would keep your friends cosy in Stormont. I don't want, and I will do my utmost to prevent, the use of that measure of force. Neither do I want to use force at all, even overwhelming force, to settle the matter. When the Irish people have gathered such force, and I believe long before it, the border will have melted away peacefully.

"To the young and innocent force seems a simple, direct, and sure way to achieve a just and desirable end. Indeed, as you know, there are some who think the use of force is good in itself. But oldsters like us have seen strange results even from its successful use. The German rifles the British Tories supplied you with in 1913 undoubtedly defeated home rule, but they brought out the rifles of Easter week and of 1919–21.

"Lloyd George's threat of immediate and terrible war, of which he had given the Irish people a foretaste, brought about the defeat of De Valera's proposals for peace and cooperation with the Commonwealth and secured the acceptance of the partition and King clauses in the treaty; but where is the sensible Englishman who would not have welcomed that solution in recent years for Burma, India, and all Ireland?

OFFICE AND POWER

"But whatever difficulties the great and glorious victory of partition brought to Britain elsewhere it brought office and power to your selected friends and satisfaction to your British Tory patrons. The Liberal Party in Britain was smashed; Ulster was the right card for the Tories to play, as Lord Randolph prophesied.

"For 29 years the Nationalists have hewn wood and drawn the water for you, and your fellow top-levelers. That is a very long time in these days when victories stay won for such a short time.

"During this period hundreds of governments have fallen; dozens of countries have been conquered and many of them freed again; many empires have expanded and contracted like concertinas; booms have burst and slumps have soared; even the Bank of England fell; but, all the while, your party, particularly the inner circle of your party, gerrymandered and grew from strength to strength.

"Some day the calculation may be made as to what partition will have cost in blood and tears to the six counties, to Ireland, to Britain, and to the world. I don't want to exaggerate our importance as a nation among nations. But we were and are still a test case—and a well-known test case. What Britain judged right in her treatment of her neighbor Ireland became the legal precedent governing the relations of strong nations with weak.

"If, for strategic reasons, it was right for England, the champion of small nations, to partition and hold portion of Ireland against the wishes of the vast majority of the people, how could it be wrong for Japan to seize portion of China, or Italy to seize Abyssinia and Albania, or for Germany to seize Denmark and Norway and Holland and Belgium, or for Russia to seize Finland and Latvia and Poland and Hungary.

"Indeed, if tomorrow Russia suddenly swooped on the 40,000,000 Britons to improve the strategic position of the 200,000,000 Russians, what right has a British partitionist to object? If it was right for England to

partition and hold portion of Ireland because her friends had a local majority, how could it be wrong for Germany to grab Sudetenland or for Russia, after judicious infiltration, liquidation, and plantation, to grab and hold every country she can reach.

"You and I as Irishmen, as Ulstermen, and as six-county men, might gain a certain satisfaction in seeing Britain reap the whirlwind. Dear as you are to John Bull's heart when he wants help in war, in peace he tries to run you on the cheap. We know the location of the last depressed area to be aided in the past, and we suspect we know it for the future.

THERE'S THE RUB

"But if our neighbor's roof is swept away, will the whirlwind blow itself out before it reaches us? There's the rub. It would be wiser for us, I think, to unite in persuading him to mend his ways and sow peace while he has still the strength.

"I remember as a child the weary trudge home from school being enlivened by the excitement of shouting 'To hell with King Billy' in reply to the salutation 'To hell with the Pope.' Neither I nor the other toddlers knew then that His Holiness the Pope and His Majesty King William had been allies on the Boyne. But we, all of us, know today that both Catholics and Protestants on the Continent are allies in defense of common principles now subject to relentless attack and persecution.

"Britain today is having her last chance of doing good with the resources still at her disposal. But her military potential is vitally reduced by the weakness of her moral position. The success of western civilization in the struggle that is warming up depends not only upon military weapons but upon the actions of peoples who know the principles they fight for and who have seen them practiced by those who ask them to fight. Atomic bombs, alone, can only put the finishing touches on a Europe allowed to be occupied by peoples who have no definite standards by which they are prepared to act on all occasions and for which they are prepared to die.

"Has Russia no right to occupy any part of a country in Europe against the wishes of its inhabitants? If not, her right can only effectively be denied by those whose slate is clean of such offenses. Britain's military contribution cannot offset the handicap she is to western civilization so long as she continues to occupy any portion of Ireland against the wishes of the overwhelming majority of its inhabitants.

"It is a situation worth thinking about.

"Yours faithfully,

"FRANK AIKEN."

Effect of Trade-Agreements Program on American Petroleum Industry

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. KILDAY. Mr. Speaker, we have all read the President's message of July 11. He has recommended to industry and business that production of goods and commodities be increased so that a high level of national income can be sustained.

The program or goal thus indicated must be broken down into its specific parts, so that we can discover whether there are hindrances and restrictions in the way of each particular industry of such nature as to prevent the achievement of its proper part of the expansion. At this time I want to call attention to certain conditions which will prevent the petroleum industry of the United States from going forward.

Acting under authority delegated by the President, the State Department is taking more than $2,000,000 a day from our domestic oil industry and giving it to five or six large companies operating outside the United States. Through the trade-agreements program as administered, we are giving our domestic markets in petroleum to these large companies. Through various ingenious devices in the form of subsidiary companies, vast amounts of income are siphoned away from our domestic economy. It has already been brought out in congressional investigations that there has been an avoidance of taxes to the Federal Government on earnings which were made by selling foreign oil to the armed services. The effect is disastrous to thousands of independent operators in this country.

Many of these giant companies have subsidiary companies operating in my State of Texas. These local companies now face reduced income and reduced employment while their brother subsidiary companies which operate abroad continue to increase their income. Some of them are incorporated in countries where little tax is paid and in such cases none is paid in the United States.

There is still time to correct the weakness of the trade-agreements program. If the administration cannot or will not act—and it has thus far given no sign that it means to do so—then it is the duty of Congress to do so. We should attend to it that the correction applies not only to future trade agreements but to all that are now in force.

Petroleum is the vital fluid of our economy today. The expansion program which has been recommended cannot be carried out without a large supply of oil products. The needs probably will be greater than they now are. At the moment we have the assurance that all needs can be met. Such would not be the case if development of known reserves and the discovery of new reserves should come to a stop. We have two known facts as to the ability of the domestic oil industry to meet our domestic demands. First, there is the assurance, backed by 90 years of successful effort and by the expanded knowledge of petroleum geology, that the presently undiscovered reserves are of great magnitude. Second, we know that a continued high rate of drilling must be carried on to convert undiscovered reserves into available supply.

The threat to the domestic industry is grave. The owners of huge concessions abroad are steadily encroaching on the markets which naturally belong to the industry here at home. The volume, now about 600,000 barrels daily, has steadily increased since the close of the war. The April ratio of imported petroleum and products to the daily production from the fields of the United States was 11.8 percent. Prewar, 1932–41, it was 5.6 percent. That is one measure of the inroads that are being made upon an industry which carried the major part of the oil-supply burden in two wars and which we have no assurance will not be called upon again to serve in the same way.

Each tankerload of foreign oil reaching the ports of the United States has its noticeable effect upon the welfare of the domestic industry. Since the beginning of this year the domestic production of crude oil has fallen and at this time it is 800,000 barrels per day below the average in December 1948. It did not decline for natural reasons; it was restricted by orders of State conservation authorities to prevent the waste that always accompanies production in excess of the ability of the market to absorb it. In some instances it has been the crude-oil purchasing companies that have initiated the reductions. Their refusal to buy more than a certain percentage of production in a field or a State has compelled the producers who lack other outlets to reduce the flowing and the pumping production of their wells.

The domestic industry has started to tighten its belt. Future drilling programs are being revised downward. Oilfield labor is growing uneasy. The shrinking market and the reduced income compels the oil operator to cut costs. A great many lay-offs have taken place and more are in prospect. Bankers are beginning to call in oil producers for discussions of reduction of loans now in effect. Some of the independent refiners have curtailed their operations, some have shut down.

Aside from the essentiality of its products, the petroleum industry is in itself an important part of the national economy. It distributes to owners of land many millions—hundreds of millions—of dollars each year in royalties, lease bonuses, and rentals. It is a major employer and is one of the high-wage industries. The taxes on oil producing and refining properties are the mainstays in hundreds of communities for the support of schools and other public institutions. It is a large source of tax revenue to the Federal Government.

The problem of oil imports is not local. It is not of concern alone to the States and the communities where oil is produced. Even on that basis, it would be occasion for national action. The implications of the present destructive course are, however, much deeper. The expansion program which the President has said is desirable cannot possibly succeed if a segment of industry as important as the oil industry loses ground. That is what it is doing now.

The domestic petroleum industry is regulated in the States where it exists. Producers are not permitted to produce at wasteful rates. No such regulation is imposed on the industry in the countries which are swelling the tide of imports. No limitation is in effect on the amount of oil that can come into our markets. The export business in oil has already been largely taken by foreign sources. It is certain that with the excess of production abroad no export market will exist in a short time.

The producing States, like the domestic oil industry, are helpless. States

cannot regulate imports. The executive department of the Federal Government has refused to do certain things within its present authority which would afford some relief. It now appears that Congress is the only source of help to an industry which is day by day seeing its energy destroyed.

The Mess

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call attention to an article by Stewart Alsop entitled "The Mess," in which the writer discusses the situation in Burma as an aspect of the general demoralization in Asia resulting from the Communist conquests in China. I believe that the State Department is to give us shortly a white paper on China. It would be more appropriate to call it a "black paper." When are we going to decide that the Communist conquest of Asia cannot be ignored by this country?

Mr. Alsop's article reads:

THE MESS
(By Stewart Alsop)

RANGOON, BURMA.—"Anybody, when asked about the political situation in our country," remarked Burmese Premier Thakin Nu recently, "will answer that it is an awful mess. There can be no other answer." This ranks as about the frankest statement on record by any chief of state—and also the most accurate. The situation in Burma is the messiest in Asia, which is saying a great deal. Yet the mess is not, essentially, a hopeless mess.

It looks hopeless enough on the surface. What is going on in Burma is not so much a civil war as a kind of nation-wide riot. No less than five major groups—and countless minor groups—are taking part in the riot. To give some notion of just how messy the mess here is, the major groups may be briefly listed and described.

1. The Government, or what is left of it. The higher officials of this Government can be found crouching in a comfortable concentration camp, surrounded by barbed wire and armed guards in the suburbs of Rangoon. Even inside this concentration camp, as Thakin Nu has also plaintively remarked, the Government officials sleep with revolvers under their pillows. Such precautions are necessary simply because most of their predecessors have already been assassinated.

These officials are not, by nature, violent men. Like Thakin Nu himself (who has a strong and not unnatural desire to retire to a Buddhist monastery), they are bookish left-wing intellectuals whose knowledge of government, before they inherited power from the British, was derived wholly from the printed word. They are now learning certain lessons which were not spelled out in the Socialist tracts they read in their university days. In the process of learning, however, they have completely lost control over the country they are supposed to govern.

2. The white-flag Communists. The Communists were the first to take up arms against the Government. This they did in the late spring of last year, at about the same time that the Communists in India, Malaya, and Indonesia also resorted to direct action, obviously as part of Moscow's over-all strategy for Asia. The white-flag Communists are the orthodox Stalinists and their leader is Thakin Than Tun, a former friend of Thakin Nu.

3. The red-flag Communists. These are led by another former friend, Thakin So. Thakin So is called a Trotskyite, but he is actually merely a proud fellow who refuses to take orders from Thakin Than Tun. The Communists have also split into warring camps in Indonesia and India and for much the same reason. This tendency of Asiatic Communist movements to split apart is interesting and may be significant.

4. The wartime resistance movement, called the People's Volunteer Association. The PVA, like everything else in Burma, has come apart, splitting into the Yellow Band, unreliably loyal to the Government, and the White Band, unreliably allied to the white-flag Communists. The White Band—and this again is a phenomenon common to all southeast Asia—consists largely of young men who discovered during the war that it is pleasanter to call yourself a hero and to rob villages than to work.

5. And most important, the Karens. Burma is a jumbled patchwork of races, and the 3,000,000 or so Karens constitute one of the biggest patches. The Karens are the best fighting men in Burma. Recently they came within an ace of capturing Rangoon itself. The Karens want a semi-autonomous state within Burma, which the Government is willing to concede in principle. The trouble is that the size of the state the Karens want grows with their military successes. The Karens are far more powerful than the other groups fighting the Government, and thus a settlement with the Karens is an absolute prerequisite to reestablishing the Government's authority.

All these groups are intermittently fighting not only the Government but each other. While this nation-wide free-for-all is in progress, the Chinese Communists are edging nearer the long, undefended Burma-Chinese border. Chinese Communist Chief Mao Tse-tung is reliably believed to have offered Thakin Than Tun a secret mutual assistance pact last February. The pact envisages material aid from the Chinese People's Liberation Army in liberating Burma. Thus it would seem reasonable to assume that the new Communist imperialism in Asia will swallow Burma as easily as a boa constrictor swallows a crippled lamb.

Yet, given certain conditions, this need not necessarily be so. The first and wholly essential condition is time, time to begin to clean up the awful mess. Everywhere in southeast Asia, but especially here, it is blindingly obvious that any measures which may slow the advance south of the Chinese Communist armies are in the hard practical interest of the United States and the whole Western World.

An Appeal for Fair Play and Decency

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. SANBORN. Mr. Speaker, as you are well aware, I am a regular Republican who believes in and supports the high principles of that Grand Old Party which I believe has contributed more than any other force to the upbuilding and welfare of our glorious country.

However, I have a keen appreciation of the fact that under our system of government there must be two strong opposing parties, and I have the greatest respect for the opinions of real Jeffersonian Democrats.

But in recent years there has sprung up a maverick breed inoculated with foreign isms and ideologies who sometimes masquerade as Republicans and sometimes as Democrats in the hope that they can so corrupt and weaken the two old parties that they may be able to replace our system of government with some type of totalitarian state.

Many of these subverters of doubtful loyalty have been surreptitiously infiltrated into key positions in our Government, and from such vantage points they seek to destroy those who dare expose or oppose them in their sinister designs.

Their favorite device is to feed gossip, half-truths, rumors, and lies to a certain type of columnist and commentator who make a specialty of waving the flag with one hand, while chiseling away the foundation of our Republic with the other. Voltaire must have had this type in mind when he made the following comment:

When engaged in performing a discreditable action, there is nothing so advantageous as to utter loudly virtuous sentiments.

Such a venomous smear campaign has been launched quite recently attacking the honesty and integrity of a man without a scintilla of evidence to support their vicious charges, merely because that man happens to be the military aide to the President of the United States and had the courage to tell some of these subverters where to get off. It is very evident that this smear campaign against General Vaughan is intended to embarrass the President; and while I strongly disagree with Mr. Truman on many issues, nevertheless he is the President of the United States, and I bitterly resent this method of attacking him. Probably you will have a better understanding of the motives behind this attack after reading the following articles from the New York Journal-American of July 20, 1949, and the Washington Times-Herald of July 23, 1949.

[From the New York Journal-American of July 20, 1949]

MORE ON DREW PEARSON AND KARR, HIS "LEG-MAN"

(By Westbrook Pegler)

The quality of the journalism of Drew Pearson has been revealed by the incident related yesterday in which David Katz, alias Karr, Pearson's "leg-man," frankly threatened that Pearson would blast Gen. Harry H. Vaughan, President Truman's military aide, on his Sunday broadcast unless Vaughan withdrew opposition to a project in which Pearson had a financial interest.

Karr named a zero-hour for compliance. Pearson was trying to get a passport for George C. Vournas, a naturalized Greek lawyer, so that Vournas could latch onto an economic mission to Greece as a hitchhiker in the guise of journalist. His own politics was dubious, and he had a brother in the Communist guerrillas.

When it became plain that Vaughan had blocked the passport for Vournas, who had secret, undeclared intentions to make contact with Drug Tito, the Communist dictator of Yugoslavia, Karr made a final call on Charles G. Ross, the President's secretary,

and delivered his threat in the White House. This was the most brazen act yet.

Karr has been associated with Communists for years. He was on the staff of the Daily Worker, and he wrote for other Communist publications. During the war he dug in as chief of the foreign language section of the Office of Facts and Figures, later the Office of War Information, although he later admitted under oath that he could neither read nor write any foreign language.

Karr is now a vice president of the William H. Weintraub Advertising Agency in New York, which handles the broadcasts of Pearson on Sunday nights. When I telephoned the Weintraub agency, I was told that Karr could be reached at Drew Pearson's offices in Washington.

Nevertheless, Harry Trenner, my informant at the Weintraub agency, said Karr was no longer employed by Pearson. He knew nothing of Karr's past traffic with the Communists. He said Mr. Weintraub himself was in Europe.

There has long been abroad in the journalism and official and bureaucratic life of Washington a fear of abusive attacks by Pearson against any person who should refuse to give him exclusive news for his broadcast and column.

The tragic death of James V. Forrestal, the first Secretary of Defense, whose mental condition Pearson harped upon with gusto until Forrestal jumped out a window, finally brought down on Pearson a storm of resentment by newspapers and magazines. Most of it was gutless generality and therefore as much a reproach to the journals which thus ducked a fight as to the lying blackguard whom they were too yellow to name.

Even during the very time that Pearson was hounding Forrestal and taunting him about his condition, his own sponsor, Frank Lee, of Lee Hats, of Danbury, Conn., himself was in a hospital and enjoying a privacy which Pearson denied to Forrestal.

Lee's own paper, the Danbury News-Times, killed two dispatches dealing frankly with Pearson's treatment of Forrestal. Lee could underwrite abuse of good men, but he couldn't take fair, honest discussion.

Pearson's "column," a jerky, inaccurate journal of jottings, most of it dull beyond the power of all but the most dogged reader and abominably crude in expression, is now secondary to his broadcast both as a source of revenue and as a weapon. Nevertheless it still has a fearsome reputation among the bureaucrats.

Its rise was concurrent with the development of a grapevine in Washington by which clerks and higher underlings could get even with their bosses or others by trickling into print embarrassing if not always scandalous, or even thoughtful, gossip.

But it would be incorrect to give Pearson credit for this sordid phenomenon. Tipsters, sneaks, eavesdroppers are on every hand. Secretaries are suspect. The fellow listening alongside at a cocktail party may be getting $10 a week for items of "dirt."

Most victims refuse to fight. Norman Littell, a lawyer who came to Washington in the New Deal and remained to resist much of that counterfeit which is offered as liberalism, has sued Pearson for accusing him of a crime. Pearson said Littell was acting as a propagandist for the Netherlands Government, "though he failed to register as a foreign agent." Few others had the courage.

Recently, I heard that Hal O'Flaherty, formerly managing editor of the Chicago Daily News, then owned by the late Frank Knox, had received the same approach from one of Pearson's agents that Charlie Ross experienced from Katz, or Karr. Hal is an American journalist who has been absolutely clean for a career of 40 years. He doesn't know how to compromise with honor.

"Pearson had an inside line to the naval intelligence reports before Knox set up the office of public relations," Hal wrote me. "All public relations had been handled by ONI and most ONI officers were enthusiastic followers of Pearson because he had helped the Navy with recruiting."

I think you can write your own comment on such "help." In the Regular Army, it is expressed in the words: "Let's you and him fight." O'Flaherty's letter continues:

"Then Knox set up the new Office of Public Relations, and all that sort of work was ripped away from ONI. Pearson lost a very fruitful source of exclusive news. This he blamed on Knox. The record will show a series of personal attacks on Knox starting about the time Pearson was cut off from ONI.

"I was told several times after I was taken into the Navy that I could heal the breach between Pearson and Knox by giving Pearson a break of 2 or 3 days on Navy news that he could use in his predictions. I was urged to see Pearson's runner, whose name I vaguely remember. I told those who urged me to see him that I knew I couldn't satisfy Pearson, but that I would talk with his representative, who later came to see me.

'This runner was very suave and said it was regrettable that there couldn't be a better relationship between his boss and mine. I agreed. He said they only wanted occasional breaks on Navy news. Other departments were giving them duplicates of news releases 3 days in advance. Why couldn't the Navy do the same?

"I pointed out that across the hall the Navy maintained a press room where reporters regularly assigned to the Navy sat all day long. Commander Robert Barry was in charge, and whenever news was released he saw to it that every one of the regulars got a fair break. If some were away at meals, he waited until they returned or personally called their organizations and gave them the news.

" 'That is the only way we can handle news releases here,' I told Mr. Pearson's representative, 'and it will continue as long as I have anything to do with the release of news.'

"Within a week Pearson gave Knox another shellacking and I was called up to Knox's office to explain. I told the story of the approach and the decision I had taken. Knox said:

" 'You were perfectly right. Don't play any favorites.'

"From then on, Pearson took many wallops at Knox, but he never, so far as I know, got any special treatment from the Office of Public Relations, certainly not while Knox lived.

"I felt pretty badly about the attacks on Knox, knowing them to be grossly unfair, but satisfied that if I had submitted, it would have been like the old story of paying the blackmailer. I believe Forrestal carried on with the same decision after he took over at Knox's death and was subjected to the same treament by Pearson. That, however, was after my time in Washington.

"No other writer even suggested such a thing. The files of newspapers from January 1940 until 1944 will show the course of Pearson's vindictive attacks on Knox."

[From the Washington Times-Herald of July 23, 1949]

FAIR ENOUGH

(By Westbrook Pegler)

This outcry against Harry Vaughan is the most outrageous smear that I have ever seen in the newspaper business. It began 2 years ago as a retaliation against Vaughan by that lying blackguard of the air, Drew Pearson, after he had tried to stow away an undercover snoop with an official mission to Greece, a fellow of very questionable particulars who admittedly had no qualifications as a journalist and, admittedly, was trying to do some secret business with Tito, the Communist dictator of Yugoslavia.

Vaughan blocked this fellow's passport and Pearson's "legman," a furtive fellow named Katz but using an alias, went to Charlie Ross, the President's secretary, and threatened that if Vaughan did not withdraw his opposition by a "zero hour" Pearson would start "blasting" Vaughan on the air. Vaughan stood pat and the blasting began.

Recently the off-Republican Herald Tribune of New York, whose sneaky partiality to fellow-travelers and their projects I have often spelled out, never by innuendo and always in plain English, began another of its penny-ante crusades. Here is an obvious, cheap bid for the Pulitzer prize or, if not, then one or more of the tainted baubles that self-respecting, honest reporters despise.

The Clapper award, for example, or the miserable citations of the New York Newspaper Guild.

Bert Andrews, the Herald Tribune's Washington man, got inflated with artificial alarm a couple of years ago and bawled all over the paper in a season of mock-hysterics over the injustice of this country's honest, earnest attempts to protect itself from traitors.

The Pulitzer crowd had been under fire in some magazines of low circulation and high liberal pretension just before that. They lost their nerve and gave the big casino to Andrews. The award was a disgrace and the Pulitzer prize was degraded.

In this recent seizure, the Herald Tribune learned that an ex-colonel had been collecting 5 percent on Government contracts from people whom he put in touch with those who passed out the business.

That is like discovering prostitution and exclaiming, "Can such things be?" This is an ancient fact of life in popular government.

There was a smack of it when Elliott Roosevelt was wined and dined in connection with the award of airplane contracts in absolute violation of an explicit order by Gen. "Happy" Arnold.

Washington is crawling with vicious, contemptible shysters, most, though not all, of them from Harvard Law, who make a pretense of legal practice to lobby through favors and find shortcuts through the mazes which they had a part in creating for that very purpose.

Miserable parasites writhing on the moribund body of a wonderful nation which they devoured in their nasty greed, they now waylay and levy a tax on good citizens come to town to fumble and blunder among the traps and mazes.

They come seeking Government contracts. They want their rights before bureaus set up to deny their rights and create litigation and problems for honest men and business opportunities for these vermin. These are the dirty intellectuals of the Roosevelt New Deal. These are the friends of the common man.

The Herald Tribune had not a shred of evidence to implicate Harry Vaughan. He gave his autographed picture to a fellow who was a colonel for a while and then got out of the Army to become a piece man.

The guy was a name-dropper. How many of us have given our pictures to persons whom we know but slightly or not at all, sometimes with cordial inscriptions? I sent one to some woman in Chicago years ago.

The office had bought them by the hundred. A town sport operator told me 2 years later he saw it on the dresser in a lady's room. He leered. You know.

The other day, a character named Joseph Alsop, one of those Herald Tribune types, ran a whole column of insinuating smear about Vaughan. In detail it says nothing. Altogether it gives a rotten impression.

"The absence of any imputation that General Vaughan was cut in on Colonel Hunt's profits does not make the matter much less serious," says this Alsop.

Well, it just makes all the difference in the world, that's all. If he had proof that Vaughan did cut in on Hunt's profits which,

by the way, seem legitimate and traditional, he would scream his head off.

Now here is Bob Ruark, of the Scripps-Howard outfit: "I think the inclusion of that clown, that buffoon, that flap-mouthed dunderhead, Gen. Harry Vaughan, in his official family as aide, is an insult both to the military and to the people who elected Truman."

Ruark is above that. Yet he dumps a load of outrageous abuse without making the slightest accusation that the man could answer.

And the Scripps-Howard editorial for all the chain quotes a misquotation and then gives the correct quotation only to impugn it on no specified grounds.

Will I put myself in the position of defending Vaughan?

You bet your sweet life I will; I will defend any person against such abuse of the freedom of the American press.

S. 1076

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. BIEMILLER. Mr. Speaker, my attention has been called to an extension of remarks in the July 14 issue of the CONGRESSIONAL RECORD made by my colleague the Honorable ALVIN F. WEICHEL, of Ohio, concerning legislation now under consideration by this House, S. 1076. This bill, introduced by Senator JOHNSON of Colorado in the Senate, has already passed that body, has been considered by the House Merchant Marine and Fisheries Committee, and has been reported favorably. I hope when it is next called up for consideration that it may pass this House of Representatives by a large majority because it is a good, substantial bill and entirely worthy of enactment.

I wish to call attention to certain errors in Mr. WEICHEL's statements—probably made because he is unfamiliar with the background of this proposed legislation. He has stated that the Director of the Fish and Wildlife Service is asking for a 100-percent increase in the duck-stamp tax so that he might have more funds for administrative spending. He implies that this is a plan conceived by the Director of that Service, perhaps contrary to public opinion. This is not the case.

I, myself, was responsible for the introduction of a bill in the first session of the Seventy-ninth Congress, which was known as H. R. 5021, to increase the price of the duck stamp from $1 to $2. I introduced this bill on December 17, 1945, not at the request of the Fish and Wildlife Service but at the request of the duck hunters in my State. This proposal was conceived, sponsored, and wholeheartedly endorsed by the Wisconsin Duck Hunters Association of my home town of Milwaukee, Wis. They did it because at that time ducks and geese were on the decline. The duck hunters in my State were among the first to demand a shorter season, reduced bag limits, and to press for more adequate management of the waterfowl resource. I introduced H. R. 5021 because I believed with my constituents that it was a necessary move to give the Fish and Wildlife Service better tools with which to do a management job. It had the enthusiastic support of Gordon MacQuarrie, the well-known Milwaukee Journal writer on outdoor subjects.

My bill failed of passage but Congressman Charles J. Kersten, who succeeded me in the Eightieth Congress, introduced a similar bill, again at the request and insistence of the Wisconsin Duck Hunters Association. This was known as H. R. 3802 of the Eightieth Congress. Senator A. WILLIS ROBERTSON, of Virginia, introduced a companion measure, S. 2482, which passed the Senate and would have passed the House of Representatives last year, I understand, had not the gentleman from Ohio [Mr. WEICHEL] who was then chairman of the Merchant Marine and Fisheries Committee of the House, blocked its consideration by the full committee, although the wildlife subcommittee had endorsed it.

A similar bill was again introduced in the House this year by Congressman CLARK W. THOMPSON, of Texas, chairman of the Subcommittee of Merchant Marine and Fisheries handling fish and wildlife legislation. This bill is numbered H. R. 3711. Senator JOHNSON of Colorado, chairman of the Committee on Interstate and Foreign Commerce, introduced a similar measure which has passed the Senate and has been reported favorably by the House Committee on Merchant Marine and Fisheries. I hope it will pass because I know from my experience that it has the strong endorsement of sportsmen all over the country. This is the bill under consideration—S. 1076.

It is not a general tax taken out of the United States Treasury. It is an additional tax upon the duck hunters themselves and one which they will gladly pay. I have followed the course of this bill and I know that the objections to it are practically nil.

One further point should be explained insofar as Mr. WEICHEL's presentation of his opposition is concerned and that deals with the income for wildlife restoration purposes from the 11-percent tax on sporting arms and ammunition. These funds, other than not to exceed 8 percent for administration, are not available to the Director of the Fish and Wildlife Service but are allocated to the State fish and game departments in a fixed ratio prescribed in the so-called Pittman-Robertson Act. This is State-aid money and the fish and game department of my State as well as every other State in the Union would object most strenuously to any attempt to divert these funds to the Fish and Wildlife Service to carry on any of its activities. The two items should not be confused.

I am including an article in the Memphis Commercial-Appeal of July 1, 1949, by Walter Stewart, and also a column in the July 19 issue of the Evening Star, Washington, D. C., written by Bill Leetch. Both of these articles describe the situation as I and my duck-hunting friends in Wisconsin see it. They follow:

[From the Memphis Commercial Appeal of July 1, 1949]

YOU CAN THROW AWAY YOUR GUMBOOTS—UNLESS SOMETHING IS DONE FOR WILD WATERFUL—LET'S JAM THIS DUCK-STAMP BILL THROUGH CONGRESS

(By Walter Stewart)

Sweat cascaded down the collar in jolly little flash floods as we applied a soothing blend of alcohol and glycerin to our gumboots—and marveled at the futility of it all. For information filtering down from Washington indicates that such equipment will soon be obsolete as David's slingshot, and this will create a serious problem in the Midsouth, where approximately 315,000 scatter gunners employ rubber waders in the assassination of wild waterfowl.

So we are sponsoring a contest for the reconversion of gumboots which may be used as vats for exhausted engine oil, exotic flower pots, or raincoats for underprivileged cocker spaniels. Write your suggestion on a slip of paper, tear off the head of your favorite Congressman and mail to this department.

For it appears that additional public-hunting grounds and refuge areas can be out of the question. This delay means that our already riddled waterfowl population will not be able to restock itself, and that the law of diminishing returns will work out on perfect schedule. The land-acquisition program is only 60 percent complete and now it has bogged down dismally. Al Day, director of the United States Fish and Wildlife Service, appeared before a Senate committee the other day and explained just why.

The high price of real estate bans substantial additions to the refuge system. And there are extensive plans to drain vast areas for agricultural use. This naturally destroys the value of such lands as breeding and nesting grounds for ducks and geese.

SHAKE OFF THE DUST

In the meanwhile, the proposal for raising the cost of the duck stamp from $1 to $2 is gathering dust upon the shelf. It has worked its way through the Senate committee, and our Washington operative (who has thus far escaped the FBI) has dispatched a carrier pigeon with reports that the bill has also escaped the House Merchant Marine and Fisheries Subcommittee—will appear before the full committee this week. The price elevation would supply funds for the purchase of land in quantity sufficient to complete the refuge system. It would also allow the establishment of more public hunting areas and rescue some of the swamps earmarked for drainage. The extra dollar would pour power in the enforcement agencies by raising the stamp contribution from 10 percent to 25 percent of the total.

But Congress is going to adjourn within a month and the passage of this duck-stamp measure is vital to everyone who glories in the bucking recoil of a 12-gage on a frosty autumn morning. If it doesn't pass now, there'll probably be a 2-year delay and the wild waterfowl population simply isn't capable of living through this financial famine.

When we estimated the number of amphibious gunners in the Midsouth, we based it upon the hunting licenses sold in Tennessee, Mississippi, and Arkansas last year. Mississippi bargained for 194,500, Tennessee for 256,400 (combined hunting and fishing), while Arkansas sold 174,261 resident hunting licenses.

THE STAGGERING TOTAL

This totals 625,161, and those who should know, wardens and sporting goods tycoons, report that a heavy majority are chiefly interested in ducks and geese. But we have halved the figure and let it go at that. With quail shooting going down the drain at an

alarming rate, more and more huntsmen are turning to the swamps and the pressure will grow heavier with time.

Now Congress isn't going to pass this duck-stamp bill without being prodded in its plump hams. There isn't any reason why Congress shouldn't, for the money comes directly from the pocket of the hunter and not from Government funds. But Congress is like that. It must be remembered that those representing 625,161 licenses are equipped with a great deal of political muscle, and this should be applied in the present situation. Just write your Congressman and hint broadly that you'd be pleased with immediate action on this duck-stamp bill—and its passage pronto.

THE PROPER RELATIONSHIP

There seems to be some misconception concerning the relationship between Congress and the American people. The gentlemen who sit in the House and Senate are the employees of the taxpayers. The gentlemen apply for the job by running for election. We hire them by casting a vote and pay their salaries by parting with tax moneys. They are supposed to show their appreciation by representing our interests with vigor and intelligence. And enactment of the duck-stamp bill is most certainly to the interests of the millions who cast their heavy thunders against the skies of autumn.

Sportsmen's associations are springing up with pleasing frequency, and these bands should take a leading part in the campaign. Those who labor in the United States Fish and Wildlife Service are thoroughly expert and efficient, but they can't get champagne out of a turnip any more successfully than you can. Without sufficient funds, they are helpless. Without the United States Fish and Wildlife Service, the wild waterfowl are helpless. And without wild waterfowl—well, you may as well start converting those gumboots.

And the problems of the Service are pointed up by Representative WILLIAM LEMKE, who has proposed a bill which would issue special permits for the indiscriminate slaughter of ducks and geese. There are so many of these, maintains WILLIAM, that they are destroying vast quantities of farm produce. Wonder where he finds them.

No, we aren't going to preach a sermon concerning "our sacred heritage" insofar as game is involved. We'd just like to note that millions of American males find happiness in the pursuit of wild waterfowl. They are willing to pay for it, and Congress is a sorry servant if it fails to supply the raw material for such happiness.

[From the Washington Evening Star of July 19, 1949]

OUTDOORS

(By Bill Leetch)

Representative ALVIN F. WEICHEL, Republican, of Ohio, last week lashed out at bill S. 1706, already passed by the Senate, which seeks to boost the duck stamp tax fee from $1 to $2.

Let's get the facts straight.

In the first place this duck stamp tax fee is not a tax imposed on the general public, as Mr. WEICHEL implies. It is a fee paid only by duck hunters, and with few exceptions, gladly. Under the law this money is used to purchase duck-breeding grounds and sanctuaries in this country and for enforcement and administration. Only 10 percent of these funds annually is permitted for administration and enforcement, and from this amount must be deducted the Post Office Department's costs of printing and distributing the stamps, leaving acutally only about 8 percent.

Duck stamps first were put on sale on August 14, 1934, and that year some 635,000 were sold. Over the years, through 1948, peak sales amounted to just over $2,000,000 in the top year, not the $5,000,000 which Mr. WEICHEL claims. Ten percent of $2,000,000 is $200,000, which in the peak year had to cover the cost of enforcement of the shooting laws and administration costs—a small enough sum when one considers that this has to be spread all over the United States.

Mr. WEICHEL also asserts that Wildlife Service revenues already are at a peak, claiming that in addition to appropriations from Congress it has an unexpected balance of about $14,000,000 in its treasury representing revenues from taxes on the sale of hunting equipment, and expects to collect $10,000,000 more this year. This $14,000,000 is not in the treasury of the Wildlife Service. It is Pittman-Robertson money and in the Treasury earmarked for wildlife restoration, etc., through the States under the Pittman-Robertson Act.

The balance is not unexpected, but has been building up over some years, and the reason it is so large is that Congress has been niggardly in appropriating from this fund. This money is not used by the Fish and Wildlife Service at all, nor does it collect one penny of it. There is not room enough in this column to explain the whole working of the P.-R. Act, but we assure you that the only chance the Wildlife Service has to get a penny of it is if some State, which has been made an appropriation under the law, fails to use it within a 2-year period. In this case it reverts to the migratory-bird conservation fund and can be used along with and in the same manner as duck-stamp funds. We assure you that a very few thousands ever are turned down by the States.

With no increase in funds, the Fish and Wildlife Service is supposed to do a bigger job today than in 1934, in spite of the shrinkage in dollar value. Mr. Day, Director of the Service, is not trying to jam this bill through Congress as Mr. WEICHEL asserts. He does wish it passed so the Service can do a job, and he is backed by every real conservation organization in this country.

It is a physical impossibility for the seventy-odd Federal law-enforcement officers to break up illegal duck hunting. Many authorities claim almost as many ducks are being slaughtered illegally as legally. More funds for law enforcement are desperately needed if our duck populations are to be protected from the "gun goons," as Nash Buckingham calls them.

It is true that the Fish and Wildlife Service cannot guarantee to raise each year a definite quota of ducks. But the Service can "temper the wind" to the ducks in their annual migration, provided they are given the funds with which to do it.

Economy and Preparedness

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. TEAGUE. Mr. Speaker, it is my belief that we should not formulate our defense plans without regard to the cost of such plans because it is absolutely essential that this country remain economically strong. General Bradley realizes that this is necessary and appropriately passed on his thoughts to the graduates of the Command and General Staff College recently.

Under leave to extend my remarks in the RECORD, I wish to include General Bradley's address entitled "Economy and Preparedness" which appeared in the August issue of the Infantry Journal:

ECONOMY AND PREPAREDNESS

(By Gen. Omar N. Bradley)

If we Americans are to forge a long-range military policy which will endure, it must be internationally astute, and nationally within our means. Strategic plans for future defense can only be as valid as the peacetime preparations we can afford. Soldiers, sailors, and airmen must provide the United States with the sturdiest defense available, within the price we can pay.

That this is a very real, and very limiting factor, no one can deny. For we cannot afford to maintain over a long period of time the established forces that can assure a quick victory.

However, we can afford—and must afford—sufficient forces in being, including the mobilization base and necessary reinforcements, to avert disaster in event we are attacked.

In 4 years we demobilized an army, a navy, and an air force until they were little more than occupation forces in foreign lands. For the cycle of reestablishing a planned and ready military stature we have reacted jerkily, spasmodically, to the stress and the tension from outside sources. In this atmosphere, a truly long-range policy was only a conversation piece.

Today in our armed forces, we have reached a stability which in my opinion can be the basis of the combat readiness which will avert disaster. With additional effort, and a little more time, we can build the forces now planned into reliable guardians of defense.

Militarily speaking, the situation is as stable as it is going to be for some time to come. In the 4 years since VJ-day I think the advantage has swung to our side and that the aggressor, who was once a friend, is now on the defensive.

Rather than expect a long period of friendly cooperation, however, we must anticipate a long period of tension, with alternating day-to-day improvements or set-backs, which must not be allowed to unstabilize the long-range plans for security. The American citizen must evidence a resoluteness and constancy that will signal our new stand for protected, secure freedoms. He will draw courage and strength for his own progress, and will reinforce the faith of our friends in western Europe. The United States security dollar will be invested in long-term bonds which are bound to pay off in defense dividends and decreased costs. Better plans can be made, greater economies effected, and our allies can confidently chart their courses.

Since you are students of American foreign policy as well as military preparedness, you are interested in a consideration of the basic ingredients of a sound long-range military policy for the United States, which is an integrated plan of our peaceful intention and our military potential.

First, under present conditions, it must cost much less than we are spending now.

Second, considering the enemies we may sometime face, our combined forces must be much more effective than they are today.

In speaking of effectiveness—or combat readiness, as the military man would term it—our greatest danger is that we will be caught in the fancy of a futurism and commit ourselves to unbalanced forces that will not match the forces which might oppose us.

When I speak of balance, I don't mean the dividing of funds equally among three services; nor do I mean an equation of so many ships equal so many soldiers equal so many air groups, to create a pattern on a chart.

When I speak of balance, I mean effective forces equal to the tasks that modern warfare may thrust upon us. And in striking this balance we must include that which can be reliably contributed by our allies. We can upset this equilibrium by committing ourselves, not strategically, nor numerically, but financially, to plans which on the surface

seem proper, but tomorrow tower over us in burdensome upkeep.

So, as a third basic ingredient, I consider balanced forces—as I understand balance—as most essential.

This guiding principle of economy, effectiveness, and balanced preparedness applies equally, in my judgment, to all three of the armed forces. We cannot afford to spend more money than is absolutely essential on any one of the services merely to satisfy an emotional appeal. Every dollar spent must be strategically productive, for either national bankruptcy or a lack of preparedness will satisfy a lurking aggressor.

Long-range policy must be accompanied by long-range budget plans. Piecemeal attacks cannot be mounted forever. And in our year-to-year consideration of the budget we must look ahead at least 4 or 5 years.

We cannot afford to spend $6,000,000,000 in the enlargement of a particular service that may require $7,000,000,000 to maintain the next year, and perhaps $8,000,000,000 to maintain and improve in the succeeding year, unless we realize and fully intend the long-range effect that this will have on our future capabilities.

For example—and it is only a hypothetical picture—if we decide in fiscal year 1953 that we can afford only $12,000,000,000 of the Federal funds for the armed forces, and in the present fiscal year we launched a long-range program for one service that will in 3 years demand $8,000,000,000, of a $12,000,000,000 budget, then we would end up with a National Military Establishment entirely out of balance to meet an emergency. We would have nullified our effectiveness and decidedly compromised our security.

Long-range military policy must ultimately be interpreted by men with missions, trained and equipped to perform them. Civilians must set the policy, but they will continue to rely upon their trusted military advisers for the practical applications. Without sacrificing any of the economies or progress which can be opened by modern research and invention, some down-to-earth readiness must be the foundation of our present plans. This is our most pressing military problem.

American ingenuity has been admired and respected by men everywhere. With the American soldier, the field expedient has often created sterling success from foredoomed impossibility; with inventive genius he has often provided abundance from scarcity.

Nationally, we are faced with a similar problem. And today every planner must put this ingenuity to work on the "big picture" scale.

The American people are anxious for the first sign that we can positively win the victory in any future war. However, our plans can best provide for victory by preventing another war. Many soldiers and even more statesmen have worked toward the goal of winning the war without firing a shot. I believe that we can contribute greatly to this possibility for the United States. Success in this effort would be the ultimate in economy—of lives, of resources, of American standards of living.

You are all familiar with the precept that another way to prevent war is to be so strong that no one will attack us. In this day and age, however, this method of war prevention is too expensive. We must seek a better solution.

Another method would be to reestablish through the coalition of friendly nations, the military power to back our peaceful intention if challenged. In concert with the other signers of the Atlantic Pact, we may ultimately achieve this. In that event smaller forces, readily available and readily capable of expansion might be relied upon. Our strength would lie in collective action and political combination backed by efficient, expandable forces. These forces must be ready and capable of keeping a toehold on any continent which may ultimately become the battlefield. Our economy is thus linked to theirs; our foreign policy to their international ways and means.

It is not necessary that I discuss with you the nature of modern warfare which will dictate our fundamental forces. We all recognize that we must have first and foremost, a strategic air force, second to none, equipped with the ultimate in weapons that our research and development can provide. And our plans must be so complete, that we know the application of this force and its armaments, will help carry us to the position we nationally wish to achieve, when the war is over.

With me, you undoubtedly plan for a Navy, with its air arm, and its essential Marine units, for the fulfillment of the Navy's offensive and defensive missions, including the assistance that the Army and Air Force must have to project the battle as far from our own shores as possible.

We must have a tactical air force, for every soldier knows that the fighter-bomber combination with the infantry, artillery, and tanks, is the only practical battlefield force in modern war.

Before presenting the detailed problem I would like to have you consider, I would add one more thought on modern warfare. It is essential for all of us to realize that successful modern war demands that the victor put continuous pressure on the enemy, for modern battle is a unified and continuing effort. To win, we must pour on a series of continuing blows, rising to a crescendo of intensity and fierceness, until the enemy and his war-making potential crumble. It is essential that no phase should fall off in intensity and thus allow him to catch his breath, and recuperate from the latest blow to prepare for the next. If he is a strong foe, he may seize the opportunity, if there is a lag, to strike a telling blow back.

With economy our yardstick and preparedness our pattern, then let us estimate the size and composition of the American Army that fits the pattern—smaller, less expensive defense forces for a nation which is a member of a coalition. In analyzing the requirements, we must provide an answer to the question: What size Army must we—and shall we—maintain for the long run?

To meet the modern warfare requirements, we must maintain as a ready mobile force, the smallest, self-contained organization, capable of major battle accomplishments. And we must have, to go with it, the reinforcements, the mobilization base, the special-mission units for bases we must seize and hold. This is not nearly so large an Army as some might imagine.

This ready force must have good soldiers trained to assume greater positions of responsibility. In an extreme, perhaps, every private should be a potential first sergeant. These men must be trained not in just one type of warfare, but in many, and for many climates, and many strange conditions.

I think this is the place to put in a necessary caution. Too many planners, failing to consider our national dearth of manpower in comparison with other nations, think in terms of large special forces—divisions capable of only amphibious work—or divisions capable of only airborne work. This is shortsighted. In the American armed forces we must have every division—in fact, every combat soldier—trained to fight as infantry, and with the infantry, on the ground.

That this force must be mobile both tactically and strategically is a foregone conclusion. And if it is to be committed overseas, the necessary shipping must be readily available in the exact numbers and types of ships we need. Ports and port battalions must exist as transportation support in being.

Trained men and waiting ships are not enough. This force-in-being which must be our minimum fighting establishment should have the best in modern equipment.

Caught in the fascination of scientific development and research promise, the practical soldier may be misled in his thinking toward atomic warheads, and guided missile long-range fire power, to the exclusion of a very practical objective.

Even with our generous industrial production, any future American Army must leave an absolutely clean battlefield. We cannot expect industry to provide, nor a soldier to carry, any item he does not use. This applies, too, to every other soldier who must support the advance of the ground army.

To save themselves in order to win the battle, the American GI must be the best equipped, the best protected, and the man with the lightest load. This includes his rifle, his ammunition, his clothing, his food. I don't believe that American ingenuity has been completely applied to this ultimate economy-plus-effectiveness problem.

Lighten the soldier's load, and at the same time decrease the weight of his supporting guns and their ammunition—and we may in the sum total, provide, through research and careful development, an air-borne army. By effecting this helpful economy, and by constant effort to use less of the strategically critical raw materials in our arms, we may be able to lower the steel and munitions requirements to the point that we can provide a victory at lower cost—in living standards as well as lives.

Finally, in general objective, this ready force must know its mission, and more than that, must like it. It cannot be a one-shot task force for a suicide attempt. Plans made for its employment must include a realistic concept of the logistical support, and the reinforcements, needed for its sustained mission. As we work out its speedy transportation with the Navy and the Air Force, we must provide the tactical air groups to push the divisions forward, and to maintain air superiority wherever possible.

If this force is available, and we provide in our Army the schooling system, the depots and storage plants, the necessary Reserve and National Guard training assistance, we can meet the first requirement of a modern war at the same time strategic air launches the retaliatory attack.

These are unusual and most difficult requirements. However, they are not beyond the capabilities of good-planning, forward-thinking soldiers. And I urge you in the months to come to apply your minds and your education to this problem.

As a basis of discussion I suggest one possible solution: Can the United States afford an Army striking force of any less than a completely ready, reinforced corps, balanced in division types, capable of sustained action, for the backbone of its long-range modern Army?

This is not a time for classroom problems. After all, you have completed a year of rigorous study, in a limited professional field. American military success has been founded on similar study by soldiers before you. Each of them had the capability of envisioning greater problems, and at the same time inventing more practical answers than their predecessors.

A review of World War II and its outcome has confirmed in my own mind the belief that the Army system of professional education which was revitalized and expanded after World War I was one of the greatest contributions to the winning of World War II. For it provided us, in our small nucleus of Regular Army officers, and our larger complement of National Guard and Reserve officers, with skilled leadership as well as staff procedures which competently faced the tough tactical and strategic problems thrust upon us.

Today, as you graduate from the Command and General Staff College you join the ranks of those soldiers who have a common professional education aimed toward the solution of higher staff and command problems. Your selection to attend this school is evidence of the Army's faith in your potential for assuming greater responsibility in the case of war. It is especially appropriate that we have discussed future plans and policies, and necessary economies with you here today.

One final word to the future commanders and staff officers in the American Army. Keep within these possibilities as you plan: The American Army can be no different than the American people. If our national aptitudes are mechanization, initiative, ingenuity, individuality, we must never attempt to suppress them. A man's religion and his politics are his own affairs and must always continue to be. And if a man's respect for his superiors is based on an appreciation of the intelligence and ability of his leaders, then the leaders we offer him must have these better talents.

In your future military careers, I wish you and your families continued success and much happiness. As American citizens you are expected to be outstanding.

Country Editors Think—And Some Write

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, from the Allegan Gazette of July 21, 1949, published in my home town of Allegan, Mich., comes the following:

NOTES AND COMMENT—THE PASSING PARADE

Last week we wrote an editorial suggesting that Congress might save a lot of time and do the country a service if they dropped all their investigations and investigated Truman. A friend of the Gazette (not Uncle Enos) advised us that it was in poor taste as it inferred that our President might be dishonest. So we threw it in the wastebasket. Now we read that Senator BYRD wants to investigate Truman's economic advisers and that Representative SHAFER wants to investigate General Vaughan, Truman's profane personal military adviser. Looks as though we lost out on that one.

Last week General Vaughan, at a press interview upon his return from a trip abroad, opened his big mouth and stated to the press that he knew there were about 300 "five percenters" in Washington, and that some of the reporters present had better be careful because some day they might want a "White House favor." For your information, a "five percenter" is a Washington leech who rates with the administration. He has "influence" and is willing to "sell" his influence to anyone who is willing to give him 5 percent of any contract that he can secure from the Government. Needless to say, the 5 percent is eventually paid by the taxpayer.

Eight of the jurors in the Hiss trial found him guilty of perjury, which is the same as finding him guilty of delivering secret confidential Government documents to the Communists. As you know, Hiss was an official of the State Department under Roosevelt and his personal advisor at Yalta, where Roosevelt delivered over to Stalin and the Communists all of eastern Europe. Hiss was recommended to Uncle Sam by Felix Frankfurter, appointed by Roosevelt to the Supreme Court. Frankfurter degraded the name of the highest court in the land by appearing as a character witness for Hiss at the trial. The eight jurors who voted for conviction evidently believe that the fact that the stolen documents were copied on the Hiss typewriter outweighed the testimony of Justice Frankfurter.

For your information, Frankfurter was formerly a Harvard professor, and it was through his influence that many of his law students secured high positions in the New Deal government. Another one of his proteges, Edward Prichard, formerly an assistant to the Attorney General of the United States, has just been convicted in Kentucky and sentenced to 2 years in the Federal penitentiary for doctoring 254 ballots in the general election last fall. It appears that he forged these ballots in favor of the New Deal. Some picker, this man Frankfurter.

From Austin, Minn., comes a news item concerning one Thomas Downey. It appears that this man fell from a truck and injured his head. Well-meaning friends placed a tourniquet around his neck and drew it tight to stop the flow of blood. A woman passerby stopped and persuaded them to loosen it and, thanks to her, Thomas Downey revived and is now on the road to recovery. We sincerely wish that Truman would appoint this same woman his personal economic adviser so that she could do the same for Uncle Sam. In our opinion, Uncle Sam is being strangled to death by the New Dealers, labor bosses, pinkish justices of the Supreme Court, Bridges with his blockade of Hawaii, the American Legion with its pension and other benefits to undeserving so-called veterans, and career reliefers.

You remember the story of the Man Without a Country and how the Navy took over the custody of one Philip Nolan? This unfortunate soul, guilty of a crime against his country, was placed on a naval vessel and for the rest of his life was not permitted to hear, speak of or see the United States. In our opinion the United States would do well to take the wraps off its moth-ball fleet, load Hiss and all the other nonbelievers in democracy on this fleet and give them the same treatment. We would gladly pay taxes for such a project.

L. W. H.

The foregoing editorial shows that the home folks have at least an inkling of what is going on behind the iron curtain in Washington. The editorials are a barometer which give us an accurate evaluation of the thinking of a majority of our people.

Pledge of Allegiance

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. DOYLE. Mr. Speaker, the following is the text of an article which appeared in the Independent Review, Los Angles County, Calif., under date of July 22, 1949, by Leisa Bronson, director of organization, women's division of the Democrat State Committee, California, southern division. I am pleased to present it to you:

At the opening of every political meeting we stand and pledge allegiance to the flag of the United States of America and to the Republic for which it stands; one nation indivisible, with liberty and justice for all. We have done this hundreds, perhaps thousands of times. How did we come to take this pledge? What is its meaning for us?

The pledge of allegiance was first used in the schools in response to a proclamation issued by President Benjamin Harrison at the request of Congress, recommending that October 31, 1892, be set aside to commemorate the four hundredth anniversary of the discovery of America. The pledge devised for the occasion, slightly altered, is the one we use today.

We call it the pledge of allegiance. According to Webster's Dictionary, allegiance means the duty of fidelity to one's king, government, or sovereign state. It connotes devotion, loyalty, service, and respect. The opposite or antonym is given as "treason, treachery, perfidy, disloyalty."

TRANSCENDS LOYALTY PLEDGE

We have, then, taken a loyalty oath—a loyalty oath that is voluntary, dynamic, creative. This pledge far transcends the negative type of compulsory loyalty oaths advocated by our Un-American Activities Committee. He who pledges himself wholeheartedly to work for "liberty and justice for all" must repudiate totalitarianism in all its forms. He who sincerely pledges allegiance to the flag could not own a prior allegiance to any other government.

But more than this, the pledge of allegiance is far-reaching in its implications. That phrase "liberty and justice for all" commits us to many things. It commits us to work against discrimination, both racial and economic. It commits us to implement the Bill of Rights. It commits us to the task of unifying the Nation, not in terms of power, but in terms of a national ideal.

The pledge connotes service. It means that we must give of our best in the struggle to achieve social justice. It means that we will serve with constancy and responsibility. It means self-dedication.

There is no fear in this pledge. It is a pledge of free men, freely given. When we repeat the familiar words together, let us think of the deep meaning they have for us as Democrats and as citizens. Let us think of them as a victorious answer for today and a challenge for tomorrow.

Our Flag Flies at Night Also

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1949

Mr. DOYLE. Mr. Speaker, the fact that I had never seen the flag staff on our Nation's Capitol building without a flag flying from it, either night or day, caused me to make inquiry to the Library of Congress as to why it did so and whether or not there were other places in the United States where the flag of the United States also flew in the breeze 24 hours a day.

I felt reasonably sure that the information which was furnished to me by the Library of Congress in reply to my inquiry on this matter would be of value to all Members of Congress and the thousands of other readers of the CONGRESSIONAL RECORD. Therefore, I take pleasure in submitting it to you for your guidance and information, and I include

therein the text of Public Law 829 of the Seventy-seventh Congress:

FLYING OF UNITED STATES FLAG AT NIGHT

The Star-Spangled Banner at Fort McHenry, Md., will fly under floodlights all night long hereafter, largely because a visitor complained the flag was not visible "at the twilight's last gleaming," it was announced today.

It was at Fort McHenry, in the War of 1812, that the sight of the flag gallantly streaming throughout a British attack inspired Francis Scott Key to write the national anthem. (Washington Post, February 12, 1947, p. 2.)

Walter L. Vanaman, director of the municipal veterans bureau (Baltimore) said today he had received permission from the Department of the Interior to fly the flag at night at Fort McHenry. It will be illuminated by spotlights.

The night display was prompted by a letter from Herbert Beck, director of the Franklin and Marshall College Museum in Lancaster, Pa. Beck said it was disappointing to passengers on night boats passing the fort not to see that "the flag was still there." (Associated Press release, February 1, 1947.)

WHERE THE UNITED STATES FLAG FLIES DAY AND NIGHT

There are four flags that fly continuously, day and night, year in, year out: On the east and west fronts of the United States Capitol, at the grave of Francis Scott Key; and at the War Memorial, Worcester, Mass.

On the Capitol Building. In 1894 Congress made provision for the flying of the flag over the east and west porticos of the United States Capitol Building in Washington, and the flags were flown daily between sunrise and sunset until 1918. During the World War requests were received from all parts of the country urging that the United States flag be flown continuously over all public buildings in Washington, so since that time it has been the custom to keep the flags on the east and west fronts of the Capitol Building flying 24 hours a day every day in the year. * * *

At the grave of Francis Scott Key in Mount Olivet Cemetery, Frederick, Md. Flying the flag day and night was the custom as far back as 1898. However, because of criticism, the flag was later displayed only between sunrise and sunset. Subsequently the practice of flying the flag day and night was resumed. The belief by some that this practice is authorized by an act of Congress is erroneous. It was started either by authority of the Francis Scott Key Memorial Association, or by the superintendent of Mount Olivet Cemetery on his own accord. It is contended by some that flying the flag over the grave of Francis Scott Key at night is in keeping with the sentiment in "The Star Spangled Banner," giving "proof through the night that our flag is still there."

At the Worcester War Memorial. The War Memorial at Worcester, Mass., was designed around the idea of a flag flying perpetually. It had been flying continuously since November 11, 1933, being illuminated at night by powerful spotlights.

When a permanent fort or a ship is engaged in battle at night, the flag is flown. (Moss, James A., The Flag of the United States. The United States Flag Association, Washington, D. C. 1941, pp. 203–204.)

THE LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
Washington, D. C., July 25, 1949.

Hon. CLYDE DOYLE,
House of Representatives,
Washington, D. C.

DEAR MR. DOYLE: This is in response to your inquiry of a few days ago, about flying the flag at night. The enclosed extract from James A. Moss, The Flag of the United States, indicates three places where the flag flies continuously (the Capitol, the grave of Francis Scott Key, and the Worcester War Memorial), and the press releases show a fourth, namely, Fort McHenry, commencing in 1947.

A word of explanation should certainly accompany any such list. In the first place, I doubt whether there is any substantial basis for a complete list of places where the flag is flown continuously. So far as Government buildings are concerned, the matter is, of course, governed by regulation. (This explains, for example, the procedure in the case of Fort McHenry.) But beyond that, there is no general law dealing with the subject which would effectively prohibit flying the flag at night. The so-called Flag Code does not purport to lay down the law but rather to codify existing custom. No penalties are prescribed. Hence the whole matter, so far as private individuals are concerned, rests in their sound discretion, aided but not bound by the customs codified in the Flag Code. That act indicates that sunrise to sunset is the general custom. "However, the flag may be displayed at night upon special occasions when it is desired to produce a patriotic effect." This clause would seem to be capable of considerable latitude of interpretation; for example, the Worcester War Memorial could well be considered as designed to produce a patriotic effect.

How many more cases of the sort there may be is something on which we have been unable to find data. However, I presume the absence of such data probably means that any further examples are not of national significance.

Very truly yours,

W. C. GILBERT,
Assistant Director, Legislative Reference Service.

[Public Law 829—77th Cong.]
[Ch. 806—2d Sess.]
House Joint Resolution 359

Joint resolution to amend Public Law No. 623, approved June 22, 1942, entitled "Joint resolution to codify and emphasize existing rules and customs pertaining to the display and use of the flag of the United States of America"

Resolved, etc., That Public Law No. 623, approved June 22, 1942, entitled "Joint resolution to codify and emphasize existing rules and customs pertaining to the display and use of the flag of the United States of America," be, and the same is hereby, amended to read as follows:

That the following codification of existing rules and customs pertaining to the display and use of the flag of the United States of America be, and it is hereby, established for the use of such civilians or civilian groups or organizations as may not be required to conform with regulations promulgated by one or more executive departments of the Government of the United States.

SEC. 2. (a) It is the universal custom to display the flag only from sunrise to sunset on buildings and on stationary flagstaffs in the open. However, the flag may be displayed at night upon special occasions when it is desired to produce a patriotic effect.

(b) The flag should be hoisted briskly and lowered ceremoniously.

(c) The flag should not be displayed on days when the weather is inclement.

(d) The flag should be displayed on all days when the weather permits, especially on New Year's Day, January 1; Inauguration Day, January 20; Lincoln's Birthday, February 12; Washington's Birthday, February 22; Army Day, April 6; Easter Sunday (variable); Mother's Day, second Sunday in May; Memorial Day (half staff until noon), May 30; Flag Day, June 14; Independence Day, July 4; Labor Day, first Monday in September; Constitution Day, September 17; Columbus Day, October 12; Navy Day, October 27; Armistice Day, November 11; Thanksgiving Day, fourth Thursday in November; Christmas Day, December 25; such other days as may be proclaimed by the President of the United States; the birthdays of States (dates of admission); and on State holidays.

(e) The flag should be displayed daily, weather permitting, on or near the main administration building of every public institution.

(f) The flag should be displayed in or near every polling place on election days.

(g) The flag should be displayed during school days in or near every schoolhouse.

SEC. 3. That the flag, when carried in a procession with another flag or flags, should be either on the marching right; that is, the flag's own right, or, if there is a line of other flags, in front of the center of that line.

(a) The flag should not be displayed on a float in a parade except from a staff, or as provided in subsection (i).

(b) The flag should not be draped over the hood, top, sides, or back of a vehicle or of a railroad train or a boat. When the flag is displayed on a motorcar, the staff shall be fixed firmly to the chassis or clamped to the radiator cap.

(c) No other flag or pennant should be placed above, or, if on the same level, to the right of the flag of the United States of America, except during church services conducted by naval chaplains at sea, when the church pennant may be flown above the flag during church services for the personnel of the Navy.

(d) The flag of the United States of America, when it is displayed with another flag against a wall from crossed staffs, should be on the right, the flag's own right, and its staff should be in front of the staff of the other flag.

(e) The flag of the United States of America should be at the center and at the highest point of the group when a number of flags of States or localities or pennants of societies are grouped and displayed from staffs.

(f) When flags of States, cities, or localities, or pennants of societies are flown on the same halyard with the flag of the United States, the latter should always be at the peak. When the flags are flown from adjacent staffs, the flag of the United States should be hoisted first and lowered last. No such flag or pennant may be placed above the flag of the United States or to the right of the flag of the United States.

(g) When flags of two or more nations are displayed, they are to be flown from separate staffs of the same height. The flags should be of approximately equal size. International usage forbids the display of the flag of one nation above that of another nation in time of peace.

(h) When the flag of the United States is displayed from a staff projecting horizontally or at an angle from the window sill, balcony, or front of a building, the union of the flag should be placed at the peak of the staff unless the flag is at half staff. When the flag is suspended over a sidewalk from a rope extending from a house to a pole at the edge of the sidewalk, the flag should be hoisted out, union first, from the building.

(i) When the flag is displayed otherwise than by being flown from a staff, it should be displayed flat, whether indoors or out, or so suspended that its folds fall as free as though the flag were staffed.

(j) When the flag is displayed over the middle of the street, it should be suspended vertically with the union to the north in an east and west street or to the east in a north and south street.

(k) When used on a speaker's platform, the flag, if displayed flat, should be displayed above and behind the speaker. When displayed from a staff in a church or public auditorium, if it is displayed in the chancel of

a church, or on the speaker's platform in a public auditorium, the flag should occupy the position of honor and be placed at the clergyman's or speaker's right as he faces the congregation or audience. Any other flag so displayed in the chancel or on the platform should be placed at the clergyman's or speaker's left as he faces the congregation or audience. But when the flag is displayed from a staff in a church or public auditorium elsewhere than in the chancel or on the platform it shall be placed in the position of honor at the right of the congregation or audience as they face the chancel or platform. Any other flag so displayed should be placed on the left of the congregation or audience as they face the chancel or platform.

(l) The flag should form a distinctive feature of the ceremony of unveiling a statue or monument, but it should never be used as the covering for the statue or monument.

(m) The flag, when flown at half staff, should be first hoisted to the peak for an instant and then lowered to the half-staff position. The flag should be again raised to the peak before it is lowered for the day. By "half staff" is meant lowering the flag to one-half the distance between the top and bottom of the staff. Crepe streamers may be affixed to spear heads or flagstaffs in a parade only by order of the President of the United States.

(n) When the flag is used to cover a casket, it should be so placed that the union is at the head and over the left shoulder. The flag should not be lowered into the grave or allowed to touch the ground.

SEC. 4. That no disrespect should be shown to the flag of the United States of America; the flag should not be dipped to any person or thing. Regimental colors, State flags, and organization or institutional flags are to be dipped as a mark of honor.

(a) The flag should never be displayed with the union down save as a signal of dire distress.

(b) The flag should never touch anything beneath it, such as the ground, the floor, water, or merchandise.

(c) The flag should never be carried flat or horizontally, but always aloft and free.

(d) The flag should never be used as drapery of any sort whatsoever, never festooned, drawn back, nor up, in folds, but always allowed to fall free. Bunting of blue, white, and red, always arranged with the blue above, the white in the middle, and the red below, should be used for covering a speaker's desk, draping the front of a platform, and for decoration in general.

(e) The flag should never be fastened, displayed, used, or stored in such a manner as will permit it to be easily torn, soiled, or damaged in any way.

(f) The flag should never be used as a covering for a ceiling.

(g) The flag should never have placed upon it, nor on any part of it, nor attached to it any mark, insignia, letter, word, figure, design, picture, or drawing of any nature.

(h) The flag should never be used as a receptacle for receiving, holding, carrying, or delivering anything.

(i) The flag should never be used for advertising purposes in any manner whatsoever. It should not be embroidered on such articles as cushions or handkerchiefs and the like, printed or otherwise impressed on paper napkins or boxes or anything that is designed for temporary use and discard; or used as any portion of a costume or athletic uniform. Advertising signs should not be fastened to a staff or halyard from which the flag is flown.

(j) The flag, when it is in such condition that it is no longer a fitting emblem for display, should be destroyed in a dignified way, preferably by burning.

SEC. 5. That during the ceremony of hoisting or lowering the flag or when the flag is passing in a parade or in a review, all persons present should face the flag, stand at attention, and salute. Those present in uniform should render the military salute. When not in uniform, men should remove the headdress with the right hand holding it at the left shoulder, the hand being over the heart. Men without hats should salute in the same manner. Aliens should stand at attention. Women should salute by placing the right hand over the heart. The salute to the flag in the moving column should be rendered at the moment the flag passes.

SEC. 6. That when the national anthem is played and the flag is not displayed, all present should stand and face toward the music. Those in uniform should salute at the first note of the anthem, retaining this position until the last note. All others should stand at attention, men removing the headdress. When the flag is displayed, all present should face the flag and salute.

SEC. 7. That the pledge of allegiance to the flag, "I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one Nation indivisible, with liberty and justice for all", be rendered by standing with the right hand over the heart. However, civilians will always show full respect to the flag when the pledge is given by merely standing at attention, men removing the headdress. Persons in uniform shall render the military salute.

SEC. 8. Any rule or custom pertaining to the display of the flag of the United States of America, set forth herein, may be altered, modified, or repealed, or additional rules with respect thereto may be prescribed, by the Commander in Chief of the Army and Navy of the United States, whenever he deems it to be appropriate or desirable; and any such alteration or additional rule shall be set forth in a proclamation.

Approved, December 22, 1942.

Address by Governor Dewey at First Annual Conference on American Foreign Policy

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, July 29 (legislative day of Thursday, June 2), 1949

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address which I consider to be quite important, delivered by Gov. Thomas E. Dewey at the closing session of the first annual conference on American foreign policy, at Colgate University, Hamilton, N. Y., July 28, 1949. The address deals with the Chinese situation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Four years ago, on the fourteenth of next month, World War II in Asia came to an end with the surrender of the Japanese. China had been under invasion and occupation by the Japanese for a grand total of 14 years—ever since the Japanese invaded Manchuria in 1931. Germany and Japan had now been completely beaten and the world confidently expected a new era of peace and freedom.

The exhausted Chinese Government and people shared the exultation which went around the free world. China looked forward to a new era, free of invaders, with a chance to rebuild her war-torn economy and rescue her 500,000,000 people from the suffering of years of warfare and occupation.

Today that great vision is shattered in a thousand pieces and the hopes of the Chinese people are lower than they were before their triumphant victory in partnership with the United States. A thoughtful Chinese put it to me this way the other day:

If China had violated her ancient friendship with the United States and had joined hands with Japan as the enemy of America, where would she be today? It is unthinkable that China would ever have done such a thing, he said, but let's assume that she did. China would ultimately have been defeated, as was Japan. The war would have been prolonged. It would have cost America countless additional lives and billions of dollars. But China would ultimately have been defeated by the United States. Then what would have happened, he asked?

General MacArthur would be presiding today over not only Japan but over China too. Each would be occupied by American troops and the United States Government would be pouring hundreds of millions of dollars into China for the purpose of restoring her economy, establishing a stable free government and rebuilding her in the partnership of nations just as we are doing in Germany and Japan today.

Instead, where is China, our ally and friend? He pointed out that instead of having the benefit of peace, order, American technical skill, and hundreds of millions of dollars in American money, China has been abandoned to Communist conquest. So said my Chinese friend.

In short, China is worse off for being our friend than if she had been our enemy.

Having sent arms and other wartime aid to China when she stood at our side during the war, we went even further and pledged ourselves to maintain the territorial and political integrity of China in the postwar world. These pledges we solemnly made at Cairo in November 1943. With seemingly carefree abandon the allied nations reversed themselves at Yalta and have vacillated ever since. Behind China's back, we agreed to let the Russians take over China's eastern and southern Manchurian railroads and also Port Arthur and Dairen as tokens of their share in our victory over Japan. China, who stood for 14 years against Japan from 1931 to 1945, found that victory gave her only the bitter result of having to yield valuable territory to Russia.

For China the war never stopped. She just has a new enemy. In place of Japan, it is her Russian-sponsored Communist enemies who have continued the war these four long additional years, finally collapsing the Chinese economy and conquering more than half her people. The rewards for friendship and loyalty have been the bitter fruits of more war, starvation, and now conquest.

More than a year and a half ago, in November 1947, I delivered a speech in New York City devoted to this subject and I pointed out what had happened up to then, forecasting with a dismal degree of accuracy what has since occurred. It is entirely unimportant that I should have forecast this mighty tragedy. But it is of major importance to determine whether there is anything yet to be done about it.

The eyes of most Americans have been focused on Europe since the end of the war. By dint of tremendous effort and at great cost, we have achieved a stalemate with the Soviets in the cold war in Europe. Economically, she is still hanging in a precarious balance, and what I learned in my recent trip to Europe has only increased my concern over the prospects of rebuilding a western Europe strong enough to stand on its own feet if Asia is in chaos. But while we have won these tenuous victories in Europe the whole cause we represent has suffered the most far-reaching and resounding defeats in China and throughout much of Asia.

While perhaps saving Europe's 270,000,000 people, we have up to now lost even more in China and face the risk of losing all of Asia.

Is this important? It seems to me to be a key to world peace, and we have thrown it into the bottom of the Pacific Ocean. A cardinal tenet of our foreign policy, ranking in importance with the Monroe Doctrine, has been our open-door policy. With positive action and generous aid we have time and again shown our respect for and vital interest in the political integrity of China. As a people, regardless of politics, we decided long ago that a free China was essential to our own welfare.

The attack on Pearl Harbor which brought us into the war was precipitated by our insistence that Japan withdraw her legions in China and halt their conquest. Our Government's official White Book of 1943 makes this perfectly clear. It was our firm position in defense of China that brought on the Japanese attack. We fought for 4 years in that defense, because the defense of free China was the defense of America.

One of America's great statesmen, Secretary of State John Hay, said nearly 50 years ago, "World peace rests with China, and whoever understands China * * * holds the key to world politics during the next five centuries." There are still 450 years to go on those five centuries, and the statement is as true today as when it was made.

There are still in this world matters such as good faith and loyalty to our ancient and traditional ally. These should be sufficient motivation for a change in our far-eastern policy. But even aside from these, we have a very practical problem of the physical and military protection of the interest and people of America. If all China should go, obviously the Communist revolutionaries in Indochina will complete their success there. Siam and Malaya might not be expected to survive long, and Burma would follow. A surrounded and divided India would appear to be easy prey, and it requires a great deal of wishful thinking to assume that the movement would not then extend into the Middle and Near East. That would bring the Communist forces with the colossal prestige and power of more than a billion people of Asia within easy reach of the fabulous supplies of oil of the Middle East. Without oil, the survival of Europe would be even more precarious than it is today.

How long would Korea survive as an appendix to Asia How long would we be willing to support Japan, whose whole trade background has always been with the continent of Asia? Could Indonesia hold out if she desired—and where would the Philippines be? Would there be any rubber supplies left flowing to the United States? And what would the position of our defenses be then?

And let me ask, how well we would do in the United Nations to which we are solemnly committed if the Chinese vote on the Security Council should in the future be controlled from the Kremlin. And how would we do in the Assembly with China and Korea and Japan and other Asiatic states (once they are admitted) all with their votes also controlled from the Kremlin? To state the questions is to show the stark nature of the tragedy to which the world must face up now if ever.

It seems that subsequent events have solemnly validated John Hay's dictum that "The world peace rests with China."

So as we win an uneasy stalemate in Europe, what is to be done about China? I know and you know there is no simple answer, but you and I know equally well that there can be neither excuse nor reason for timidity and muddleheadedness on the part of our Government in attempting a solution. Surely we must have a policy and the will to carry it out, and surely our present habit of no policy at all must go.

It is my firm conviction that with a small fraction of what a new war would cost, we could provide the skills and resources which we might reasonably hope could still save China—could save and preserve one-fifth of the world's people on the side of human freedom.

After I made my speech in November 1947 the Congress forced an $18,000,000 appropriation for China. Last year further appropriations were made, but our Government has shown no real interest in China and instead it administers a contemptuous rebuff each time a despairing appeal is made by any leaders of her Government.

On top of that, the Communist propaganda is so vastly superior that they make it appear that China is already a gone goose and that Asia is theirs. This is not true. It is a startling fact that today, right now, the non-Communist forces in China control more territory than they did during their war with Japan.

They still control the southeast China seaports which they never had at any time while they were our ally in the war.

Free China still includes more than 170,000,000 people. It still controls a very large share of the agricultural land of all China.

There is a determined hard core of resistance, not only throughout the ranks of the leadership in China, but throughout the rank and file of its people against communism, which is hateful to everything the Chinese people believe in.

One other fact: The public apologists and writers who have been innocently or willfully playing the Communist game in trying to deceive the American people into believing that the Chinese Communists were not Communists at all have been exposed as frauds. The Communist conquerors have publicly insulted our Government and we have lost face in the Orient. Our Ambassador was kept a virtual prisoner in Nanking. Vice Consul Olive was beaten in the Shanghai jail. The Chinese Communists have repeatedly demonstrated that they are the servants of Moscow and the advance agents of the new totalitarianism.

Now should we follow these false prophets still further? They have a new line made in Moscow all ready for us. They would like to have our Government recognize the Communist conquests, thereby proving to all the world that it is unwise to be friendly with the United States—that we will betray our friends immediately when any one develops a coup d'état through bloody conquest. If that should be the action of our Government, we would most certainly be throwing away every principle for which our flag and Constitution have ever stood, every right to speak for the cause of world peace and decency.

But these apologists go further. They now tell us we can do business with the Communists if we will quickly recognize them and prove we are not hostile. That need leave little argument. We went all through this before. We listened to those who said we could do business with H'tler, and American boys are dead as a result.

If we can clear away these misconceptions, our own course of action becomes clearer. These negative concepts are as important as positive action. If we should immediately make it clear to the world that we will not recognize this brutal conquest, we will be well on the road toward a vast revival of morale of the forces for freedom in China and the rest of Asia.

The next step is equally clear: We should indicate plainly that even though we realize the National Government is far from perfect, we have not abandoned the faith in a free China we proclaimed so loudly when we needed it during the war; that we know that whatever its faults it is the best present hope of establishing freedom in China. This, too, is obvious, and there should be no reason for hesitation over such a course.

How much aid should America then give to the various non-Communist forces? That is a matter as to which the most widely different opinions can be found. Any aid, given immediately, right now, this summer, would create a great return of confidence. If supported with a vigorous official position it would make a radical change in the Chinese picture. It is said that the troops in China are now almost evenly divided, approximately 1,300,000 on each side. It is also said that there are more fresh troops being trained by the National Government. I do not know whether these figures are accurate, but I do know that if spirit returns and the sense of being abandoned by her friends is cleared away, there is sufficient will to carry on an effective struggle and prevent a Communist conquest.

How long would such a struggle last? No one knows. But there are leaders in vast territories of China—territories larger than those on our side during the whole war with Japan—who will fight on and on until the turn comes. As they fight, with whatever American aid we give them, we gain time in the cold war and the rest of Asia does not go under.

Moreover, if the Communist conquerors are forced to a defensive position while they endeavor to cure the frightful economic conditions which made their successes so easy they will soon prove their bankruptcy and inefficiency. They will face the prospect of the very disintegration and loss of prestige on which they have built their temporary successes. Then it would not be necessary to liberate China by a long and costly military operation. Stalemate would inevitably be followed by new and effective yearning by the Chinese people for a restoration of their traditional freedoms.

Communism is basically rotten and contains within itself the seeds of its own destruction. This we believe with all our hearts and souls and it is time—past time—that as a Nation we started acting on our beliefs.

I cannot say it better than did the free-trade-union committee of the American Federation of Labor in a statement issued on July 4:

"We reject all notions and policies of defeatism in China. We categorically repudiate the notion that all is hopelessly lost in China," the committee stated, and they added: "It is high time that our country showed the way in atoning to the Chinese people for the Big Three sacrifice of their sovereignty.

"American leadership in stemming the tide of totalitarian communism and chaos in China is long overdue."

If we back renewed faith with vigor and competence, I believe that we will succeed. With a clear policy and firm action, we can keep that faith. Such a policy and such action must soon evolve. I prayerfully hope that it will and that it will endure as a cornerstone of American foreign policy, based upon our fundamental belief in the liberty and independence of free men everywhere in all the years to come.

Proposed Columbia Valley Administration

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, July 29 (legislative day of Thursday, June 2), 1949

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the RECORD a letter dated July 12, 1949, from Ralph L. Albaugh, a well-known attorney of Idaho Falls, Idaho, to Ben

Johnson, chairman of the Idaho Agricultural Council, containing a legal opinion on the proposed law creating the Columbia Valley Administration.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

IDAHO FALLS, IDAHO, *July 12, 1949.*

Mr. BEN JOHNSON,
Chairman, Idaho Agricultural Council,
Preston, Idaho.

DEAR SIR: You have requested my opinion concerning the proposed law creating the Columbia Valley Administration, and enumerate six points which you would like to have covered in my opinion.

I do not have the time available to give you a comprehensive and detailed opinion of this bill, although I have spent considerable time studying same.

In the first place, I want you to know that I am, and always have been, opposed to Government ownership and/or operation of business, and I oppose paternalism in Government. I think, as a rule, the development of our resources and the operation of all forms of business should remain in individuals and private corporations. There are exceptions to all rules, and I think the protection, development and utilization of our larger rivers and watersheds by the Federal Government is an exception to the rule.

The Columbia River and its larger tributaries are navigable streams, and the control of these navigable streams is vested by law in the Federal Government. Private corporations, because of the magnitude of such a project, cannot do this work. And neither can the States of Idaho, Washington, Oregon, or Montana prosecute such an undertaking.

It therefore appears that our Federal Government, or some authority or bureau created by it, must assume this responsibility. The opponents of the CVA claim that the Army engineers and the Department of Reclamation are properly organized for this huge undertaking and can satisfactorily do the job. I do not agree with this contention.

While the Army engineers and the Department of Reclamation are deserving of praise for the many public works they have constructed, I think it is an established fact that their work has not been coordinated, and that these two agencies of the Federal Government have not cooperated with each other. The public and the taxpayers have suffered from this lack of cooperation. I think it must also be admitted that after a project was authorized by the Congress there have been many delays, and the work not efficiently or diligently prosecuted.

It is true that the proposed bill grants great powers and authority to the Columbia Valley Administration, with the right to take property by eminent domain, as well as many other powers. It must be remembered, however, that the Federal Government now has power to take property by eminent domain for almost every conceivable purpose. The Bureau of Reclamation has that power and has frequently used it.

The power to abolish the CVA, as well as the power to create it, rests in the Congress and the President. If the CVA does not function properly or functions in an arbitrary or unreasonable manner, we think the Congress will give the citizens protection, either through control of the purse strings or by abolishing the CVA. Surely, we cannot assume that the CVA will act in an unreasonable, arbitrary, or oppressive manner, or that it will intentionally injure the residents of the Northwest.

I have given considerable time and thought to a study of this proposed law. I do not believe it is unnecessarily oppressive, and it is my opinion that some sort of an authority or administration similar to the CVA, is the only way, and the only means, to develop and utilize the resources and power of the Columbia River and its tributaries, which are now being wasted or inefficiently used.

Great concern and anxiety has been aroused in the water-users of the State of Idaho over the proposed enactment of the bill to create the CVA. Many opponents of this bill insist that water rights will be confiscated by the CVA. Water rights are real property, and, as such, are protected by the Constitutions of the State of Idaho and the United States. Every reservoir constructed by the Bureau of Reclamation has affected water rights on the particular stream where the reservoir was constructed. Some water-users have received great benefits from the reservoirs and others have been damaged. We are unable to ascertain how a reservoir constructed by the CVA will more seriously affect the water users than a reservoir constructed by the Bureau of Reclamation. Property will be condemned by either agency, and water rights will be affected by the construction of the reservoir. Some will receive benefits therefrom, and others will be injured, regardless of which Government agency does the work.

Very truly yours,

RALPH L. ALBAUGH.

Aid to Britain

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Friday, July 29 (legislative day of Thursday, June 2), 1949

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article under the heading "Political Parade," written by George R. Brown, dealing with American aid to Britain, and published in the Washington Times-Herald of July 29, 1949. The article is self-explanatory.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POLITICAL PARADE

(By George Rothwell Brown)

The United States Senate finds itself faced this week with an embarrassing decision—whether to vote to stop influencing British politics, or to continue to support a fast sinking alien ship-of-state socialism at the expense of American taxpayers.

Winston Churchill's Wolverhampton speech falls only a little short of being a plea to the Truman Socialist-Labor government in Washington to cease the financing of the Attlee Socialist-Labor government of London, and thus give the Conservative Party a chance to save the British social and economic systems before both collapse into complete ruin.

It is impossible to regard as coincidence the fact that the former Prime Minister's charge that the Labor government has squandered nearly $8,000,000,000 aid, mostly from the United States, was made at the beginning of the debate in the Senate on the pending ECA appropriation bill.

It looked like careful timing.

The Wolverhampton speech has immensely strengthened the Democratic and Republican supporters of the proposed amendment by Senator JAMES P. KEM, of Missouri, which would deny further Marshall-plan aid to countries which continue the socialization of basic industries after the passage of the act.

Churchill's blistering charge that there is no difference between the Socialist system and communism, which made front-page news in the Sunday newspapers, was reiterated with telling effect in the Senate debate on Monday.

When Mr. Churchill declared that the Socialist-Labor government has no effective plan for dealing with impending national insolvency, he in effect put on the political spot in this country every Senator who casts a vote against the Kem amendment, the purpose of which is to cut off nearly a billion dollars of further aid to the British Government if it persists in continuing a policy which is leading to insolvency.

Senator KEM, speaking in support of his amendment, told the Senate that in 1948 ECA went to the rescue of the British Government, and permitted it to use more than $400,000,000 of American tax money from the so-called counterpart funds, for cancellation of British national debt, incurred as a result of the socialization of industries, of which the Attlee administration has already nationalized nine.

"The British national debt was swollen by the purchase of the industries," said Senator KEM, "and the British national debt was reduced by the Marshall-plan funds.

"Future students of the economic history of the United States will no doubt be interested in the fact that while these transactions were taking place, the national debt of the United States remained above $252,000,000,000."

Senator KEM then went on to prove that Marshall plan counterpart funds had been used to make up losses in the nationalized industries. These losses, in the first year of nationalization, he partially listed as follows:

The coal industry lost $94,000,000, civil aviation industry $44,000,000; transportation, $112,000,000; electrical industry (in a few months after nationalization) $28,000,000.

Well, here are the facts from both sides of the Atlantic.

The disclosures by Mr. Churchill and by Senator KEM and others are almost identical.

The Socialist-Labor government in Washington now proposes to drain off another billion of American wealth to keep the Socialist-Labor government of Britain from sinking.

This is deliberate interference by the Truman administration in British politics.

After reading Churchill's speech how can any Senator pretending to believe in the free enterprise system vote to keep the Attlee government in, and the Conservative government from coming back?

The Longshoremen's Strike in Hawaii

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Friday, July 29 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a short editorial entitled "Food From Japan," published in the Honolulu Advertiser of July 25. The editorial sets forth how food shipments are forbidden to enter Hawaii from the American coast, but that Mr. Bridges permits food shipments to enter Hawaii from Japan.

In addition to that editorial, I ask unanimous consent that there may be inserted in the Appendix of the RECORD three other short editorials, and comment from other newspapers, also pub-

lished in the Honolulu Advertiser of July 21.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

[From the Honolulu (Hawaii) Advertiser of July 25, 1949]

FOOD FROM JAPAN

Washington pundits who argue that the blockade of 540,000 American people in Hawaii is not a matter of national concern would do well to ponder the news that relief food for this Territory is to be sent from Japan. The United States Government is spending millions of dollars for the rehabilitation of the Japanese people—only lately their armed foes. It has gone to great lengths to save those people from starvation and disease. Now an American community, financially able to buy American food in American markets, must look to a defeated people who still are their country's beneficiaries for the means to sustain life.

And this because a power-hungry labor monopolist has chosen to impose a manufactured torment upon the people of Hawaii. Harry Bridges says we may trade freely with Japan, but not with the rest of the United States. So food comes to Hawaii from Japan.

[From the Honolulu (Hawaii) Advertiser of July 21, 1949]

VIOLENCE ON THE WATER FRONT

Violent defiance of the law has appeared for a third time on Honolulu's water front in relation to the Bridges blockade of Hawaii. This time the outbreak reached the proportions of a riot; private property was damaged, policemen and civilians suffered injury, arrests were made.

In each instance, this violence has originated among strikers or strike sympathizers. This is a fact that the public will do well to bear in mind, for it will not be long before the longshore leaders will be attempting to present their rioters in the white mantles of martyrs. History of ILWU-instigated violence shows that this is the common pattern. It is also the pattern of Communist rioting everywhere.

Start trouble, then blame the other fellow, is the basic plan. The people of Hawaii cannot permit themselves to be fooled now. The facts are too plainly evident.

BIG JOB BEFORE LEGISLATORS

Whatever happens in the current longshore blockade, the need for the special session of the Hawaii Legislature, which Governor Stainback has announced he will call next week, will be no less. Hawaii must have a new labor deal. There must be laws to protect the people of these islands from being placed in bondage by any group of special privilege seekers.

Monopoly of labor has no more place in Hawaii than does monopoly of capital. The people of Hawaii know of their own observation that, whatever may have been the condition in the long distant past, there is no monopoly of capital in this Territory today. They know Bridges' pretense that such a monopoly exists is untrue propaganda. They know, also, that Bridges has established a monopoly of labor here to an intolerable degree. He was frank in his admission at Washington Monday that he would attempt to close all the ports of the world against Hawaii in order to maintain that monopoly.

Hawaii must have laws that will meet and correct this imposition of a labor dictatorship insofar as that can be done by local legislation. At the same time the legislature will do well to act further to safeguard the Territory against hoarders and profiteers who batten on the public when it is beset by blockaders. Shameful extortion is being practiced by some dealers who are in possession of small supplies of food that has been brought through the existing blockade.

That the majority of Hawaii's merchants are not profiteers does not affect the situation. Laws are needed which will halt, and inflict severe penalties on, those who are so lacking in conscience that they will extort an unreasonable profit from the need of their fellow men.

The Hawaii Bar Association, the attorney general's department, and the hold-over committee are preparing a comprehensive agenda for the consideration of the legislators. The lawmakers' work will be laid out for them when they meet, and there will be no need for a long session. They should be able to accomplish their tasks quickly and effectively. But they are faced with tasks that must be accomplished now. Hawaii needs new labor laws. It cannot wait for the next regular session of the legislature, and this the Governor has recognized.

WAGES NOT BRIDGES' CONCERN

Longshoremen who have been led into Hawaii's disastrous maritime blockade will find food for serious thought in the words of Harry Bridges, called to testify before a congressional committee, when he admitted that he was not so much concerned over wages for the water-front workers as he is in imposing arbitration on the Territory. "The union," he said, "will get a satisfactory settlement though not necessarily 32 cents an hour." He said he was willing to give up wage parity in exchange for arbitration. This, of course, means that power, not the welfare of the longshoremen, is the Bridges stake.

THEY SAY ABOUT HAWAII

The Bangor (Maine) Daily News, in common with several other newspapers, likened the Hawaii strike situation to the days when the Jesse James and Dalton gangs roamed midwestern America. A column editorial assailing the Bridges gang was captioned "Banditry a la 1949." The News editorial was inspired, as so many others have been inspired, by a letter written to a Maine friend by Florence McIntyre, of Honolulu, who sent out some 40 broadsides enclosing printed antistrike material.

The Portland Oregonian, describing the "Blight on Hawaii," said "there is a blight among the orchids of the Paradise of the Pacific," which explains the reasons for the employers' rejection of wage arbitration in contract demands. The Oregonian editorial was sent in by E. L. Knickerbocker, of Honolulu.

"Hawaii is desperate," remarked the Colton (Calif.) Courier. "Clearly irresponsible men are willing to have multitudes suffer to gain their point. Harry Bridges wouldn't be allowed to call a strike if he were in Russia. He is certainly abusing his privileges in this country." The newspaper points out again that Richard Gladstein, attorney in the New York Communist trial, also is attorney for Harry Bridges.

The Oklahoma City Times said that "while the Truman administration's stand in labor controversies is weak-kneed enough in dealing with Lewis and his coal-mining dynasty * * * it is still more disgusting in dealing with the frightful situation in Honolulu. * * * Where is the Army?" Mrs. J. R. Williams, of Honolulu, sent the clipping.

The well-named Toledo (Ohio) Blade asserted editorially on July 11 that the immediate hope for the people of Hawaii "rests in the apparently timorous hands of President Truman," and added: "We suspect that certain political considerations might explain why Washington has been so reluctant." The newspaper said Bridges had forfeited any justice he might have had on his side by rejection of the fact-finding board's recommendations.

Another Dud

EXTENSION OF REMARKS

OF

HON. JAMES B. FRAZIER, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. FRAZIER. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the following editorial appearing in the Washington Post under date of Thursday, July 28, 1949, entitled "Another Dud":

ANOTHER DUD

For the fifth time in as many Congresses, a bill to forbid the levying of a poll tax as a prerequisite of voting in elections for Federal offices has passed the House. There was no elation evident this time, because of the certainty among House Members that the measure is doomed to share the fate of its predecessors: death in the Senate.

What the House has accomplished, then, is simply to mark up another X on the wall. In those seven States where poll taxes are still levied, they will continue in effect. By repassing the bill once more the House gains no tangible achievement—or any moral one, either. As we have said in the past, the antitax bill is the wrong way to attack the problem. It is the slowest way just because it is the most direct.

A real constitutional question is involved in the question whether the Congress by statute can define the qualifications of voters in any respect. The Constitution gives this privilege to the States themselves. The issue thus ought to be settled squarely and cleanly in the way provided for amending the Constitution. If the Eighty-first Congress wants to make some contribution to democracy, it should start an anti-poll-tax amendment through the works and forget about trying to pass an anti-poll-tax bill.

World Federation

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, July 29 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, on July 27 I joined with 13 other Members of the Senate in introducing a resolution calling for the strengthening of the United Nations, and its development into a world federation with defined and limited powers. In connection with this I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a statement prepared by me. There being no objection, the statement was ordered to be printed in the RECORD as follows:

The United Nations, as at present constituted, can neither enact nor administer law, nor has it the necessary enforcement powers. For this reason I believe that the United Nations must be developed as rapidly as possible into a universal federation of the world's peoples. However, when I say "as rapidly as possible," I do not mean that any precipitate action should be undertaken which might risk the disruption of the only

present world organization. Nor do I think it would be wise to go further, at the present time, than the declaration of fundamental purpose contained in the World Federation Resolution. To bring about a universal world organization will take long, patient and intelligent effort. By universal world organization I do not mean a government of the full and complete powers normally associated with national government. I do not mean government controlling trade, money, immigration, communications, and the relationship of the individual to the State. I mean a limited world federation with powers confined to the control of weapons of mass destruction and the prevention of war. I do not think we are in a position at this moment to work out a blueprint of procedure. I do not think it would be wise to commit ourselves now to any specific steps along the road to world federation, because such commitments may later dangerously limit our freedom of action in this rapidly changing world. I do not think we should at this point close any doors which we might later wish to open.

What we do need now—and this is provided by the World Federation Resolution—is the unequivocal affirmation of the long-range goal toward which our policy is directed. With things as they are in the world, much of our policy is necessarily defensive and protective. It is directed toward the prevention of the further spread of totalitarian dictatorship. This, to be sure, is vital to world peace. But what we must do is provide a framework of constructive long-range purpose within which the Marshall plan, the Atlantic Pact, and other emergency devices may assume the aspects of positive action.

What we need most at this moment—what the free world has a right to expect of us at this crisis in human history—is an affirmative program for peace. The World Federation Resolution provides the first step in that program. That first step is and should be no more than the act of faith demanded by the time in which we live.

Reduction of Armaments and Opposition to Universal Military Training

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, July 29 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Paul Newton Poling, secretary of the Board of Christian Education of the Presbyterian Church in the United States of America.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE BOARD OF CHRISTIAN EDUCATION OF THE PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA,
Philadelphia, Pa., July 26, 1949.

Hon. WILLIAM LANGER,
Washington, D. C.

DEAR SENATOR LANGER: According to Senate Report 639 the Senate Committee on Appropriations is recommending an increase in selective service appropriations to $9,000,000 thus doubling the $4,500,000 approved by the House.

We would call your attention to the position taken by the general assembly of the Presbyterian Church in Buffalo, N. Y., May 25, 1949. "It is imperative that the crass militarization of our nations and of the nations of the world be checked now. We believe the multilateral reduction and control of armaments through the United Nations should be vigorously and continuously sought. We reaffirm our opposition to any form of universal military training or peacetime conscription. The Presbyterian Church, U. S. A., has consistently supported the democratic system of voluntary recruitment. There is genuine peril that our own defense measures may precipitate the very war we fear, and that our free economy will be crushed beneath the intolerable burden of armaments."

The general assembly has consistently maintained and reaffirmed through the years its opposition to peacetime military training. The action contemplated in Senate Report 639 appears to me that the way is being prepared for the extension of conscription beyond its present expiration date of June 1950. We earnestly hope that in both the interest of economy and release from peacetime conscription you will oppose this recommendation of the Committee on Appropriations.

With every good wish to you in the discharge of your heavy responsibilities.

Sincerely yours,

PAUL NEWTON POLING,
Secretary.

Columbia River Basin Development—Statement by Ben Stong

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, July 29 (legislative day of Thursday, June 2), 1949

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by Ben Stong, of the National Committee on Resources, pointing at the startling similarity between statements of various Northwest governors pertaining to the proposed Columbia Valley Authority.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

It is made abundantly clear by the file of letters sent to the White House today endorsing the Army-Bureau of Reclamation plan for the Columbia River Basin that the private-power industry held and guided the hands of at least two governors and one State engineer as they wrote their approval of the Pick-Straus defense against a Columbia Valley Administration.

Almost identical statements in the communications of Gov. John W. Bonner of Montana, Gov. C. A. Robins of Idaho and State Engineer L. C. Bishop of Wyoming on transmission lines are a dead give-away which clearly reveals the fountainhead of the whole drive to put over the Pick-Straus plan for the Columbia River instead of a CVA.

Gov. C. A. Robins, of Idaho, said, in his comment on the Army-Bureau throw-together plan:

"Neither should long transmission lines be extended into an area or State unless it can be clearly shown that there is now, or will be in the near future, a need for the power in that area, or in that State, beyond the ability or willingness of the local systems, public or private, to supply and/or transmit."

Gov. John W. Bonner of Montana, several hundred miles away and across the Continental Divide, wrote:

"Long transmission lines should not be extended into areas already being served unless it can be clearly shown that there is, or will be in the future, a need for extra power in the area which is beyond the ability or willingness of the local systems, public or private, to supply."

State Engineer L. C. Bishop, of Wyoming, with the enthusiastic approval of Governor Crane, wrote:

"Long transmission lines should not be extended into an area unless it can be clearly shown that there is, or will be in the near future, a need for the power in that area, beyond the ability or willingness of the local systems, public or private, to supply."

The common origin of this phraseology is so indisputable and clear that denials would be an insult to the intelligence of citizens. These three officials have obviously permitted the big paw of the Power Trust, which reaches across great distances, to guide their supine hands as they wrote these standardized passages opposing public transmission lines.

It is equally apparent that most of the officials who endorsed the Army-Bureau plan (with some very important reservations, however) served as Charlie McCarthys for highly placed foes of CVA.

The State officials were asked for comments on the acceptability of the Bureau of Reclamation's proposed projects on the Columbia and tributaries. But many of them—as shown by the quotes below—went beyond the scope of the inquiry to take a slap at the proposed CVA, the President of the United States, and the Secretary of the Interior. Phraseology again indicates that there was a common fountainhead for these gratuitous additions to the official comments.

Take, for example, the similarity of these three:

State Engineer L. C. Bishop, of Wyoming: "Also please be advised Wyoming is definitely opposed to a Columbia Valley Administration, as proposed by the President and recommended by the Secretary of the Interior."

State Engineer Harold Linke, of Utah: "Utah is definitely opposed to a Columbia Valley Administration, as proposed by the President and recommended by the Secretary of the Interior."

Gov. A. G. Crane, of Wyoming: "The people of Wyoming are in favor of this development being carried on by the existing Government agencies and are opposed to a Columbia Valley Administration, as recommended by the Secretary of the Interior."

Again, it is apparent that there was a common guiding hand, which is almost equally obvious in the following extracts:

Gov. C. A. Robins, of Idaho: "These agencies (Army and Bureau of Reclamation) and the other existing agencies of the Federal and State Governments, should be entrusted with the responsibility of carrying forward the program for the development of the resources of the Columbia River Basin."

Conservation Director J. V. Rogers, of Washington: "It is my opinion existing agencies of the Federal and State Government should be entrusted to continue with the responsibility of carrying forward the program for the development of the resources of the Columbia River Basin."

Gov. Arthur B. Langlie deviated from the common phraseology, but he got the same point over when he wrote:

"I believe that programs for the conservation and development of such natural resources as forests, minerals, game, and wildlife, etc., while important, are in reality extraneous to the heavy construction projects planned and built by our two major con-

struction agencies (Army and Bureau of Reclamation). They are and can continue to be adequately handled by existing State and Federal agencies set up for the several purposes without interference by or with our major construction projects."

There is a strange tone of responsiveness to a request in the phraseology of two of the messages, which were directed to Commissioner of Reclamation Straus, who would otherwise be presumed to be supporting the CVA proposal.

Gov. J. Bracken Lee, of Utah, opened and closed his brief message to Commissioner Straus thus:

"Pursuant to your recent telegram requesting comments, Utah is definitely opposed to a Columbia Valley Administration or any such form of authority."

State Engineer Alfred M. Smith offered full cooperation and assistance to Mr. Straus in getting a statement against CVA into the record when he wrote Straus:

"I am strongly opposed to the proposed administration of Columbia River Basin affairs through the medium of a Columbia Valley Authority or administration as has been proposed in certain bills now pending before Congress. * * * I shall not go into detail in this letter, but if you wish a detailed statement of my stand in this matter, for presentation, I will prepare one for you."

How did Mr. Smith get the notion that Straus wanted material to fight CVA, when Straus is a key official in the Truman administration, which has proposed the CVA?

Similar, almost verbatim statements by the high executives in regard to reclamation phases of the proposed Pick-Sloan scheme clearly show that these portions, too, sprang from a common source. (See quotations attached.)

Taken altogether, these statements make it obvious that the high western officials have not acted upon their own thinking; they have been only the suppliant transmission belts for the party line of special interests.

Some of these same officials rushed into Washington recently to appear at prematurely called hearings on the Pick-Straus scheme and entrusted themselves to the handling of Mr. William Welch, of the National Reclamation Association, which is supported by the power companies and carries their torch, and Mr. E. W. Rising, one-time power company agent in Idaho, who now lobbies against CVA in Washington for the coordinating committee of land and water organizations and another similar outfit.

At that time, they appeared to speak their own pieces to the committees. The amazing file of letters which has now been sent to the White House indicates, however, that they have even abdicated their responsibilities as public officials and permit special-interest ghosts to think and to write official documents for them.

WHO WRITES THE LETTERS FOR THE WESTERN GOVERNORS?

SOME ADDITIONAL PASSAGES FROM THEIR COMMUNICATIONS ON CVA WHICH SHOW THEY SIMPLY FRONTED FOR A MASTER-MIND LOBBYIST

On aid to irrigation

Governor Robins, of Idaho: "The suggested plan of aid to irrigation from power revenues is commendable. In fact it is highly important that the authorizing legislation contain language that is definite, positive, and clear-cut to the effect that power rates shall be sufficient to pay not only depreciation, upkeep, payments in lieu of taxes, and repayment of all proper costs to the Federal Treasury, but, in addition thereto, to pay all irrigation and reclamation costs on reclamation projects, as they are authorized for construction, which are beyond the ability of the water users to repay, except those costs which may properly be allocated to other nonreimbursable features."

State Engineer L. C. Bishop, of Wyoming: "The plan of aid to irrigation from power revenues as suggested in the report is commendable. We think it is important that the authorizing legislation contain * * *" (etc., as above).

Gov. Arthur B. Langlie, of Washington: "I am in agreement with the plan for use of power revenues for repayment to the Federal Government of that portion of irrigation costs in excess of water users' ability to pay."

Gov. John W. Bonner, of Montana: "The plan of extending subsidies to irrigation development from power revenues is very essential if we expect to build very many new irrigation projects in the future."

A descriptive passage

Governor Robins, of Idaho: "The report recommends for authorization 13 reclamation projects previously recommended by the Bureau of Reclamation, which constitute 7½ percent of the total reclamation potential of the region. It also recommends for authorization power projects which develop 20 percent of the power potential of the region."

State Engineer L. C. Bishop, of Wyoming: "The report recommends for authorization 13 reclamation projects previously recommended by the Bureau of Reclamation, which constitute about 7½ percent of the total reclamation potential of the region. It also recommends for authorization power projects which would develop 20 percent of the power potential of the region."

The main control plan

Governor Robins, of Idaho: "The main control plan proposed in the (Army) report will provide much needed flood protection to the areas where the situation is now critical; it will provide hydroelectric power where the power shortage is now acute, particularly in the western part of the region; it will provide navigation benefits which are important * * *."

Governor Lee, of Utah: "The main control plan as proposed by the Corps of Engineers is laudable and will provide much needed flood protection, necessary hydroelectric power and navigation benefits."

Many other examples of identical phraseology leave only one question: Who wrote the master copy?

Trial Examiners

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, July 29 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article entitled "Key United States Trial Examiners Must Now Win Approval of Corporation Lawyers," which appeared in the July 21, 1949, issue of the Machinist, a weekly published by the National Association of Machinists.

There being no objection, the article was ordered to be printed in the RECORD as follows:

KEY UNITED STATES TRIAL EXAMINERS MUST NOW WIN APPROVAL OF CORPORATION LAWYERS

Unless President Truman or Congress intervenes, no one will ever again be hired to the all-important job of Government trial examiner without the advance approval of big business, the Machinist learned this week.

After 15 years of trying, the National Association of Manufacturers and its big corporation members, working through their attorneys in the American Bar Association, have taken over from the Civil Service Commission control of the selection of trial examiners for every Government agency.

A trial examiner is the keyman in the enforcement of most social legislation. He conducts the hearing, finds the facts and recommends whatever action is necessary to enforce the laws. Harry B. Mitchell, President of the Civil Service Commission, once explained that "Congress meant for hearing examiners * * * to be the representatives of all the people, not merely the representatives * * * of a particular class or segment of the people."

The victory of the NAM and its big business members in winning control over the selection of trial examiners is influencing the enforcement activities of every major Government agency—from the Securities Exchange Commission to the National Labor Relations Board. Not even the Interstate Commerce Commission has escaped.

Here are the facts as told to the Machinist:

In 1946, on the recommendation of the bar association, the Congress adopted an Administrative Procedures Act under which the United States Civil Service Commission was to set up standards governing the qualifications of future appointees. The Commission in turn delegated this job to a panel of six consultants, called a Board of Examiners, only one of whom is a Government employee, and most of whom are former presidents or high officials of the American Bar Association.

Who are these men whom the Civil Service Commission picked to pass on the qualification of supposedly impartial Government trial examiners? They are:

Carl McFarland, the chairman, is a member of the Washington, D. C., law firm of McFarland & Sellers. His firm is currently employed by the National Association of Manufacturers in its suit against the United States Government in which the NAM is trying to have the Anti-Lobbying Act declared unconstitutional.

Joseph W. Henderson is a Philadelphia lawyer who has represented Republic Steel Corp., the Berkshire Knitting Mills, Southern Steamship Co., and other big corporations before various Government agencies.

Willis Smith comes from Raleigh, N. C., and is counsel for the Southern Railroad and, himself, is director of various southern textile companies.

Henderson and Smith are former presidents of the American Bar Association. McFarland was chairman of the ABA's special committee on administrative law in 1945 when that committee urged the bar association to pay special attention to the personnel and operation of trial examiners in the Government service.

What was their purpose? Here are their own words.

In a published report to the bar association in 1945, McFarland wrote:

"Business and industry generally, when proposals for administrative powers and legislation arise, by nature confine themselves to questions as to whether or not the powers should be conferred or the subject regulated at all * * * they do not take the further step of proposing that * * * appropriate methods of regulation should be elected. * * * The American Bar Association is in a position to supply these ommisions * * * which * * * may result in protections throughout the years."

In the same year, Smith told the Vermont Bar Association:

"We knew these (Government) agencies are manned by zealots who believe that the end justifies the means and who believe

themselves to be the benefactors of the public. * * * It has reached a point where these agencies will delegate to subordinates and employees all sorts of power, and these in turn usurp other powers. Consequently, decisions are rendered against your client by these employees of mediocre caliber with no judicial review."

Henderson, similarly, told the Nebraska Bar Association:

"If you have administrative bungling, they need not answer to anybody. You and I will be subject to their insolence and we'll be lucky to get anything."

So much for the attitude of three men picked by the Civil Service Commission for its special panel of consultants. What have they accomplished?

Step No. 1: The panel has screened all trial examiners currently employed by the Government and disqualified a number in almost every agency. They disqualified or sought to demote 26 of the 27 of the highest rated trial examiners now working for the National Labor Relations Board; 12 employed by the Interstate Commerce Commission, and others working for the Securities Exchange Commission, the Wage and Hour Division, the Department of Agriculture, and other agencies.

Many of these men were disqualified after interviews with Henderson and McFarland.

When the trial examiners protested, a number of those dismissed were reinstated—without any further hearing or any additional evidence. The special panel of consultants simply changed their mind under pressure. Those who were not reinstated have appealed.

Step No. 2: The panel of consultants reviewed all applications from men who are seeking appointment as trial examiners. They established an approved list of qualified examiners from which every Government agency is to hire its examiners in the future.

On that list the panel placed approximately 185 safe names—enough to fill every vacancy that will occur among Government trial examiners for years to come. Although that list has not been made public, the Machinist learned that the name at the top of the list is William B. Duncan.

Investigation shows that Duncan is a former law partner of Willis D. Smith—one of the three big-business attorneys on this Civil Service Commission special panel.

An unusually high proportion of employees hired by Robert N. Denham, general counsel of the National Labor Relations Board, appear to have met the approval of the special panel, while almost none of the employees of the National Labor Relations Board itself have been able to qualify for the job of trial examiner. This, despite the fact that most of the applicants who were Board employees had much longer experience with labor law.

The Commission has stated that loyalty matters were not involved. At least 10 of those disqualified Labor Board employees have checked with all or most of the persons whose names they gave as references and learned of none who had been approached during the investigation.

Applicants from outside the Government were treated in sharp contrast. Available evidence shows that some applicants were not examined or interviewed at all by the special panel, but were found qualified on the basis of personal knowledge of a panel member.

Panel members actually recruited applicants for trial examiners among their friends and then rated applicants thus recruited.

Gerhard P. Van Arkel, former general counsel for the National Labor Relations Board, who is currently representing a number of the disqualified examiners, has summed up the facts this way:

"Congress assigned to the Civil Service Commission the authority to qualify or disqualify trial examiners employed by the Government. The Commission in its turn has turned this power over to a small group of consultants at least half of whom are, in fact, pleaders for special interests. These men have been handed the power of disqualifying or demoting practically all trial examiners employed by the Government whose attitudes conflict with the interest of their clients.

"This whole procedure raises the question of whether a special interest group should control the quasi-judicial functions of all Federal agencies. If so," he asked, "who will protect the public interest?"

So far that important question has not been answered.

Address by Secretary for the Air Force at Tennessee American Legion Convention

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, July 29 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD a very thoughtful address delivered by the distinguished Secretary for Air Force, W. Stuart Symington, at the Tennessee American Legion Convention on Monday, July 25.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I know all of you take great pride in the keen interest and loyal support of the Legion, so evident in the fine turn-out for this convention. In this, you Tennesseans are living up to your reputation as strong supporters of adequate national defense. Your State name—"The Volunteer State"—is something you have a right to be proud of.

Tennessee first earned it during the war with Mexico in 1847—when Governor Brown asked for 3,000 troops, and 30,000 volunteered. Since that time you've always responded fully and freely when your country called. Tennessee's war record shows that no section of the United States ever produced better fighters.

You gentlemen here today are worthy descendants of many generations of patriotic Americans. You Tennessee Legionnaires—in company with Legionnaires throughout the Nation—are determined that those who gave life and limb in past wars shall not have fought in vain. And further, that your children and succeeding generations of liberty-loving Americans shall not be subjected to the horrors of war if a militarily strong America can prevent it.

Your commander, Mr. Lewis, tells me that your total membership is about 60,000. That figure is only a few thousand less than the number of military dead resting in Tennessee's 8 national cemeteries. Those figures recall John McCrae's famous poem, In Flanders Fields, remembered especially by those of you who fought in World War I:

"We are the dead. Short days ago
We lived, felt dawn, saw sunset glow,
Loved and were loved, and now we lie
In Flanders fields.
Take up our quarrel with the foe:
To you from failing hands we throw
The torch; be yours to hold it high."

The torch is liberty, and in Tennessee are thousands of patriotic Americans who, in the past, have held the torch high, defending it with weapons ranging from flintlocks to tommy guns, from round shot, grape, and cannister, to high explosive proximity fuse shells; from horse cavalry and saber to modern armored vehicles; and from observation planes to great fleets of heavy long-range bombers.

Infantrymen fought a battle here 86 years ago which military historians refer to as the Battle Above the Clouds. But in the war just past, that name took on a different meaning: Hundreds of battles were fought miles above the clouds by American boys, thousands of them trained right here in Tennessee on the great Air Force bases such as at Smyrna. They defended America on battlefields miles above the earth, battlefields known to those who fly.

Another familiar place-name from the War Between the States is Missionary Ridge. But during World War II another Tennessee ridge made historical headlines—Oak Ridge—where this Nation risked over a billion dollars and the labors of 82,000 persons as part of the gigantic and successful effort to create the atomic bomb.

Those battles above the clouds in World War II, and the miracle at Oak Ridge, combine to teach us a great lesson for the future, namely, that the ramparts we must watch in this air-atomic age are aloft.

Those ramparts in the sky are a far cry from the breastworks that once studded the Chickamauga battlefield. Gen. Braxton Bragg's remark about the difficulty of fighting in this mountainous country around Chattanooga marks the difference. General Bragg is quoted as having said:

"Mountains hide your foe from you, while they are full of gaps through which he can pounce upon you at any time. A mountain is like the wall of a house full of rat holes. The rat lies hidden in his hole, ready to pop out when no one is watching. Who can tell what lies hidden behind that wall?" said he, pointing to the Cumberland Range across the river.

If General Bragg was perplexed by the possibility of unexpected enemy attack in these mountains around Chattanooga, how would he react today to the problems of air defense in this air-atomic age, with an infinite number of avenues of attack from the air?

I wonder how many of the thousands of tourists visiting your national cemeteries and old battlefields in this vicinity, pause to consider such things? As example, how many realize why Chattanooga was so bitterly fought for during the War Between the States?

You war veterans, of course, know why: Chattanooga was a strategic center of communications. From Chattanooga, railroad lines radiated to the Mississippi, to the Ohio, to the Atlantic, and to the Gulf of Mexico. The city lay across the only avenue by which Virginia could be invaded from the southwest. With Chattanooga in its possession, the Federal Army could almost isolate Virginia and North Carolina, and slash Mississippi and Alabama away from the Confederacy. It could also open the road to Georgia, and thereby confine the war to Virginia and North Carolina.

On the other hand, Confederate possession of Chattanooga meant control of east Tennessee, allowing Confederate forces to be shifted between Virginia and the West. A Confederate Chattanooga was a constant menace to Federal forces in middle Tennessee and Kentucky, making it necessary for the Union to keep those regions heavily garrisoned.

Thus Chattanooga became, in the War Between the States, a striking example of the truth of the military axiom:

"As an element of strategy, communications devour all other elements."

The word "communications" is used in the full military sense—meaning the movement of troops and supplies as well as the transmission of messages.

That famous native of Chapel Hill, Tenn., Gen. Nathan Bedford Forrest, probably never heard the strategic importance of communications expressed in the somewhat elegant language I just quoted. But he said much the same thing when he made his famous remark about "gittin' thar fustest with the mostest."

I would like to digress here a moment to quote another remark by General Forrest which some of you may not have heard before. As you know, he joined the Confederate Army as a private, but was soon given an officer's commission. He raised his own battalion and did his best to equip it, but he didn't have quite enough guns to go around. Even in this situation, which would have dismayed a lesser man, Forrest showed that spirit and confidence which made him such a great leader. To his new recruits for whom he had no weapons, he said, "There's going to be a fight with those folks over there (meaning, of course, the Yankees) and we'll get you some guns there."

It was this aspect of his character which probably accounts for Gen. Robert E. Lee's remark when asked who was his best general. Lee replied, "A man I have never seen—General Forrest."

Your own great President, Harry S. Truman, a true expert on American history, quotes Bedford Forrest as much as he does any man.

But to get back to the importance of communications as an element of strategy.

During the past year—in Operation Vittles—the Berlin air lift—the truth of that military axiom was again confirmed. Operation Vittles was the difference between getting to Berlin and not getting there at all. America's great resources in food, fuel, clothing, and the like would have been denied the people of Berlin if we hadn't had—in air power—the ability to hurdle the land blockade. That air line of communications to Berlin was a life line to millions of people threatened with starvation and disease—but it was more than that—it was a powerful factor in our national strategy.

In quite a different way, but based on the same principle, our ability to use the airspace for delivery of the atomic bomb is a powerful instrument of national diplomacy. When Winston Churchill expressed the view that Uncle Sam's possession of the atomic bomb was the greatest force for peace in the world today, he was aware that we possess both the bomb and the means to deliver it. In other words, our ability to use the airspace for delivery of the bomb helps make the bomb such a force for peace.

You Tennesseeans have a special interest in this, because you are helping to build both the bomb and the intercontinental bomber. The airframe of the B–36 contains sheet aluminium from Alcoa, and its wing flaps are being built at a plant near Nashville.

As former soldiers, sailors, marines, and airmen, you know that in order to have combat capacity on time, you must have it on tap. And when you have it on tap, the enemy knows it—and he will not attack you. That is why the American Legion insists that this country never again run the risk of being "too little—too late."

For this support, the military services are deeply indebted to you. The record shows that, between World Wars I and II—those tragic years of disillusionment when this Nation pursued the mirage of peace through a policy of disarmament—your organization took a strong stand against what we now know was futile idealism. As war veterans, having bitter personal experience with the horrors of war, you felt that this Nation was making a tragic mistake in not maintaining sufficient military strength to deter aggression. Year after year, despite contrary popular opinion, you advocated a high degree of combat readiness—this as insurance against a future war.

Your efforts—along with those who felt as you did—failed, and we all know what happened. But at last it looks as if America has learned its lesson.

The world knows that this Nation will always continue to seek a formula for settling international disputes without fighting. But never again with our eyes closed; never again through a policy of self-inflicted weakness. We are now convinced that we must maintain sufficient military strength to meet our obligations in the world community of Nations.

How to achieve this necessary military strength, however, is a problem without parallel in our Nation's history. As pointed out by the great chairman of the Senate Armed Services Committee, Senator MILLARD TYDINGS, in a speech last April 6:

"The construction of an adequate national defense for a Nation like the United States has become one of the most highly complex scientific and challenging of all human undertakings. The airplane, both bomber and fighter, airborne infantry, the rapidly moving motorized tank, the atomic bomb, the guided missile, the proximity fuse, radar, wireless communication, and bacteriological warfare show the scope of modern military science."

This complexity of modern total war involves expenditures which are simply fantastic by comparison with earlier days.

As example, in 1913—just before many of you entered the First World War—the annual per capita cost of national defense in the United States was $2.25. A generation later—just before many of you entered World War II—this cost had risen to $8 a person.

And today—based on the Federal budget for fiscal year 1950—the annual per capita cost of national defense stands at $101.40—about 50 times what it was just before World War I.

A quick look at the broad divisions of the current $42,000,000,000 Federal budget shows how seriously the cost of national defense is affecting the economic situation.

Thirty-four percent, or about $14,000,000,000, is earmarked for current defense preparations.

Another 16 percent, almost $7,000,000,000, goes for international aid programs, such as the Marshall plan, an aspect of our national security.

And another 13 percent, or about $5,500,000,000, goes for veterans' services and benefits, part of the cost of past wars.

And so, if you consider only the cost of current defense preparations plus the international aid, you account for 50 cents of the Federal tax dollar.

The Air Force believes that this country can have adequate military strength without committing economic suicide, and without surrendering to regimentation, provided we do these three things:

1. Focus our efforts on a sound strategic plan, geared to this air-atomic age, which will exploit our technological superiority and balance our military forces against the tasks called for in the strategic timetable.

2. Eliminate excessive duplication and waste among the three military services.

3. Use modern business management methods within each military service.

That is what Secretary Johnson believes and that is what he is working for. The Air Force supports him, a great American and your former National President.

You, as former soldiers and as present-day businessmen, recognize the common sense of those three objectives. And you will also agree, I believe, that we cannot achieve those objectives without full unification—both within the National Military Establishment and within the entire integrated national security program.

This obvious requirement for real unification in the interest of greater military effectiveness at lower cost, prompted President Truman to insist recently that Congress act promptly on proposed amendments to the National Security Act—else he would employ his executive authority to make certain desirable changes in the National Military Establishment.

The Air Force solidly supports the President and the Secretary of Defense in their efforts to get greater unification. We look forward with confidence, as I know you do, toward a stronger and more efficient National Military Establishment as the best assurance of world peace and prosperity in the years to come.

S. 1008, the O'Mahoney Bill, Unnecessary for Clarification, But Gives Small Business Devastating Blow

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. PATMAN. Mr. Speaker, I cannot understand why it is reported that the Federal Trade Commission and the Department of Justice approved the enactment of S. 1008. This bill is often referred to in correspondence as the O'Mahoney-Capehart-Celler bill. The facts are that during the Eightieth Congress, in 1948, when the Capehart committee was conducting hearings on the theory that there should be a law to clarify the Supreme Court decisions in the Cement and Rigid-Conduit steel cases, and during the first part of the Eighty-first Congress, when the Senator EDWIN JOHNSON committee was conducting similar hearings, the members of the Federal Trade Commission, and the Assistant Attorney General in charge of antitrust matters declared that further legislation was not needed.

In order to be specific, the Honorable Herbert A. Bergson, Assistant Attorney General, Antitrust Division, Department of Justice, in a hearing before the Capehart committee on November 10, 1948, stated:

It is said that the Federal Trade Commission declines to give advance rulings as to what the act permits or condemns so that no one who absorbs freight or sells at delivered prices can know whether the Commission will at some future time condemn and outlaw his pricing practice. The conclusion is drawn that, as a practical matter, the only method of pricing safe against proceedings under the act is pricing on an f. o. b. mill basis. It is, therefore, urged that Congress should clarify the law. * * * The predicament which is pictured is, I think, greatly overstated. In the first place, the prohibitions of the Trade Commission Act come into play only upon issuance of an order by the Commission, and then only after court affirmance of the order if review is sought. * * * There is no provision for penalizing prior conduct. In the second place, the Commission has never brought a proceeding charging that freight absorption by a single seller * * * violates the Trade Commission Act.

That statement is rather definite that new legislation is not needed. In addition, Mr. Robert B. Dawkins, associate general counsel, Federal Trade Commission, before the Senate Judiciary Committee March 31, 1949, stated in answer to a question by Senator CAPEHART, "Are you likewise against any clarification of existing laws that might at least be a step toward clearing it up in the mind of the people?"

Senator, I have talked with a great many lawyers both on the outside and in Government. Some of us have tried from time to time to draft clarifying language. The difficulty is * * * in centering upon just whether it is clarification or change that is desired. A change is easy to make. A clarification is sometimes not easy, particularly when you are dealing with antitrust statutes which almost perforce need a certain degree of looseness in the joints in order that they can be applied to changing and varying conditions."

Further Mr. Dawkins stated:

Senator, I am frankly unable to see the occasion for the fear or uncertainty. I am not debating or attempting to debate whether or not people are not adequately informed or have misunderstood or have been misled, or any of those things, but I do say that I do not know that any of the recent decisions furnishes a firm foundation for such fear.

In addition the Honorable Garland S. Ferguson, Commissioner, Federal Trade Commission, before the Capehart committee June 2, 1948, in answer to the following question by Senator CAPEHART: "Do you feel that possibly some new legislation is needed upon this?" Mr. Ferguson stated:

I cannot say that I do, Senator. Of course, that is in the wisdom of Congress. * * * Just as an individual I will say that, so far as I now can see, I do not see any need for legislation.

In addition, Hon. Ewin L. Davis, Commissioner, Federal Trade Commission, before the Capehart committee, June 2, 1948, stated:

I respectfully recommend against the enactment of legislation which would legalize the basing-point system or any other device which is used to restrain competition. Such legislation, if enacted into law, would undoubtedly seriously weaken the enforcement of the antitrust laws.

Mr. Davis is exactly right. Such a bill would seriously weaken the enforcement of the antitrust laws.

The Honorable Robert E. Freer, while Chairman of the Federal Trade Commission, stated before the Capehart committee, June 2 and 4, 1948, that no legislation should be passed to interfere with the Supreme Court's Cement decision, and stated:

The suggestion inherent in the resolution (setting up the Capehart committee) that legislation may be needed to legalize what was condemned by the Commission in the Cement case is a serious one and it goes to the very roots of the antitrust laws. I think it should be made plain from the outset that legislation which would approve any practice prohibited by the Commissioners' order in the Cement case would be legislation to permit combination and conspiracy to fix and maintain prices or systematic price discrimination practiced for the purpose or with the effect of eliminating competition.

The Chief of the Division of Antimonopoly Trials of the Federal Trade Commission, Mr. Everette MacIntyre, correctly quoted the Federal Trade Commission in testimony before the House Small Business Committee, July 5, 1949, as follows:

On March 1, 1949, a majority of the members of the Federal Trade Commission, over the signature of the Secretary of the Commission, submitted to Senator EDWIN C. JOHNSON, at his request, their comments on S. 1008 then pending before a committee in the Senate. In that letter it was stated: "The Commission believes that enactment of this bill is neither necessary nor desirable." In that letter reasons were given why the Commission stated that conclusion with respect to the draft of the bill then pending in the Senate committee. They appear to me to have been based upon the belief of the Commission that the law was clear and that the legislation then proposed would add uncertainties to the law instead of providing for clarification. With that conclusion I personally am in complete agreement.

The Honorable Lowell B. Mason, Chairman of the Federal Trade Commission, in a letter to me dated May 16, 1949, concerning H. R. 2222, which was a moratorium bill, and S. 1008, stated:

The Commission believes that neither of these bills is necessary or desirable.

The Honorable Ewin L. Davis, Commissioner of the Federal Trade Commission, in a letter to Senator EDWIN C. JOHNSON, chairman of the Committee on Interstate and Foreign Commerce, dated February 17, 1949, stated:

Not only do I fail to see the need for emergency legislation, but I also think that any such legislation as that proposed would defeat the committee's purpose of clarifying the law. * * * You will recall that in my testimony before your committee I stated that legislation such as S. 236 was unnecessary and undesirable in my opinion. * * * Patchwork amendment of the law is unlikely to produce a good result. Accordingly, I suggest that such changes in the law as your committee now contemplates be deferred in order to permit concentration upon the second part of your task and thereby to make possible a well-rounded and fully coordinated set of proposals designed to strengthen the antimonopoly laws and provide for their more effective enforcement.

It will be noticed that he refers to S. 236, which, of course, contains the same proposal as embodied in H. R. 2222 and S. 1008.

Mr. Robert B. Dawkins, associate counsel, Federal Trade Commission, before the Senate Judiciary Committee, March 31, 1949, concerning S. 1008, stated:

The Commission does not believe that enactment of the proposed legislation is necessary or desirable. Insofar as it may affect existing law, it is obviously intended to be and acts only as a suspension, but it is almost certain to create new doubts as to the legal status of the practices which the Congress finds necessary to safeguard with a moratorium.

One thing is very evident, and that is clarifying language is not needed. Since it is not needed, was the principal objective in trying to secure the enactment of this bill the destruction of the Robinson-Patman law that protects small business?

Although S. 1008 was passed by the Senate, with amendments, and it has been passed by the House, with amendments, and is now on the desk of the presiding officer of the Senate for further consideration, this bill should be defeated. The printed hearings of the Committee on Small Business, containing the testimony of witnesses in opposition to S. 1008, will be available this week. I urge every Member of the House and Senate who has not made up his mind on this bill to carefully read these hearings, and I believe he will be convinced that S. 1008 is still a dangerous bill and should not, under any circumstances, be enacted into law.

Serious Position of Americans Held as Hostages in Shanghai

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. MANSFIELD. Mr. Speaker, 1,400 American businessmen who remained in Shanghai when the Communists took over to carry on American business are now not permitted to leave China until they pay the blackmail and extortion dictated by the communistic authorities. They are further under penalty of being jailed if the blackmail and extortion are not forthcoming. They are also being terrorized by their native staffs by being locked in their offices. The communistic authorities refuse to intervene.

The American Ambassador and the consul general of Shanghai are also unable to leave the country unless they subscribe to the indignity of producing a Chinese "shop guaranty," and the imprisonment and beating of Vice Consul Olive is well known.

Whatever the intentions of the Communists in pursuing this course of action toward foreigners, it cannot be denied that the hasty retreat of the American Navy from Shanghai was a big contributing factor in encouraging this action of the Communists.

A situation has thus developed fast and bids to develop even faster into one of real personal danger to Shanghai Americans, and of greater political magnitude unless something is done about it very quickly. Up to the present no steps have been taken by the State Department to arrange for Americans to leave China, nor in spite of having instructed the Ambassador and consul general to refuse the demand of a "shop guaranty," has it advised Americans not to meet the extortionate Communist demands. In fact, by the implication implicit of the withdrawal of the Navy and failure to exert pressure on the Communists, it has forced United States firms to submit to blackmail and threats, and has thus set a most dangerous precedent and opened the door to unlimited extortion, by its acquiescence to the pressure on American nationals.

What will the United States Government do when the Communists decide that American business and properties shall be turned over to the workers or to the Communist Government in lieu of payment of wages for which there is no income, or if the Communist attitude becomes more militant and involves physical harm to the American community?

The situation of the American businessmen in Shanghai today is as follows:

The Communists have instructed that foreign firms must continue in business irrespective of whether they are making money, have funds to pay their staffs, or can get funds from their home offices. Further, they cannot declare bankruptcy or sell their businesses. Still further, the labor section of the Shanghai Military Control Commission has fixed wage increases to be paid—in some instances, retroactive 3 years. Employers will not be permitted to leave China as long as they have unfinished labor obligations and employers have been notified that they will be held personally responsible even to the extent of jailing or other forms of punishment if a Chinese employee dies or suffers any other hardship due to the employer's failure to pay the wages instructed.

As illustrated, the extent of this situation, the American-owned Shanghai Telephone Co. has been forced to mortgage its properties to the Communist-owned Peoples Bank in order to secure working cash to meet the required wage demands. Other American companies, such as the American Asiatic Underwriters, the Underwriters Bank, and the Shanghai Evening Post have been forced to draw on their home offices to the extent of $15,000 a month, although they are doing no business.

In the case of the American-owned Shanghai Evening Post, which closed down several months ago because it had been losing money over a long period, both the editor, Randall Gould, and the business manager, Charles Miner, are presently locked in their offices by their staffs, and the Chinese authorities refuse to intervene until and unless they meet the wage demands dictated by the authorities—an impossibility, since the Post has no other assets other than its local properties.

The danger of permitting this situation to continue cannot be too strongly stressed, as anyone familiar with China will readily admit. As mentioned, the State Department has taken no steps toward breaking the impasse beyond stating it is considering sending a ship to evacuate not only Americans, but other nationals. As long as the Communists refused to permit Americans to depart, the idea of sending a ship seems something more than ridiculous.

The obvious solution of the whole matter lies in a compromise, whereby we offer the Communists what they need most at the present time—rice in exchange for the unimpeded release of those Americans who desire to leave. Such a solution does not involve political protocol in respect to recognition or withdrawal of recognition of the Nationalists. Such a solution is not a happy one or one that I approve wholeheartedly but it does seem to be the only practical one at this time. ECA funds could be used for this purpose if Congress were willing to authorize it.

With regard to American China policy in general, it has been stated in the press that Messrs. Acheson, Johnson, and the National Security Council are making policy plans, but there is no indication of what lines these plans will follow, or when they will be made public. What are these lines? What is the broad objective of the United States Government? What does the United States Government want of its citizens in China? What is the Government going to do for their protection?

Basing-Point Lawyers Anticipate Congressional Action—Rigid Steel Conduit Petition to FTC Backfires When Motion Based on Future Congressional Action Is Denied

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. PATMAN. Mr. Speaker, attorneys for the Rigid Steel Conduit Association et al. filed a motion on July 1, 1949, to reopen and modify the order of the Federal Trade Commission in the Rigid Steel Conduit case entered June 6, 1944. In its memorandum in support of the motion to reopen the case, attorneys for the association argued that—

A bill (S. 1008) is now pending in Congress which is designed to make clear that f. o. b. mill pricing is not required by law and that freight absorption for the purpose of meeting competition is not illegal. That bill was introduced in the Senate on May 31, 1949, by Senator O'MAHONEY and was passed by the Senate on the next day, after certain amendments had been incorporated therein on the floor of the Senate, two of which are generally referred to as the Kefauver amendment. The same bill, with the Kefauver amendment eliminated, has already been approved by the Committee on the Judiciary of the House of Representatives.

PASSAGE OF S. 1008 BY THE CONGRESS ARGUED AS ABSOLUTE CERTAINTY BY RIGID STEEL CONDUIT CROWD

This type of argument takes up several pages of the motion to the FTC, indicating an anticipated action by the Congress which would permit the return of the basing-point system in the Rigid Steel Conduit and in other industries.

It is a strange circumstance indeed when respondents who have been found guilty of collusive practices come before a responsible agency of the Federal Government and plead in expectation of congressional passage of a bill which had not, at that time, passed the House of Representatives. The Commission makes it quite clear, in its order denying the motion to reopen and modify its order of June 6, 1944, that—

The Commission does not consider that the order in its present form prohibits the independent practice of freight absorption or selling at delivered prices by individual sellers.

And the preceding sentence also states clearly that the order of June 6, 1944, "does not prohibit any of the respondents, acting independently, from quoting or selling at delivered prices or from absorbing freight."

This order makes it more apparent than ever that those who have violated our antitrust laws—and this includes members of the steel, cement, and rigid steel conduit industries and others—have manufactured, via propaganda, false issues.

BIG STEEL AND BIG CEMENT RAISE FALSE ISSUES IN HUGE PROPAGANDA CAMPAIGN

Since the Cement decision outlawing the basing-point system, the cry has been for clarification to end the confusion. Certainly the Federal Trade Commission order of July 7, 1949, in the matter of the rigid steel conduit crowd once again emphasizes the fact that legislation weakening our antitrust laws is neither necessary nor desirable. The propaganda campaign which had for its purpose the reestablishment of the basing-point system of pricing and the destruction of the Robinson-Patman Act has failed.

It would seem to be sheer impudence or stupidity on the part of any person or persons to come into a Federal administrative agency, or any other Government agency or judicial body, and complacently move to have an act done in anticipation of some laws being passed.

FTC ORDER EFFECTIVELY EMPHASIZES THAT S. 1008 IS NEITHER NECESSARY NOR DESIRABLE

The issuance of the FTC order, which clearly delineates and defines sales practices which have never seriously been questioned by any court or by the Federal Trade Commission, emphasizes the false basis for any legislation. Of course, in addition to legalizing the basing-point system, it is now apparent that the cement, steel, and oil combines intended also to destroy the Robinson-Patman Act. In the interest of small business and fair play, S. 1008 should continue to lie on the table in the Senate permanently.

The Federal Trade Commission order follows in full:

[United States of America, Before Federal Trade Commission—At a regular session of the Federal Trade Commission, held at its office in the city of Washington, D. C., on the 7th day of July A. D. 1949—Commissioners: Lowell B. Mason, acting chairman; Garland S. Ferguson, Ewin L. Davis, William A. Ayres; In the matter of Rigid Steel Conduit Association, et al., Docket No. 4452]

ORDER DENYING MOTION TO REOPEN AND MODIFY

This matter comes before the Commission on motion by certain respondents to reopen the proceeding and modify the order to cease and desist entered on June 6, 1944, by striking paragraph V thereof and substituting certain language set forth in the motion.

The purpose of the requested modification is said to be to make clear that the order does not prohibit any of the respondents, acting independently, from quoting or selling at delivered prices or from absorbing freight. The Commission does not consider that the order in its present form prohibits

the independent practice of freight absorption or selling at delivered prices by individual sellers. What the questioned portion of the order does prohibit is the continuance of the basing-point, delivered price system, found to have been the subject of conspiracy, or any variation thereof which might be accomplished through the practices specified in subparagraphs (a), (b), (c), or (d) when done, as stated in the order, "for the purpose or with the effect of systematically matching delivered price quotations."

Taking the matters pleaded in the motion and memorandum in support thereof as true only for present purposes, no change of fact or of law appears and there is no showing that the public interest requires reopening and modification of the order. In the absence of an adequate showing of such change of law or fact or the requirements of the public interest the motion is denied.

By the Commission.

D. C. DANIEL, *Secretary.*

Concurring opinion by Commissioner Mason attached.

[United States of America, before Federal Trade Commission—In the matter of Rigid Steel Conduit Association et al., Docket No. 4452]

CONCURRING OPINION OF COMMISSIONER LOWELL B. MASON

My concurrence in the above order is based solely on the grounds that the respondents' motion does not fulfill the requirements of the statute. They have set forth no change of fact.

As to the law, while there are some semantic hedgings put about the Commission's power to prohibit a citizen from disposing of his wares in distant markets by systematically paying the freight on his products, the whole thing can be boiled down to the plain fact that we can do just that under the present decisions of the Commission, and we can do it without the necessity of finding anyone who has done a conspiratorial act. This new socioeconomic basis for a cease-and-desist order is now the subject of legislative scrutiny.

Should legislation be enacted and change the above power of the Commission, it might then be proper for the respondents to move for the reopening. However, the Commission is here asked to modify its order on the assumption that legislation will be enacted. Governmental agencies cannot operate on such a basis.

LOWELL B. MASON,
Commissioner.

Atlantic Treaty But No Arms

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Friday, July 29 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Atlantic Treaty But No Arms," appearing in the St. Louis Globe-Democrat for July 20, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ATLANTIC TREATY BUT NO ARMS

The Senate is scheduled to vote on and approve the North Atlantic Treaty tomorrow. Two votes against are certain—DONNELL and KEM, Missouri's two Senators. Both have said they are opposed to ratification because they fear involvement in Europe's affairs beyond economic support. They believe the pact carries with it the implicit promise to furnish arms now and for 20 years to countries that will fight Russian aggression.

They don't like such a commitment, nor does this newspaper. We believe the pact would not be weakened in any respect if it included a specific reservation that the treaty does not carry an automatic obligation to provide arms.

Current debate in the Senate has revolved around this point. If the United States joins the North Atlantic alliance, is it legally and, of course, morally obliged to furnish arms to Europe? By the same token, is a Senator who votes for ratification of the treaty obliged to vote arms to Europe at some later date?

Senators VANDENBERG, CONNALLY, and DULLES, who are leading the fight for ratification, say the two programs are entirely separate, that a Senator may vote for pact approval and still vote against sending arms to Europe.

Senator TAFT, who came out reluctantly against ratification last week, says the pact and arms programs are inextricably linked. He favors the treaty but as to arms, he declared that program would promote war rather than peace.

Senator KEM made an impressive speech on the floor. He argued that under the treaty the United States would be expected to "furnish western Europe with guns, planes, tanks, and ammunition when needed for 20 years." This is the term of the treaty.

"The treaty itself and the arms program are one and inseparable," he said. "The one without the other would be like a dairy without a cow or a cannon without ammunition." And he added, the pledge of mutual aid means only that the United States would actually finance the arms aid alone. He continued:

"The arms we send would be completely within the nations receiving them. They would be subject to orders of those who at the time control the governments of each of those countries.

"What would happen if Italy goes communistic at the next election? The Reds would be free to take over the arms to use against us. Then, too, if Russia should decide to go to war, she would find that we had placed much of our best military equipment at her very doorstep, where we would be in no position to protect it. This already has happened in China.

"I cannot support the treaty because it bypasses the United Nations. I am not convinced that we should junk the United Nations. In the last analysis, this is an attempt to set up a balance of power between the east and west. The balance of power is just about the oldest political device in history.

"I am unwilling to consent to a disregard of Washington's warning against 'entangling alliances with none' in order that we may substitute in its place Secretary Acheson's brand-new policy of 'entangling alliances with some.'"

Senator TAFT says extension of the Monroe Doctrine to Europe would be sufficient—a declaration by the United States that it would assist any European nation that is attacked. After all, that has been our policy in the past and one of the chief arguments for the treaty is that it would state this determination formally. That should be sufficient notification to Russia or any other potential aggressor. Only this week it was disclosed that Hitler probably would not have gone as far as he did had he accepted as true the information given him by his agents in this country that the United States would fight under certain circumstances.

Supporters of the pact shy away from a definitive reservation in the treaty, one that says specifically that this country is not under any moral or legal obligation to send arms to Europe. Yesterday there was growing hope such a reservation might be written into the pact.

It is unfortunate that so much confusion surrounds the treaty. As originally conceived it was a straightforward alliance against any aggressor in Europe, although article III called for "continuous and effective self-help and mutual aid." Tacitly the State Department indicated to our allies that this meant they would be provided with arms when they signed. That was their understanding, or at least that is what they claim now.

Foes of the pact allege this is precisely what our allies would expect; that if arms are denied them they would cry "deception" and the situation would be worsened instead of bettered.

The treaty doubtless will be ratified. But when the request for arms for Europe comes before the Senate formally, we believe it will be defeated. Call it resurgent isolationism or what not, the bald fact is that Congress is becoming economy-minded and, aside from the military aspect, will balk at an arms expenditure of $1,130,000,000 for the first year, and there are those who say this is a conservative estimate of what Europe expects.

Evidences of economic isolationism are seen in Congress—in the trimming of Marshall-plan aid, in cold indifference to Britain's plea that we must come running with more funds, in ignoring Mr. Truman's point 4 for saving the world, and now in the arms program.

Congress and the people as well are commencing to wonder how long we can finance the world without bankrupting our own national economy. It's about time some sober thinking is being done in Washington.

H. R. 5119, Mansfield Bill To Restore the Export Tax on Copper

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. MANSFIELD. Mr. Speaker, I am enclosing for the consideration of the House a copy of a memorandum from the United States Tariff Commission for the Senate Finance Committee and House Ways and Means Committee on S. 2022 and H. R. 5119, Eighty-first Congress, identical bills, to repeal an act to suspend certain import taxes on copper, approved March 31, 1949, Public Law 33, Eighty-first Congress.

I wish to call the attention of the Congress to the very serious situation in which the copper industry in this country finds itself at the present time. As I have previously indicated in a speech before this body, a number of mines, including the Lexington, Orphan Girl, Belmont, Badger, and Kelly Shaft, have closed down in Butte, Mont., in recent months. What has happened in Butte has happened in Utah, Nevada, Arizona, and New Mexico and because of the difficulty which this industry finds itself in at the present time and particularly be-

cause of its effects upon Butte and Anaconda, Mont., I am urging the House Ways and Means Committee to hold hearings on my bill (H. R. 5119) so that the import taxes on copper may be reimposed and greater security given to the workers and businessmen of Montana.

You will note that the United States Tariff Commission states in its detailed study showed that imports of unmanufactured copper in all forms in the first quarter of 1949 totaled 166,438 short tons or an average of 55,479 tons monthly compared with imports of 48,609 tons in April and 48,792 tons in May 1949. The period since the first quarter of 1949 has been characterized by relatively high copper imports, by fairly high domestic copper output with some falling off of production in May and June, and by a substantial increase in producers' inventories of copper. Under these conditions the imposition of the copper import-excise tax would tend to restrict copper imports, thus lessening the impact of reduced copper demand upon domestic copper producers. It would appear on the basis of the United States Tariff Commission Report, dated July 19, 1949, that as of the present time, the shortage of copper in the United States in 1948 and early in 1949, which resulted in the enactment of Public Law 33 in March 1949, continuing in effect the suspension of the excise tax of 4 cents a pound, has disappeared. Congress therefore should repeal Public Law 33, Eighty-first Congress and hearings should be held immediately to the end that this excise tax on copper be restored. If this is done, it will bring greater tranquillity to domestic producers and more security to our people who work or are dependent on the production of copper in this country.

UNITED STATES TARIFF COMMISSION,
Washington, July 19, 1949.

MEMORANDUM FOR THE SENATE FINANCE COMMITTEE AND HOUSE WAYS AND MEANS COMMITTEE ON S. 2022 AND H. R. 5119, EIGHTY-FIRST CONGRESS, IDENTICAL BILLS, TO REPEAL AN ACT TO SUSPEND CERTAIN IMPORT TAXES ON COPPER, APPROVED MARCH 31, 1949 (PUBLIC LAW 33, 81ST CONG.)

Either of the above bills, if enacted, would terminate the suspension of the import-excise tax on the copper content of copper-bearing articles, including ores and concentrates, copper matte, blister copper, refined copper, and copper-containing alloys (brass, bronze, bell metal, nickel silver, phosphor copper, and composition metal). Public Law 42, Eightieth Congress, had suspended the import-excise tax on these articles from April 30, 1947, through March 31, 1949. Public Law 33, Eighty-first Congress (approved March 31, 1949) extended the suspension through June 30, 1950.

Copper in unmanufactured forms was free of duty under the Tariff Act of 1930, but under the Revenue Act of 1932 (now section 3425 of the Internal Revenue Code) an import-excise tax of 4 cents per pound was imposed on the copper content of copper-bearing articles. In the General Agreement on Tariffs and Trade (Geneva agreement) the United States reduced the import-excise tax on copper by 50 percent. Thus if the tax suspension is terminated, as proposed by S. 2022 and H. R. 5119, the import-excise tax on copper will be 2 cents per pound.

At the time of enactment of Public Law 33, Eighty-first Congress, the domestic supply of copper, as indicated by data then available, still appeared short of domestic demand, and the price of electrolytic copper (Connecticut Valley) was 23.37½ cents per pound. Since then the situation has changed greatly.

Domestic supply has increased in relation to domestic demand; the price of copper declined to a low of 16 cents on June 17. The price rose to 17 cents on July 6, the first rise in nearly a year, and to 17.625 cents on July 11.[1]

TABLE 1.—*Copper: Changes in United States published prices from the expiration of OPA controls on Nov. 9, 1946, to July 11, 1949*

Source: American Metal Market.

Table 1 indicates the changes in the price of copper since November 8, 1946, when the OPA ceiling price was in effect.

Table 2 shows monthly averages of production, consumption, imports, and exports on a quarterly basis for 1948 and the first quarter of 1949 and monthly totals for April and May 1949.

United States total consumption of refined copper as reported to the United States Bureau of Mines averaged 124,118 short tons of copper monthly during the fourth quarter of 1948 as compared with 107,220 tons monthly in the first quarter of 1949. Although comparable data are not available for subsequent months, trade reports indicate that copper consumption (excluding withdrawals for the strategic stock pile) continued to decline at least through April and May and possibly through June of 1949, although deliveries of copper to customers are reported to have increased during June. Producers' stocks of refined copper, which at the end of March amounted to 68,450 tons, are reported to have increased in each subsequent month, amounting at the end of June to 166,925 tons—the largest since September 1940. During July offers and takings of copper by producers and consumers have increased somewhat.

World consumption of primary copper has shown a similar trend to that for the United States. In 1948 the average monthly consumption by 11 of the principal consuming countries was 183,000 tons, and during the first quarter of 1949 it was 176,000 tons. The above figures include the United States, which has accounted for about half of the total consumption. World consumption data are not available for the months following March. However, figures on April copper consumption in the United Kingdom, probably the largest consumer of copper outside of the United States, show a decrease from the amount consumed in the previous month.

TABLE 2.—*Unmanufactured copper: United States production, consumption, imports, and exports, monthly averages by quarters, January 1948 to March 1949, and April and May 1949*

[Short tons copper content]

Item	1948				1949		
	First quarter	Second quarter	Third quarter	Fourth quarter	First quarter	April	May
Production:	*Monthly average*	*Monthly average*	*Monthly average*	*Monthly average*	*Monthly average*		
Mine output [1]	72,061	74,906	71,507	56,747	61,674	72,657	67,305
Secondary [2]	42,601	40,359	40,326	41,436	39,420	([3])	([3])
Total	114,662	115,265	111,833	98,183	101,094	([3])	([3])
Consumption [4]	115,472	113,500	122,235	124,118	107,220	([3])	([3])
Imports for consumption [5]	41,352	39,670	40,251	40,734	55,479	48,609	48,792
Domestic exports [5]	12,070	14,756	11,399	10,888	13,590	9,579	11,822

[1] Estimated recoverable copper content of ores and concentrates.
[2] Represents copper recovered in all forms (copper metal, alloys, and copper compounds) from old scrap.
[3] Not available.
[4] Represents consumption of refined copper by brass mills, wire mills, foundries, chemical plants and miscellaneous manufacturing plants as reported to the Bureau of Mines.
[5] Represents copper in ore, concentrates, matte, blister copper, refined copper, and scrap copper. All imports were entered free of duty during the period shown.

Source: Production and consumption, from official statistics of the Bureau of Mines; imports and exports, from official statistics of the Department of Commerce.

NOTE.—It should be noted that the consumption figures shown in the table represent quantities reported by consumers as having been used each month. Withdrawals of copper for the strategic Government stock pile, which during the first half of 1949 were substantial, are not included in the figures given.

United States mine production of recoverable copper, as reported by the Bureau of Mines, averaged 61,674 short tons monthly during the first quarter of 1949; however, this average was much smaller than mine capacity owing to a strike at one of the largest mines. April mine output amounted to 72,657 tons and that for May to 67,305 tons. Trade reports indicate a further decline in June. With the reductions in the price of copper, some high-cost operations have been discontinued; other producers, including the three largest copper producers, have reduced the number of hours worked per week. The curtailment of copper-mining operations in the United States began on May 1, 1949, when the leading producer in

[1] The price of copper in the United Kingdom, although higher than that in the United States, has followed a similar trend. The United Kingdom price is fixed by the British Ministry of Supply; the price on July 12, 1949, was at the low point equal to approximately 18.745 cents per pound (for copper delivered to consumers' works); on July 13 it was raised to the equivalent of 19.37 cents.

Michigan ceased operations. Early in June one of the major producers suspended operations at one of the mines in Montana; another producer shut down the copper mines at Bisbee, Ariz.; and at the end of June a smaller company discontinued all underground operations at its properties at Kimberly, Nev. Many mines have gone from a 48-hour to a 40-hour week; these include the Ray, Chino, and Nevada mines of the Kennecott Copper Corp., the Butte properties of the Anaconda Copper Co., and the large open-pit mines of the Phelps Dodge Corp. at Morenci and Ajo, Ariz. It is estimated by the trade that these curtailments if continued will lower domestic production, as compared with April 1949, by from 10,000 to 15,000 tons per month.

Foreign copper-mine operations have also been curtailed. Recent reports indicate that, owing to the recent decline in copper prices, two large mines in Chile have reduced operations by about 30 percent, equivalent to about 7,500 tons per month. Belgian Congo copper production has recently declined by about 10 percent because of a water shortage. Rhodesian copper mines and the largest copper producer in Canada have also curtailed copper output by about 10 percent. These operations are the source of most of the United States imports of copper and they are the largest producers outside the United States.

Imports of unmanufactured copper in all forms in the first quarter of 1949 totaled 166,438 short tons, an average of 55,479 tons monthly compared with imports of 48,609 tons in April and 48,792 tons in May. Exports during the first quarter averaged 13,590 short tons monthly and were 9,579 tons in April and 11,822 tons during May.

To summarize, the period since the end of the first quarter of 1949 has been characterized by relatively high net copper imports, by fairly high domestic copper output with some falling off of production in May and June, and by a substantial increase in producers' inventories of copper. Under these conditions the imposition of the 2-cent per pound copper import-excise tax would tend to restrict copper imports, thus lessening the impact of reduced copper demand upon domestic copper producers.

In view of the foregoing facts it would appear that, as of the present time, the shortage of copper in the United States in 1948 and early 1949, which resulted in the enactment of Public Law 33 in March 1949, continuing in effect the suspension of the excise tax of 4 cents a pound, has disappeared. The Congress may therefore wish to repeal Public Law 33, Eighty-first Congress.

Tributes to Radio Station WGN, Chicago

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, July 29 (legislative day of Thursday, June 2), 1949

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared paying tribute to radio station WGN, owned by the Chicago Tribune, for the service it has performed during the past 25 years in furthering the cause of culture and music. I also ask to have included with that statement congratulatory telegrams sent to that radio station by Governor Stevenson, of Illinois, and Mayor Kennelly, of Chicago, and others.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

CONGRATULATORY STATEMENT OF SENATOR PAUL H. DOUGLAS, DEMOCRAT, OF ILLINOIS, ON TWENTY-FIFTH ANNIVERSARY OF RADIO STATION WGN, TOGETHER WITH TELEGRAMS OF GOVERNOR STEVENSON AND MAYOR KENNELLY

This month marks the twenty-fifth anniversary of one of the Nations outstanding radio stations—WGN, Chicago. I am glad to join with other citizens in sending to WGN congratulations on the completion of its first quarter-century and best wishes for its future service to the public.

WGN's programs reach a great and growing cross-section of Americans in the Middle West. Its audience includes families on remote farms and in hundreds of small towns and villages in this rich agricultural area. It is also heard in tiny mining communities and in great metropolitan areas. Few if any instruments of communication have such a heavy responsibility as accompanies this power to reach so diverse and so representative an audience of Americans.

To serve the needs and interests of all these listeners, WGN appears to have developed a commendable balance in its programs. Farm and market information, weather reports, frequent news summaries, and a wide variety of entertainment are available to its listeners.

I am particularly glad that substantial periods of WGN's broadcasting time are devoted to the best in music and to educational and discussional programs in cooperation with the University of Chicago, Northwestern University, Loyola University, DePaul University, the University of Illinois, and the leading agricultural colleges of the Midwest.

Among the best known of these educational programs have been the Northwestern Reviewing Stand, Your Right To Say It, the Human Adventure, the Chicago Story, Citizens of Tomorrow, Let's Face the Issue, and Report From Congress. Moreover, special event programs are frequently presented. And in technical developments in new fields like FM and television, WGN has likewise been a leader.

Although it is well known that I do not subscribe to all the political and economic views of those who own and manage station WGN, namely, the Chicago Tribune, and they have never been warm and glowing admirers of mine, I am glad to acknowledge the many services WGN has rendered to a great section of America. I also wish for it a growing success in the use of its remarkable facilities to reach our Midwest families with the balanced information, the healthy entertainment, and the cultural resources that can enrich and strengthen our democratic, American way of life.

I am glad to close this statement with congratulatory messages received by the station from several of our leading Illinois citizens:

CONGRATULATORY TELEGRAMS

CHICAGO, ILL., *July 18, 1949.*

FRANK SCHREIBER,
General Manager, WGN:

Congratulations to WGN and its staff on 25 years of service to the city and rural population of Illinois and the Midwest. My best wishes for continued success in the future.

ADLAI E. STEVENSON,
Governor.

CHICAGO, ILL., *July 18, 1949.*

Mr. FRANK SCHREIBER,
Manager, Radio Station WGN:

Congratulations to you and all the members of the staff of WGN on the occasion of this station's twenty-fifth birthday. WGN has rendered an outstanding service to the people of our city for a quarter of a century and as mayor of Chicago I am happy to extend best wishes for its continued growth and success.

MARTIN H. KENNELLY,
Mayor.

BENTON HARBOR, MICH, *July 15, 1949.*

FRANK P. SCHREIBER,
Manager, WGN:

Congratulations on WGN's twenty-fifth anniversary.

JOHN S. BOYLE,
States Attorney of Cook County.

NEW YORK, N. Y., *July 17, 1949.*

WGN RADIO STATION:

Congratulations to WGN radio station for its tremendous progress made in the past 25 years.

J. C. PETRILLO.

The British Medical-Care Plan

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, July 28 (legislative day of Thursday, June 2), 1949

Mr. MURRAY. Mr. President, a great many references have been made to the British medical-care plan here on the floor of the Senate. Evidently there is, here in this country, a great deal of misunderstanding of the way in which that program developed and the differences between it and the national health-insurance program which President Truman is recommending. I should, therefore, like to call the Senate's attention to an excellent and authoritative report on the British plan made by Mr. John G. Hill, director of research, for the Health and Welfare Council of Philadelphia. I am informed by the Public Printer that the manuscript will make about two and three-fourths pages of the RECORD at a cost of $220.

I ask unanimous consent that Mr. Hill's report be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

HAS BRITAIN SHOWN THAT HEALTH INSURANCE CAN WORK?

(By John G. Hill, director of research, Health and Welfare Council of Philadelphia, Pa.)

It is now almost a full year since the British National Health Service came into operation in England, Scotland, and Wales. No single act of the Labor government since it came into power in 1945 has aroused as widespread interest, provoked as much criticism, or provided as many conflicting stories on this side of the Atlantic as that one measure. There is scarcely a discussion these days of the proposal for Government health insurance here in the United States in which at least part of the argument does not hinge on what is, or is supposed to be, happening in Great Britain. If for no other reason than to be able to follow intelligently the current debates on proposals here, it is necessary to know something about the British National Health Service.

It comes as a minor shock to some people to learn that the Labor government cannot

be entirely blamed or credited—depending on one's point of view—with the National Health Service. Government planning for a comprehensive medical care program really began back in 1941 under Churchill as part of his government's consideration of postwar reconstruction problems, but the beginnings of the story really go back much further.

For 36 years prior to inauguration of the National Health Service, Great Britain had had a national health insurance program, which, as its name implies, was based entirely on the social insurance concept. At the time it was terminated last year, it covered only manual and white-collar workers earning £420 ($1,680) per year or less. Dependents and children of insured persons were not covered. Medical benefits were restricted, for the most part, to general practitioners' services and did not include hospital care or specialists' services. Some twenty-odd million people—roughly one-half the population—were covered and about 84 percent of the doctors in the country were treating patients under this scheme in addition to their private practices. Doctors were paid on a capitation basis, and the cost of the program was met by specified contributions from employees, employers, and the Government.

There were also a variety of other provisions for medical care. For hospital and specialists' services there were voluntary hospitals, municipal hospitals, and public assistance institutions and special services for the treatment of tuberculosis and venereal diseases, for maternity and child care, and mainly through voluntary societies, for home nursing care. For those who could not pay the local health authorities had responsibility for seeing to it that services were made available.

It is of interest to note that for many years Britain had also had voluntary hospital insurance schemes, roughly analogous to our Blue Cross. In his report on social insurance and allied services in 1942, Beveridge mentioned an estimate that these voluntary hospital insurance schemes covered about 25 percent of the population and yielded about £6,500,000 ($26,000,000) annually to the voluntary hospitals.

Despite this array of public-semipublic and voluntary services, there were numerous criticisms. Gaps in the programs, lack of coordination and to the fact that all too frequently medical care was distributed according to economic status rather than medical need, were considered the major defects. Surprisingly to us here in the United States, the organized British medical profession played a prominent part in making this type of criticism and was a leading proponent of corrective measures.

When the National Health Insurance Act was passed in 1911, the British medical profession was vigorously opposed to it. Gradually, however, its attitude softened and by 1930 the British Medical Association urged the government to extend the coverage of the health-insurance program to include the dependents of insured workers, a recommendation with the association repeated in 1938. In 1940, a Medical Planning Commission was jointly established by the British Medical Association and other British medical organizations. Early in 1942, it recommended that a comprehensive medical care program be made available to everyone in the population. A few months later came the famous Beveridge report in which a comprehensive medical care program was viewed as one of three basic assumptions on which the social-security system which the report recommended must be based. In other words, what Lord Beveridge said was that it would be impossible to create a satisfactory social-security program for the country without such a health service. This was accepted by the Churchill government and by the medical groups, and in 1944 the Churchill government issued a white paper setting forth the method by which it intended to implement that recommendation. This white paper stated as a basic principle that medical care should be put on a new footing and be made available to everybody as a publicly sponsored service. To this, the British Medical Association pledged its support.

The Churchill government, however, did not remain in power long enough to enact legislation. That was left to the Labor Party and the legislation that was finally adopted differed in several respects from the coalition government's proposals. But the basic principle—that medical care, like education, should be available as a publicly sponsored service to everybody in the population—remained the same and was accepted by all political parties, the British medical profession and the general public.

It should be pointed out that the dispute which arose between the British Medical Association and the Minister of Health early in 1948 and was so widely publicized in the American press did not involve this principle. Rather it dealt with some of the administrative arrangements under which the new service was to be operated. There were four major points of disagreement:

1. The method of compensating the general practitioners: The British Medical Association objected to the payment to all general practitioners of a basic salary along with the capitation fees on the grounds that a basic salary would ultimately lead to a full-salary service which they strenuously opposed. The conflict was finally resolved by an arrangement under which only those general practitioners would receive the basic salary who requested it and could justify receiving it. Also, the Minister agreed that the method of payment would not be changed to a salary method without review by Parliament.

2. The administrative controls over the location of new practices in the public service: The medical profession objected to the prohibition against a doctor's moving into or establishing a new public practice in a locality designated as "overdoctored." This control remains but is to be reviewed after the act has been in operation for 2 years. It should be noted that this control does not apply to private practice.

3. The prohibition against the sale of public practices: The sales and purchases of medical practices were almost universal in Britain, and the government proposed paying the doctors for the loss of their right to sell public practices in the new service. The doctors feared they would not receive as much for their practices as normally, and also that ending the sale of practices would interfere with freedom to choose their partners and assistants. Assurance was given of freedom to choose partners and assistants, but the sale of public practices is still prohibited. Sale and purchase of private practices is not affected by the new act.

4. The right of a practioner dismissed from the National Health Service to ultimate appeal to the civil courts: Under the act, final appeal is to be to the Minister of Health and no concession was made on that point.

It is clear from this brief outline of the background of the British National Health Service that the creation of a comprehensive medical program as a publicly sponsored service open to everyone who wished to use it was an undertaking not solely due to the Labor Party but had the backing of the entire electorate as well as the medical profession itself. Regardless of what political party had come into power in 1945, there would have been a national health service which, while it would have differed in many respects from the present program, would nevertheless have had the same objective. A publicly sponsored service was the only plan considered likely to solve the medical-care problem of the nation; it was a plan evolved after long years of vainly trying to cope with rising medical costs and inadequate distribution of medical care by means of voluntary and compulsory insurance programs covering limited segments of the population, and numerous other public, semipublic, and voluntary schemes.

Under the British National Health Service, all types of medical care, as needed, are provided free of charge to everyone in the country who wishes to avail himself of them. Since the national health service is not an insurance program, everyone in the country is eligible. Some 85 to 90 percent of the cost comes from general tax revenues, mostly from the national exchequer, although part of the cost comes from the local health authorities. The remaining 10 to 15 percent comes from the national insurance fund to which those (practically everybody in the nation) covered by the other social insurance measures of the country contribute.

The range of services offered covers general practitioner and specialist services, complete in-patient and out-patient hospital care, convalescent and rehabilitation treatment, optical and dental care and home nursing. Prescribed drugs and medical appliances, including spectacles and dentures, are also supplied. The only services for which there is a direct charge are those not needed on medical grounds, such as private hospital accommodation except when necessary for the welfare of the patient, or more expensive types of appliances or spectacle frames. I might also add that there is a charge for replacement of spectacles or other appliances made necessary because of the carelessness of the patient.

As was the practice in Britain prior to inauguration of the new service, the usual channel to most types of medical care is through the general practitioner or family doctor. He provides the ordinary general practitioner services in his own office or in the home, or may refer the patient for hospital or specialist care. A patient may select any general practitioner participating in the service in his area and if the doctor accepts him, is placed on the doctor's list which entitles him to that doctor's services. The patient may change doctors for any reason. Likewise, the doctor may refuse to take any patient or may have a patient dropped from his list. Neither doctors nor patients are compelled to participate in the public service, both being free to make private arrangements as formerly.

The services of specialists are usually provided through the hospitals. Optical services will eventually be incorporated with the specialist services in the hospital, but until they are patients are certified by the family doctor for care by any participating optician. Present arrangements for dental care are also temporary, for dental clinics will eventually be set up for this service. At present a priority dental program is operated by the local health authorities for expectant mothers and young children but others go directly to any participating dentist.

Perhaps the most striking fact about the operation of the national health service since it took effect last July 5 is the unexpectedly high proportion of both the medical profession and the public who are participating in it. Last April the British Medical Journal stated that 20,000—which is well over 90 percent—of the country's general practitioners had signed up for the national health service either full- or part-time. This exceeded the expectations of both the profession and the government.

This unexpectedly high proportion of the general practitioners who are participating is not entirely due to their real desire to do so, for, while the right to continue in private

practice is legally guaranteed, the opportunities for doing so have been sharply curtailed by the heavy proportion of the population who have sought care under the National Health Service. Various estimates placed the number of those who would continue to receive medical care under private arrangement at 15 percent or more. However, it has developed that 95 percent of the population have signed up for the public service, and some estimates published last April in the British Medical Journal place the proportion as high as 98 percent. The numbers of those participating has been particularly surprising in the wealthier districts. The more affluent doctors formerly drew their patients from the wealthier 10 to 15 percent of the population, but obviously many of these, too, have sought medical care under the new scheme. Exponents of the National Health Service in England look upon this development as salutary on the theory that the wealthier groups having been in the habit of demanding and receiving the highest quality medical care, will help maintain standards under the National Health Service.

The same story is true of other branches of the service. Approximately 92 percent of the estimated 12,500 dentists in England, Scotland and Wales have joined despite the persistent advice of the British Dental Association to its members not to do so. Similar proportions of the estimated 6,400 opticians and 17,000 pharmacists are also reported to be participating.

What has this heavy enrollment meant to medical practice and to the quality of care? It has, of course, placed a much heavier demand on all branches of medical service. The Lancet—a 125-year-old independent British medical journal—in a survey of the workings of the new act, estimated that the average number of those attending doctors' offices had risen by one-quarter to one-half. There are, no doubt, instances where the increase has been much greater, particularly in the heavily populated industrial centers.

The demands for hospital treatment have also been greatly increased. The Lancet survey of the hospital services estimated that the number of those now seeking hospital treatment is about three times what it was before the National Health Service began. The waiting lists of most hospitals have been greatly lengthened, the most difficulty being experienced in efforts to care for the chronically ill or those likely to become chronically ill. For certain types of treatment not immediately urgent, the waiting period may often run to many months, although most hospitals reserve about 10 to 15 percent of available space so that emergency cases can be dealt with at once.

Some of the heaviest increases have been felt in the dental and optical services. Most dentists are booked up several months in advance and the waiting period for spectacles runs on the average to from 4 to 8 weeks and sometimes longer. The latest official figures quoted recently by the British Medical Journal were that for the first 6 months of the National Health Service 3,400,000 persons had received or were receiving dental care and 2,500,000 had had their sight tested. Spectacles were being ordered at a rate close to 8,000,000 pairs per year, over twice the former number and 40 percent above the Government estimates.

Much of the adverse criticism of the British National Health Service is based on the present shortages of personnel and facilities to meet at once all demands placed upon them. In our own country, critics point to this as grounds for condemning the whole system. In Britain, it was fully realized that medical resources would not at once be sufficient for all needs, for there were shortages prior to July 5. For the period during which resources were being brought into balance with demand, the decision had to be made as to whether what facilities there were should be immediately accessible to everybody on the basis of physical need or whether they should be rationed on some priority basis. There were and still are differences of opinion as to what should have been done. The action of the Government was to give access to existing resources to everybody on the basis of physical need with the exception of the dental services where, because of extreme shortage, a priority system was established for expectant and nursing mothers and young children. Also, many were of the opinion that removing any economic or other barrier to medical care would expose existing resources to the full needs of the entire population and act as the most powerful stimulant to speedy and adequate provision of the resources really necessary.

While it is possible to quarrel with this approach, it must be recognized that it is a question of approach and not a question of the ultimate effectiveness or ineffectiveness of the National Health Service. Even if Britain were to curtail certain services temporarily on some priority basis (which I hasten to add is not being considered) such action would not of itself be grounds for condemning the entire program—as many would no doubt do—but only for criticizing the method the British government took to launch its new program.

Most of the complaints with respect to the strain on the Nation's medical services appear to be coming from the general practitioners and it is undoubtedly true that many of them are heavily burdened. Much of this difficulty arises from the present maldistribution between the general practitioners and the population, a problem which exists under any form of medical practice but which is thrown into bold relief by a program like the National Health Service. The Lancet states that a family doctor should be able to care for from 2,000 to 3,000 patients adequately, depending on the temperament of the doctor and the geographic and other characteristics of his practice. The ratio of the total population of England, Scotland, and Wales (48,000,000) to the number of general practitioners in the National Health Service (20,000) is about 2,400 but with the present maldistribution between the doctors and the population this theoretic average-size practice will not be possible for some time to come, and under present arrangements, a general practitioner in the National Health Service is permitted to take a maximum of 4,000 patients. Since the opportunity for private practice has almost disappeared, most doctors feel they must strive for that maximum under the method of straight capitation payment on which they insisted.

The ultimate solution of this problem lies not only in better distribution of the doctors but also in an increase of their numbers. It will take many years to increase the number of the doctors although the medical schools are full to capacity. There is a central medical-practices committee, 7 of whose 9 members are medical practitioners, charged with responsibility of achieving better distribution of the doctors; it is this committee which designates areas as overdoctored in which new public practices may not be established or into which a doctor in the public service may not move. However, probably due to the strenuous opposition of the medical profession to this indirect control of their movements, there have been very few areas designated as overdoctored although this matter is scheduled for review.

The suggestion of many in the medical profession for coping with this problem is the speedier provision of the health centers. Health centers are called for in the plan for the National Health Service. They will consist of technically equipped premises, constructed and staffed at public expense where general practitioners and dentists in the service will see their patients. Nurses, clerical staff and other auxiliary personnel will be provided to relieve the doctor of much of the routine parts of his job, including the much discussed certification and paper work, which can as well be done by others under his direction. So far, there is one health center in Birmingham, several others have been approved for the London area and plans are being submitted for health centers in other sections of the country. It is estimated that working in a health center would conserve about 25 percent of the doctor's professional time. Editorial comments and letters in the columns of British medical journals indicate that the doctors do not believe the construction of health centers is being given the priority it deserves.

Contrary to some reports here, the Lancet in its survey of the operation of the National Health Service stated that "every account agrees that frivolous complaints (being brought to the doctor) are no commoner than before." Also, dishonesty under the system is rare, although cases that have come to light are widely publicized. The most common complaint among the doctors regarding the type of ailments they are asked to treat was put this way by Dr. Dain, chairman of the Council of the British Medical Association: "No longer are we called upon to see a patient; we are called to see a family." Whether a doctor is called in or visited, no financial barrier remains to his being asked to advise on other members of the household. Not all doctors, however, look upon this as bad. As one general practitioner put it in a recent issue of a British medical journal: * * * "there will never be preventive medicine unless patients are encouraged to take occasional risks with the doctor's valuable time. * * * It is useless to preach prevention rather than cure without offering practical help in bringing the preventable to the doctor's notice in good time."

Judging by the amount of space devoted to it in the last several months' issues of the British Medical Journal, the subject uppermost in the minds of the general practitioners at the moment is that of remuneration. The remuneration of the general practitioners, specialists, and dentists in the national health service was based on recommendations of a committee under the chairmanship of Sir Will Spens, of Cambridge University. The Spens committee surveyed the incomes of medical practitioners earned prior to the war and made recommendations, in 1939 money values, of the amounts and the distribution of incomes which should be achieved under the national health service. These recommendations were accepted by the profession and the Government and the method and amount of payments in current money values were negotiated by the Government and the profession.

General practitioners are paid according to the numbers of persons on their lists for whose care they have accepted responsibility. For each person, the doctor receives a flat annual sum, or capitation fee, of about 17 shillings 6 pence ($3.45) regardless of how much or how little service the person required during the year. Doctors who receive the basic salary are paid £300 ($1,200) per year plus capitation fees reduced by one-seventh the normal amount. There are also special payments to general practitioners for treating emergency cases, maternity cases, for the administration of anesthetics, and in certain areas mileage payments for home calls.

At present, dentists are paid on a fee-for-service basis, according to a set scale for each service rendered. Opticians are also paid on a fee basis, according to a scale for each item of service. Specialists in full- or part-time service are paid on a salary basis, ranging up to £2,750 ($11,000) per year for a full-time specialist. Special awards are given to

about one-third of the specialists, bringing the maximum salary of a specialist up to £5,250 ($21,000) per year.

Exact figures on the distribution of the incomes of the general practitioners are not yet available for the period from July 5 to March 31, the end of the British fiscal year. Nevertheless, there is clear indication that there have been substantial shifts in income both ways: Those working in congested areas with the maximum of 4,000 patients are reported to have experienced a 25 to 30 percent increase in income, while those in thinly populated areas or in wealthier districts with fewer patients have had substantial reductions.

Last March, the general medical practices committee—the central body concerned mainly with the distribution of doctors—submitted a report to the Minister of Health pointing out the dissatisfaction of the general practitioners with the remuneration. The report stated that in general the objectives of the Spens committee recommendations were being achieved with respect to the doctors in the 40–49 age group, but that there were too many low incomes among the group under 40 and too few high incomes in the group over 50. It recommended an increase in the fund for payment of the general practitioners and the increase be used to raise the capitation rate for the first 1,000 or 2,000 patients on the doctor's list.

Another aspect of the dissatisfaction of the general practitioners in respect to remuneration is the inequity between what some of them are earning as compared with some of the dentists. As I have mentioned, the dentists are presently paid on a fee-for-service basis, what most students of this subject believe to be the most ineffective way of remunerating doctors under a national medical care program. The recommendations of the Spens committee for the dentists were based on a 33-hour week at the dentists' chair side plus added hours for other work, which the dentists agreed was a fair amount. However, no maximum was placed on the number of patients or the amount of work a dentist could undertake. A few months after the service began, it developed that many dentists were working double, or almost double, the 33 hours at the chair side and grossing much larger incomes in relation to the general medical practitioners than was anticipated or intended. On the grounds that the number of hours these dentists were spending at the chair side would impair efficiency, the Minister of Health, as of the first of this year, cut the payments above £4,800 ($19,200) per year by 50 percent. This allows full payment up to 42 chair-side hours per week or 9 hours above that recommended by the Spens committee and accepted by the dental profession.

There seems little question that these inequities which have emerged in the remuneration of the doctors need to be reviewed in the light of this experience. This seems likely in view of a recent announcement by the British Medical Journal that the Minister of Health has been collecting the exact figures on the distribution of incomes among the general practitioners from the 138 local executive councils where the actual payments are made.

Fundamental to an appraisal of the National Health Service is the effect it is exerting on the quality of medical care. It seems to me reasonable to suppose that when the medical resources of a country are admitted to be in short supply, suddenly making them available to the entire population is bound to lower the highest quality and quantity of service formerly accessible to a limited section of the population, while for those who formerly did without or nearly without, it would mean an improvement. It is therefore not surprising to me that we are receiving conflicting reports that the quality of care under the National Health Service has both been improved and lowered. Undoubtedly, there is truth in both reports. As to how the quality of care is affected, the Lancet expressed the view that "at one pole, the acutely ill patient, and at the other the person with mild bronchitis are likely to fare no differently than before," but that the differences would be felt between those extremes.

The criterion by which to judge the quality of care under the National Health Service seems to me not whether the many are now receiving the benefit of the highest quality of care formerly accessible to the few, but whether the mass of people are on the whole receiving better care. There is substantial evidence that they are. Most impartial observers of the National Health Service admit that every illustration of lowered quality of care can be more than matched by the amount of undisclosed illness coming to light or by cases in which better care, or any care, is now being received which was not possible before. In the same Lancet article to which I have just referred, it was stated: "* * * the service has brought to light untreated illness in the old, in children, and in women. The amount of undisclosed illness is particularly large in women, many of whom have suffered for years without referring to a doctor * * *."

One final matter regarding the National Health Service which has received considerable publicity is the matter of cost. Preliminary estimates early in 1948 placed the gross cost of the National Health Service for the first 9 months of operation—July 5 to March 31, the close of the British fiscal year—at £198,000,000 ($792,000,000) including the amount from the local health authorities and the National Insurance Fund. Actually, however, the gross cost of the service during this period came to £275,000,000 ($1,100,000,000) or slightly less than 40 percent above the original estimates. In the debates in the House of Commons on these increases, it was pointed out that the original estimates were made several months before the actual salary scales were determined, but most of the increase was due to a much heavier demand in some branches of the service than was anticipated. More than half of it was because of dental and optical costs, where the original estimates were determined largely on what seems to me an unrealistic basis, namely, the amount of optical and dental services rendered under the old National Health Insurance scheme where these benefits were narrowly restricted.

The estimates for the first full fiscal year—1949–50—are £352,000,000 ($1,408,000,000) of which £268,000,000 ($1,072,000,000) will be a direct charge on the national exchequer. The London Economist pointed out last March, when this estimate was announced, that it is at a lower rate than the cost for the first 9 months since these early months included certain nonrecurring items, such as the financial liabilities of the hospitals which were transferred to the Ministry of Health when the service began. Also, expenditures in the pharmaceutical and ophthalmic services are expected to be at a lower rate during the present year, since the backlog of demand in these services is expected to level off during the current fiscal year. The estimate for 1949–50 represents about 3.6 percent of the British national income.

Whether this sum is an excessive amount beyond the ability of Great Britain to afford can hardly be answered on the basis of the first 9 months of operation, nor on the basis that the cost was substantially above the estimate for that period. The cost of the National Health Service is not a net increase since a considerable proportion of this sum was being paid by the nation for health services and for the care of the indigent sick prior to inauguration of the new program. In the final analysis, the cost of the National Health Service is a charge on the productive capacity of the country. If it eventually reduces the cost of production of conserving the Nation's manpower and increasing industrial output, as many believe it will, the investment will then be economically justified. But, whether it will or not can hardly be determined for some time to come.

Early reviews of a new program such as the British National Health Service necessarily dwell on the major problems which have emerged, and I have tried to touch on those most widely discussed. Most of these difficulties were anticipated before the national health service came into operation and it was generally well understood in Britain that many of them would have to be worked out over a period of time. Now, after several months, the great majority of those associated with the new service still believe that these difficulties can be remedied and that there is no inherent reason why the National Health Service will not eventually function smoothly. It is significant that there is no indication that Britain is considering abolishing its comprehensive medical-care program regardless of what political party is elected in 1950, for the nation remains firmly convinced of its need, of its benefit, and of its workability.

Many of the gloomy predictions before the National Health Service began have not materialized. There are no complaints of clinical interference on the part of the Government in medical practice; the doctor-patient relationship still remains undisturbed; the incentives of the medical profession have not been destroyed; the transfer of the hospitals to the Ministry of Health has gone smoothly and many believe that the hospitals in Britain have been given new life and scope; the numbers of those seeking admission to the country's medical schools have not diminished—if anything, they have increased; and, above all, more people are receiving medical care, or better medical care, than was thought possible heretofore.

In reference to what we can learn from British experience thus far, as to whether or not compulsory health insurance can work in the United States, I think a good answer was given by this paragraph in a dispatch to the New York Times early this year by Herbert Mathews, chief of its London bureau:

"American critics or champions who look across the Atlantic for arguments to oppose or support President Truman's plan to introduce compulsory health insurance will find whatever they are seeking. The American Medical Association will be able to produce a mass of testimony from British doctors on how badly the scheme is working. Conversely, the Federal Security Administration should be able to compile a still more formidable body of testimony from patients, druggists, dentists, and many doctors to prove that a nation of nearly 50,000,000 can take care of the health of every man, woman, and child from teething to senility."

Installation of Air Conditioning in Government Offices

EXTENSION OF REMARKS

OF

HON. RAYMOND W. KARST

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. KARST. Mr. Speaker, as we gather today in an air-conditioned

Chamber, perhaps it is easy for us to forget the outside temperature. But let us recall for a moment that much of the country is in the midst of a terrific heat wave. I do not know that there is much we can do about the weather, but there is something that can be done about the conditions under which thousands of Government employees must work here in Washington and throughout the country.

Some Federal office buildings are air-conditioned. Others are not. Some Government workers not only have to work in buildings which are not air-conditioned, but they have to work in "temporary" buildings which are really better described as furnaces, or hot boxes, in this kind of weather.

I know there is a rule which permits supervisors to send Government employees home when the temperature zooms to a certain height, and when the humidity reaches a certain percentage of intensity. Government employees tell me this table is unrealistic, and that there is a wide variation in the policy of letting workers go home in inhumanly hot weather.

In some cases the "big shots" work in air-conditioned offices while hundreds of their underlings work in non-air-conditioned offices. Somehow or other I believe that if the chiefs had to work under the same conditions as some of their less fortunate employees, there would be strong pressure to extend air-conditioning throughout their offices.

I realize that there are certain functions of the Government which must go on in all kinds of weather, regardless of the temperature. However, I believe that in times like these, supervisors should keep in mind two things—first of all, they should be as lenient as possible in permitting employees to leave their desks any time the temperature gets close to 95; and secondly, I believe they should bestir themselves to do what they can to get air conditioning as soon as possible for their employees.

I know this may sound extravagant to the so-called economy bloc, but I believe it is penny-wise, pound-foolish not to install air conditioning wherever possible in Government buildings in places like Washington, St. Louis, and wherever we generally encounter weather such as we are having today.

Think of the salaries of the workers who are permitted to go home in this kind of weather. I am no mathematician, but I believe the loss on this score alone would run into thousands, perhaps hundreds of thousands of dollars each summer. Then think of the lowered efficiency of Government workers who have to work in non-air-conditioned buildings. If a worker can operate only at 50 or 60 percent efficiency in weather like this, we are simply wasting part of his services.

I believe that private industry has proven time and again that good working conditions pay off in better work, a higher morale, and in the end, are much more economical than trying to make employees work under unfavorable conditions. In the Government we recognize the desirability of air conditioning—most of our newer buildings have it. But let us not forget the poor unfortunate Government workers who today are at their desks in buildings where the temperature is several degrees higher than the official thermometer reads.

Let us urge all Government supervisors to treat their employees as humanly as possible, and let us do what we can to hasten the day when all Government offices are air-conditioned. The result, I am sure, will be that our Government will function better, more economically, and we will not be driving capable employees to seek employment in private industry where they are better appreciated.

Farm Prices and City Consumers

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. JAVITS. Mr. Speaker, there is appended hereto a leading editorial from the New York Times of Thursday, July 28, 1949. This editorial bears out the urgent need for flexible price supports rather than of the high inflexible parity price supports contained in the Gore substitute and the experimental recommendations of Secretary Brannan. Flexible price supports should be the logical next step, and I believe it very regrettable that the House saw fit to abandon a policy approved only a year ago in the Hope-Aiken bill.

The interests of city consumers and farmers can and must be reconciled. Farmers want a full market, city consumers want reasonable prices. The answer is plentiful and sustained demand. The great mass-production industries have shown the practicability of this approach. As a Congressman from a big-city district, it is my aim to encourage statesmanship, both on behalf of the farmer and consumer, so that this goal may be achieved. It has seemed to me that the system of flexible price supports, adjusted, if necessary, where the Hope-Aiken bill may have worked out too stringently, is the best progressive step in the interests of such statesmanship:

FOR A SANE FARM POLICY

Last week the House rejected emphatically the Pace farm bill, a version of Agriculture Secretary Brannan's policy recommendations. Having done that, it voted to repeal the present (Aiken) law, which although it has been on the statute books since 1948, does not actually become operative until January 1, 1950. Finally, it passed a substitute introduced by Representative GORE of Tennessee. The Gore bill would continue indefinitely in effect the high-level, inflexible, price-support program which was introduced as a war measure to stimulate production and which was to have gone out of existence at the end of this year under the provisions of the present law.

Fortunately, there is reason for hoping that the Senate may act to halt, or at least modify, this potentially ruinous policy, which has already led us far along the road back to the chronic farm surpluses that characterized the thirties. Yesterday Mr. THOMAS of Oklahoma, chairman of the Senate Agriculture Committee, directed a seven-man subcommittee to draft a new farm bill. The committee is headed by Senator CLINTON P. ANDERSON, former Secretary of Agriculture, and includes in its number Senator AIKEN, of Vermont, author of the present law, with its provision for flexible price supports. Senator AIKEN is reported as saying that he will go along with the former Secretary of Agriculture in what the latter has called an attempt "to make the Aiken Act more serviceable."

The theory behind the Aiken flexible support program is that it would tend to stimulate crop production when supplies are subnormal and to discourage it in time of surplus stocks. As the law now stands, a farmer would receive 75 percent of parity when supplies are normal. As they moved above normal, supports would recede toward 60 percent of parity.

The policy of supporting basic farm commidities at 90 percent of parity when in most cases the Government is already carrying huge surpluses under nonrecourse loans in its warehouses, must, if long continued, be economically disastrous. Although there has been an enormous market for such commodities this year, both at home and abroad, it is a startling fact that the Commodity Credit Corporation has spent more in supporting prices than ever before. Under conditions which, by almost any comparison, have been highly favorable, the support program has cost an estimated $2,000,000,000.

Cotton offers a typical illustration of what has been happening. Cotton exports for the season which ends July 31 will total around 4,500,000 bales, of which about 3,500,000 will have been financed by the ECA. Despite the disappearance of these 3,500,000 bales through the recovery program—which is, of course, adventitious and temporary in character—it is estimated that at the end of the season the Commodity Credit Corporation will still be holding about 3,800,000 bales of cotton. Including handling and other charges this alone would represent an investment of some $588,000,000. What will the situation be, it is fair to ask, if the present policy is continued right up to the time when the ECA is terminated, 3 years hence?

Not only is the potential cost of such a farm program frighteningly prohibitive, but, like any program that is based on political expediency, it is bound to contaminate the economy and erupt at innumerable points in the form of other equally indefensible measures. We have seen two manifestations of this in the past few weeks alone. First, there was the wheat agreement, a pious economic hoax if ever there was one, under which, in the name of international stabilization this country committed itself to sell 168,000,000 bushels of wheat abroad in the current year at a price far below the world market—with the American taxpayer footing the bill. Then, only the other day, came the highly obnoxious proposal by Senator MCCLELLAN for amending the ECA appropriations bill. This amendment, in the words of spokesmen for the three big farm organizations, would have made the European recovery program a dumping ground for United States farm surpluses. Shocking? Of course, it is. But it is precisely the sort of thing that we must be prepared to expect as regular legislative fare so long as we insist upon pursuing a farm policy which results in chronic and ever-increasing surpluses.

Farm Forums on Farm Legislation

REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. MARTIN of Iowa. Mr. Speaker, a great movement has been started in Iowa to bring our farmers together in local forum discussion meetings to find out what the farmers themselves want placed in our future farm program. On Wednesday, July 27, a great meeting of farmers was held at Mediapolis, Iowa. The size of the crowd at this meeting is ample proof that the farmers are tremendously interested in the development of a sound and acceptable farm program. No other issue could draw together as many interested people, and reports of the meeting should convince every community leader in our agricultural areas that such meetings should be scheduled immediately to the end that the President and all Members of Congress may be enlightened on the farm problems as they appear to the farmers themselves. Farmers of all political beliefs were encouraged to attend and to join in the forum discussion.

Some idea of the success of the Mediapolis meeting can be shown by the following statement of Gerald Bogan, publicity director, Republican State headquarters, Des Moines, Iowa:

TRIAL RUN A SUCCESS

The trial-run grass-roots farm meeting at Mediapolis last week was a whopping success. Des Moines County Chairman James Schramm and his committee did an excellent job arranging the meeting of farmers to get a rural report on the type of farm legislation the farmers want.

Nearly 1,100 farmers gathered in the town park at Mediapolis to talk over farm plans. There was no political oratory. There were no big-name speakers; just a group of farmers getting together to express their views on farm legislation.

The large crowd indicated that farmers are interested in good legislation and the type of meeting conducted may be the pattern for a series of similar meetings throughout the State on the county level to get opinions from the farmers on agricultural legislation. Climaxing the series of meetings will be the 19-State regional farm conference at Sioux City when long-range farm plans will be discussed with the farmers.

Republican leadership doesn't intend to sell a program to the farmers but to come out to Iowa, talk it over with residents of the Corn Belt area, and find out what the farmers have to say.

Congratulations to the Des Moines County Republican Central Committee for the new look in farm meetings. They went down to the grass roots to talk it over. Good government must come from the people, and the Mediapolis meeting may well be the starting point from which the Republican Party will continue to go to the people and ask rather than come to the people and tell them what to do.

In strong contrast to the Mediapolis farmer forum was the 16-State Midwest conference staged by the Democrats at Des Moines on June 13 to sell the Brannan plan to the farmers. The Brannan plan was handed out on that occasion in printed form as the final answer to our farm problems and the regional conference at Des Moines had for its purpose the selling of the Brannan plan as then already determined without even asking the farmers to help develop a farm program.

My hat is off to James Schramm, of Burlington, Iowa, Des Moines County Republican chairman, for his taking the lead in the development of farmer forums. More power to him and to our other community leaders throughout the Nation who help to build our agricultural policy on such a firm foundation. Let us consult the farmers.

School Aid Propaganda Proven To Be False

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including the following editorial which appeared in the Chicago Journal of Commerce on August 1 and which is pertinent to the subject of Federal aid for schools:

SHODDY PROPAGANDA FOR UNITED STATES SCHOOLS

By far the most suggestive aspect of the proposed multibillion Federal subsidies for education is the fact that the States which would benefit most by the hand-outs are several degrees less than luke warm about the whole deal.

These States can find all sorts of reasons for bigger and better Federal crutches when it comes to public works of one kind or another. But in the case of cash for schools enthusiasm is conspicuous by its absence.

The prosubsidy groups notably the National Education Association, have been busier than beavers when the snows melt trying to assure local agencies that their authority will be undimmed under the new order. Despite these assurances, Representative GWINN reports that the House committee which dealt with the subsidy bill found no State, county, or local educational agencies willing to support it. They stayed away from hearings in large numbers.

Many of the subsidy plumpers no doubt believe in the validity of their own claims, but if so they have strange ways of demonstrating their sincerity. For example, the Saturday Evening Post currently calls attention to the peculiar use to which certain official statistics are put. Such as the following statement from the report of the Senate Committee on Labor and Public Welfare: "According to United States census estimates for 1947, about 4,000,000 children between the ages of 5 and 17 attend no school whatever."

Statements of this sort are supposed to indicate the shocking conditions which Federal money will correct. Dr. Lawrence M. Gould, president of Carleton College, spotted the worthlessness of the figures without too much effort. "In many States," said Dr. Gould, "compulsory education does not start until 6 or 7 years of age and some end compulsion at 16. Of the 4,000,000 referred to, 2,063,000 were only 5 years old, 156,000 were 6, and 1,406,000 were 16 and 17."

What this means is that 3,625,000 of the 4,000,000 underprivileged kiddies lacking educational opportunity were either too young to go to school or old enough to be legally excused from education under the laws of the States in which they reside. That leaves 375,000 children not in school last year, many of whom probably were physical or mental defectives.

When such shoddy misrepresentation can get into a Senate committee report, is it any wonder State, county, and local boards of education keep their fingers crossed when exposed to the sweet freedom of Federal grants to schools in the backward States?

H. R. 1758 Should Not Be Passed

REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. YATES. Mr. Speaker, a few month ago the price of gasoline was increased at the expense of millions of motorists in this country. I pointed out at that time that in my opinion the increase was unwarranted, because the profits of the petroleum and gas industry were the highest they have ever been in the history of this Nation.

In a few days this House will be faced with consideration as to whether it should increase the profits of that industry again to the tune of hundreds of millions of dollars, this time at the expense of the millions of gas-rate payers. That is exactly what H. R. 1758, the bill to amend the Natural Gas Act, proposes to do. In the city of Chicago alone it is probable that the rates charged by the Peoples' Gas Light & Coke Co. may be doubled or trebled if this should pass.

There are approximately 2,300 natural gas producers in this country. Of that number, 24 companies produced 62 percent of all the natural gas sold in 1947 to interstate pipe lines in the Southwest. These companies made returns on their common stock ranging from 12 percent to over 40 percent during 1948. Why, then, should they push for further profits? I believe it is about time the consumer got a break.

This is a special privilege bill. It enriches a few corporations at the expense of millions of people. It is vitally important that the Members of this House be made aware of the facts before they vote, and I certainly hope they will read the report of the Interstate and Foreign

Commerce Committee on it. In order that the Members may know of the earnings of the 24 companies for the year 1948, I am presenting the following:

List of 24 large producers whose interstate sales of natural gas would be exempt from regulation under H. R. 1758

1947 position in interstate sales	Producer	Total assets, Dec. 31, 1948	Total gross operating revenues, 1948	Percent return on common stock and surplus, 1948
24	Barnsdall Oil Co	$52,135,900	$37,150,300	31.6
2	The Chicago Corp	41,490,000	10,440,000	22.6
41	Cities Service Oil Co	[1]	[1]	[1]
	(Cities Service Co.)	991,851,300	593,435,000	25.7
7	Continental Oil Co	261,949,800	330,280,800	25.8
8	Gulf Oil Corp	1,191,004,000	1,068,876,500	20.0
4	Humble Oil & Refining Co	861,426,300	1,050,570,400	27.7
	(Standard Oil Co. N. J.)	3,526,043,000	3,300,786,000	16.1
16	Magnolia Petroleum Co	[1]	[1]	[1]
	(Socony-Vacuum Oil Co. Inc.)	1,443,034,000	1,326,508,300	12.4
32	Ohio Oil Co	203,389,200	191,385,400	28.4
1	Phillips Petroleum Co	579,273,500	487,165,287	18.7
33	Pure Oil Co	270,967,800	281,319,500	23.6
3	Republic Natural Gas Co	[2] 22,760,000	[3] 9,735,100	[3] 24.1
18	Shamrock Oil & Gas Corp	[4] 24,858,500	[5] 21,417,100	[5] 40.8
17	Shell Oil Co	[1]	[1]	[1]
	(Shell Union Oil Co)	640,569,000	830,421,200	29.5
43	Sinclair-Prairie Oil Co	[1]	[1]	[1]
	(Sinclair Oil Corp.)	710,125,200	636,568,800	19.4
6	Skelly Oil Co	169,015,500	180,044,400	30.4
5	Stanolind Oil & Gas Co	[1]	[1]	[1]
	(Standard Oil Co. of Indiana)	1,500,049,500	1,236,957,500	13.7
14	Sun Oil Co	278,582,600	447,309,200	19.4
35	Sunray Oil Co	136,030,800	65,527,200	30.0
26	Superior Oil Co	[6] 84,464,600	[7] 53,832,000	[7] 32.0
15	Texas Gulf Producing Co	19,569,200	9,729,500	31.0
22	The Texas Co	1,277,093,800	1,080,886,400	17.9
42	Union Oil Co. of Calif	298,415,900	208,353,500	16.3
12	United Carbon Co	29,518,600	26,034,900	12.0
25	Warren Petroleum Corp	[2] 57,836,400	[3] 80,495,200	[3] 28.2

[1] Producer not reported separately from parent corporation listed below.
[2] June 30, 1948.
[3] Year ended June 30, 1948.
[4] Nov. 30, 1948.
[5] Year ended Nov. 30, 1948.
[6] Aug. 31, 1948.
[7] Year ended Aug. 31, 1948.

The above-listed producers furnished 62 percent of gas sold in 1947 to interstate pipe-line companies in Southwest.

Demand for Leadership

REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. KEEFE. Mr. Speaker, there are many Members of Congress, and I know many people throughout the country, who are worried over the trends that exist, both domestically and on the international front. People are asking for leadership today, to lead us out of the morass that confronts the people of this Nation.

As bearing upon that question and as specifically directed to my friends on the Republican side, may I call your attention to one of the most brilliant editorials that is has been my privilege to read, written by that dynamic editor, Richard Lloyd Jones, of the Tulsa Tribune of Tulsa, Okla., appearing in that paper on July 23, 1949. The title of the editorial is "Light the Ripon Candles." It is inspired by the poetic statement:

A courage mightier than the sun—
You rose and fought and fighting, won!

The editorial is as follows:

A courage mightier than the sun—
You rose and fought and fighting, won!
—*Morgan.*

LIGHT THE RIPON CANDLES

(By Richard Lloyd Jones)

Last summer in this column, Tribune issue of June 26, 1948, we carried a picture of the little schoolhouse that still stands on the campus of Ripon College in the little town of Ripon, Wis. In that little schoolhouse the Republican Party was born.

Resolution, consecration, and determination gave birth to the Republican Party in that little schoolhouse. The nobilities that were crystallized in that little community's educational center are the need of this Nation today. It is the dedication which our colleges should assume and which they evade. It is the courage of conviction which the Republican Party must reaffirm or die. The Republican leaders must quit their cowardly "me too" endorsement of New Deal repudiations of the Republic of the United States.

The good people of Ripon have inscribed on this abandoned schoolhouse the simple legend: "Birthplace of the Republican Party." That is all that has been done. Last summer we urged the Republican National Committee to assume the ownership of this schoolhouse and make it a national shrine.

A few members of the National Republican Committee responded to the notion. They thought it an admirable idea. They thought it would be quite worth while for the candidates of the party last summer to dedicate the little schoolhouse as a party shrine and there to once more pledge the Republican Party to the preservation of this Republic, to advocate anew the economics of the Bill of Rights. That was the feeling of a few. But most of them paid no attention to the suggestion, probably didn't take pains to even read it. Dewey and TAFT were both appealed to. Both ignored it.

And that is what is the matter with the Republican Party. It is not Chairman SCOTT. It is the collective membership of the National Committee that has been intimidated by the segregations of bloc votes, to satisfy all of whom the Democrats have galloped in all directions, built up a confiscating bureaucracy, and repudiated every principle for which the American Revolution was fought.

But at long last through the 13 months between the appearance of the Tulsa Tribune suggestions there are National Republican Committee members who are beginning to be impatient with the party's spineless utter lack of leadership. They are beginning to think in terms of the reaffirmation of Republican resolution. Their thoughts go back to Ripon.

Ripon was a little country town a hundred years ago when its pioneers built this schoolhouse. Now Ripon is a tidy, industrial community of about 10,000 people, in the center of which is the beautiful campus and the stately academic buildings of the fast-growing Ripon College.

Among the town's assets to which its Chamber of Commerce, its Rotarians, Lions, and Kiwanians pointed with pride was a very excellent tavern. A hotel which in equipment and service rated much above that to be found in towns of Ripon's size.

In the early morning hours of one night last spring farmers from miles around were astonished at the brillant sky over Ripon. Ripon was awake, alarmed, excited, and gravely concerned. The fire bells were through clanging, everybody was busy at engines and ladders. The prized hotel of Ripon was on fire. In its ashes were found the remains of half a dozen or more victims. Tourists who went to Ripon because of the tavern go to Ripon no more.

We have grown so far away from our rational thinking of political righteousness that even the town's people of Ripon found their chief pride in the fact that a good hotel manager maintained a tavern there. Ripon forgot its greatest asset. The spiritual and resolute endowments of a party that was dedicated to the preservation of the Republic. In the ashes of the tavern, seeking to find what Ripon might have left, Ripon found the little schoolhouse.

Ripon is just like every town in our country. We have all forgotten our most precious legacy. A legacy that only the fires of apathy and indifference can destroy.

The industrial needs of the community demand a new and better hotel. Some practical Republicans on the national committee—and politics is futile if not practical—have conceived the bright idea of building around the historic little schoolhouse a three-wing hotel to be known as the Republican House. Lease this hotel to a competent hotel operator, make the hotel famous because of its quality of service, as well as its consecration of purpose. If the old hotel made money, the new Republican hotel could make more money. It is the plan of those members of the Republican National Committee who now toy with this notion that the earnings from this hotel should provide funds for outstanding high-school students from all parts of the country to prepare them for leading roles in the Nation's affairs. Thus would America filter into the classrooms of every college in the country. What our professors have failed to do for our country the selected Ripon students in their classrooms would do.

Great oaks from little acorns grow. A great idea can drive its roots deep and spread its branches far. In the candlelight of the little Ripon schoolhouse, on the 20th of March, 1854, the good citizens of Ripon met. They had been Democrats, Whigs, and Free Soilers. But now all of a common mind—Americans. All were impatient with the inaction and cowardice of the politicians who

let themselves be pushed around by organized selfish interests.

There in the candlelight were the new minutemen. The farmers and the town folks of every Middlesex village and farm. One among them, one A. E. Bovay, was elected to travel to New York City to discuss the purpose of a new party with Horace Greeley. Greeley was soon to address a group of dissenting Whigs and Democrats of Jackson, Mich. He carried the Ripon idea there, and enlisted the Michiganders.

Now Henry Wallace wants the little schoolhouse. It represents everything he repudiates. But it would make a magnificent mask behind which he might conduct his tirade against our Bill of Rights.

"Back to Ripon" is beginning to crystallize as a party slogan. It is the battle cry of those who would bring to the Republican Party new leaders, and shake the old ones out of their slumber and lethargy.

America is what we, the people, choose to make it. For the last 16 years we have made a mess of it. We are today worse confused and confounded than were the Whigs, the Democrats, and Free Soilers when the little candles in Ripon's schoolhouse threw a light of hope upon a bewildered nation.

The little red schoolhouse, which is woven into the literature of our country, is symbolized by the patriotism that has made a shrine of the little schoolhouse at Ripon where resolute men resolved to perpetuate the freedoms of this Republic.

When the leaders of the Republican Party can match their intelligence and their integrities with the ancient candlelight of Ripon, the Republican Party will find a people who are impatient to enlist under and follow its banner.

Farmers Express Gratitude

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a resolution adopted by the Southern Pine Electric Power Association, of Taylorsville, Miss.

This association is not in the district I have the honor to represent; but they have called on me from time to time for assistance, and I have done everything I could to aid them in every possible way.

They are now serving 11,500 farmers in 11 counties in south Mississippi, where 15 years ago there was not one farmer out of a hundred who had electric lights in his home.

It is doing more to raise the standard of living, brighten the homes, relieve the burden of drudgery, and inspire hope among the people in the rural districts than everything that Congress has done for the last 50 years.

I am hoping and praying for the day when a rural power line will be extended to every farm house in every State in the Union that can be reached by the draft in times of war, or found by the tax collector in times of peace.

The matter referred to follows:

Whereas it is an accepted and recognized fact that the dean of the Mississippi delegation in Congress, Hon. JOHN E. RANKIN, of Tupelo, has through the years been an outstanding champion of the TVA and REA programs in the United States Congress; and

Whereas it is also an accepted fact that all sections of Mississippi have benefited greatly by the untiring efforts of Congressman RANKIN through his fight to keep the REA program active and aggressive until all rural areas have been electrified: Now, therefore, be it

Resolved by the members of the Southern Pine Electric Power Association, in tenth annual meeting assembled, That we express to the Honorable JOHN E. RANKIN our heartfelt thanks and appreciation for his efforts in behalf of TVA and REA, and that we further express the hope that he will still have many years of continued public service; and further that a copy of this resolution be mailed by the secretary to Mr. RANKIN.

Federal Aid to Education

REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. LARCADE. Mr. Speaker, for many years the Congress has had under consideration legislation for Federal aid to education.

Many different bills have been introduced with various approaches to the problem.

As a former member of the Committee on Education of the House of Representatives I heard testimony on the subject when that committee considered various bills.

At this time the Congress and the Committee on Education and Labor has under consideration several bills on the subject.

Mr. Speaker, unfortunately in the consideration of these various bills a most regrettable controversy has arisen among the citizens of our great country as to the provisions of some of the bills under consideration.

Every Member of the Congress knows and most of our citizens should realize that it is impossible to obtain complete unanimity on any legislation submitted to the Congress, and generally legislation which is enacted upon any subject is the result of compromise.

Mr. Speaker, I have given much thought to the provisions of the various bills introduced at this session of the Congress, and it is my opinion that the bill S. 246, by Senator THOMAS of Utah, amended to include auxiliary services is the bill which would have the approval of a vast majority of the citizens of the United States, and if enacted into law, will be the most acceptable of any of the bills now before the committees and the Congress.

Therefore, I earnestly hope that the House Committee will approve S. 246.

S. 246, as amended, has already passed the Senate, and if the House would approve the Senate bill it would not be necessary for the matter to again be taken up by the Senate.

Mr. Speaker, it is my further considered opinion that it would be to the best interests of our country and our citizens if the Congress would take action on this legislation at this session of the Congress for if the legislation is carried over until next session, nothing can be gained for we will still be confronted with the problem and the issues will remain the same. On the contrary, if we do not dispose of this legislation at this session, it may be that the flames will spread and roll which would only result in continued controversy and dissension among our citizens causing disunity and discord in our country, at a time when our country is spending its resources to bring peace to all of the world.

Mr. Speaker, I hope that the members of the Education and Labor Committee will give consideration to the approval of S. 246 or my identical bill at their meeting to be held on tomorrow morning as I believe that this bill is the bill which will work more satisfactorily and the one which will be for the best interests of our country.

Medical Officers for the Armed Forces

REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. POLK. Mr. Speaker, the problem of obtaining medical officers for the regular armed services and for their reserve components is indeed critical. Dr. Carl A. Minning, of Williamsburg, Ohio, has written an article for publication in the Reserve Officer on the subject Medical Officers Can Be Obtained for the Armed Forces. This article offers what seems to me to be a proper solution to the present difficult situation, and I believe it merits the consideration of the House of Representatives:

MEDICAL OFFICERS CAN BE OBTAINED FOR THE ARMED FORCES

Unusual efforts are being made to procure medical officers for the armed forces. They have met with such poor results that serious thought is being given to drafting young doctors of medicine who obtained part or all of their professional education at public expense. Needless and unfair as was this expenditure of public funds, it will be bold discrimination if these men are impressed into Federal service. Other students similarly obtained part or all of their professional education at public expense. None of these have been drafted. Such a draft would solve the problem only temporarily. When the ASTP and V–12 graduates will have served their proposed 2 years, the military will be right back where they are now.

What then is the solution of this problem? Actually, the solution is quite simple. An analysis of any type of employment which is offered so vigorously and yet is shunned so completely, usually has one or both of the following faults: (1) The work is undesirable. (2) The compensation is inadequate. The positions which are being offered doctors of medicine by the armed forces have both of these faults. The armed forces are realizing the results of improper employment of doctors of medicine during World War II.

Diagnosis and treatment of the sick and injured is the primary mission of the Medical Corps. Doctors of medicine spend more years, more effort, and more money in preparing themselves for their life work, than does any other profession. That life work consists of the diagnosis and treatment of the sick and the injured. And yet, what do we find in the Army, the Navy, and the Air Force? The ward medical officers and the dispensary medical officers who do the actual examination and treatment of the great majority of soldiers, sailors, and airmen are the youngest, the least experienced, and only too often the most poorly trained. The older doctors who have the best training and experience are considered to be promoted when they are put in command of sections, services, and hospitals. Really, all this administrative work is a demotion in everything but rank and pay. If doctors of medicine had wanted to be hospital administrators they would have studied hospital administration instead of medicine and surgery. Preparation for the former career is easier and costs less time and money. The first step in the procurement of medical officers is to assure every doctor of medicine that his special abilities are highly prized by the armed forces and that proper use will be made of them. The diagnosis and the treatment of sick and injured military personnel constitute the very highest type of work. None but doctors of medicine are capable of such work in civilian life or in the military establishment. It is only by thus utilizing doctors and so providing desirable work that the armed forces can make the career of a medical officer attractive.

With respect to compensation, again the career of a medical officer is unattractive. In the armed forces, pay and rank are inseparable. Rank and pay of medical officers (even with the present additional $100 per month professional salary) have changed very little during the past 30 years. The training, ability, income, and standing in his community of today's doctor of medicine make him far superior to his counterpart of 1919. His improved ability to manage disease and injury during the past three decades has extended life expectancy in the United States by 16 years. The reader is requested to ponder his present chances with pneumonia, meningitis, tuberculosis, diabetes, ruptured appendix, cancer of the larynx, or brain tumor as compared with the person so afflicted 30 years ago. These are but a few of the afflications of mankind which have been and are being conquered. The armed forces must recognize the superiority of the present-day doctor of medicine and accord him rank and pay which are as favorable in the Military Establishment as he holds in his civilian community. Doctors simply will not expose themselves to the inferior rank, pay, and status which generally were their lot during World War II. Reduced to simple terms, a graduate of an approved medical college with an approved internship of 1 year should rate a captaincy.

Promotions should be automatic and at a more rapid rate than in other branches of the services. Any physician or surgeon with 10 years' professional experience after his internship of 1 year should rate the rank and pay of a full colonel.

Further, and most important of all, the armed forces must effect a complete change in medical department organization. The ward medical officers and dispensary medical officers who actually diagnose and treat the sick and injured should be the most capable and most experienced medical officers of the corps. They only, can give the best care to the sick and injured and they should have the highest rank and pay. This means that the colonels, lieutenant colonels, and majors will be ward medical officers and battalion medical officers. The reader is requested to consider himself the patient and then to answer the following questions. Should the most capable and experienced doctor be filling out reports or should he be attending the patient? Who is more important, and should have the rank and pay that goes with that importance, the attending physician or the pencil pusher?

Efforts were made during World War II to reduce the number of doctors required by the Army. An example of such economy was the change in hospital Tables of Organization, assigning the positions of executive officer and hospital inspector to officers of the Medical Administrative Corps. Since these were field-grade vacancies, the net result was that still fewer promotions were available to medical officers. Recognized leaders of their communities and their profession very often held the same rank and received the same pay as store clerks, high-school boys, farmers, nurses, physiotherapists, and many others who possessed considerably less than even a 4-year college education. Is it any wonder that doctors of medicine are rejecting the military? The writer had the misfortune to serve for 3 years as a battalion medical officer with several engineer regiments. The waste of medical talent was terrible. Seldom was more than 1 hour per day required for sick call. One medical officer easily could have attended the 1,315 able-bodied men of military age who composed each engineer regiment and whose duties lay entirely in the rear areas, yet at no time did any of these regiments have less than three medical officers. Usually four medical officers were assigned and present for duty. Doctors of medicine who are worth their salt don't like such waste of their time and abilities. They want to work a full day attending the sick and the injured. The writer has more than 3,000 active-list people for whom he does practically all the medicine and surgery. Ninety percent of his work is with persons under 15 and over 60 years of age and with child-bearing women He would starve if the 3,000 were men of military age. Much greater economy of medical personnel can and should be effected in the Tables of Organization of all units not in active combat zones.

If the armed forces can assure doctors of medicine that their duties will consist of diagnosis and treatment of patients, and that rank and pay will be as appropriate as are the community esteem and income of the civilian doctors of medicine, there will be no shortage of medical officers. The writer might be tempted himself.

Future Farmers of America

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1 (legislative day of Thursday, June 2), 1949

Mr. PEPPER. Mr. President, one of the great organizations of America making this country stronger and better is an organization of young farm boys called the Future Farmers of America. During the last week there was held in Washington the annual meeting of the board of trustees of this splendid organization. It was my privilege to have the members of this board, together with the president of the organization, who is from the State of Florida, as my luncheon guests, an occasion which was graced by the presence of the Vice President, the Secretary of Agriculture, and many Senators from States from which these young men come.

Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement I have prepared about the Future Farmers of America, and the young men who make up this forward-looking organization.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

During this week the national officers of the Future Farmers of America are in Washington for the annual meeting of their board of trustees. As most Members of the Congress know, the Future Farmers of America is the national organization of farm boys who are studying vocational agriculture in our rural public high schools. The organization is sponsored by the Agricultural Education Service of the Office of Education, Federal Security Agency, and serves as an integral part of the program of vocational education in agriculture that is made possible by the National Vocational Education Acts.

I am pleased that the national president of the Future Farmers of America, Doyle Conner, is from the city of Starke in my State of Florida. The national first vice president is Paul Lindholm, of Ortonville, Minn.; the second vice president is Dale Hess of Fallston, Md.; the third vice president is Bill Michael, of Billings, Mont.; the fourth vice president is Alton Brazell of Lubbock, Tex.; and the student secretary is Max Cobble, of Midway, Tenn.

These six young men exemplify attainment of the purposes for which the Future Farmers of America organization was established 20 years ago. Doyle Conner has established a herd of beef cattle through his farming projects in vocational agriculture, and the returns from those cattle will pay most of his expenses through the College of Agriculture at the University of Florida.

Paul Lindholm is farming 976 acres of land in partnership with his father and younger brother. He produces certified seeds and is developing one of the finest herds of Hereford cattle in Minnesota. Dale Hess also is farming in partnership with his father and it was largely through his influence that they have developed a herd of 103 dairy cattle to balance a farming program that previously consisted primarily of vegetable production. Bill Michael lives in an irrigated section of Montana and he is farming 80 acres that he rents.

Alton Brazell rents 34 acres of land near Lubbock, Tex., and helps his father on the 420-acre home farm. He is particularly proud of an improved, irrigated pasture he developed. It will furnish grazing for two cows to the acre, while native pasture in the area would do well to carry one cow on eight acres. Max Cobble knows something about improved farming practices, too. His influence on the home farm in Tennessee can be seen in the purebred cattle, certified seeds, recommended fertilizers, and soil-conservation practices that are causing the farm to provide a good income for the family.

Not one of the six is yet old enough to vote, but they already are well established in farming. They have applied to their home farms the knowledge and techniques they learned in the high school study of vocational agriculture. The success they have attained is a testimony to the effectiveness of this teaching program.

We also see in these national officers the attainment of other worthy objectives of the FFA organization, including rural leadership, good citizenship, and patriotism. Here are six young men who have given a year out of their lives, without monetary compen-

sation, to serve the organization that helped them along the way to success. Here are young men already showing evidence of real leadership in their home communities, States, and the Nation—leadership that is bound to increase and become more effective as they grow older.

But it is not just the record of these six national officers of the Future Farmers of America that I wish to bring to the attention of the Congress. Rather, it is the fact that these young men, with their outstanding records of achievement, are merely a sample of the 280,000 American farm boys who make up the membership of this great organization. In every State of the Union, the Territory of Hawaii and the island of Puerto Rico, farm boys are learning to become good farmers and good citizens through the program of vocational education in agriculture. The Future Farmers of America organization serves to extend the training in vocational agriculture and to stimulate farm boys to greater achievement in their study and work.

These farm boys of today are the citizens who will be supplying the food and other agricultural products for our Nation in just a few years. The United States of America will be stronger because of the training they are receiving in the Future Farmers of America.

Federal Power Policy for Pacific Northwest

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, August 1 (legislative day of Thursday, June 2), 1949

Mr. CAIN. Mr. President, every Senator has an interest in the development of the Pacific Northwest from the power which has been and is to be generated from the waters of the Columbia River. Mr. Herbert G. West, executive vice president of the Inland Empire Waterways Association, has recently spoken out in favor of the need for a Federal power policy for the Pacific Northwest. His views were presented in the July 24 edition of the Walla Walla Union Bulletin, and I ask unanimous consent that they be printed in the Appendix of the RECORD in order that interested readers may become the better informed and able to exercise their own judgment on Mr. West's position.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CASE FOR A FEDERAL POWER POLICY FOR PACIFIC NORTHWEST STATED BY H. G. WEST

(By H. G. West, vice president, Inland Empire Waterways Association)

Public power is in the Pacific Northwest. This point is firmly established from the fact that out of 3,500,000 kilowatts of power now being produced, 2,000,000 is private power or produced by the private utility companies and approximately 1,500,000 (1,000,000 from Grand Coulee and 500,000 from Bonneville) is the Federal pool. McNary will add approximately 980,000 kilowatts of power and Chief Joseph will add in excess of 1,000,000 kilowatts of power. Thus, in a very few years Federal power production will far exceed the private power production.

It is estimated by competent engineers that there is approximately 33,000,000 to 40,000,000 kilowatts of hydroelectric power potential in the Columbia-Snake River Basin. It must, therefore, be clearly accepted by all that if Pacific Northwest citizens are to request the Federal Government to build these multiple-purpose dams, develop the power, extend irrigation, reclamation, and navigation, and to develop a flood-control system, the Federal Government must have and is entitled to determine the power policy. This would include how this power shall be developed, how it shall be distributed, and how it should be sold.

RATE IS EQUITABLE

The principle of the postage-stamp rate established under the Bonneville Act has proved very equitable to the entire region. In the early days, there was considerable demand for the bus bar rate which would have benefited large metropolitan areas and especially would have benefited Portland over and above any other community. This would have produced cheaper power for that immediate area and would have created an industrial development in and around the close proximity of the Bonneville Dam. However, the Pacific Northwest today enjoys a very low power rate. In fact, the average cost per kilowatt-hour in all classes of service in 1947 in Oregon, Idaho, and Washington was 49.2 percent lower than the national average. In 1947, Pacific Northwest farms electrified reached 94.5 percent. Also, the average consumption per domestic user in the Pacific Northwest in 1947 was 144.6 percent over the national average. Another very great advantage of the postage-stamp rate is the fact that it eliminates any possibility of political selection of sites and there is no advantage accorded to any particular region or to any area when all power goes into a common pool and is distributed in Portland, Seattle, Spokane, Lewiston, or any other place within the Columbia River Basin at the same cost to the consumer.

PREMISE HELD FALSE

The Bonneville Act came in at a time when we were told that it would take approximately 50 years to consume the 500,000 kilowatts from Bonneville and approximately 75 years to consume the 1,000,000 kilowatts from Grand Coulee. The Bonneville Act provided then, and does today, that 50 percent of the power should be reserved for public power agencies such as the PUD's, municipal power, farm cooperatives, and the REA's. Politically, maybe that is still important; economically, it is a false premise. The development of the Pacific Northwest should not be on a partisan political basis.

When the Bonneville Act first came in we were faced with a so-called surplus of power and a political situation. Today, we have a shortage of power in the Pacific Northwest, although there is a surplus of power, I am told, on the national level. What the situation will be when we get into a 30,000,000- or 35,000,000-kilowatt production, none of us can see or foretell; but, presumably, we will be in a position of surplus power. Therefore, a well-defined Federal power policy, having for its purpose the distribution of the federally developed power at the lowest possible cost to all, is essential. The power policy should have for its purpose definite elimination of the wasteful fight which has been carried on for years—on one hand, the Bonneville Administration using all of its power and its resources for the elimination of private utilities; on the other hand, the private utilities hampering the development of our public power resources in the Northwest.

I do not believe that it is necessary to politically dominate an area to develop the resources of the region. A set of rules should be set up whereby private utilities and public power agencies can live and work together to the best interest of the general public. This is not a new idea. I recite in brief the life of the North Pacific Grain Growers, Inc., a farm cooperative marketing organization. Many years ago the farmers of the Pacific Northwest felt that they were being unnecessarily taken advantage of by the so-called old-line grain dealers. Therefore, they received Government assistance in setting up the North Pacific Grain Growers. It was not necessary to drive the independent old-line grain dealers out of the grain business. Both of these agencies, so-called public and private, are in business and doing more business today than they were in the early days. The beneficiary of this program is the farmer. This should be our objective in the Federal power policy field.

RESEARCH ADVOCATED

Any student of the problem knows well that it is comparatively easy to sell a pool of 3,500,000 kilowatts of power or to sell a pool of 10,000,000 kilowatts of power. This is entirely different from attempting to sell a pool of 20,000,000 kilowatts of power, 30,000,000 kilowatts of power, or a maximum of 40,000,000 kilowatts of power. Therefore, incorporated in the Federal power policy should be a principle permitting the Federal power agency to go into research for uses of power as applied to the resources of the Pacific Northwest—not for the purpose of putting the Federal Government into private industry, but rather for the purpose of the Federal Government developing the know-how, locating the natural resources, and then making available to private industry the formula or other technique that might be necessary. The people of the Pacific Northwest can well pay a fraction of the bill per kilowatt-hour for this service for it is of value and benefit to them.

Under a well-defined Federal power policy, it will be comparatively simple to work out a financing program so that when the Congress of the United States authorizes and appropriates for a project it can appropriate the entire amount at one time. This would make available to the construction agency the entire appropriation in order that they might effect all economy possible in construction procedures and would eliminate the necessity of subjecting each project (after it is authorized and appropriated for) to the annual squabble and fight over regional appropriations.

I would like to see the name of the Bonneville Power Administration completely eliminated and changed to a Pacific Northwest Federal power sales agency or some other name suitable. This is because I think the name, Bonneville Power Administration is too closely linked with the fight that has been going on since 1934; and upon the determination of the Federal power policy a close, cooperative system of coordination can be effected involving the Federal power sales agency with the construction agencies of the Corps of Engineers and the Bureau of Reclamation.

TWO PRIME POINTS

In my judgment there are two firsts—

No. 1 first: The adoption by Congress of S. 2180. This bill was submitted by Senator WARREN G. MAGNUSON, of Washington, and is a bill "authorizing certain works for the improvement of navigation, control of floods, and the conservation and utilization of the water of the Columbia River and its tributaries and for other purposes." In very brief, this bill authorizes the projects contained in the 308 review report. This report had complete 100-percent approval of the people of the Pacific Northwest, as testified to in the recent hearings held by the board of Army engineers in Spokane, Seattle,

Portland, and Boise in the early part of 1949. It would make into law the agreement reached on April 11, 1949, by the Army engineers and the Bureau of Reclamation and would authorize an appropriation of $500,000,000 for the Department of the Interior and $500,000,000 for the Chief of Engineers, Department of the Army. This legislation should have the complete endorsement and enthusiastic support of every Congressman and Senator from the Pacific Northwest States, from every community, every chamber of commerce, every farm organization, and every citizen in this area.

No. 2 first (after the adoption of S. 2180): The development of a Federal power policy * * * this as a third arm of making S. 2180 workable. If the politicians want to resolve the political issues of the Pacific Northwest, here is their opportunity to demonstrate that they are statesmen. However, if for selfish, partisan, political reasons they want to continue to stir up the political fires that are holding back the development of the Pacific Northwest, then they will not accept our plan. After a Federal power policy is developed and on the books and S. 2180 is authorized and on the books, then the only political issue involved is for Republicans and Democrats alike to make known their support of this program.

The CVA is not needed, nor is it wanted; the Federal power policy and S. 2180 is needed and is wanted.

President's Endorsement of the Glories of Deficit Financing Having Adverse Effect on Those of Our Private Citizens Who Give Freely of Their Time and Effort To Head Up Bond-Selling Campaigns

REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. ALLEN of Illinois. Mr. Speaker, there have been many comments made regarding the pros and cons of the President's endorsement of the theory of deficit spending. Outstanding citizens on both sides of the argument have explored the effects of this theory, and have given their answers as to what they believe the ultimate results will be.

I, as one individual, do not endorse this reckless economic theory, and am convinced that its evils will far outnumber its benefits. However, there may be one particular phase of that theory that the President and his completely biased advisers have not considered. That phase deals with the plight in which hundreds of outstanding private citizens find themselves. These citizens I refer to are the ones who head up the different bond-buying campaigns throughout the Nation. These men and women are respected citizens of their communities, and as such their advice to their neighbors to buy bonds carries a considerable amount of weight. With the President's complete endorsement of deficit spending, these men and women are placed in a rather embarrassing and awkward position. They find it increasingly difficult to advise their friends and neighbors to be frugal and to invest in Government bonds, when that very Government shows no regard for frugality in its financial operations and continues to spend more than its income every day, every month, and every year.

To prove my point, let me quote from a letter I have received from an outstanding American who has given unstintingly of this time and effort to further the sale of bonds; in fact, he has been chairman of the savings-bond committee of an entire county. I quote:

It now seems assured that our Federal Government has drifted into a situation wherein they will be spending more than their income and borrowing the difference. There appears to be no determination in high places to bring deficit spending to a halt or to take other measures that will safeguard the quality of the Government securities now outstanding.

I therefore choose to withdraw from the chairmanship of the Jo Daviess County Savings Bond Committee, effective at once.

Probably other members of this House have learned of similar situations existing, and my point at this time is that savings bonds must be sold to the public, as a sound investment, by citizens who are respected in their community, not by bureaucrats or politicians. By a continuation of deficit financing and loose financial policies, our Government may well find that there is a growing reluctance on the part of these private citizens to continue as a part of this unsound financial alliance.

Socialized Medicine

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 1 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Socialized Medicine?" from the Minneapolis Star of July 6, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOCIALIZED MEDICINE?

"Socialized medicine" is a term seldom used by the British, although obviously that is what they have got. Medical services are paid for from general taxation, private practice is discouraged, and hospitals have been taken over by the Government.

The Labor Party in Britain is a Socialist Party, but it isn't often called that. Thus Britishers are not likely to apply the word "Socialist" to projects of the party. They speak of their "health scheme." When they occasionally say "socialized medicine," they have borrowed the phrase from America.

In this country socialized medicine is applied to many things which aren't socialistic in the usually accepted sense.

The administration has proposed a national health-insurance program to be financed by pay-roll deductions and other taxes. Many legitimate arguments may be brought against such a plan—the shortage of doctors, the tendency of people to make unwise demands upon public services, the advantages of voluntary medical insurance, etc. But the administration proposal is hardly more socialistic than our present social-security set-up with its old-age and other benefits.

Propagandists against public health insurance are partly responsible for calling this plan "socialized medicine." Whether such usage helps their case or not is problematical. But they may be breeding a great danger for the future.

If at some time a public-insurance system is voted in the United States, the people may come to accept it as socialized medicine. That might make them more easily susceptible to the truly socialistic projects which lead so easily to statism.

Let's not say socialized medicine unless that is really what we mean.

Columbia Valley Administration

EXTFNSION OF REMARKS
OF
HON. GUY CORDON
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 1 (legislative day of Thursday, June 2), 1949

Mr. CORDON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two statements, one by Robert Ormond Case, and the other by Assistant Secretary of the Interior C. Girard Davison, discussing the proposed Columbia Valley Administration. The statements were made before the Oregon Bankers Association Convention, Portland, Oreg., on June 7, 1949. I have had an estimate of cost of printing made. The estimate is $380.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

DEMOCRACY ON THE RETREAT

(By Robert Ormond Case)

Many general and loosely worded statements have been made about the proposed creation of a Columbia Valley Authority, or Administration. You gentlemen have heard a few of these generalities today. In all such debates, however, the time finally comes when it is both proper and desirable to be specific.

There happens to be before the current Eighty-first Congress specific legislation calling for the creation of a CVA. If adopted, it will affect the welfare of every citizen of the Columbia Basin. It follows that every citizen of the basin is entitled to know exactly what is in the bill. If there is nothing alarming in it, a scrutiny of the bill will disclose that fact. If there are alarming features, they will be in the printed bill in black and white.

This bill is Senate bill 1645, and there are companion measures in the House which differ only in a minor paragraph or two. This is called the administration bill. It is a part of President Truman's over-all program which includes civil rights, socialized medicine, enlarged social security, more Federal controls, more Federal taxes, and other programs with which you gentlemen are familiar.

Thus the weight and influence of the administration are behind this bill. All the enormous propaganda devices of the Department of the Interior are behind it. Mr. Davidson, Assistant Secretary of the Interior, is taking time out from his exacting duties

in Washington to promote this bill throughout the Columbia Basin. An army of consultants on the pay roll of the Bonneville Power Administration of the Department of the Interior are carrying the same torch into the dark and backward corners of the Pacific Northwest.

Before proceeding to an analysis of the bill before us, let this fact be clearly understood: There is no difference of opinion as to the desirability of developing the resources of the Columbia Basin to the utmost, and as speedily as possible. Everybody wants that. The issue is how it is to be done—by what agencies or processes of Government.

Let us narrow the issue still further. It is universally agreed that the development of our great river projects is a proper Federal function. The issue is: Shall these projects be developed by existing Federal agencies, through existing democratic processes, or shall the Congress create a superbureau, or superstate, whose very existence is alien to representative government as we know it today?

And let us clarify that latter point at once. Mr. Davidson has stated that the three-man administration created by this bill will be given no new powers not already possessed by various agencies of Government. This is a disarming but very deceptive statement. As a student of government, I am sure Mr. Davidson knows the obvious answer.

The answer is that when certain enormous powers are selected from many existing agencies, stripped of their democratic controls and wrapped up in one package, it can be a very dangerous package indeed.

In this democracy, as my opponent is well aware, the Government has powers over property, public welfare, and life and death, that are the equal of those possessed by any dictator of today, or by any king or emperor of the past. The sole difference between a democracy and a dictatorship is that in a democracy the people have retained control over these powers. Concentrate those powers, remove or bypass the controls, and you have a dictatorship.

That is what is proposed in S. 1645: the concentration of enormous existing powers, without the necessary democratic controls, in one explosive package.

Before we inquire into the dangerous nature of this package, let us review the manner in which waterways development projects are carried forward in the Columbia Basin today. This is a necessary preliminary to examination of the bill itself. Remember, as we pass this machinery of representative government in review, that the burden of proof as to the necessity of substituting a superbureau or superstate for these democratic processes rests squarely upon the proponents of a CVA.

These, in brief, are the various steps through which our present development of the Columbia River has been achieved:

Step 1. A project is requested by the people of the region and the request is transmitted through their elected representatives to Congress.

Step 2. Congress directs the Army engineers to make a survey of the requested project.

Step 3. The Army engineers hold public meetings throughout the region to ascertain what the people want. Then they survey the project, make estimates of the cost and forward these data to Washington.

Step 4. In Washington, the project is reviewed by the Army Board of Engineers, and coordinated with the plans of other Federal agencies through the interagency committee.

Step 5. The revised plan is then sent back to the people of the region for further hearings. The governors of each State affected by the project are invited to comment on the plan. These comments, plus a record of all public hearings and recommendations, are attached to the plan and forwarded to Congress.

Step 6. Congress either rejects the project, or authorizes it and makes an appropriation for it.

Step 7. The money having been appropriated the project is constructed by the Army engineers.

These are the seven steps, and I call your attention to the manner in which the will of the people is expressed at every step, up to and including the final approval and appropriation by the Congress, the elected representatives of the people.

A Bureau of Reclamation project follows a different and equally involved procedure, with an additional and final check in the people's interest: A majority of the landowners, by their vote, must approve the final form of the irrigation project.

Now, my distinguished opponent tells us that these various steps I have outlined are entirely too cumbersome. There is an overlapping of functions, he says. There is friction between bureaus. There is inefficiency and waste.

I have no quarrel with these assertions. Mr. Davidson is the Assistant Secretary of the Interior, our largest single agency of civil Government. When Mr. Davidson assures us that these great Federal bureaus, including the Department of the Interior, are wasteful, cumbersome, and inefficient—that they can no longer carry out the tasks assigned to them—we can't help but be impressed by the statement.

I shall, however, call attention to a few curious and exceedingly pertinent facts. The first is that I have here a copy of a letter, signed by the Secretary of the Interior, which holds exactly the opposite view to that presented by Mr. Davidson.

This letter was sent to President Truman on April 11, 1949, on the same legislative day when this bill was introduced in the Congress. It is signed by J. A. Krug, Secretary of the Interior. It refers to what is called the engineers revised plan 308, and the coordinated Bureau of Reclamation plan for the development of the Columbia Basin.

Revised plan 308 is the product of the processes I outlined a moment ago. It provides for the over-all, long-range development of the Columbia Basin. Its total cost will be in excess of three billions of dollars. It covers every waterway and land-use project which the world's best engineers can devise. The plans of all other Federal agencies in the basin have been coordinated with it.

Remember, this is the crux of this debate. Mr. Davidson says that coordinated development of the basin is impossible under existing machinery. Listen to what his boss says:

WASHINGTON, *D. C., April 11, 1949.*

The PRESIDENT,
The White House.

MY DEAR MR. PRESIDENT: Pursuant to your letters of June 1 and September 16, 1948, we have reviewed carefully our respective reports on the Columbia River Basin taking full cognizance of the data obtained as a result of the 1948 floods. In further pursuance of your requests, the two plans have been fully coordinated, not only with regard to the physical features to be included in the plan of development, but also with regard to the policies and scheduling of the work to be done.

The coordinated plan is comprehensive in scope and is designed not only to meet the most pressing current needs but to provide as well a basis for incorporation of further projects into the program as they become necessary. It provides also for the inclusion, when prepared by the appropriate agencies, of plans for forest management, land treatment, protection and propagation of fish and wildlife, recreational development, meeting needs and rights of Indians, and interagency procedures for coordinated operation of river control projects.

During the course of our conferences, full agreement has been reached on numerous important and interrelated matters which are enumerated in the attached digest.

If you indicate your concurrence, our respective reports will be prepared and submitted to you in forms consistent with those agreements.

Sincerely yours,

MICHAEL W. STRAUS,
Commissioner of Reclamation.
J. A. KRUG,
Secretary of the Interior.
LEWIS A. PICK,
Chief of Engineers.
KENNETH ROYALL,
Secretary of the Army.

It would be interesting to have Mr. Davidson's explanation of this letter. Either Mr. Davidson is confused, on Mr. Krug is confused, as to what line the Department of the Interior should follow.

I understand that Mr. Krug has recently done an about-face with respect to this letter. What he really meant, he now says, was that revised plan 308 is fine, but it should be administered by the CVA * * * This is further evidence of confusion, because the two theories don't mix. Plan 308 and the CVA proposed in this bill couldn't even exist side by side. Plan 308 is a long-range program subject to the orderly processes of government and the appropriative powers of Congress. The CVA proposed in this bill bypasses, short-cuts or brushes aside these outworn democratic devices. To attempt to administer plan 308 with this CVA would be like turning a wrecking crew and a building crew loose on the same partly finished building.

We will be grateful for any light Mr. Davidson is able to shed on this confusing subject.

The second curious detail is that the people of the Columbia Basin have been doing very well, indeed, under existing democratic machinery of development. What is the goal of any regional development program? Benefits to the people. That is the sole reason for the program's existence, and the sole and final yardstick of its success.

Therefore let us take a quick trip around the basin and take note of some of the benefits now enjoyed by the people of the region. This again involves dragging in some low-level, horse-sense facts of record, but the time has come when we must call a spade a spade. I am sure Mr. Davidson will appreciate that I am not presenting these facts merely to annoy or embarrass him. It is all very well to live and move and breathe in a world of generalities, of benevolent and academic assumptions, but this bill is as tangible as a concrete brick. It has been introduced and is pending before this Congress.

The three States of Oregon, Washington, and Idaho, which comprise the bulk of the region included in the proposed CVA, today enjoy:

The Nation's lowest household electric rates.

The Nation's highest per capita use of electricity and the highest per capita rural electrification. Farms throughout western Washington and Oregon are almost 100 percent electrified.

Oregon and Washington enjoy the Nation's highest average wage level, the highest per capita home ownership, and are in the first five in per capita motor vehicle ownership.

Oregon leads all States in per capita farm ownership, and has led the Nation in per capita income gain and in population gain since 1940.

Citizens of Oregon and Washington not only own one motor vehicle for each 2.9 persons but the percentage of recreational driving per vehicle is highest in the Nation.

Oregon has more State parks than any other State in the Union, and the number of people who visited these parks during 1947 was greater than the State's entire population that year.

There are more golf clubs per capita, more institutions of higher learning, and more books circulated in libraries per capita in Oregon and Washington than elsewhere in the Nation.

In other words, judged by the usual yardsticks which measure the best in comfortable living, secure living—the American way of living—the Columbia Basin today leads the Nation by far.

What about our waterways projects? Already developed in the Columbia Basin we find:

Bonneville Dam, the world's largest hydroelectric installation at tidewater.

Grand Coulee Dam, the world's largest power plant in any category. When all its generators are installed Grand Coulee will produce almost as much hydroelectric power as all 26 dams in the Tennessee Valley Authority.

And let me interpolate a word here about the power shortage in the Northwest. Crusaders for a CVA have made much of this power shortage. We have been left in the dark, however, as to the extent of the shortage. The Edison Institute supplied us with that important detail less than 3 weeks ago. A survey of the Nation indicated that we do have a power shortage here in the Northwest, but that our supply of firm power fails to meet the current demand by less than 1 percent.

In other words, merely installing the remaining generators at Grand Coulee would actually give us a current surplus of power.

Based upon this power shortage of less than 1 percent, my opponent insists that we should have a CVA because Northwest industries are suffering, and a CVA is the only way to relieve that suffering. But the Census Bureau, just last week, came forth with one of those unemotional, horse-sense facts which are always so disconcerting to the opposition. Unaware of Mr. Davidson's arguments, the Census Bureau disclosed that since 1939 the Pacific coast has led the Nation, percentagewise, in the values added to raw materials through manufacturing processes. Oregon ranked first in the Nation, California second, and Washington a close third.

Oregon and Washington, you understand, include the principal industrial areas of the Columbia Basin.

To continue with our inventory of waterways projects, we find, in the Inland Empire, more irrigation projects in operation than in any comparable area of the continent. When additional projects now under construction are completed, more than two-thirds of all land available for irrigation in the Inland Empire will be under water—and all without the aid of a CVA.

We find, on the river itself, navigation improvements which aid a river traffic 15 times greater than that moving over the Tennessee River, and we find that these improvements were built at a far less cost per ton-mile, and have resulted in far greater ton-mile savings than those constructed by the TVA.

Incidentally, the average cost of the concrete dams built by the TVA, by force account, has been tremendously greater than the comparable concrete dams built by general contractors outside the TVA area. The average cost of TVA concrete dams was $16.07 per cubic yard. Those built by private contractors average $9.02 per cubic yard. The cost of hydroelectric construction and installation in TVA dams averaged $97.29 per kilowatt. Those built by private contractors, including the Hoover Dam, averaged $61.60 per kilowatt.

This is an important point, because proponents of a CVA are making many unsupported statements about the efficiency, economy, and savings effected by the Authority type of management.

The facts I have just cited with relation to present development of the Columbia Basin led Gov. Douglas McKay, of Oregon, to say, about the proposed CVA: "We're doing fine. Why change?" Six of seven governors of basin States agree with Governor McKay. Eight percent of the newspapers agree. Almost all the chambers of commerce, industrial organizations, and water users agree.

And let me interpolate a thought at this point. There has been a tendency on the part of CVA crusaders to call all opponents of a CVA tools of the Power Trust. Why that ghost of Sam Insull should still haunt every discussion which even remotely touches on hydroelectric power is beyond my comprehension, but let us lay that ghost once and for all. The truth of it is that 217 organizations in the Columbia Basin, representing a cross section of the basin's entire economy, have gone on record to date in opposition to a CVA or to valley authorities in general.

One further thought on this point. I am not a spokesman for private utilities. I am here as a citizen interested in good government, and at some personal sacrifice, just as my opponent, as a public servant, is here at some sacrifice to his pressing duties as Assistant Secretary of the Interior. In my view a private utility is merely one of many phases of free enterprise whose right to exist, and to battle for existence, is axiomatic under our American system. If the people of the Columbia Basin wish to abolish private power utilities they already have the means to abolish them, through existing legislative processes. Their summary execution, as proposed in this bill, is totally unnecessary. Let the people decide.

Meantime, the private utilities should certainly fight for their existence. This bill is their death warrant in the Columbia Basin, with a three-man board their judge, their jury, and their executioner. Certainly they should fight such a bill openly, without apology and to the last ditch. Their battle is under the banner of free enterprise. The defense of free enterprise is the defense of the American system. Therefore, I say, strength to their arms.

And now, let us consider Senate bill 1645.

It must be obvious to you at this point that this document can have no honest or intelligent relation to the problems of future development in the Columbia Basin. No emergency exists here. No river basin in America has more cause to be thankful for existing development machinery. No river basin has less need of benevolent theories and alien experiments in government. There is no rational excuse even for the existence of this bill.

Unfortunately, this bill is the product of a so-called liberal school of thought which has invaded the very highest places in our Government. The United States of America is the most powerful Nation on earth, and the bulwark and source of its strength is the free enterprise system. And at the very pinnacle of our strength, we find the free enterprise system under attack from all sides. It is being corroded and eroded and undermined by an ideology, or political philosophy, which originated outside the boundaries of this Nation, and outside our previous concepts of representative self-government.

This school of thought—and you can call it liberal if you wish, though I can think of harsher names—apparently believes that the processes of representative government have failed, that power should be centralized in Washington, that the people—for their own good—must be regimented and regulated and told what they may and may not do.

This document assumes that the people are no longer capable of governing themselves—a theory common to dictators and state socialism.

It proposes short cuts in government—and each short cut removes government farther from the people. The principal claim of those who support this bill is that a three-man CVA board could obtain more money for needed projects faster than Congress now appropriates it.

They are damned by their own argument. How could they get money faster except by bypassing the deliberation of Congress? How could they get more money except by bypassing or assuming Congress's appropriative powers? I would like to hear Mr. Davidson's reply to these two questions.

Let us never forget one basic fact: Cumbersome, creaking and inefficient though our present processes may be, they represent the highest pinnacle of self-government yet achieved by man. There is room for improvement, certainly, but the machinery for that improvement is contained within our present structure. Any short cut which affects that basic structure—which impairs or abridges the right of the people to govern themselves—does not represent a forward step in political thought. It is a backward step. It is reactionary. It is democracy in retreat.

Our present criminal court procedures are ponderous and cumbersome. According to Mr. Davidson's logic, the lynch law is much more efficient. Just hang every man accused of murder. It would bypass much argument, save the jurors' time, and save the state a great deal of expense. But the man being hanged wouldn't like that theory at all.

Now let us consider a chapter and verse in S. 1645. You probably are aware that this bill creates a three-man corporation which will have almost dictatorial control of a geographical subdivision of the Nation larger than the combined areas of England and prewar Germany. Included are all of Washington and Oregon—except the Klamath and Goose Lake Basins—and parts of Idaho, Nevada, Utah, Montana, and Wyoming.

The members of this three-man board are not elected by the people of the Columbia Basin, cannot be removed from office by the vote of the people, and are only indirectly responsible to Congress. They are appointed by the President with the approval of the Senate and are responsible directly to the President.

To this three-man board will be turned over the management of all waterways development projects on the Columbia River and all its tributaries; all funds appropriated by Congress for these projects; and all the existing powers and functions of the Bonneville Power Administration, the Bureau of Reclamation and the Columbia Basin functions of the Army engineers.

Now, if the bill stopped at that point—as Mr. Davidson infers that it does—something might be made of it. We need more efficiency in Government, and perhaps the merging of these three bureaus might help. But that isn't the subject of this debate. And that isn't what the bill says. Remember Mr. Davidson's statement that no new powers are created by this bill. But notice what happens when enormous and unrestricted powers are wrapped up in one package.

This three-man board will also have the power to condemn any real or personal property in the Columbia Basin, including water rights, which the board decides is necessary for its purposes.

It will have the power not only to produce, distribute, and market hydroelectric power, but it can fix retail power rates in the re-

gion. That simple little proviso is the death warrant for private power utilities. If this bill is adopted, with this proviso, private utilities of the basin will soon be as extinct as the three-toed horses that once roamed the plateaus of eastern Oregon.

That isn't all. The three-man board can spend all of its power revenues as it pleases. Remember, there is a potential of 30,000,000 kilowatts of hydroelectric power in the basin—43 percent of the Nation's potential. When these power projects are all developed, and the power is sold at Bonneville's present wholesale rate—$17.50 per kilowatt year—the three-man board will have annual revenues of $525,000,000 at their disposal.

And listen to this. With that half billion dollars annually, in the guise of research facilities, experiments, and practical demonstrations, the three-man board can build and operate any industrial plant they please—of any type, as long as they please—in competition with existing industries.

And that isn't all. The three-man board is made almost immune to the appropriative processes of Congress through a simple but highly effective device. When the board dreams up—or should I say, initiates—a new project not included among the scores and hundreds of projects already under its complete control, it merely includes the new project in its annual report to Congress. Once Congress approves the report as a whole, the appropriation for the new project is automatically approved, and the board can proceed to spend an amount equal to the total estimated cost of the new project.

And finally, what are the qualifications for membership on this three-man board? Personally, I would be dubious about entrusting that much power to three angel Gabriels—and they would have to identify themselves as angel Gabriels. But let's see what the bill says. Two must be residents of the Columbia Basin. All must be citizens of the United States. Otherwise their sole required qualification is contained on page 5, line 24.

Let us turn to that page. "All members of the board shall be persons who profess a belief in the feasibility and wisdom of this act." Now, I ask you gentlemen—and all of you have had some experience with corporations—what do you think of that qualification for membership on the board of the world's greatest corporation, public or private, and one of the most powerful administrative positions it is possible for Congress to create?

As far as the two Northwest representatives on the three-man board is concerned, that qualification would exactly fit ex-Gov. Mon Wallgren, of Washington, who has already been retired from public office by the voters of his State.

It would qualify such authorities in Government as Senator GLEN TAYLOR, of Idaho, late running-mate of Henry Wallace, who stated in debate in the Senate that all these Authority proposals are socialistic—there is no use beating around the bush about it. It would qualify Dr. Raver, the present Bonneville Power Administrator. It would qualify Mr. Davidson, who works in Washington but maintains his legal residence here. It would qualify any good Democrat from any precinct in the seven basin States who was attracted by a Government job paying $17,500 annually, and with probably a lifetime tenure, since the voters of the basin could not remove him from office.

Now, what does all this mean? As we examine this document—as we probe through the generalities used by its supporters, and the deceptive language of the bill itself—an amazing structure emerges. It is a structure alien to our American democracy, neither Federal nor State, and stripped of the major aspects of representative government.

I am well aware that CVA supporters do not like the term "superstate." Yet the term precisely fits. If I have not described a superstate, how better can it be described? And I ask you, in all fairness: What remote connection is there between Mr. Davidson's benevolently worded pleas for more efficiency and coordination, and this incredible, dismaying, and alien superstructure of government?

Mr. Davidson says that a CVA will bring a little bit of Washington to the Northwest, because the three-man board is required to make its headquarters here. He says that brings home rule closed to the basin. He says that the board must rely on the advice of the people of the basin.

But that isn't what the bill says—and it will be this bill, not what Mr. Davidson says, which will become the law of the land if Congress adopts it. Turn to page 2, beginning on line 20. Note that the board must rely on the advice and assistance of the people to the fullest practicable extent. That is the joker. The board itself—and only the board—decides what is practicable.

Now turn to page 4, line 20. "The board shall be responsible for policy, directive, and general supervisory functions." Those are good English words. They mean exactly what they say. The board—alone—is responsible for policy. Groups of interested but naive citizens may appear before the board, but the board, in its wisdom, decides what is best to do.

Let us continue, from the bill itself, to document each of the points I have made.

The rights of condemnation? Turn to page 9, lines 5 to 16. Mark them, and read them at your leisure. They appear to exempt water rights, but there's a joker in it. That joker turns up again on page 22. Beginning on line 19 and continuing for 11 lines thereafter, the board's complete disinterest in water rights is affirmed and reaffirmed—and there are added two provisos which completely nullify all this excellent verbiage and enable the board, on one protext or another, to condemn any water right anywhere in the Columbia Basin.

Mr. Davidson says that no private utility can be condemned by the CVA. Let's see what the bill says. Turn to page 20, beginning on line 13 and mark to the end of the paragraph. Those lines enable the Board to fix retail electric rates—which leaves every private utility in the basin at the board's mercy. The Portland General Electric Co., for example, today obtains more than half its power from Bonneville. The Board could merely say, "You are charging your customers too much; cut your rates in half," and PGE would be bankrupt as of that moment.

Government in business? Socialized economy? Mr. Davidson scoffs at such suggestions. We must assume, then, that Mr. Davidson did not write lines 1 to 4, on page 10. Those four lines enable the three-man board to engage in any industrial, commercial, or agricultural business they please, in competition with private industry.

Bypassing the appropriative powers of Congress? Turn to page 28, section 12, beginning on line 10. Read that entire section at your leisure. You will find that it sets up a fund in the United States Treasury, and the three-man board may draw on that fund without bothering to secure the approval of Congress. All power revenues go into this fund, and can be spent at the Board's sole discretion.

This brings us to the perfect example of a short cut in Government. It also represents perfect, documented proof of what I said in the beginning: That when you take existing powers, and strip the controls from them, you have a dictatorship.

Turn to page 33. Note section 13, entitled "Payments in Lieu of Taxes." You understand, gentlemen, that existing private utilities in the basin now pay an average of 24 percent of their earnings in taxes to support our existing forms of representative government. Naturally, when the CVA makes willing sellers of all these utilities, and takes them over, something should be done about taxes.

This section takes care of that. But don't read the whole section now. The next four pages don't mean a thing. Just turn to page 36 and read the sentence beginning on line 19. "The determination of the Administration of the necessity of making any payments under this section, and of the amounts thereof, shall be final." In other words, when this taxable property passes into the control of the CVA, neither the cities, the counties, the States, nor the Congress of the United States can tell the CVA what amounts shall be paid in lieu of taxes. The three-man board decides whether to make any payments, and their decision is final.

Note the vague wording through most of the bill; for example, page 14, subsection 5, beginning on line 19. Draw a circle around that three-line section. It's a positive jewel. What Henry Wallace could do with those three lines couldn't happen today in Soviet Russia. * * * Suppose you had up to a half billion dollars each year to play around with, and the voters of the basin couldn't remove you from office, and you didn't like our profit system, and had some glorious and starry-eyed theories about managed economy and whatnot, just how would you foster the use of mineral, forest, land, water, fish and other resources of the basin to assure a balanced and stable economic development? Particularly when you were the sole judge of what a balanced and stable economy meant? You'd have a better time then on any Sons of Norway picnic.

And don't think for a moment that this vagueness is in the bill by accident. The proponents of this bill have learned in the TVA, and in the BPA, and in all the emergency measures passed during the depression, that when a section is vague it is elastic, and when it is elastic it can be interpreted broadly, and a broad interpretation means more power.

Notice the last section, page 45, beginning on line 16. This is to inform the Supreme Court that this act shall be liberally construed to carry out the purposes of Congress and so forth. What are the purposes of Congress? They are not found in the generalities and benevolently worded promises of those who support this bill. The sole clues are in this document, in black and white.

In closing, I wish to assure Mr. Davidson that no personal slight was intended in any of my remarks. I concede that he is sincere—if mistaken—in his political philosophy. I am sure he will concede that I am equally sincere—and perhaps equally mistaken—in mine. I hope, however, that he will find time to answer two specific questions.

Question number one: If, as Mr. Davidson asserts, the purpose of a CVA is merely to coordinate the functions of three existing Federal bureaus in the Columbia Basin, why doesn't the bill say just that and stop at that point?

Question number two: What is the specific meaning of lines 21 and 22 on page 4 of the bill: "The board shall be responsible for policy, directive and supervisory functions"? Does this mean, or does it not mean, that the board retains the exclusive power to determine policy, regardless of representations made by citizens of the basin?

I am sure the answers to these questions will be helpful to every citizen of the Columbia Basin, and to the Congress which will be called upon to delegate its constitutional authority—perhaps irrevocably—according to the intent of the specific words in the bill before us.

MANAGING THE FEDERAL INVESTMENT IN THE NORTHWEST

(By Assistant Secretary of the Interior C. Girard Davidson)

This morning I should like to examine with you what we might term a resource-balance sheet for the State of Oregon and for the Pacific Northwest as a whole.

Both you and I are interested in a continuing increase of economic activity. This calls for a steadily rising investment in new industrial and new agricultural ventures, which in turn brings increased employment, larger purchasing power, and greater taxable wealth.

Some say we are doing fine now in the Pacific Northwest. To a great extent this is true. Without question this region is now more prosperous, and its people have a higher standard of living, than is the case in other regions I might mention. The Northwest, however, is a young region and we cannot afford to rest on past accomplishments. We must look into the future.

As we look ahead we must ask ourselves whether our progress today has been adequate. We should judge our accomplishments against our potentialities. We should not compare our present position only with the position of other regions. We must also compare our progress with our problems.

In making such a comparison we find that population here has increased much faster than have jobs and business opportunities. Population in the Pacific Northwest has increased 35 percent since 1940, the greatest rise of any region in the United States. This growth is certainly understandable because of the extraordinary and appealing characteristics of this area. It is estimated that the growth will certainly continue so that by 1970 the population of the Pacific Northwest will reach 7,000,000, which is roughly 2,000,000 more than at present.

Paired with the population increase, however, is the fact that since the end of the war Oregon and Washington have consistently ranked among the top States in the ratio of the labor force unemployed. In February of 1949 unemployment in the Pacific Northwest was 12 percent of the labor force as against a national average of 5 percent. Although during the months of March and April the situation has improved considerably, the Northwest was still above the national average.

Twenty-six out of every one thousand business failures during the first 4 months of 1949 have taken place in Oregon, although only 11 out of every 1,000 United States citizens live in Oregon. In other words, with 1.1 percent of the population, Oregon is suffering 2.2 percent of the business failures.

Oregon had the lowest rate of increase in per capita income in the entire United States between 1944 and 1947. Only Washington, of all the States, had a decrease during this period. That puts Oregon and Washington as No. 47 and No. 48, respectively, in the standing of our 48 States. With our great increase in population in this area, we have had to spread the income among a greater number of people.

I have heard some say let these people go back where they came from. If we have no jobs, they will leave, therefore we shouldn't worry about job opportunities.

I don't feel, however, that this is a practical or constructive approach, nor is it good business for the Pacific Northwest. With 9 percent of the land area of the United States but with only 3 percent of its population, and with the great natural resources of this region, we can make effective use of this greater population which will increase our taxable wealth and improve our economic conditions generally.

We have in the mighty Columbia River and its watershed some of the most spectacular assets possessed by any part of the United States.

The Northwest, for instance, has 40 percent of the Nation's hydroelecteric potential, but less than one-tenth of it has been developed to date. Consequently, we have been suffering—and for the next four or five winters will consintue to suffer—one of the Nation's greatest power shortages. Utilities in this area have been refusing power to new industries: The Northwest power pool has resolved that no utility shall connect a new industrial load of 500 kilowatts or more. Industries anxious to locate here—industries which would provide thousands of new jobs—are not building new plants here because their applications for electric power have had to be refused.

The Northwest has 62 percent of the Nation's phosphate deposits, but produces only 8 percent of the Nation's phosphate fertilizers. At the same time, croplands in the region need at least 200,000 tons of phosphate a year, which is much more than they now get. For the phosphates which farmers are able to obtain they are paying high freight rates to have them shipped from the Tennessee Valley.

The Northwest has 20 percent of the Nation's potentially irrigable lands, but water now is being supplied to but half of them. At the same time, almost three-fourths of the nonirrigated crop lands in the region are in a serious or critical state of erosion. Erosion losses from croplands average about 60,000,000 tons annually, from range lands 35,000,000 tons. In the Palouse country of eastern Washington, for instance, farmers are losing 1 ton of topsoil for every bushel of grain they grow.

The Northwest has 40 percent of the Nation's remaining saw timber, including its last stand of virgin timber, but these reserves are shrinking rapidly, and more than 6,000,000 acres need to be reforested.

The Northwest could have a great inland waterway from the Pacific Ocean to Lewiston, Idaho—a distance equal to the navigable length of the Rhine—but only less than one-fourth of this potential water highway has been improved for river navigation.

The Columbia River's unique fishing industry, valued at approximately $20,000,000 a year, is now being threatened with destruction by the construction of certain dams without the necessary preliminary work having been done first. A 10-year program for perpetuating the fish runs has been devised and adopted by the Federal agencies interested in river development, but it is now almost 2 years behind schedule for lack of adequate funds. One of the main reasons for the lack of the necessary appropriations is the failure to have this problem understood by the budget officials and the Congress in relation to the over-all program.

The Northwest has important mineral deposits which are familiar to all of you, but the great bulk of them lie in the ground undeveloped.

The Northwest, while trying to move ahead, is steadily losing assets in great uncontrolled floods. Last spring, for instance, the Columbia on a rampage, in addition to taking 51 lives, destroyed more than $100,000,000 worth of property.

Many have the responsibility in the development of the natural resources of this area. The business community must take the lead in producing and using these resources and in advancing the capital which is necessary for accelerated business activity. State and local governments have a great interest in the increase of the tax base. The Federal Government also has an interest, particularly in States such as Oregon, where 53 percent of the land is in Federal and Indian ownership.

Millions of dollars have already been spent by the Federal Government in the Pacific Northwest in order to do its share of the job, but the amount that the Government can devote to these purposes is necessarily limited. It is essential, therefore, that we get our dollar's worth for every dollar spent.

It is estimated that 76 percent of the 1950 budget for the Federal Government will be devoted to what must be considered fixed payments for national security. This includes $14,300,000,000 for the armed services, $5,500,000,000 for services and payments to veterans, $5,500,000,000 for interest on the public debt, and $6,700,000,000 for international affairs, including ECA.

At the most then, only 24 percent of the Federal budget is left for what we might call domestic use. Some part of this 24 percent will be spent in the Northwest for the numerous activities in which the Federal Government is engaged.

It is generally conceded that the river-regulation job is one that should be done by the Federal Government. Whatever opposition exists is not questioning the desirability of controlling floods, constructing a navigation channel, producing power, and irrigating lands, but comes from those specific interests who have a fear—and often a legitimate one—that their interests will be adversely affected by the river-regulation program.

The capital requirements for these river projects are stupendous. Grand Coulee Dam, together with its irrigation works, is now estimated to cost approximately $730,000,000. While the irrigation works alone will run approximately $533,000,000, the irrigators are in a position to pay only $85,000,000 of this expenditure. This leaves approximately $450,000,000 in irrigation costs which must and will be paid back to the Treasury out of power revenues. Of course, power revenues must also pay back the $160,000,000 of construction costs which is allocated to power.

When you add a $450,000,000 irrigation subsidy to the cost of the power facilities, the amounts involved are of such magnitude that no agency except the Federal Government will undertake it. As Mr. Dawson B. Harris, president of the Hamilton National Bank, Chattanooga, said in commenting on TVA: "I am against the principle of Government in business. But the job on the Tennessee was one for Government." I am sure we will agree that the job on the Columbia is also one for Government.

If, however, we expect the Federal Government to do the job on the Columbia and its tributaries, we are going to have to present a complete financial picture to the Congress in order to justify the necessary capital advances. The Federal agencies operating in the resource-development field in the Pacific Northwest cannot now present such a picture to the Congress under their present legislative authorizations.

As a banker, you would want to see complete house plans, and have all other pertinent data, before you lent a man money to construct a house. You wouldn't be satisfield with only an electric-wiring diagram, or only a cost estimate on the roof, or only an appraisal of the land.

Today, however, the Bureau of the Budget and the Congress are in the position of making a large investment in the Pacific Northwest without having in hand all the facts relating to that investment. Figuratively speaking, one Federal agency buys the land, another designs the roof, a third does the plumbing, a fourth makes the working drawings, and so on. Unfortunately, however, there is no general contractor, no single agency or agent which brings all these plans and estimates together into a single statement. Each agency with its separate program goes separately to the Bureau of the Budget, to the President, and to the Congress. Each agency makes its requests to a separate committee of the Congress. It is

not surprising, therefore, that our present Federal investment in the Northwest is haphazard.

While we are spending $530,000,000 to bring into production new farm land near Grand Coulee, we are spending comparatively little to hold present soil on the land. During last year's flood, for instance, topsoil equivalent to 1,300 farms of 80 acres each washed down the Columbia.

The Hoover Commission on Reorganization of the Government has reported that "the public lands and water resources of the Nation have all been tied together by nature * * * only the Government insists on treating them separately * * * the function of river development is a multipurpose one, cutting across many of the unifunctional agencies, experience has shown that parceling out river-development responsibilities among these functional agencies produces endless confusion and conflict. A plan for the development of a river basin cannot be devised by adding together the special studies and the special recommendations of unifunctional agencies concerned respectively with navigation, flood control, irrigation, land drainage, pollution abatement, power development, domestic and industrial water supply, fishing, and recreation. These varied and sometimes conflicting purposes must be put together and integrated in a single plan of development."

Who are the men who made this report? The Chairman, as you all know, was Herbert Hoover, former President of the United States, and now a life-insurance executive. And among the members of the task force from whose report the Commission quoted we find Ralph Carr, former Governor of Colorado; Leslie A. Miller, former Governor of Wyoming; Horace M. Albright, president of United States Potash Co.; Donald McLaughlin, president of Homestake Mining Co., and others. I believe you will agree with me that these men cannot be charged with being radical. They are concerned with finding the most effective and economical method of managing Federal expenditures, which means the elimination of waste motion and duplication.

I can add further examples of the difficulties which we have faced as a result of this divided responsibility for what is in essence a single task. Many of you will remember that the United States Corps of Engineers and the Bureau of Reclamation disputed publicly for many months as to which of them would build Hells Canyon Dam, Lucky Peak Reservoir, Chief Joseph Dam, and others.

Although there are now only two Federal dams operating in the Columbia, and both of them as yet are operated almost exclusively for power production, there is inescapable conflict among three agencies on releasing water from these dams. It took a number of weeks and numerous letters, telephone calls, and meetings to decide upon the release of water from Grand Coulee this spring to diminish the flood danger. If this can happen with only two dams operating, one can envision the chaos which will result when there are a dozen or more dams on the river, unless we have a single water master on the main stem of the Columbia who can control the flow for navigation, irrigation, and power production as one switchyard master bosses the movement of all trains in a railroad terminal.

The design of generators to be installed in the Army-built McNary Dam was a matter of controversy between the Bonneville Power Administration, the Army engineers, and the Federal Power Commission for a year and a half. The Bonneville Power Administration, which is to market the power from the dam, asked the Army to order generators of low reactance. Such generators would cost $3,000,000 more than generators of higher reactance, but the low reactance generators would make it possible to transmit the power produced at McNary Dam with one less circuit on the Bonneville transmission system. The cost of such a circuit was estimated to be $10,000,000, so that the net saving from using the low reactance generators would be about $7,000,000. The Corps of Engineers, which was not directly concerned with transmission problems, preferred the higher reactance installation. The Federal Power Commission was interested because of its responsibility for the design of generators at Army-built dams. After 18 months of three-cornered negotiations and correspondence, extending from April 1947 to October 1948, the matter was finally settled, not in the Pacific Northwest, but in Washington, D. C.

And so again we come to the question: What is the most efficient use of the limited funds which the Federal Government has available for the development of resources in the Pacific Northwest?

The answer, to my way of thinking, is embodied in the proposal for a Columbia Valley Administration which is now being considered by both the House and Senate. This proposal, before it was even embodied in draft legislation, before even its drafters knew what specific provision it would contain, was denounced as socialism and communism. Is is, I ask you, socialistic or communistic to be efficient? Private enterprise has boasted—and properly so—of its efficiency as a contribution to making our democracy great. Why should not this same efficiency be applied to Government? The Hoover Commission and other studies have shown that the existing Federal agencies as now organized are not capable of doing the resources development job in the most efficient manner and at the least cost to the taxpayer. Why, therefore, should not a more efficient management instrument be utilized?

Let me tell you briefly what is involved in this CVA proposal, which deals exclusively with existing Federal functions:

First, the CVA would absorb the three agencies now concerned with water and power functions in the Pacific Northwest. These are the Bonneville Power Administration, the Bureau of Reclamation, and the Corps of Engineers. In their place will be a single agency which can more effectively and more economically handle navigation, irrigation, power transmission, and flood control, responsibilities of the Federal Government under existing law.

Second, the CAV will provide all of us—and particularly the President and the Congress—with a single comprehensive program for resource development in the region. Although the other Federal agencies concerned with soil erosion, forest management, recreation, pollution control, minerals development, et cetera, will not be absorbed in the CVA, they will contribute to constructing a program covering all their activities as well as those of the CVA. One agency, however, the CVA, will be held responsible for creation of this program and review of it annually to keep it abreast of changing requirements, and also for presenting to Congress a cordinated budget as a guide for appropriations of funds to carry out the program.

Third, CVA will provide a maximum of home rule, a larger participation by the people who live in the region in the Federal administration of these activities. The CVA will have its headquarters in the region. All of its directors will live here, and two out of three of them must be bona fide residents before appointment. Not only State governments, but groups representing the various interests in the region, will have a voice in the decisions of the CVA through membership on its advisory boards and councils. Final decisions will be made in the region instead of in Washington, D. C., as at present.

Fourth, Congress retains its control over CVA as it does over the existing Federal agencies operating in the region. All new projects and activities must be approved in advance by Congress. Once approved, however, projects can be carried to completion as rapidly as possible without waiting for annual appropriations from Congress.

For these and other reasons, President Truman recommended to the Congress the establishment of a CVA. He has stated that the proposed Columbia Valley Administration represents the most effective mechanism which has yet been suggested for speedy and complete development of the rich resources of the Pacific Northwest. We need it now, not only to guide new Federal investment in the region, but also to create quickly an economic base for further growth of business, industry, and agriculture.

Sale to Permanente Metals Corp. of Certain Aluminum Plants, Etc.

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, August 1 (legislative day of Thursday, June 2), 1949

Mr. CAIN. Mr. President, when the Government gets out of a wartime business on terms which are of mutual benefit to the Government and to the private interests involved most of us have reason to be pleased. The War Assets Administration has recently concluded a sale to the Permanente Metals Corp. of certain aluminum plants and facilities which have heretofore been operated by Permanente under Government leases. In a letter which Admiral Paul A. Mather of the War Assets Administration wrote to the Senator from Arkansas [Mr. McCLELLAN] on July 28 there is included a full explanation of the transaction. I think all Senators will benefit from reading a copy of the letter which Admiral Mather thoughtfully sent to me. I ask unanimous consent that it be printed in the Appendix to the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JULY 28, 1949.

Hon. JOHN L. McCLELLAN,
Chairman, Committee on Expenditures in the Executive Departments, United States Senate, Washington, D. C.

DEAR SENATOR: In order that you and your committee may continue to be informed of significant actions taken by War Assets I think it may be helpful to you to be advised of a current sale which we think to be of some moment and which, we believe, reflects credit on our operations.

War Assets has concluded a sale to the Permanente Metals Corp. of certain aluminum plants and facilities heretofore operated by Permanente under leases with early termination dates. These plants are an alumina plant at Baton Rouge, La., an aluminum smelting plant at Spokane, Wash., and a rolling mill at Trentwood, Wash. The price agreed upon for the sale of these plants

is $36,000,000. The sale is in accordance with the policy of the Government to make final disposal of its interest in wartime plants, and is subject to such national security clauses as the Munitions Board may prescribe.

At the end of the war Government-owned aluminum facilities had an aluminum production of approximately 2,300,000,000 pounds per year. Apart from the Reynolds Metals Co. which had privately owned facilities capable of producing 160,000,000 pounds per year, the only privately owned facilities of this character were those of the Aluminum Co. of America whose total productive capacity at the close of the war was 800,000,000 pounds per year.

Beginning with the first lease of a wartime aluminum facility back in April 1946, the Surplus Property Board through its various designated agencies and later the War Assets Administration have made every effort to insure the disposal of aluminum facilities in a manner calculated to effectuate competition in the aluminum industry.

The administrators of the surplus-property functions bore in mind continually the provisions of the Surplus Property Act and also the opinion of Judge Hand in the case of *the United States of America* v. *the Aluminum Company of America* (148F (2) 416). The aforesaid act and opinion admonished them to dispose of the war surplus aluminum facilities in the manner best suited to establish competition in the aluminum industry.

As is evidenced by the original and supplemental reports on aluminum plants and facilities filed with the Congress under section 19 of the Surplus Property Act, it was deemed advisable in implementing the aforesaid responsibilities to establish integrated competition. Inasmuch as the Government owned only two alumina plants, it was only practical to create two competitors for the Aluminum Co. of America. Due to the large amount of capital necessary to establish an appropriate competitive position and to the relative uncertainties of the industry, it was deemed advisable to commence disposal of Government aluminum facilities through leases, with rental payments predicated in part on firm minimums and in part on production results.

After considering the prospective operators of this type of facility, it was determined to lease one set of integrated plants to the Reynolds Metals Co. and another to the Permanente Metals Corp. With these leases these two corporations entered into the aluminum field in a substantial way and between them soon were producing approximately 50 percent of the basic virgin aluminum ingot. With the experiences they have acquired and markets which they have developed, it would appear the time has come when the experimental period can be considered practically at an end. Therefore, if these corporations are to properly effectuate economies and adequately handle the obsolescent factors of a rapidly developing industry they should be in a position of ownership or its equivalent.

In considering ownership, as a general policy, we take into consideration the prospective purchaser's operating and financial problems. Consistent with the protection of the Government's interest, our disposal terms are fixed to permit retention by the purchaser of adequate capital. With the foregoing in mind, negotiations have been conducted with Permanente for the purchase of the three plants—an alumina plant, an aluminum plant, and a rolling mill—Permanente having previously purchased from the Government a small aluminum plant at Tacoma, Wash., and a fabricating plant at Newark, Ohio. Fair value for these three plants was established by us at $45,000,000, and Permanente's offer of purchase was $33,000,000. In making its offer, Permanente considered several alternatives; a long-term lease such as is presently held by the Reynolds Metals Co.; the construction of their own new facilities; and the purchase of the aluminum and aluminum plants with contemporaneous cancelation of the Trentwood lease and transfer of the fabricating activities to Newark, Ohio. It was felt the Government's interests and responsibilities were best protected and discharged by a single disposal of all three aforesaid plants to one purchaser. Consequently, a counter offer was made by War Assets of $38,250,000 representing 85 percent of our estimated fair value. After prolonged negotiations a purchase price of $36,000,000 was agreed upon, representing 80 percent of that fair value.

The terms of the disposition provide for a down payment of 5 percent and purchase money mortgage or mortgage over a period of 25 years with interest rate of 4 percent. This permits Permanente to operate on the basis of low-fixed charges. Unless Permanente elects to prepay the entire obligation, the payment of 4-percent interest will result in an over-all ultimate sales recovery of $53,000,000 which figure approximates the depreciated original investment in the facilities. Likewise, if the principal payments are made as scheduled with interest and without prepayment, the Government will recover approximately 90 percent of acquisition cost, when it is taken into consideration that the Government has already received approximately $26,000,000 from the operations of these facilities.

Aluminum is on the strategic and critical materials list of the Munitions Board, and that Board has advised that it considers it in the best interest of the Government for War Assets to accept aluminum in lieu of cash under section 204 (c) of Public Law 152, Eighty-first Congress, the present law under which liquidation of War Assets is being processed. Section 204 (c) provides for the acceptance by the Government of that type of material instead of cash payments due on the sale or other disposition of surplus property. War Assets has agreed to permit Permanente to substitute in lieu of cash payments at current market prices at times of deliveries 24,000,000 pounds of aluminum.

It is expected, in the fiscal year of 1950, to practically complete the liquidation of the former War Assets Administration, and to leave therefrom the most minimum property management problem and to place in private hands the title to practically all Government assets generated during World War II and determined to be surplus to the Government's needs. This disposal to Permanente we consider to be in line with that project and we hope that we shall be able to effect sale of the bulk of the remaining surplus Government facilities present in the hands of lessees.

In view of the foregoing, the sale to Permanente on the indicated terms is believed to be in the best interests of the Government for the following reasons:

1. Ownership rather than lease places the Corporation in a stronger competitive position.

2. The replacement of leases cancelable on relatively short notice at the option of lessee and the substitution therefor of firm obligations under purchase-money mortgages places the Government in a more secure economic position as to the future.

3. The sale subjects the plants to the national security clause which is not incident to the leases.

4. The sale continues to get the Government out of business.

Sincerely yours,

PAUL L. MATHER,
Administrator, WAA.

The Ohio Farm Bureau Federation

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Monday, August 1 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, recently the National Tax Equality Association has flooded the country with a pamphlet called Sudden Death on Main Street. This Main Street is in Pataskala, Ohio, and the charge is that the Licking County Farm Bureau is threatening to destroy Moore Farm Service by opening a branch there. I ask unanimous consent to have printed in the RECORD a fact sheet on the situation which I think will be of interest to the Senate, in that it throws a different light on this picture.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

HERE ARE THE FACTS BEHIND THE LICKING COUNTY FARM BUREAU-MOORE FARM SERVICE CONTROVERSY

Late last summer the Outville Hay & Grain Co. (5 miles east of Pataskala) was offered for sale. The Licking County Farm Bureau investigated and found the price was too high. The president of the Farm Bureau co-op board and Eldon Lust, manager, surveyed the railroad facilities and possible locations in the community and found a tract of land near Pataskala that was suitable. Immediately a real-estate agent was contacted who in turn contacted owners of the tract and was able to secure an option.

Early last winter John Moore, owner of Moore Farm Service, which is an elevator at Pataskala, had become ill with a heart ailment and rumors had it that he was going to sell. At the same time approximately 200 farm people in the neighborhood, through a series of 11 meetings, had requested the Farm Bureau to establish a branch at Pataskala. It was felt that before building, Mr. Moore should be contacted to see if he would be willing to sell.

Mr. Moore said that because of his ill health he had considered selling but would like to have a few days to think it over. Meanwhile his son, Howard, who had been employed by the Borden Co., had decided to go into partnership with his father.

A week later Mr. Moore called Mr. Williamson and said he didn't want to sell. He had run an ad meanwhile seeking public sentiment as to whether he should remain in business. In the ad Mr. Moore said, "Mr. Williamson and his associates felt that the privately owned grain and implement dealers in this community were not offering adequate service to the farmers." Mr. Williamson denies this statement. It was the farmers themselves—approximately 200 of them—who felt that their service was not adequate and that they should petition the Farm Bureau for a branch.

Mr. Moore also stated in the ad that "they (the Farm Bureau) offered to buy our Pataskala business; in the event we would not sell, they would erect a building on land on which they have taken an option, and in that way get the business of this community." According to Williamson that statement is only partially true. It is true that the Farm Bureau investigated buying the Pataskala business. Both Lust and Williamson felt that before taking the issue before the board they

should contact Moore to discover his sentiments. Since it had been rumored that Moore would sell anyway, it was only logical that he should be contacted before another project was started.

Mr. Moore had also printed in the ad: "But we are leaving it up to you—our customers—whether you wish to deal with us whose family has been in this community for over a hundred years, or to deal with a national organization, as was stated by the Farm Bureau representatives." This statement was never made by the Farm Bureau representatives. The Licking County Farm Bureau Cooperative Association is by no means a large national organization. Last year it did $864,000 worth of business, paying back to farmers nearly $31,000 in stock dividends and patronage refunds.

It is not known how many farmers responded to Mr. Moore's ad, but it is doubtful that as many responded as had already petitioned for better service through the Farm Bureau.

The National Tax Equality Association in picking up this incident made these statements, "When the big tax-exempt co-op came along and said 'Sell out or we'll open up across the street,' the Moores appealed to their customers. They found plenty of encouragement to stay in business. But this family, like many other small-business people, are face to face with the fact that tax exemptions and other unfair advantages given to co-op corporations are insurmountable in a competitive way. Tax favoritism enables the co-ops to threaten them with 'sell out or we'll run you out because of our tax advantages'."

It is readily seen that the NTEA has viciously distorted the facts. In the 15-year history of the Licking County Farm Bureau Cooperative Association, no business in the county has failed because of co-op competition. "Sell out or we'll open up across the street" was not the attitude the Farm Bureau representatives took in contacting Mr. Moore at any time.

The Pataskala Standard came out May 12 with a front page news story indicating that Mr. Moore had decided to stay in business since "answers came in by the score," the article said, "Through the mail, over the telephone, and in person." "No single reply was in favor of selling to the Farm Bureau." Many farmers in the neighborhood had estimated that Mr. Moore was getting less than one-third of the farm business in the community. The article went ahead to explain the editor's lack of facts on the Farm Bureau's tax status and made an offer to tell the Farm Bureau's side of the story. In another column a writer named Harvey who conducts a regular feature, told of his return trip from Florida. "Another thing I found out" he said, "on my return that made me boil was the fast one the co-op tried to put over on John Moore and I really got a kick out of the neat way John handled the situation * * *. I am informed they bring in non-American products, handle little known merchandise, pay no taxes, return stock in lieu of cash dividends and claim they are a nonprofit organization. There is a profit and you can be sure of that. But who gets it? That is the question that is bothering a good many farmers these days. I am looking into the situation and I think I'll have some more information in the near future. In the meantime you can rest assured that when you trade with John Moore the entire investment remains in this community."

On May 26 an interview with Eldon Lust, manager of the Licking County Farm Bureau Co-op, was made by the editor. The editor said in part, "The Standard cannot yet claim a thorough knowledge of the aims and purposes of the co-op but we will attempt to give a summary of the interview." He went ahead to try to explain the tax status, but made a very poor report. He claimed all the way through that the co-op was not paying its share of taxes.

On June 2 Harvey had received a letter from "Mose." Mose had asked why with a net earning of $31,573 for the last fiscal year the Farm Bureau could not use the money to finance a plant at Pataskala, "Who has this money and what is it being used for?" he asked. Harvey answered the question with a letter from the National Tax Equality Association in the person of Homer E. Marsh who reported that regular tax-paying corporation with the identical amount of income would have paid $9,000 in Federal income tax and went ahead to explain other tax deductions. It ended up with this statement: "I think that if the farmer was told that he had to pay income taxes on his patronage dividends when not received in cash, he would insist that his cooperative pay such dividends in cash instead of giving him a worthless piece of paper and keeping the cash for expansion." Farmers in this community who have invested a considerable amount in their local cooperative resent this statement. As a matter of fact, for each dollar due on outstanding stock in the Licking County Farm Bureau Cooperative Association approximately $1.35 is back of it.

Careless Navy Flyers

REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. SHAFER. Mr. Speaker, I believe it would be wise for our Committee on the Armed Services to question the higher personnel in the Department of the Navy, and in the other armed services, relative to measures they have been using to curb carelessness on the part of pilots under their jurisdiction. Every one of us is familiar with the details of the tragic crash Saturday over Fort Dix, N. J. This crash, according to eyewitnesses, was the direct result of negligence on the part of a Navy fighter pilot who was at the controls of his plane when it sheared off a section of the Eastern Airlines transport. Apparently this pilot had succumbed to a common human frailty to "show off." Sixteen persons went to a flaming death because this pilot failed to exercise reasonable judgment in a highly hazardous flight area.

Of course, none of us can say definitely what motivated the Navy pilot, or what he was attempting to do, at the time of the tragic crash. He was killed, and no board of inquiry has made a report. But all the witnesses seem to agree that he was stunting in one of the most heavily air traveled areas in the entire United States.

It seems to me that the Navy should take immediate steps to assure the Nation that such accidents will not happen again in the future. With all the Nation over which to fly, and the Atlantic and Pacific Ocean areas on each side of us in which to train, it seems to me particularly stupid that Navy flyers should choose the area over New York, New Jersey, or any other heavily populated areas for training maneuvers or for stunt flying. Two other commercial transport pilots on a rival southern air line Saturday reported being buzzed by Navy fighter pilots. This seems to indicate that these pilots either were under orders from someone to participate in such fool tricks, or have had so much leeway in their activities as to become flight happy. I know that I voice the sentiments of all of my colleagues when I extend sympathy both to the family of the Navy flyer and to the families and friends of the 16 persons who were killed in the transport crash. This type of thing is doubly tragic because it is so useless, so wasteful, and so avoidable by the exercise of common judgment.

I am sure that the gentleman from Georgia [Mr. VINSON], chairman of the Armed Services Committee, will join with me in seeing to it that the Navy immediately gives a report of this tragedy and what measures are being taken to strengthen its code of flight practices so that such an accident will never again blot the Navy's peacetime record.

Dr. Ralph J. Bunche Should Continue His Good Work as UN Mediator for Palestine

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. CELLER. Mr. Speaker, Dr. Ralph J. Bunche has made an unfortunate mistake in ending his task as United Nation's mediator for Palestine. He has asked that his functions be transferred to a United Nations Commission, giving as his reason that the military phase of the conflict in Palestine is over. Unfortunately, reports reach us that such military phase of the conflict is not over.

There are armistice agreements with Israel and the Arab countries, but they may not be worth the paper they are written on. The peace may only be temporary, not permanent.

In the Arab press, there appear daily demands that war against Israel be resumed. Here are some typical examples of the Arab threats of renewed war against Israel as they appear in the Arab press:

According to the Cairo Al Masri of May 8, 1949, Azzam Pasha declared that the Arabs had better not trust the Jews, but rather expect them at any time to break the armistice and other agreements concluded with them. The Arabs on their part should therefore be prepared for any sudden emergency. He said he did not think it far from possible that the Jews would surprise the Arabs with further aggression. The member states of the Arab League should stand united as one body so as to stifle any aggressive attempts the Jews may come to think of.

The Iraqi Ministry of Defense at Bagdad published a statement regarding the efforts of the Iraqi Army in the Palestine war.

The statement says that the units now returning home are doing so only in order to rest and prepare for the renewal of the Holy Jehad at a suitable time. It goes on to say that if the results in general did not satisfy the Arab peoples, this was not the fault of the army, which will always be prepared to fulfill its mission in Palestine, defend its country and come to the aid of any Arab country in danger.

Mohamed El Taabi in "Achar Sa'a" of Egypt: "The world—at least the Arab world—today knows that Hitler was neither a wicked man nor an oppressor, as represented by Jewish propaganda. He was just an energetic ruler who dealt with the Jews as they deserved it. Perhaps 'peace' will come—but it will be an official peace between the governments only. The Arab peoples will never know peace with the Jews, but will continue to tell the world that a blood feud exists between them and those Jews. * * * They will always remember what happened to the hundreds of thousands of refugees. * * * Until Allah will send them the Savior, the Leader. * * * A new Hitler will rise amongst the Arabs, woe to you, you Jews!"

Azmi Nashashibi, the manager of the Ramallah radio station, in his talk in English broadcast on May 19, 1949: "Thousands of boys are receiving military training and the girls are learning first aid." (He asked for the return of all the refugees to their homes and added:) "We have been attacked, murdered, robbed, ruined—but we shall carry our burdens and when the time comes we shall show what material we are made of. We, the Arabs of Palestine, shall neither forget nor forgive."

Dr. Bunche indeed shuts himself in an ivory tower if he believes real peace has descended upon Palestine. Israel sits upon a powder keg which the Arabs may ignite any day.

It would be tragic indeed if the United Nations, upon the advice of Dr. Bunche, twiddles its thumbs and assumes a do-nothing attitude. Despite the paper armistices, the conciliation and mediation processes must continue.

Under the guise and subterfuge of treaty agreements, Britain has now lifted the arms embargo to Arab nations. Vast quantities of small arms are pouring into Egypt, Iraq, Syria, Transjordan, Lebanon, soon to be followed by heavier equipment and artillery. Against whom will these arms be used? Only against Israel in a "Holy Jehad."

Also France, I am informed, is arming the new Syrian dictator, Marshal Zayim. Dr. Bunche only encourages such action by his unfortunate action. I hope he reconsiders.

Our Government should demand (1) the continuation of all arms embargoes in the sensitive area of the Near East, and (2) continuation of the Palestine Conciliation Commission in toto.

Mace Potent House Symbol

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. CANFIELD. Mr. Speaker, Arthur Sylvester, well-known correspondent of the Newark (N. J.) Evening News, is the author of a most interesting article on the history and functions of the House mace. It appeared in the News last Sunday and reads as follows:

MACE POTENT HOUSE SYMBOL—THRUST BETWEEN BRAWLING MEMBERS OR CARRIED DOWN AISLE, IT HAS NEVER FAILED TO QUELL DISTURBANCES

(By Arthur Sylvester)

WASHINGTON.—Before the House of Representatives could begin doing business in the temporary quarters it's occupying while the Capitol is being repaired, $400 worth of symbolic sovereignty had to be properly placed. That is the mace, aside from the flag, the only visible symbol of Federal Government authority and as old as the Government itself.

Consisting of 13 ebony rods bound with silver wrappings and topped by a silver eagle astride a silver globe, it looks somewhat like a drum major's baton. But its 46 inches of historic might are used not to beat rhythms but recalcitrant Congressmen. In its day it has quelled book throwing, fist fighting, and other disorders.

The mace was provided for in a resolution adopted by the House during the First Congress in 1789. The original symbol of the authority of the Sergeant at Arms, whose duty is to preserve order on the floor, was destroyed when the British burned the Capitol in 1814. It was replaced by a mace of painted wood until 1841, when the present mace was made as a reproduction of the original by William Adams, of New York, a silversmith.

MODERN FUNCTION

Aside from its historical associations, the mace has a present-day function. When the House is called to order each day an assistant sergeant at arms places the mace on a cylindrical pedestal of polished green marble at the right of the Speaker's desk. Once the Speaker calls the House in session the mace begins its silent but important part in the House proceedings.

Its position tells Members at once whether the House itself is in session or in Committee. When the mace is at the Speaker's right the former is the situation. But when the House resolves itself into Committee of the Whole the mace is removed to a lower white pedestal by the desk of the Sergeant at Arms.

These varying positions are significant to Members, because 218 Members must be present to constitute a quorum for business in the House. Only 100 are necessary when the House is sitting as a Committee of the Whole. In view of its value today the mace cost little. There's an item in a statement of the expenditure of the contingent fund of the House for 1841–42 which reads: "William Adams, a mace for Hall, H. R., $400."

DESIGNED BY JEFFERSON

It was Thomas Jefferson who designed the mace. The 13 rods are, of course, emblematic of the Thirteen Original States. The globe is set with the Western Hemisphere in front under the eagle's back. In creating this part of the form and ceremony of the Government Jefferson drew on history. A heritage of the great days of Rome, the mace was used as a symbol of authority by Britain's House of Commons, after which the House of Representatives was modeled.

In recent years the Speaker has seldom had recourse to the mace to restore order. "The House will please be in order"; "The Chair requests order"; "Will the gentlemen cease their audible conversation or retire to the cloakroom?" These are the traditional requests of the presiding officer, punctuated at times with his gavel. Occasionally the Speaker says: "Will the Sergeant at Arms please assist me in restoring order."

This calls for that officer to walk up the center aisle and wave Members to their seats. If there is real disorder, the final request is given by the Chair: "The Sergeant at Arms will present the mace on the floor of the House." The mace is then carried up the center aisle and back to the rostrum. This usually does the trick.

ALWAYS WORKS

But if there are fisticuffs between two Members, as has happened, then the mace is thrust between the offenders as a silent order to desist and never has this failed to quiet the situation.

It worked one exciting day in 1847 when Robert C. Winthrop, Massachusetts Whig, became Speaker. A charge by Representative Duer of New York that Mr. Meade of Virginia was a disunionist brought a retort from Mr. Meade.

"It is false."

"You lie," countered Mr. Duer, Mr. Toombs of Georgia swung a fist, Mr. Bayly of Virginia got in the fray and it looked like a free-for-all. Sergeant at Arms Sargent presented the mace, every one subsided and Mr. Winthrop took the chair.

There have been other exciting occasions when it saved the day. It ended a fist fight between Illinois and Iowa in the middle aisle in 1880. Three years later the Sergeant at Arms was forced to arrest Representatives Heard of Missouri and Breckinridge of Kentucky until they apologized and subsided. There was a rough time in the Fifty-ninth Congress when Representative Bartlett of Georgia tossed a volume of the United States statutes at a Pennsylvania Member and chased a New York Congressman up the middle aisle with a knife.

NOT USED LATELY

During 1917 Tom Heflin, of Georgia, swapped punches with Patrick Danield Norton of North Dakota. Later a fellow Alabaman asked Mr. Heflin why, if he favored going to war, he didn't enlist himself. Mr. Heflin went after him and the Sergeant at Arms went after the mace.

But there hasn't been a rumpus calling for the mace since 1933; just one-punch affairs. Representative CLARENCE CANNON, Democrat, Missouri, once House parliamentarian, says the boys are too busy today for rough stuff. There used to be fights just from boredom, he says.

At the end of a hard day, in fact every day, the mace goes back to the office of the Sergeant at Arms. There it is locked up under a light which burns constantly. That is out of respect to its symbolic significance.

One Hundred and Fifty-one Taxes Found on Loaf of Bread

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Earl Richert, from the Washington Daily News of August 1, 1949:

ONE HUNDRED AND FIFTY-ONE TAXES FOUND ON LOAF OF BREAD

(By Earl Richert)

Without digging very deep, the Tax Foundation has found 151 hidden Federal and State taxes on a loaf of bread.

Selected for study was a loaf made and sold in Indianapolis.

And counted only were the Federal and State taxes paid by the grocer, the baker, the concerns supplying the ingredients that went directly into the bread and the railroads that hauled the ingredients.

No local taxes were counted nor was any attempt made to add in taxes paid by such far-back factors in the chain of production as the farmer who grew wheat or the manufacturer who made the pans for the bakery ovens.

GROCER AND BAKER PAID

The researchers for the Tax Foundation, a tax study organization, found that the Indianapolis grocer, a smal' independent, paid four Federal taxes—individual income tax, 15 percent tax on his telephone, 3 percent tax on transportation of property, and 20 percent on his safety-deposit box.

The baker, a large national corporation that owns its trucks, paid Federal taxes—a corporation income tax, stamp taxes on its security transfers and issues, the telephone tax, the telegram tax of 25 percent, the transportation tax of 15 percent for officials traveling on company business, the transportation of property tax, the safe-deposit tax, and the 1 percent of pay roll social security tax.

Together, the grocer and baking concern paid 15 State taxes, with the bakery paying four-fifths of them because of its corporate status and the gasoline and motor vehicle taxes on its trucks. Included in the State taxes paid by the baking concern was four corporation taxes paid in Delaware since the concern is chartered there. Both the grocer and the baker pay an Indiana gross-income tax on their operations.

MILL AND RAILROAD, TOO

The Kansas City flour mill from which came the flour paid seven Federal taxes and eight Missouri State taxes. And the railroad that hauled the flour to Indianapolis paid five Federal taxes and a varying number of taxes to each of the States through which it operates—Missouri, Illinois, and Indiana on this particular haul.

The sugar that went into the bread came from a large refining concern in New Orleans and the refiner paid eight Federal taxes and six Louisiana State taxes. The railroad hauling the sugar to Indianapolis also paid five Federal taxes and a whole flock of State taxes.

SALT, MALT, YEAST

The story is the same for the salt warehouse in Chicago from which the salt came for the bread, the malt company in Chicago, the shortening manufacturer in Cincinnati, the milk-solids manufacturer in Chicago, the yeast factory in Chicago—and the railroads that transported all these ingredients.

If these concerns weren't losing money, they were passing their tax costs along in the bills they charged for their products and services. Altogether, Tax Foundation researchers figured that these supplying concerns and the transporting railroads paid a total of 120 Federal and State taxes—not counting any State taxes for the railroads.

ALWAYS PASSED ALONG

Tax Foundation experts say it is impossible to figure out just what all these tax costs amount to in the retail price of a loaf of bread. But they know they're in there because tax costs are almost always passed along.

WHO, Des Moines, Friend of the Farmer

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. CUNNINGHAM. Mr. Speaker, on each visit to my home State of Iowa, I realize more and more the value of radio to the farmers of this Nation. In our modern world, the farmer's work is truly that of a scientist. With the latest and best in farm machinery and with an access through radio to the centers of market information and agricultural research, the farmer of today is a skillful scientist—a student of the soil—bent upon securing the most bountiful crop through businesslike application of modern methods.

Most of the farmer's daily source of agricultural information is by means of his radio. Radio station WHO, Des Moines, renders a highly valued service to farmers. Located in the heart of the Nation's food-producing area, WHO with its clear channel is able to reach from the city of Des Moines and the immediate vicinity to serve vast farm regions which would otherwise have little or no radio service. This fine, clear-channel radio station has always placed the public interest above receipts from sale of time. In paying tribute today to WHO, I want to stress its public-service policies and its never-ending desire to serve faithfully the farm area which hears its clear-channel voice each day.

Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD a statement on WHO's farm-service policy, plus a brief review of its daily operation:

STATION WHO FARM SERVICE POLICY

Motivating all WHO farm department activities is the conviction that radio offers a unique and outstanding opportunity to render a distinct service to farm families and to all other people, rural and urban, interested in the welfare of agriculture. WHO farm service is expressed in many ways, some of which are:

1. Recognition that farm families are intellectually on as high a plane as any other group, and therefore entitled to as fine a schedule of news, information, entertainment, and other service as it is possible to offer.

2. Daily farm news, weather forecasts, and market reports, with emphasis on food production for a hungry world.

3. Special informative and entertaining programs, of, by, and for farm families.

4. Cooperation with and staging of major farm events designed to serve agriculture.

5. Staff members serve on committees directly concerned with agriculture, and make many speeches to farm groups throughout the Middle West.

6. Personal attention to inquiries and requests for information by correspondence or long-distance telephone, supplemented by broadcasts.

7. Emphasis on farm-family welfare through continuous campaigns on farm and home safety, fire protection, good neighborliness, etc.

8. Working for a better understanding between our own rural and urban people.

STATION WHO—A PUBLIC SERVANT

WHO has attained prominence in Iowa, the Middle West, and the entire Nation because of its sincerely consistent and unselfish service to its listeners—service with news and information—service with good music—service with religious broadcasts—service with the kind and variety of programs that WHO listeners want. WHO consistently heeds the wishes of its audience, thereby giving its city listeners and its farm friends the programs they wish to hear.

Service of WHO to the farmers of Iowa and nearby States has been recognized publicly by many groups both within and without the agricultural industry, including the National Grange and the American Farm Bureau Federation. For example, WHO has received:

1. The du Pont award (the Pulitzer prize of radio) for soil-conservation work.

2. A farm-service award from Variety magazine.

3. Awards from National Safety Council, 3 consecutive years for farm-safety efforts.

4. Citations from National Board of Fire Underwriters for educational work to remove farm-fire hazards.

5. National citation from American Legion for presentation of programs for the betterment of community, State and Nation.

6. Varied and numerous awards for all types of public-service contributions to the people of Iowa and nearby States.

The Townsend Plan

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. HILL. Mr. Speaker, following is a petition signed by members of the Townsend Club, Greeley, Colo., in the Second Congressional District of Colorado, and I wish to present this as evidence of the interest in the passage of H. R. 2136:

GREELEY, COLO.

Hon. WILLIAM S. HILL,
Washington, D. C.:

We, the undersigned citizens of the Second Congressional District of the State of Colorado, respectfully request the passage of H. R. 2135 and H. R. 2136, known as the Townsend plan, and respectfully request your cooperation and help.

Mrs. Inda A. Mullikan, P. N. Price, Anna Leonard, Nettie Peterson, James E. Hume, W. J. Simms, Josephine Simms, Russell Borth, Harold Hein, Ed Bila, Catherine Tilk, Rose R. Waite, Fred Dilka, Mary Dilka, Walter E. Cary, Floyd Bainbridge, Harold C. Howard, William L. Norris, Glen F. Norris, L. R. Norris, Mrs. Myrtle Jennings, Nola M. Jennings, Mrs. Charles C. Melander, Stella Regester, Della Lloyd, Phillippa Watson, E. B. Storey, C. B. Daniels, Fern Silvey, Greeley, Colo.; Pauline Baumig, Eaton, Colo.; Helene Holley, Carl Thiel, Mrs. Bessie M. Wolaver, Mrs. Jessie Carr, E. B. Silvey, Davis Burrell, J. L. Dickey, Mrs. L. J. Simmons, Dorothy Simmons, F. J. Williams, W. I. Jennings, Greeley, Colo.; Fred L. Aleck, Evans, Colo.; Frank A. Jaspa, Greeley, Colo.; Neal Dilley, Kersey, Colo.; George A. Hill, Pery Fugate, Daniel Martinez, Teodora Martinez, Charles Derksen, Edith A. Derksen, A. H. Jordan, Charles Holfied, Harry Fortune, Mrs. Madge Fortune, Miss Edna Wilson, Truman Avery Steward, George W. Helps, Ellen M. Helps, Frank Lewis, Lesta J. Chase, Linda E. Potter, Laura Bird, Paul Stuart, E. J. Carter, Louis C. Baab, Rolla McBride, W. C. Umble, C. O. Oglesby, L. J. Simmons, William R. Hockley, Claude A. Carr, Conrad Borgens, G. S. Larson, Thomas J. Hogentogler, F. L. Payne, Mrs. F. S. Payne, Mrs. Gertrude M. Blake, Rudy Ensior, Charles O. Lind, Mollie Theil, Rev. A. H. Rux, Anna Sampson, Charles C. Melander, Dorthea Baker, John A. Fry, Edward M. Kuffinger, H. O. Timothy, Glen W. Timothy, John G. Parker, Julio S. Trujillo, Lee Mota, A. M. McCollins, William M. Hammer, Ben Gleasman, Henry W. Stenger, John Frank, Jacob Greenwalt, August Tierke, Greeley, Colo.

Parris, A. C. Bierig, H. E. McLearen, Mrs. Beulah Kler, James E. Summers, A. W. Cross, Gladys Cumley, William Mitchell, Lora Lee Mitchell, Ruby A. Hendrickson, Clyde Cumley, Greeley, Colo.

The Story of the French Assignat—A Graphic Account of French Inflation

EXTENSION OF REMARKS
OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. WHITE of Idaho. Mr. Speaker, ever since I started to study the subject of money, I have read reference to the French assignat—French paper money based on the value of the land and real property the French confiscated from church organizations back in the seventeenth century. Recently there came into my hands an authentic account of the French assignat and its effect on the French economy just prior to the French Revolution.

This record of the assignat was prepared by a former president of Cornell University, Mr. White, with many citations from authentic documents made with painstaking care, which I have taken the liberty to condense and present herewith for the information of my colleagues:

Early in the year 1789 the French nation found itself in deep financial embarrassment; there was a heavy debt and a serious deficit.

There was a general search for some short road to prosperity; ere long the idea was set afloat that the great want of the country was more of the circulating medium; and this was speedily followed by calls for an issue of paper money. During the last months of 1789 and the first months of 1790 came discussions in the National Assembly looking to issues of notes based upon the landed property of the church—which was to be confiscated for that purpose.

The National Assembly had determined to confiscate the vast real property of the French church—the pious accumulations of 1,500 years. There were princely estates in the country, bishop's palaces and conventual buildings in the towns; these formed between one-fourth and one-third of the entire real property of France, and amounted in value to at least 2,000,000,000 livres (normal value 19.1 cents). By a few sweeping strokes all this became the property of the nation. Never, apparently, did a government secure a more solid basis for a great financial future.

It was urged, then, that the issue of four hundred millions of paper (not in the shape of interest-bearing bonds, as had at first been proposed, but in notes small as well as large), would give the treasury something to pay out immediately, and relieve the national necessities.

In April 1790, came the final decree to issue 400,000,000 livres in paper money, based upon confiscated property of the church for its security.

This sum—four hundred millions, so vast in those days—was issued in assignats, which were notes secured by a pledge of productive real estate and bearing interest to the holder at 3 percent. No irredeemable currency has ever claimed a more scientific and practical guaranty for its goodness and for its proper action on public finances.

The first result of this issue was apparently all that the most sanguine could desire; the treasury was at once greatly relieved; a portion of the public debt was paid; creditors were encouraged; credit revived; ordinary expenses were met, and, a considerable part of this paper money having thus been passed from the government into the hands of the people, trade increased and all difficulties seemed to vanish. But soon there came another result; times grew less easy; by the end of September, within 5 months after the issue of the four hundred millions in assignats, the government had spent them and was again in distress. Throughout the country began a cry for another issue of paper.

The question was brought up by Montesquieu's report on the 27th of August, 1790. This report favored, with evident reluctance, an additional issue of paper. It went on to declare that the original issue of four hundred millions, though opposed at the beginning, had proved successful; that assignats were economical. Chabroud said that the issue of assignats would relieve the distress of the people and he presented very neatly the new theory of paper money and its basis in the following words. "The earth is the source of value; you cannot distribute the earth in a circulating value, but this paper becomes representative of that value and it is evident that the creditors of the nation will not be injured by taking it." Boutidoux, resorting to phrasemaking, called the assignats "un papier terre," or "land converted into paper."

Royer said to the National Assembly "If it is necessary to create five thousand millions, and more, of the paper, decree such a creation gladly." He, too, predicted, as many others had done, a time when gold was to lose all its value, since all exchanges would be made with this admirable, guaranteed paper, and therefore that coin would come out from the places where it was hoarded. He foretold prosperous times to France in case these great issues of paper were continued and declared these "the only means to insure happiness, glory, and liberty to the French nation."

Prudhomme's newspaper poured contempt over gold as security for the currency, extolled real estate as the only true basis, and was fervent in praise of the convertibility and self-adjusting features of the proposed scheme. On the 29th of September 1790, by a vote of 508 to 423, the deed was done; a bill was passed authorizing the issue of 800,000,000 of new assignats, but solemnly declaring that in no case should the entire amount put in circulation exceed twelve hundred millions. To make assurance doubly sure, it also provided that as fast as the assignats were paid into the treasury for land they should be burned, and thus a healthful contraction be constantly maintained. Unlike the first issue, these new notes were to bear no interest.

Within a short time there had been received into the treasury for lands 160,000,000 livres in paper. By the terms of the previous acts this amount of paper ought to have been retired. Instead of this, under the plea of necessity, the greater part of it was reissued in the form of small notes.

There was, indeed, much excuse for new issues of small notes, for, under the theory that an issue of smaller notes would drive silver out of circulation, the smallest authorized assignat was for 50 livres. To supply silver and copper and hold it in circulation everything was tried. Citizens had been spurred on by law to send their silverware and jewels to the mint. Even the king sent his silver and gold plate, and the churches and convents were required by law to send to the government melting pot all silver and gold vessels not absolutely necessary for public worship. For copper money the church bells were melted down. But silver and even copper continued to become more and more scarce. In the midst of all this, various juggleries were tried, and in November 1790 the Assembly decreed a single standard of coinage, the chosen metal being silver, and the ratio between the two precious metals was changed from 15½ to 1, to 14½ to 1—but all in vain. It was found necessary to issue the dreaded small paper, and a beginning was made by issuing one hundred millions in notes of 5 francs, and, ere long, obedient to the universal clamor, there were issued parchment notes for various small amounts down to a single sou.

A troublesome fact began now to appear. Though paper money had increased in amount prosperity had steadily diminished. In spite of all paper issues, commercial activity grew more and more spasmodic. Enterprise was chilled and business became more and more stagnant. At one town, Lodeve, 5,000 workmen were discharged from the cloth manufactories. Every cause except the right one was assigned for this. Heavy duties were put upon foreign goods; everything that tariffs and customhouses could do was done. Still the great manufactories of Normandy were closed, those of the rest of the kingdom speedily followed, and vast numbers of workmen in all parts of the country were thrown out of employment. Nor was this the case with the home demand alone. The foreign demand which at first had been stimulated, soon fell off.

All this breaking down of the manufactures and commerce of the nation made fearful inroads on the greater fortunes; but upon the lesser, and upon the little properties of the masses of the nation who relied upon their labor, it pressed with intense severity. The capitalist could put his surplus paper money into the Government lands and await results; but the men who needed their money from day to day suffered the worst of the misery. Still another difficulty appeared. There had come a complete uncertainty as to the future. Long before the close of 1791 no one knew whether a piece of paper money representing a hundred livres would, a month later, have a purchasing power of 90 or 80 or 60 livres. The result was that capitalists feared to embark their means in business. Enterprise received a mortal blow. Demand for labor was still further diminished; and here came a new cause of calamity; for this uncertainty withered all far-reaching undertakings. The business of France dwindled into a mere living from hand to mouth. This state of things, too, while it bore heavily upon the moneyed classes, was still more ruinous to those in moderate and, most of all, to those in straitened circumstances. With the masses of the people, the purchase of every article of supply became a speculation.

In the leading French cities now arose a luxury and license which was a greater evil even than the plundering which ministered to it. In the country the gambling spirit spread more and more. The artful plunder-

ing of the people at large was bad enough, but worse still was this growing corruption in official and legislative circles. Out of the speculating and gambling of the inflation period grew luxury, and, out of this, corruption. It grew as naturally as a fungus on a muck heap. It was first felt in business operations, but soon began to be seen in the legislative body and in journalism. Bribery of legislators followed as a matter of course, Delaunay, Jullien and Chabot accepted a bribe of 500,000 livres for aiding legislation calculated to promote the purposes of certain stockholders. It is some comfort to know that nearly all concerned were guillotined for it.

On December 17, 1791, a new issue was ordered, making in all twenty-one hundred millions authorized. Coupled with this was the declaration that the total amount in actual circulation should never reach more than sixteen hundred millions. Before this issue the value of the 100 livres note had fallen at Paris to about 80 livres; immediately afterward it fell to about 68 livres. The most curious thing evolved out of all this chaos was a new system of political economy. In speeches, newspapers and pamphlets about this time, we began to find it declared that, after all, a depreciated currency is a blessing; that gold and silver form an unsatisfactory standard for measuring values; that it is a good thing to have a currency that will not go out of the kingdom and which separates France from other nations; that thus shall manufacturers be encouraged; that commerce with other nations may be a curse, and hindrance thereto may be a blessing; that the laws of political economy however applicable in other times, are not applicable to this particular period, and, however, operative in other nations, are not now so in France; that the ordinary rules of political economy are perhaps suited to the minions of despotism but not to the free and enlightened inhabitants of France at the close of the eighteenth century; that the whole state of present things, so far from being an evil is a blessing.

On April 30, 1792, came the fifth great issue of paper money, amounting to three hundred millions; at about the same time Cambon sneered ominously at public creditors as "rich people, old financiers and bankers." Soon payment was suspended on dues to public creditors for all amounts exceeding 10,000 francs. This was hailed by many as a measure in the interests of the poorer classes of people, but the result was that it injured them most of all. Henceforward, until the end of this history capital was quietly taken from labor and locked up in all the ways that financial ingenuity could devise. All that saved thousands of laborers in France from starvation was that they were drafted off into the army and sent to be killed on foreign battlefields.

On the last day of July 1792, came another brilliant report from Fouquet, showing that the total amount of currency already issued was about twenty-four hundred millions, but claiming that the national lands were worth a little more than this sum. A decree was now passed issuing three hundred millions more. By this the prices of everything were again enhanced save one thing, and that one thing was labor. Strange as it may at first appear, while the depreciation of the currency had raised all products enormously in price, the stoppage of so many manufactories and the withdrawal of capital caused wages in the summer of 1792, after all inflation, to be as small as they had been 4 years before—viz, 15 sous per day. No more striking example can be seen of the truth uttered by Daniel Webster, that "of all contrivances for cheating the laboring classes of mankind, none has been more effective than that which deludes them with paper money." Issue after issue followed at intervals of a few months, until, on December 14, 1792, we have an official statement to the effect that thirty-five hundred millions had been put forth, of which six hundred millions had been burned, leaving in circulation twenty-eight hundred millions. The consequences of these over-issues now began to be more painfully evident to the people at large. Articles of common consumption became enormously dear and prices were constantly rising. The washerwomen of Paris, finding soap so dear that they could hardly purchase it, insisted that all the merchants who were endeavoring to save something of their little property by refusing to sell their goods for the wretched currency with which France was flooded, should be punished with death; the women of the markets and the hangers-on of the Jacobin Club called loudly for a law "to equalize the value of paper money and silver coin." It was also demanded that a tax be laid especially on the rich, to the amount of 400,000,000 francs, to buy bread. The result was that on the 28th of February 1793, at 8 o'clock in the evening, a mob of men and women in disguise began plundering the stores and shops of Paris. At first they demanded only bread; soon they insisted on coffee and rice and sugar; at last they seized everything on which they could lay their hands—cloth, clothing, groceries, and luxuries of every kind. Two hundred such places were plundered. This was endured for 6 hours and finally order was restored only by a grant of 7,000,000 francs to buy off the mob. The new political economy was beginning to bear its fruits luxuriantly. A gaudy growth of it appeared at the city hall of Paris when, in response to the complaints of the plundered merchants, Roux declared, in the midst of great applause, that "shopkeepers were only giving back to the people what they had hitherto robbed them of."

On June 22, 1793, the convention determined that there should be a forced loan, secured on the confiscated lands of the emigrants and levied upon all married men with incomes of 10,000 francs, and upon all unmarried men with incomes of 6,000 francs. It was calculated that these would bring into the treasury a thousand millions of francs. But a difficulty was found. So many of the rich had fled or had concealed their wealth that only a fifth of the sum required could be raised, and therefore a law was soon passed which levied forced loans upon incomes as low as 1,000 francs—or, say, $200 of American money. This tax was made progressive. On the smaller proprietors it was fixed at one-tenth and on the larger, that is, on all incomes above 9,000 francs, it was made one-half of the entire income. Little if any provision was made for the repayment of this loan, but the certificates might be used for purchasing the confiscated real estate of the church and of the nobility.

The third outgrowth of the vast issue of fiat money culminated on September 29, 1793, in the Law of the Maximum. Committees of experts were appointed to study the whole subject of prices, and at last there were adopted the great four rules which seemed to statesmen of that time a masterly solution of the whole difficulty.

First, the price of each article of necessity was to be fixed at one and one-third its price in 1790. Secondly, all transportation was to be added at a fixed rate per league. Thirdly, 5 percent was to be added for the profit of the wholesaler. Fourthly, 10 percent was to be added for the profit of the retailer. Nothing could look more reasonable.

The first result of the Maximum was that every means was taken to evade the fixed price imposed, and the farmers brought in as little produce as they possibly could. This increased the scarcity, and the people of the large cities were put on an allowance. Tickets were issued authorizing the bearer to obtain at the official prices a certain amount of bread or sugar or soap or wood or coal to cover immediate necessities. But it was found that the Maximum, with its divinely revealed four rules, could not be made to work well—even by the shrewdest devices. In the greater part of France it could not be enforced. As to merchandise of foreign origin or merchandise into which any foreign product entered, the war had raised it far above the price allowed under the first rule, namely, the price of 1790, with an addition of one-third. Shopkeepers therefore could not sell such goods without ruin. The result was that very many went out of business, and the remainder forced buyers to pay enormous charges under the very natural excuse that the seller risked his life in trading at all. That this excuse was valid is easily seen by the daily lists of those condemned to the guillotine, in which not infrequently figure the names of men charged with violating the Maximum laws. Manufactures were very generally crippled and generally destroyed, and agriculture was fearfully depressed. To detect goods concealed by farmers and shopkeepers, a spy system was established with a reward to the informer of one-third of the value of the goods discovered. To spread terror, the criminal tribunal at Stransburg was ordered to destroy the dwelling of anyone found guilty of selling goods above the price set by law. The farmer often found that he could not raise his products at anything like the price required by the new law, and when he tried to hold back his crops or cattle, alleging that he could not afford to sell them at the prices fixed by law, they were frequently taken from him by force and he was fortunate if paid even in the depreciated fiat money—fortunate, indeed, if he finally escaped with his life.

Involved in all these perplexities, the convention tried to cut the Gordian knot. It decreed that any person selling gold or silver coin, or making any difference on any transaction between paper and specie, should be imprisoned in irons for 6 years—that anyone who refused to accept payment in assignats, or accepted assignats at a discount, should pay a fine of 3,000 francs; and that anyone committing this crime a second time should pay a fine of 6,000 francs and suffer imprisonment 20 years in irons. Later, on the 8th of September 1793, the penalty for such offenses was made death, with confiscation of the criminal's property, and a reward was offered to any person informing the authorities regarding any such criminal transaction. To reach the climax of ferocity, the convention decreed, in May 1794, that the death penalty should be inflicted on any person convicted of "having asked, before a bargain was concluded, in what money payment was to be made." Nor was this all. The great Finance Minister Cambon soon saw that the worst enemies of his policy were gold and silver. Therefore it was that, under his lead, the convention closed the exchange and finally, on November 13, 1793, under terrifying penalties, suppressed all commerce in the precious metals. About a year later came the abolition of the Maximum itself.

It is easily seen that these Maximum laws were perfectly logical. Whenever any nation intrusts to its legislators the issue of a currency not based on the idea of redemption in standard coin recognized in the commerce of civilized nations, it intrusts to them the power to raise or depress the value of every article in the possession of every citizen. Louis XIV had claimed that all property in France was his own, and that what private persons held was as much his as if it were in his coffers. But even this assumption is exceeded by the confiscating power exercised in a country where, instead of leaving values to be measured by a standard common to the whole world, they are left to be depressed

or raised at the whim, caprice or interest of a body of legislators. When this power is given the power of fixing prices is inevitably included in it.

It may be said that these measures were made necessary by the war then going on. Nothing could be more baseless than such an objection. In this war the French soon became generally successful. It was quickly pushed mainly upon foreign soil. Numerous contributions were levied upon the subjugated countries to support the French armies. The war was one of those in which the loss, falling apparently on future generations, first stimulates, in a sad way, trade and production. The main cause of these evils was tampering with the circulating medium of an active nation; keeping all values in fluctuation; discouraging enterprise; paralyzing energy; undermining sobriety; obliterating thrift; promoting extravagance and exciting riot by the issue of a irredeemable currency.

And now was seen, taking possession of the nation, that idea which developed so easily out of the fiat money system—the idea that the ordinary needs of government may be legitimately met wholly by the means of paper currency—that taxes may be dispensed with. As a result it was found that the assignat printing press was the one resource left to the government, and the increase in the volume of paper money became every day more appalling. The national convention, which succeeded the legislative assembly, issued in 1793 over three thousand millions of assignats, and, of these, over twelve hundred millions were poured into the circulation. Everything was tried. By various degrees of persuasion or force—the guillotine looming up in the background—holders of assignats were urged to convert them into evidence of national debt, bearing interest at 5 percent, with the understanding that if more paper were afterward needed more would be issued. All in vain. The official table of depreciation shows that the assignats continued to fall. A forced loan, calling in a billion of these checked this fall, but only for a moment. The interconvertibility scheme between currency and bonds failed as dismally as the interconvertibility scheme between currency and land had failed.

Cambon, especially, ranked then and ranks now as among the most expert in any period. The disastrous results of all his courage and ability in the attempt to stand against the deluge of paper-money show how powerless are the most skillful masters of finance to stem the tide of fiat money calamity when once it is fairly under headway; and how useless are all enactments which they can devise against the underlying laws of nature. In obedience to those who believed with the market women of Paris, as stated in their famous petition that "laws should be passed making paper money as good as gold," Couthon, in August 1793, had proposed and carried a law punishing any person who should sell assignats at less than their normal value with imprisonment for 20 years in chains, and later carried a law making investments in foreign countries by Frenchmen punishable by death. But to the surprise of the great majority of the French people, the value of the assignats was found, after the momentary spasm of fear had passed, not to have been permanently increased by these measures; on the contrary, this fiat paper persisted in obeying the natural laws of finance and, as new issues increased, their value decreased.

The question will naturally be asked, On whom did this vast depreciation mainly fall at last? When this currency had sunk to about one three-hundredth part of its nominal value, and, after that, to nothing, in whose hands was the bulk of it? The answer is simple. I shall give it in the exact words of that thoughtful historian from whom I have already quoted: "Before the end of the year 1795 paper money was almost exclusively in the hands of the working classes, employees and men of small means, whose property was not large enough to invest in stores of goods or national lands. Financiers and men of large means were shrewd enough to put as much of their property as possible into objects of permanent value. The working classes had no such foresight or skill or means. On them finally came the great crushing weight of the loss. After the first collapse came up the cries of the starving. Roads and bridges were neglected; many manufactories were given up in utter helplessness." To continue in the words of the historian already cited; "None felt any confidence in the future in any respect; few dared to make a business investment for any length of time and it was accounted a folly to curtail the pleasures of the moment—to accumulate or save for so uncertain a future."

This system in finance was accompanied by a system in politics no less startling, and each system tended to aggravate the other. The wild radicals, having sent to the guillotine first all the Royalists and next all the leading Republicans they could entrap, the various factions began sending each other to the same destination—Hebertists, Dantonists, with various other factions and groups, and, finally, the Robespierrists, followed each other in rapid succession. After these declaimers and phrase-mongers had thus disappeared there came to power, in October 1795, a new government—mainly a survival of the more scoundrelly—the Directory. It found the country utterly impoverished.

The first new expedient of the Directory was to secure a forced loan of 600,000,000 francs from the wealthier classes, but this was found fruitless. Ominous it was when persons compelled to take this loan found that for an assignat of 100 francs only 1 franc was allowed. Next a national bank was proposed, but capitalists were loath to embark in banking while the howls of the mob against all who had anything especially to do with money resounded in every city. At last the Directory bethought themselves of another expedient. Pursuant to this decision it was decreed that a new paper money fully secured and as good as gold be issued under the name of "mandats." In order that these new notes should be fully secured, choice public real estate was set apart to an amount fully equal to the nominal value of the issue, and anyone offering any amount of the mandats could at once take possession of government lands; the price of the lands to be determined by two experts, one named by the government and one by the buyer, and without the formalities and delays previously established in regard to the purchase of lands with assignats.

Perhaps the most whimsical thing in the whole situation was the fact that the government, pressed as it was by demands of all sorts, continued to issue the old assignats at the same time that it was discrediting them by issuing the new mandats. And yet in order to make the mandats as good as gold it was planned by forced loans and other means to reduce the quantity of assignats in circulation, so that the value of each assignat should be raised to one-thirtieth of the value of gold, then to make mandats legal tender and to substitute them for assignats at the rate of 1 for 30. Never were great expectations more cruelly disappointed. Even before the mandats could be issued from the press they fell to 35 percent of their nominal value, from this they speedily fell to 15, and soon after to 5 percent, and finally, in August 1796, 6 months from their first issue, to 3 percent. The plan failed.

From time to time various new financial juggles were tried, some of them ingenious, most of them drastic. It was decreed that all assignats above the value of 100 francs should cease to circulate after the beginning of June 1796. But this only served to destroy the last vestige of confidence in government notes of any kind. Another expedient was seen in the decree that paper money should be made to accord with a natural and immutable standard of value and that 1 franc in paper should thenceforth be worth 10 pounds of wheat. This also failed. On July 16 another decree seemed to show that the authorities despaired of regulating the existing currency and it was decreed that all paper, whether mandats or assignats, should be taken at its real value, and that bargains might be made in whatever currency people chose. The real value of the mandats speedily sank to about 2 percent of their nominal value and the only effect of this legislation seemed to be that both assignats and mandats went still lower. Then from February 4 to February 14, 1797, came decrees and orders that the engraving apparatus for the mandat should be destroyed as that for the assignats had been, that neither assignats nor mandats should longer be a legal tender and that old debts to the state might be paid for a time with government paper at the rate of 1 percent of their face value. Then, less than 3 months later, it was decreed that the 21,000,000,000 of assignats still in circulation should be annulled. Finally, on September 30, 1797, as the culmination of these and various other experiments and expedients, came an order of the Directory that the national debts should be paid two-thirds in bonds which might be used in purchasing confiscated real estate, and the remaining "consolidated third," as it was called, was to be placed on the great book of the national debt to be paid thenceforth as the government should think best.

As to the bonds which the creditors of the nation were thus forced to take, they sank rapidly, as the assignats and mandats had done, even to 3 percent of their value. As to the "consolidated third," that was largely paid, until the coming of Bonaparte, in paper money which sank gradually to about 6 percent of its face value. Since May 1797, both assignats and mandats had been virtually worth nothing. So ended the reign of paper money in France. The twenty-five hundred millions of mandats went into the common heap of refuse with the previous forty-five thousand millions of assignats: The nation in general, rich and poor alike, was plunged into financial ruin from one end to the other.

After the assignat and French inflation had run its course, the subsequent history of French finances and French money is extremely interesting. The French Government established the bimetallic system of money on a ratio of 15½ to 1 between the money metals, silver and gold, with the franc as the unit of value. This money system worked so well that later the French Government, to stabilize international exchange between several European countries, joined other nations in establishing international bimetallic system of money. We are told that on the 23d day of December 1865 (70 years after the passing of the assignat), France, Belgium, Italy, and Switzerland united in a monetary treaty to regulate the weight, title, form, and circulation of their gold and silver coins whereby they agreed to coin gold only the pieces of 100, 50, 20, 10, and 5 francs in weight, standard, tolerance, and diameter, and of silver only the 5-franc pieces of the standard weight and fine-

ness with unlimited coinage and legal tender for such coins, and further agreed to coin in amounts as herein prescribed for each state, silver coins of 1 and 2 francs, 50 and 20 centimes of reduced fineness and limited in legal tender to 50 francs, and that any nation could join the convention by adopting its monetary system in regard to gold and silver coins. On January 4, 1867, Mr. Berthemy, Envoy of France to the United States, submitted to Secretary Seward a copy of the monetary convention of December 23, 1865, and invited the United States to become a party to it. Senator Cockrell in his illuminating speech said that was the only time the United States was ever offered an opportunity to become a member of an international bimetallic union.

Here was a bimetallic system upon the ratio of 15½ to 1 maintained by France since October 30, 1785, and all our Government had to do was simply subscribe to it—there was no international complication connected with it—nothing to do but simply subscribe to it and agree that we would coin certain coins. In order to come to that we only had to strike out about 12½ grains of our standard silver dollar—reduce it to 400 grains—to bring it down to the ratio of 15½ to 1. This was an opportunity, an invitation to the United States to join an international bimetallic union of Europe and we are told that the distinguished Senator from Ohio, Mr. Sherman, and Mr. Ruggles, United States Commissioner to the international monetary convention of 1867, prevented it.

Following this silver was demonetized in this country in 1873 and the long struggle to remonetize silver and the effort to secure the adoption of a stable international monetary system ensued with the result that Congress passed a resolution embodying a declaration of policy as to international bimetallism. And while little or no effort has been made by succeeding administrations to carry out the provision of the declaration, the law still stands on our statute book which is inserted here for the information of my colleagues:

SEC. 311. Policy of United States as to bimetallism: It is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States, in the markets and in the payment of debts.

This declaration of our monetary policy was never repealed.

Who can calculate today the loss that might have been saved to people of the world if France and the United States had been successful in establishing a sound, adequate, workable money system by securing the adoption of international bimetallism throughout the world?

Hon. John Taber

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Tribune of July 30, 1949:

HE'D RATHER BE RIGHT

We wish to make acknowledgment of an honorable man. Representative JOHN TABER, of New York, the ranking Republican on the House Appropriations Committee and chairman during the Eightieth Congress, has made a remarkable speech depicting the ruin that attends Mr. Truman's design to convert America into the image of the socialist British state. The speech was remarkable because everybody knows what Mr. TABER said is true, yet truth has such an alien ring in these times that it comes as a striking novelty. Almost all political issues and arguments, being intended to accomplish political purposes, are wholly divorced from reality, but the people have been exposed to them so often that they expect nothing else.

The most striking utterance of Mr. TABER was also the simplest: "I do not care enough about retaining my seat in Congress to lie, cheat, and deceive my constituents."

This creed makes Mr. TABER almost unique among politicians.

Status Report of Antitrust Inquiry of Subcommittee on Study of Monopoly Power

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement:

Chairman EMANUEL CELLER, of the House Judiciary Committee, announced today that because of the enlightening and constructive testimony being offered in the subcommittee's investigation of monopoly power the preliminary hearings have been extended until August 5, 1949.

The subcommittee has been holding three hearings a week since July 11, 1949. It was originally planned to wind up the preliminary hearings in 2 or 3 weeks and recess until fall. But the testimony so far offered has been so enlightening and so valuable, Mr. CELLER said, that the hearings have been extended through August 5.

Witnesses who will appear before that date include Thurman Arnold, former Federal judge and former Assistant Attorney General in charge of antitrust enforcement; Leroy Lincoln, president of the Metropolitan Life Insurance Co.; Milton Handler, professor of law, Columbia University; Edward R. Johnston, of Chicago, chairman of division of trade and commerce committee, American Bar Association; Herman W. Steinkraus, president, United States Chamber of Commerce; and Herbert A. Toulmin, Jr., patent attorney, of Dayton, Ohio.

After the conclusion of the preliminary hearings on August 5, Mr. CELLER said, the hearings will be recessed until fall. During the interim the subcommittee will study the testimony adduced and other available material, especially for the purpose of bringing out the points where additional information is required. The President has expressed a deep interest in this investigation in a letter to Mr. CELLER, and has directed the various administrative agencies to cooperate with the subcommittee in every way as may be needed. When the hearings are resumed they will be directly aimed at preparing some parts of the needed legislation for introduction in time for the next session of the Congress. Mr. CELLER said he was hopeful that the committee would be able to present legislation early in the session that would meet the approval of Congress and do something more realistic about blocking the growth of monopoly than the present laws have accomplished.

Summarizing the hearings to date, Mr. CELLER emphasized that they have been designed primarily to outline the problem, suggest possible areas of study, and possible legislative remedies for study by the subcommittee.

Witnesses so far have included Government officials, lawyers, representatives of labor, economic experts, most of whom have been long-time students of the problem of monopoly and concentrated economic power. No representatives of big business have appeared to date. Some who have been invited have preferred to wait for a later stage in the investigation. Others have found it convenient to appear on the dates available between now and August 5.

Mr. CELLER pointed out that the record, so far, is therefore highly incomplete, but that it had developed certain very definite trends. Virtually every witness, he noted, has expressed concern over the growth of concentrated economic power in the hands of a few big corporations, and warned that this, if allowed to continue, cannot fail to result in big government.

Most of the witnesses have warned that if corporations are allowed to continue to grow the Government will either have to step in to regulate them or take them over in the public interest. Several witnesses have pointed out how uncontrolled monopoly in other nations of the world has led to fascism, communism, or some form of democratic socialism. They have warned that the same thing is likely to happen here.

The witnesses who have voiced these warnings have invariably regarded such developments as unsuited to the American tradition and urged that the Government take effective action to stop the further growth of concentrated economic power before our economic system, if not our political system, is destroyed.

So far, Mr. CELLER said, three courses of action have been suggested. One type of remedy consists in specific amendments to the existing laws. Practically all witnesses, for instance, have favored the plugging of the impressive loophole in the antitrust laws by amending section 7 of the Clayton Act, concerning mergers of corporations. Happily, the House Judiciary Committee has already ordered reported the CELLER bill, H. R. 2734, for that purpose to the House. Numerous other suggestions have been offered.

A second kind of remedy was suggested by several witnesses, namely to repeal some or all of the acts granting exceptions to the antitrust laws such as the Miller-Tydings price maintenance law and the Reed-Bulwinkle law exempting the railroads from the antitrust laws. Many of the witnesses, however, including most of those who suggested patchwork remedies, have held that the antitrust laws require serious reconsideration in the light of conditions that have arisen since 1890. Mr. Adolph Berle was particularly emphatic on this point, calling attention for

example to the concentration of new capital funds in the larger corporations, and the secondary effect of tax laws, as forces pressing toward concentration so powerful as to frustrate the enforcement of the present law.

There was also some testimony indicating that concentrations may have proceeded beyond the size needed for efficiency. Dr. Walton Hamilton was of the opinion that over-all efficiency has been promoted in this country not by size but by freedom of entry into industry for new men with new ideas, and that concentration therefore tends to cause a lack of fresh enterprise and to relax progress in many of the industries where it is found.

Mr. Berle and several other witnesses have testified more or less openly that in the end, the free enterprise system cannot be preserved without a direct attack on bigness wherever it grows to the point that allows administered prices and stands in the way of the entry of new firms into an industry. Again and again the statement appears that bigness is the main cause of socialism or fascism in one form or another.

Another witness who took the general viewpoint that bigness, in and of itself, is becoming a national problem, was Dr. Walter Adams, assistant professor of economics at Michigan State College. Dr. Adams suggested a broad program of legislative action to stop the growth of monopoly and even to break up existing monopolies. He said that by pursuing a positive antimonopoly and antidepression policy, which is what the Communists least expect us to do, "we can go a long way toward preserving our competitive economic system and the social and political values concomitant therewith."

Mr. Berle and Mr. Morris Ernst called attention to the lack of a unified policy toward competitive industry, among the agencies of the Government dealing with antitrust enforcement, and between them and the agencies that buy materials in large quantities. This point was emphasized by the Hoover Commission.

The subcommittee notes these various types of evidence that have been put before it, and looks forward with interest to the further information to be obtained in the remaining hearings of this series. After a period for digesting this information, the subcommittee plans to construct a program of further hearings to cover specific branches of the subject.

Converting Coal to Gas at Gorgas, Ala.

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. ELLIOTT. Mr. Speaker, there is today being conducted by the United States Bureau of Mines and the Alabama Power Co., at Gorgas, in Walker County, Ala., in the congressional district which I have the honor to represent an underground coal-burning experiment, which we all hope will determine whether or not coal can be gassified underground, over a large area and which we all hope will result in the transfer of the energy inherent in the coal to a combustible gas which can be turned into industrial uses. Within the range of possibility is the conversion of the gas from the coal burning underground into synthetic-liquid fuels.

This experiment has attracted wide attention throughout the world. Already South Africa, Canada, England, Belgium, France, Italy, and Newfoundland have sent observers to examine this experiment.

We are all hopeful that the experiment will have far-reaching effects and that it will provide the answer for the uses of thin-seam coal which abounds in the Seventh Congressional District of Alabama, as well as in many other districts throughout the country.

As a part of my remarks, I am including an article from the Sunday, July 17, 1949, issue of the Birmingham News—Age-Herald by Mr. Irving Beiman:

WALKED OVER HOT COALS, TALKED OF PROGRESS

(By Irving Beiman)

James L. Elder walked over a burning inferno of coals at the Gorgas mine of the Alabama Power Co.

The temperature of the blazing coals was an estimated 2,200 degrees Fahrenheit.

Mr. Elder, supervising engineer for the United States Bureau of Mines in the underground coal-burning experiment at Gorgas, was 150 feet above the underground fire, of course.

But you could feel the heat through the walls of the metal pipe leading out of the burning bed.

NO RASH TALK

Mr. Elder wore a big smile.

He's in the first stages of the big second experiment at underground coal gasification. Being of a scientific turn of mind, he's not making any rash statements about the success of the current experiment, now in its fifth month.

His smile perhaps told more than some of the things he said.

But regardless this is the first report on progress of the Gorgas experiment since Thomas W. Martin, Alabama power president, dropped a thermite bomb 150 feet underground last March to set fire to the Pratt seam of the company's Warrior coal field at Gorgas.

$500,000 INTERESTED

The United States Government is interested in the experiment to the extent of $500,000 in cash and some lend-lease equipment (a huge air compressor) diverted from shipment to Russia and brought to Birmingham.

The Government realizes its reserves of gas and oil are dwindling. A fuel substitute must be found.

It may be that coal is the answer—coal that cannot be mined profitably now, but perhaps can be burned underground.

The Alabama Power Co. is interested in that angle and also in the possibility of generating enough heat to turn a turbine to make electricity.

So the utility and the Government are cooperating in this venture. The company furnished the coal bed, containing some 500,000 tons of coal, and engineering assistance.

TWO CONCLUSIONS

Two conclusions are drawn from the first 4 months of the current experiment:

1. A sensible heat gas can be made.

2. Combustion can be and is being maintained.

Those in charge of the experiment have at times brought off the bed of burning coals a combustible gas that will burn when it comes out of the mine and is set afire. But this is not done consistently.

"We're aiming at a combustible gas to bring energy from coal to the surface as a sensible heat in any sort of useable form," Mr. Elder said.

NO LIMIT REACHED

Mr. Elder attaches utmost importance to a third finding:

"No limit has been reached as to how much coal can be burned," he said.

Right now 15 or 16 tons of coal per day are being burned on the average. Occasionally the amount has gone as high as 20 or 22 tons per day. Eventually, the total will go as high as 50 tons or more being burned per day, at the mine.

The experimenters have abandoned plans to use steam and oxygen to bring up the B. t. u. (British thermal units) content of the gas formed by underground burning of coal for the time being.

They are simply going ahead with use of the huge air compressor, which forces air over the burning coal bed.

"It's cheaper that way," Mr. Elder explains.

Developing an economical fuel is a big reason for the experiment.

Mr. Elder believes the experiment will continue at least a year longer.

NOT FOR HOME USE

It attracted observers from South Africa, Canada, England, Belgium, France, Italy, Newfoundland, and other countries.

The observers have all gone home. What they saw is believed to have been enough to stimulate similar experiments in their native lands. At least, that is the information reaching the Gorgas experiment station.

The sensible heat gas now being produced is said to average from 15 to 40 B. t. u.'s per cubic foot.

It is not suitable for domestic use, but can be used as a source of power—to heat a boiler, to make steam, to turn a gas turbine, which will make electricity.

The gas range in a home can use natural or manufactured gas. Natural gas has around 1,000 B. t. u.'s (heating units) per cubic foot; manufactured gas, around 500.

BLINDFOLD WORK

"It's too early to talk about products, power gas to generate electric power, as yet," Mr. Elder insists. "But we think we can get a good combustible gas.

"Right now, I can run a boiler part time with the gas we're getting.

"Give me 6 months more and I think I can run that boiler all the time. There are still some kinks to be ironed out. We haven't got a combustible gas consistently yet.

"We can't see what's going on underground. Some of the air is not hitting the hot spot. There's a by-pass somewhere."

TEST BELIEVED O. K.

Mr. Elder is trying to produce consistently a heat gas containing 100 B. t. u. which would be sufficient to operate a gas turbine and could be burned under a boiler located at not too great a distance from the source.

A small pipe leading into a small tank from the burning coal bed is pointed out.

By-products from the burning coal go into that tank.

"Right now we're getting some tar and light oil, in a mixture," the genial supervising engineer, a Penn State graduate explains.

The coal is being burned in a sealed-off area 300 feet long and 150 feet underground.

When that is burned out, the fire will be spread to the remaining 1,200 feet of coal bed specially prepared for the experiment.

Those in the know feel that the experiment thus far has been eminently successful.

It may mean that millions of tons of thin-seam coal can be used at economical costs. Much of Alabama's coal is in thin seams and not economical to mine by conventional methods.

Chemists will determine whether the heat gas created in the experiment can be made into synthetic fuels such as gasoline, Diesel oil, and other chemicals.

The idea of burning coal underground is known to be spreading throughout the world.

The Russians claimed the processes have been applied on an industrial scale at several installations. They reportedly have produced a power gas with a heating value of 100 B. t. u. per cubic foot and a synthetic gas having a heating value between 200 and 300 B. t. u.

But the iron curtain hangs over the Russian experiments.

The Gorgas experimenters are going ahead. The coming months will tell the complete story.

Production of Strategic Metals

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. HILL. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD a news release on mining which I issued from my office July 30, 1949:

STATEMENT BY REPRESENTATIVE WILLIAM S. HILL, OF COLORADO

Many strange philosophies have originated or come out of the White House during the Democrat reign, but the latest dictum of the President certainly is one that will shock the people of the Nation.

It is this: Mr. Truman has declared that he is against an incentive for the stock piling of strategic metals by small American miners because it interferes with his program of giving American dollars to rejuvenate competing industry in "backward" nations. He went even further and picked out Chile as the country whose mining interests must be helped before he will approve legislation aiding American miners to produce such essential metals as copper, zinc, and lead.

Legislation to encourage small mining operations in the production of these strategic metals was passed by the last Congress. It was vetoed by Mr. Truman. A similar bill was introduced at this session, was approved by a subcommittee of the Public Lands Committee, and finally by the full committee.

This bill is opposed by the Bureau of Mines, undoubtedly on orders from the White House. Consequently it reposes in the Rules Committee. Democrat sponsors of the legislation were told that the bill would have to be cleared by the White House before the Rules Committee would bring it to the floor.

A few days ago six Democrat Representatives went to the White House and the President told them he disapproved the entire domestic mining program.

After expressing his disapproval of the legislation to aid small American miners, the President got up from his desk, walked over to a big globe, whirled it around, and when it stopped he pointed his finger at Chile and said:

"Gentlemen, this is Chile. It is a backward nation and it is a copper-producing nation. We have to take care of the backward nation; we must give them help, even if it does hurt the miners of the United States."

When the President was asked what he thought was going to happen to the mining interests in Arizona if the incentive bill did not pass, he replied that the mines never should have been developed in the first place.

So, there is the latest White House philosophy. Do good to Chile, help that nation produce its copper, but don't turn a finger to help the small miners in the United States, upon whom the country counted so heavily during the war.

And the President also followed through by declaring he opposes restoration of excise taxes on copper, lead, and other metals from abroad. He is quoted as saying cryptically that "restoring the duties on the metals might make the situation worse than it is now." What does that mean, can anyone understand such a statement?

So, the United States will go right ahead purchasing copper from foreign countries, without an excise tax, but we won't turn a finger to help our own miners.

Supposedly, Mr. Truman will have us help the mining business in Chile and other backward nations while our own valuable strategic metal mines deteriorate and remain idle.

I am told that the Congressmen who went down to the White House were "stunned and shocked" by the President's thinking.

So the mine incentive bill which would help a great industry and would build a stockpile of valuable metals for any emergency will die in committee while mining interests of Chile can look forward to a shot in the arm from the pocketbook of the good old suffering American taxpayer. Some philosophy!

Outlook in Textile Industry

EXTENSION OF REMARKS
OF
HON. HAMILTON C. JONES
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. JONES of North Carolina. Mr. Speaker, representing a district and a section of the South which is located in a highly developed textile area, the Tenth Congressional District of North Carolina, it was very pleasing to me to see a most interesting and well-written article by Mr. J. A. Daly, staff writer of the Charlotte (N. C.) News, offering definite proof of a marked improvement in the condition of the textile business which has developed within the last few weeks.

It shows an upsurge in primary market buying of textile mill products which should be of interest to the business interest of the Nation and is in conspicuous contrast to the rather depressed conditions which have prevailed in this industry during a greater part of 1949. Many mills have had to reduce their working forces and their shifts during this year and there has been a great recession in the total output of the textile industry during 1949 as contrasted with the years just preceding it.

Mr. Daly's article is most encouraging to many businessmen who are looking for signs of the return to more normal business conditions. There is no question but what the business interests of this Nation are so interlocked and interdependent that the improvement in one frequently has a most beneficial result on many other businesses. For this reason, I consider Mr. Daly's article of interest to the business world and Nation in general.

The article follows:

The upsurge in primary market buying of textile mill products, forecast early this month, was in full bloom today. Dispatches from New York's Worth Street said that prices were firm with supplies becoming scarce for deliveries of desirable cotton fabrics, unfinished, before early September.

As was clearly made known today in reports from Carolina textile manufacturers engaged in Nation-wide operations, there is one fly in the ointment as regards this abrupt and broad expansion in textile trade. That uncertainty is whether or not buying will be restored to an approximately normal level, considering the national income, the increased standard of living, and the greater population, as compared, for instance with 1939.

The textile industry's spokesmen in various communications have emphasized that they do not consider the current trade as an incipient boom. As a matter of good business judgment, they prefer to avoid any more experience soon with boom conditions. At the same time, they earnestly desire stabilization of the textile trade volume at levels adequate for the Nation's needs, and for full-time, 5-day week operations by at least two shifts of workers.

In the course of the past 2 weeks, prices of many cotton textiles in the unfinished state have advanced in prices as much as one-half cent per yard. The buying wave which surged over the market since the unusually extensive vacation period for the mill operatives ended 2 weeks ago, has resulted in sales of many millions of yards of cotton goods.

This is in sharp contrast to conditions which persisted in the cotton textile markets throughout the first half of this year. In that period, hand-to-mouth buying was the accepted practice. This compelled the textile manufacturers to curtail drastically while converters, dressmakers, bag manufacturers and other consumer industries reduced their admittedly excessive inventories.

Another sharp contrast was presented today and during the latter days of the past week in New York's great market when some cotton textiles were bought for deliveries as far forward as next December 30. A notable example was waffle cloth, a popular fabric for dresses. A market "run" also is being experienced in piques, another fabric popular with the womenfolks.

This rebound in the primary textile business has not been one-sided in favor of cotton cloths, however, because finished cotton goods, like chambrays and denims, have been sold heavily by the mills.

Chambrays and denims are among the popular, serviceable fabrics required for work clothing. And there seems to be an insatiable demand for work clothing.

Furthermore, the cotton-yarn spinners—an industry centering in nearby Gaston County—have experienced a brisk upturn in their sales. Still more encouraging to these spinners, perhaps, is the currently reported tremendous volume of potential yarn sales involved in a flood of inquiries from knitting mills and other consumers of carded and combed cotton yarn.

And, to make the betterment marketwise unanimous, reports from New York and Boston over the week end also told of sturdy expansion in demand for rayon fabrics, nylon hosiery, and fall-season woolens and worsteds. Prices have held steady in the fine hosiery and wool-goods markets.

This textile trade summary is based on a flood of reports which has flowed over all divisions of the Carolinas dominating textile industry in the course of the past 10 days—particularly in the latter days of the past week. And Associated Press dispatches early this afternoon from New York said "the cotton textile market was steady today, with activity greatest in the print cloths."

It may help clarify the situation for readers in business other than textiles to explain that print cloths are regarded as the

bellwether of the trade in unfinished cotton textiles in Worth Street, New York, America's greatest textile market center. Print cloths to cotton textiles represent what equities of U. S. Steel, American Telephone, and General Motors, for instance, are among the blue-chip common stocks.

Among print cloths, the 80-square cloth is the basic fabric. About a year ago, 80-square print cloths were selling in New York from 35 cents per yard. Today, print cloths for deliveries by the mills late in August and thereafter are selling at 18 cents. Three weeks ago, ample supplies for restricted demand were available at 17⅝ to 17½ cents per yard.

The various divisions of the textile industry, especially the cotton cloth and yarn-producing mills, have taken a licking, so far as selling prices of their products are concerned.

There are many ways of figuring just how hard cotton textiles have been hit by the recession psychology—which, however, seems to have largely been dissipated in the past 2 weeks.

One way of figuring the price reduction is by comparison of cotton-yarn prices. It may be explained that carded yarns represent the first manufacturing process above the raw cotton. Combed yarns are somewhat more expensive to produce, involving additional processing.

Inasmuch as textiles occupy an influential place in the American economy, developments over the next few weeks may prove that the apparent end of the flight from inventories was significant for the national economy. In any event the resistance which textiles have shown during the past year may help the industry in its striving to live down its boom-or-bust tradition.

There Is Nothing To Fear but Fear Itself

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. MULTER. Mr. Speaker, for a long time we have heard dire predictions about the terrible depression that the country is about to go into. I refuse to share those fears. The following article, which appeared in the Brooklyn Eagle of July 31, sustains my view and should be enheartening to others:

BUSINESS OUTLOOK

(By J. A. Livingston)

Corporation directors are acting even as you and I. They see business volume dropping, profits shrinking. They know if that trend continues for another 6 months or so, they'll have to reduce or eliminate dividends. But they're hopeful. They're willing to give the economy and profits a further chance to make good. So, even though corporate earnings are off about 20 percent from a year ago, dividends are up 8 percent.

This constitutes standard practice. Corporation officials don't like to have jumpy dividend records—50 cents a share one quarter, $1 the next, and nothing the third. Therefore, the tendency is to maintain dividend rates, despite ups and downs in profits. The policy imparts greater value—salability—to the common stock, when, as, and if the company wants to raise additional capital.

In the second quarter, corporations paid out an estimated 52 percent of their earnings in dividends as against 48 percent in the first quarter, and 38 percent throughout 1948. Back in 1939, the proportion was much higher—76 percent, and in 1929 it was 69 percent.

DIRECTORS' DILEMMA

Over the years, directors customarily let stockholders have about 6 out of every 10 dollars of earnings. That high standard may come back in the current era. Corporations have not found it easy to raise money by selling common stock. So they've been holding on to the shareholders' money—plowing back earnings—in order to finance postwar plant expansion.

A vicious circle results. Because corporations cling to earnings, dividends tend to stay low. Therefore, investors seeking high returns are less inclined to buy stocks. In turn, stock prices tend to stay low, and corporation directors are less inclined to float stock on the market. Their holding on to earnings increases the task of raising new money by selling common stock.

Though companies are finding it harder to keep pace with past earnings, they're not going into the red. In my tabulation of the first industrial companies to report second-quarter earnings, 116 showed decreases in profits from the second quarter of 1948, 63 increases. However, only seven reported deficits.

EXCEPTIONS TO THE TREND

Excluding General Motors and the Big Three steel companies (because of their dominating size), the over-all decline for the companies in the tabulation was 18 percent from the second quarter a year ago. (The Council of Economic Advisers estimates earnings in the second quarter were off 22 percent from a year ago.) For the first half, the drop was 9 percent. Industries which managed to buck the downtrend (on the basis of these early returns) were auto and auto parts, cement, drugs and cosmetics, railroad equipment, the Big Three steel companies (United States, Bethlehem, and Republic) tobacco, and beer. Utilities showed a good gain over a year ago.

The following table shows the change in earnings from last year on (1) a quarterly basis, and (2) a half-yearly basis.

Industry	Percent change— From second quarter 1948	Percent change— From first hal 1948
Automobiles, parts [1]	26	13
Beer	66	64
Building materials	−18	−13
Cement	19	28
Chemicals	−12	−4
Coal	−14	−15
Copper, zinc, etc	−72	−18
Drugs, cosmetics	3	31
Electrical equipment	−32	−17
Foods	−4	2
Household equipment	−61	−63
Iron and steel [2]	−20	6
Big Three steel companies	67	78
Machinery	−15	11
Office equipment	−53	−41
Oil	−37	−29
Paper and pulp	−53	−45
Railroad equipment	8	15
Retail trade	−52	−64
Textiles	−58	−40
Tobacco	12	10
Tools, hardware	−34	−20
Miscellaneous	35	9
Total industrials [3]	−18	−9
Utilities	24	22

[1] Excludes General Motors.
[2] Primarily small producers.
[3] Excludes General Motors and Big Three steel companies.

The decline reflects internal adjustments of industry. Once prices began to drop, manufacturers, wholesalers, and retailers curtailed inventories. Whereas in the first 5 months of 1948, inventories rose two billions, in the first 5 months of this year they decreased two billions. Thus, the net change in purchasing—of businessmen buying from one another—was at an annual rate of more than eight billion. That's a lot of business to poof away—just like that.

INVENTORY TURN-AROUND?

Some turn in inventory policy may be at hand. The drop in business loans, which has been continuous since January 19, shows signs of subsiding. True, last week, Federal Reserve member banks reported a decline of ninety-seven millions. But seventy-five millions of that comprised a large pay-off in New York City by a utility. In six Federal Reserve areas—Cleveland, Chicago, St. Louis, Minneapolis, Kansas City, and Dallas—loans for commercial, industrial, and agricultural purposes expanded.

This suggests that a strategic change in business policy may be at hand. Businessmen, apparently, can't hold off purchases any longer. Their inventories are too low. The continued upturn in nonferrous metal prices—lead rose this week again—supports the thesis.

Myths About China Reds Exploded in 1947

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. JUDD. Mr. Speaker, among the American reporters recently killed in the tragic plane crash in India as they returned from Indonesia, were two whose loss was irreparable as far as understanding present-day China is concerned, William H. Newton and George Moorad. Both had proved their ability to see through all the propaganda regarding the alleged whiteness of the Communists and the blackness of those fighting Communism. I have just come across again a penetrating report sent in almost 2 years ago by Bill Newton, not gossip from the bars of Shanghai, but facts from the interior of Shantung Province. How much confusion and how many costly mistakes our Government could have avoided if it had been willing to accept then the truth about the Communists instead of allowing itself to be hoodwinked for years by leftist propagandists and sentimental wishful thinkers. The news story follows:

MYTHS ABOUT CHINA REDS EXPLODED

(By William H. Newton)

WEIHSIEN, CHINA, September 9, 1947.—Visiting the besieged cities and battle areas of war-torn China and talking with the soldiers and people make it possible to explode some myths about Chinese Communists and about the Chinese Nationalist Government.

Myth No. 1 is that the Communists generally are beloved by the common people of China, the poor peasants and villagers. The facts, so far as this area of Shantung Province is concerned, are that the Communists are greatly feared by rich and poor alike.

TOWNS ABANDONED

The city of Yitu, for example, has been occupied by the Communists for the past 6 months. During that time all business ceased, all stores were closed, mission schools and hospitals were shut, and a great many people fled. The same thing happened in Linchu, and in village after village.

Myth No. 2 is that the Communist army is a "people's army," expressing the rebellion of the ordinary peasant against the Nationalist government. I talked to dozens of Communist army prisoners captured by the Nationalists after the battle of Linchu. Scarcely a one had any idea what the word "communism" meant. Most had been forced into service and compelled to fight. A few were former Nationalist soldiers who had been captured in previous battles and compelled to fight the Government.

Myth No. 3 is that the Communists permit any degree of religious freedom in areas they control. The sole exception to this is those few cities where there are foreign missionaries who might possibly report on the situation. Even in those instances religious worship is discouraged and Chinese pastors persecuted and humiliated.

CLERGY CALLED SPIES

Chinese Presbyterian and Baptist pastors frequently are accused of being spies for the Americans and driven out of town. Catholics generally are persecuted most of all.

In the village of Chinchih, for example, Communists smashed into the Catholic church, seized everything of value, and gave the German priest the equivalent of 5 cents in American money to pay for the damage. In Changchia, the Chinese Presbyterian pastors were forced to flee and their homes deliberately destroyed.

In the village of Changtuan, Communist political advisers collected Bibles which had been distributed by Presbyterian clergymen and burned them. In Shawo, the Communists attempted to force a Presbyterian pastor to order all young members of his church to attend Communist meetings. He refused. Of the 50 Presbyterian churches in the Weihsien area, only four—which are in Nationalist territory—are permitted to worship freely.

Throughout the villages in north Shantung Province, Christian pastors have been thrown into jail by the Communists.

ARMY SEIZES CROPS

Myth No. 4 is that the highly touted land-reform program is winning the peasants to the Communist side. It is true that in some cases land has been taken from landlords and distributed among the peasants. But in return, the Communists levy heavy taxes on it, appropriate whole crops to feed Communist armies, and press farmers who receive the land into military service.

There is little enough respect for political freedom or human rights in any of China. There is absolutely none in Communist areas, except, on occasion, for the show places which foreigners occasionally are permitted to visit.

Although they are utterly ruthless in pursuing their political goals, Chinese Communist leaders generally are less inclined toward graft than Nationalist Government officials traditionally are. But even this frequently heard criticism of the Chiang Kai-shek government has outstanding exceptions.

BENEVOLENT NATIONALIST

One of the exceptions is Maj. Gen. Chang Tien-tso, special commissioner of the eighth area of Chantung Province. General Chang is 40, a tall, pleasant-faced man. With the entire area under Communist reign, General Chang organized a cooperative relief committee which charters planes to bring in supplies and carry out local products. Merchants who ship goods out are taxed according to the value of merchandise—and the money used to feed the tens of thousands of refugees who fled here from the Communist armies.

He organized a school for midwives and taught them sanitation and elementary medicine. He got schoolbooks and opened rural schools through the area. He got a supply of DDT and used it in the villages for insect control. The Communists have never been able to get a foothold in the counties he administers. Through his area runs the only section of the Tsingtao-Tsinan Railway which has not been torn up by Communist guerrillas. About 40 miles of the railway is in daily operation.

It is true that the Nationalist armies also levy tribute on villages and farms which they pass. That seems to be one of the bitter necessities of war for both sides.

But here in Shantung Province, at least, when the Communists take a town the people flee. And when the Nationalists take it back the people come home again.

The Communist propaganda, as always, sounds good. But that's the way it is.

Welfare of Indians in North Dakota

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. BURDICK. Mr. Speaker, the Public Welfare Board of North Dakota had outlined the situation of Indian welfare in North Dakota by a thorough investigation of the facts, and I trust it will make an impression on Congress. When dire suffering strikes these people, Congress cannot move fast enough to relieve them. Since we ourselves forced these Indians into wardship relations with the Government, with a clear obligation to treat them as wards of the Government, and since we ourselves took most of their lands for 10 cents per acre, there is no possible way the Government can now avoid its obligation. The present conferees on the Interior appropriation bill, will have to restore some of the funds demanded or the same starvation situation of last winter will take place again. It is too much to ask of the people of North Dakota to continually help these Indians and fulfill an obligation that is not theirs but that of the United States Government. The report follows:

RESOLUTION ADOPTED BY THE PUBLIC WELFARE BOARD OF NORTH DAKOTA AT ITS JUNE 1949 MEETING

Whereas for the past 2 years Indians in need of general assistance on the reservations in North Dakota, particularly the Indians living on the Turtle Mountain and Fort Totten Reservations, and, to a lesser degree, those living on the Standing Rock and Fort Berthold Reservations, have suffered acute distress because of the lack of funds available for their care; and

Whereas the Public Welfare Board of North Dakota, as the official agency created by the legislative assembly of North Dakota in 1935, is charged with the responsibility of supervising public welfare in North Dakota, including provision for care of all its citizens even though the Public Welfare Board of North Dakota, as a State department and a State agency, is not primarily responsible for the actual provision of the funds and/or commodities because in North Dakota the county is primarily responsible for the relief of distress and the provision of funds for those in need; and

Whereas the Public Welfare Board of North Dakota believe that substantively, equitably, and morally the Federal Government is responsible for those people who are citizens of North Dakota and the United States who are residing on the Indian reservations; that the Federal Government acted within its powers and duties in dealing with the Indian situation years ago and one of the effects of this operation was to place great numbers of Indian families in certain restricted and nonproductive areas where the Federal Government apparently proposed to take care and rehabilitate these persons until they became self-supporting; that the initiation of this step by the Federal Government was its initiation wholly and completely; that apparently it has failed over the years in dealing with this humanitarian and always distressing problem; that the last few years the high cost of living, the lack of employment available, and the increasing interest of our citizens in the welfare of these people has succeeded in making this always distressing problem acute; that the Federal Government has failed dismally and signally in making adequate provision for its own citizens; that it is the opinion of the Public Welfare Board of North Dakota that the Office of Indian Affairs, in the Department of the Interior, has lacked vigor in prosecuting its request for funds, in not asking for enough money, in not keeping tuned and keyed to the facts of the moment; that it is the opinon of the Public Welfare Board of North Dakota that even though the Office of Indian Affairs, in the Department of the Interior, did prosecute vigorously its request for funds for the relief of distress on a minimum basis of United States citizens, that the Congress of the United States also needs to modify its method in view of this situation and to appropriate at the beginning of the fiscal year sufficient funds and not rely on an eccentric system of taking care of human beings by uncertain and too-late deficiency appropriations only secured by trouble, expense, and the mobilization of pressure; and

Whereas it is the opinion of the Public Welfare Board of North Dakota that the time to secure funds for the relief of human distress is before the distress occurs; that somewhere, somehow, some reliance must be placed on estimates for public assistance for Indians and in the same way that it is placed upon the estimates for public assistance for whites; and

Whereas the Public Welfare Board of North Dakota received an appropriation of $100,000 from the 1949 legislative assembly; that this appropriation was given only for the humanitarian purpose of assuring that if worse came to worse that at least a minimum amount would be available to keep these people alive; that the Public Welfare Board of North Dakota vigorously believe that it is up to Washington to do something adequately and ahead of time; that it is the firm belief of the Public Welfare Board of North Dakota that if dynamically vigorous steps are not taken in this area ahead of time that this coming winter will make three in a row that funds have not been available in an adequate amount and will make three in a row that United States citizens have had to suffer: Now, therefore, be it

Resolved, That it is the sense of this board that the Representatives in Congress from North Dakota be petitioned to exercise their good offices to effectuate the appropriation and allocation of adequate funds based on estimates given by the State and county officials in North Dakota so that our American citizens may have some semblance of security for the dire necessities of life in the cold North Dakota wintertime; and be it also

Resolved by the Public Welfare Board of North Dakota, That the Representatives in Congress from North Dakota be commended on their past efforts to secure adequate funds for this purpose.

Congratulations, Mr. President

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. MULTER. Mr. Speaker, the announcement of the President's intention to nominate Attorney General Tom Clark to the United States Supreme Court and to nominate Senator J. HOWARD MCGRATH to the high office of Attorney General have met with wide acclaim. Following is an editorial which appeared in the Brooklyn Eagle of July 31, together with an article by Ernest Lindley which has been reproduced in the press from coast to coast:

[From the Brooklyn Eagle of July 31, 1949]

THE CLARK AND MCGRATH APPOINTMENTS

Attorney General Tom Clark, whom President Truman has chosen to succeed the late Justice Frank Murphy as a member of the United States Supreme Court, brings to this high office qualities substantially different from those that marked his predecessor. Justice Murphy was a militant idealist with a passion for human rights, one who spoke with great fervor on issues concerned with the dignity of man. While the record of Attorney General Clark has at times been subjected to criticism, it is recognized quite generally that he possesses professional competence which holds the promise of development into a judicial capacity commanding respect.

Following the death of Justice Murphy there were indications that President Truman would give the selection of a new Justice long and careful study. His rather hasty nomination of Attorney General Clark is accordingly attended by considerable surprise. Before naming a member of the Nation's highest judicial tribunal, whose decisions govern either in an intimate or a remote way many aspects of the national life, it would seem to be a wise practice to study the records and the qualifications of members of Federal and State judicial systems throughout the Nation. Among them are men of great talent and distinction who would adorn the Court and who deserve recognition of their services.

In his various public offices Senator MCGRATH, a former Governor of his State and now chairman of the Democratic National Committee, has displayed marked ability and energy. His fitness for the office of Attorney General as successor to Mr. Clark cannot be questioned. He will fulfill his responsibilities capably and conscientiously. It is to be presumed, of course, that he will retire as chairman of his party's organization. But the fact that he has held this office in no way impairs his availability for the post of Attorney General.

NEWS BEHIND THE NEWS
(By Ernest Lindley)

TOM CLARK CALLED GOOD CHOICE FOR HIGH COURT ON DEPARTMENT OF JUSTICE RECORD

The Attorney Generalship is one of the traditional routes to the Supreme Court. McKinley, Wilson, and Coolidge each appointed an Attorney General to the Suppreme Court. Franklin D. Roosevelt thus promoted two of his four Attorneys General: Robert H. Jackson and the late Frank Murphy. In addition, he appointed Stanley F. Reed, who was at the time Solicitor General.

Tom Clark may not become so great a jurist as the Attorney General whom Coolidge appointed to the Court and Roosevelt promoted to Chief Justice: Harlan F. Stone. He may not have so sharp a mind and so pungent a pen as Robert H. Jackson. But he has the intelligence to make a solid jurist, and temperamentally he is better fitted for the job than have been several members of the Court over a long period, stretching at least back to Woodrow Wilson's ex-Attorney General, James C. McReynolds.

Clark was hardly known in Congress and in Washington generally when he became Attorney General in 1945. He had made a very creditable record during his years in the Department of Justice. As Attorney General he has been in hot water frequently. But, in almost every case, the heating was done by others and Clark managed to extricate himself without suffering serious burns.

He is a likeable and gregarious man. But he has also acquired in Congress and in the Washington corps a large measure of respect—not for brillance, perhaps, but for being a decent, straight-shooting official who would rather shoulder unwarranted blame than pass the buck.

That he is a Democrat and a Truman partisan is of no special importance, given the present complexion of the Court. The issues which have divided the present Court have not been partisan, or, in many respects, so basic constitutionally as those which caused the long fight between Roosevelt and the preceding Court.

While Clark has no judicial record on which to found a prophecy, his background and temperament probably will predispose him toward the conservative side of the Court, rather than toward the more radical group with which the late Justice Murphy so often identified himself.

Senator J. HOWARD MCGRATH'S fitness for the Attorney Generalship is generally recognized in Congress. He had administrative experience as Governor of Rhode Island. He resigned as Governor, midway in his third term, to become Solicitor General of the United States. He resigned as Solicitor General to run for the Senate. He is an able political manager. But he also has intelligence and integrity.

The appointment to the Cabinet probably will put him in line for the next vacancy on the Supreme Court. He may be expected to resign as chairman of the Democratic National Committee—a job which he did not seek but for which he was drafted—if he accepts the Attorney Generalship.

Both these appointments are, of course, rewards for political service. There is nothing wrong in that, however, provided the individuals selected are qualified for the rewards. I suspect that some of the newspapers which are criticizing the Clark appointment, in particular, on the ground that he has been an active partisan, will find his philosophy as a judge to their liking.

Reciprocal Trade Agreements and the World Trade Problem

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Monday, August 1 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an excellent address by Norman Burns, adviser, Office of International Trade Policy, United States Department of State, before the State Planning and Development Agencies, Department of Commerce Building, on July 27, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RECIPROCAL TRADE AGREEMENTS AND THE WORLD TRADE PROBLEM

(By Norman Burns, adviser, Office of International Trade Policy, U. S. Department of State)

Certain people traditionally opposed to reciprocal trade agreements in both fat and lean years are now asking: Should we abandon the reciprocal trade agreements program because it encourages imports, thereby creating domestic unemployment and aggravating the current business recession?

The question is timely—but not new. High tariff proponents advanced similar suggestions during congressional debates on the Smoot-Hawley tariff bill in 1929–30. Imports, they said, created unemployment and aggravated the depression. A prominent Senator, urging passage of the Smoot-Hawley bill, declared in June 1930:

"If this bill is passed, this Nation will be on the upgrade financially, economically, and commercially within 30 days, and within a year from this time we shall have regained the peak of prosperity and position we lost last October." (CONGRESSIONAL RECORD, June 13, 1930.)

Other people, more familiar with the intricate processes of commerce, realized that trade restrictions by one large country, at the beginning of a recession, might start chain reactions in other countries leading to more and more trade restrictions and to the inevitable defeat of the very objectives they sought to attain, Henry Ford pointed this out very clearly when he opposed the Smoot-Hawley tariff bill in May 1930:

"You say it is the contention of those who are backing it that it will revive industry and cure unemployment. I say it will have precisely the reverse effect. It will stultify business and industry and increase unemployment. When you prevent your customers from purchasing your goods, you are absolutely throwing men out of work. Instead of building up barriers to hinder the free flow of world trade, we should be seeking to tear existing barriers down. People cannot keep on buying from us unless we buy from them, and unless international trade can go on, our business will stagnate here at home." (Washington Daily News, May 20, 1930.)

The Smoot-Hawley Tariff Act of 1930 was followed by the British Imperial Preference Agreement of 1932, and the adoption of quotas, exchange controls, and clearing agreements in most of the continental European countries after 1933. This sequence of trade restrictionism, and the impetus it gave to the downward spiral of the world economy in the early 1930's, should be remembered by all of us—and especially by those eager to repeat the same initial steps again as an alleged cure for our present foreign and domestic economic problems.

UNITED STATES FOREIGN TRADE PROBLEM

What is the foreign trade problem that confronts us today? In its American aspect, it is simply that we need a reasonably high level of foreign trade to keep our domestic economy running smoothly. Our present foreign trade level is out of balance because we are exporting twice as much as we import. Other countries cannot continue to buy from us unless they sell more to us. The alternatives are: to lose some of our exports, through restrictions imposed by other coun-

tries; or to increase our imports; or to finance the gap by such means as ECA.

Exports are important to our economy because the United States is now the world's largest exporting country. Approximately 10 percent of our total industrial and agricultural production is sold abroad. Exports take from 10 to 20 percent of our agricultural machinery, bituminous coal, freight cars, motor trucks and rolled steel products, and also substantial amounts of passenger automobiles, machine tools, office machinery and appliances, radios, refrigerators, and photographic films. Last year, exports took from one-fourth to one-half of our total production of tobacco, cotton, wheat and dried fruit, and large amounts of fresh fruit, canned milk, food fats and eggs.

Export production is often concentrated in certain localities, e. g., automobiles at Detroit, refrigerators at Dayton, machine tools at Springfield, Mass., photographic films at Rochester, dried fruit in California, tobacco in the Carolinas and Kentucky, apples in Virginia, etc. A reduction of exports would create unemployment in the export areas, price declines, and appeals for governmental assistance of one kind or another.

United States imports in 1948 were equivalent to about 5 percent of our total production. Imports consist chiefly of raw and semifabricated materials used by domestic manufacturers in the further production of manufactured goods, e. g., copper, lead, zinc, chrome ore, manganese ore, wood pulp, burlap, natural rubber, etc. Such imports enable our manufacturing industries to operate at a high level and at reasonable costs. We import, also, large quantities of foodstuffs, such as coffee, tea, cocoa, bananas, and spices, not produced in this country but necessary to maintain our present living standards.

Imports of manufactured products are relatively small—28.6 percent of total imports in 1948. This is so because American manufacturing costs are low relative to foreign costs, and European manufacturers find it difficult to hurdle our tariffs. The American competitive advantage reflects the efficiency of American management and labor, the advantages of a large-scale market, and the large capital equipment per worker in the United States (about double that of the U. K.). The net value of industrial output per worker in 1938 was $1,730 in the United States, as compared to $645 in Europe, according to the recent survey of the Economic Commission for Europe.

THE WORLD-TRADE PROBLEM

The world-trade problem is, in a sense, the reverse image of our trade problem. Other countries need American products to maintain their standards of living above the danger point, but they cannot export enough to pay for their necessary imports. This situation is basically a result of the war.

Before the war, Europe was the largest market for the exports of the United States, Canada, South America, Asia, Africa, and Oceania. These overseas countries supplied approximately one-tenth of western Europe's total consumption. The war shattered the productive apparatus, exhausted the foreign investments, and partially destroyed the shipping facilities of many European countries, thereby shrinking their ability to produce for their own need and to pay for their necessary imports. Despite enormous obstacles, but with ECA assistance, Europe has made gigantic strides toward recovery. In the first quarter of 1949, the industrial production of western Europe, excluding Germany, was 126 percent (113 percent including Germany), exports 119 percent, and imports 95 percent of the respective prewar volumes. The gap in Europe's balance of payments with non-European countries narrowed from $7,600,000,000 in 1947 to $5,600,000,000 in 1948.[1]

[In billions of United States dollars]

	United States	Other non-European countries	Total non-European countries
Europe's imports	−4.8	−10.0	−14.8
Europe's exports	1.1	7.5	8.6
Balance of goods	−3.7	−2.5	−6.2
Balance of invisibles	.1	.5	.6
Net deficit	−3.6	−2.0	−5.6

The gap is now being met largely by ECA funds. To become self-sustaining Europe must narrow the gap through its own efforts. Western Europe must export more manufactured goods (since it lacks raw materials for export) to overseas countries, or reduce imports from overseas countries. Special complications arise because western Europe would have to expand its exports to the United States by threefold to eliminate its gap with the United States, but would need to expand its exports to other overseas countries by only 50 percent to eliminate its gap with those countries. In view of the obstacles encountered in expanding European exports of manufactured products to the United States, western European countries will be strongly tempted to balance their accounts by restricting purchases from the United States, and by making arrangements to buy from other overseas countries in equal amount that those countries buy from western Europe. The temptation becomes increasingly strong when European sales to the United States decline, as they have in recent months because of our market contractions. The recent Anglo-Argentine agreement is an example of this kind of bilateral balancing.

THE RECIPROCAL TRADE AGREEMENTS PROGRAM

It is in this setting that reciprocal trade agreements—and our entire economic foreign policy—assumes decisive significance.

It is obvious and inevitable that severe readjustments will occur before the world achieves real economic stability. The readjustments may take either a constructive or a destructive course, depending upon the wisdom with which we handle the situation. The readjustment may be made in an orderly way, through concerted action among countries, with each country gradually lowering its governmental trade barriers so world trade may expand along natural competitive lines.

Or, the readjustment may take the form of unilateral action by each country, with each country attempting to solve its own trade and employment problems by restricting imports. The experience of 1929–33 suggests that the latter course would lead to an intensification of governmental trade restrictions, to an intensification of economic nationalism and to world economic instability—surely a harsh climate for private competitive enterprise. Proponents of such solutions should meditate upon the Turkish proverb: He who falls in the sea should not grasp the serpent's tail to be saved.

The Reciprocal Trade Agreements Act strikes directly, and in a practical way, at governmental barriers to competitive international trade. This act authorizes the President to conclude trade agreements with other countries under which the United States may reduce its tariffs on individual products of interest to the other country in return for reductions by that country of their tariffs and trade controls against our products. Each country negotiates the agreement on the basis of its own national advantage. The end result is a mutual lowering of governmental barriers to trade.

The Reciprocal Trade Agreements Act, first passed in 1934, has been renewed, usually every 3 years, until June 1948 when it was extended for only 1 year and with crippling amendments.

The act contains various safeguards. First, the President, before making an agreement, must obtain the views of the Departments of State, Agriculture, Commerce, and the National Military Establishment (and under the Executive order, Labor and Treasury) obtain advice on all aspects of the problem. Second, before making an agreement, public hearings must be held at which American industry, labor, agriculture, exporters, importers, producers, and consumers have full opportunity to present information and views. Third, the Executive order implementing the act requires that each trade agreement contain an escape clause which says that if, as a result of a tariff reduction, imports of a particular product should enter the United States in such abnormally increased quantities as to seriously injure or threaten domestic producers, the tariff concession may be withdrawn (after consultation with the other country, if possible, but without consultation in case of urgency). The consent of the other country is not required, but if the United States should withdraw a concession on a particular product the other country would be free to withdraw an equivalent concession. Fourth, the act provides that the United States may not reduce its tariff rates on any item below 50 percent of the rate existing on January 1, 1945.

The United States has concluded trade agreements with 42 countries since 1934. The most important was the General Agreement on Tariffs and Trade of 1947, involving 23 nations, each of which made tariff and trade concessions to all the others on thousands of individual items. The 23 countries included the United States, the British Empire and many western European countries. Now 11 new countries are negotiating at Annecy, France, with the 23 old countries for a further reduction of world trade barriers. The 11 new countries include Sweden, Finland, Denmark, Italy, Greece, Liberia, Haiti, Nicaragua, Colombia, the Dominican Republic, and Uruguay.

The trade agreements concluded by the United States from 1934 to date have reduced United States tariff rates on agricultural products by 47 percent and on industrial products by 48 percent below the original extremely high rates of the Smoot-Hawley Act of 1930. These 47-percent and 48-percent reductions take in account both the 1934 and 1945 bases. It is true that the United States tariff averaged 13.7 percent ad valorem on total dutiable imports in 1948, but this average obscured the fact that rates on manufactured products of the kind that Europe might sell here often range from 25 percent to 90 percent. The comparatively low average rate for 1949 was greatly influenced by the high prices in the United States.

The Reciprocal Trade Agreements Act expired June 30, 1949. The President's mid-year report recommended renewal in its original form (without the crippling amendments of 1948), and Congress is expected to resume consideration of the act before adjournment this session. Failure to renew the Reciprocal Trade Agreements Act would:

1. Jeopardize the successful outcome of the Annecy Trade Conference of 34 countries now negotiating further reductions of governmental trade barriers.

[1] European transactions with non-European countries, 1948 (International Fund, May 1949):

2. Weaken our efforts to persuade European countries to reduce their barriers against each other, as required under the Economic Cooperation Act of 1948 (a bipartisan measure). Governor Dewey emphasized the importance of these efforts when he said last week: "If western Europe were made into one large area for the free exchange of goods and services like the United States * * * Europe would at last be strong enough to stand on her own feet."

3. Encourage those in other countries who seek to solve the world-trade problem by imposing more and more governmental controls, often at the expense of United States exports and always at the expense of competitive international trade.

Renewal of the Reciprocal Trade Agreements Act, in conjunction with other measures of international economic cooperation, offers us hope for achieving a flourishing world trade. This is necessary to build a solid economic foundation for the political structure of peace.

United States foreign trade

Calendar year	United States domestic exports to all countries	United States imports for consumption from all countries	Surplus of exports over imports
	Millions	*Millions*	*Millions*
1939	$3,123	$2,276	$847

Sign Petition No. 6 To Repeal the War Excise Taxes

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. MULTER. Mr. Speaker, efforts to repeal the war excise taxes on retail sales are receiving more and more support every day. I have repeatedly said that the less than $450,000,000 in tax revenue which the Government would lose by repeal of the excise taxes on retail sales of furs, jewelry, cosmetics, and luggage would be more than made up in other revenue the Government would receive because of the increase of business in those industries which would be stimulated by the repeal of these taxes.

The following editorial which appeared in the New York Herald Tribune of August 1 bears out all that I have said. My Petition No. 6 will bring before the House for consideration my bill H. R. 2324 to repeal those taxes.

REPEAL THE WAR EXCISE TAXES

In a national tax structure marred by inequities and fiscally inappropriate levies, the retention of war-created excise taxes is one of the most irritating features. Designed to help suppress wartime inflation, the taxes continue to discourage consumer spending with great but undesired efficiency at a time when our concern is to keep the flow of consumer spending at a high level. Although the force of this truth is not lost upon Congress, it is naturally reluctant to repeal the taxes because it fears that the resultant loss in revenue would add further to the deficit already anticipated for 1949–50.

We have reason to applaud, therefore, the excellent presentation of the case for repeal made by Mr. Beardsley Ruml, a private citizen who has performed distinguished service for the Government in fiscal matters on other occasions. Mr. Ruml points out that the industries subject to the levies suffered disproportionately during the sales and employment declines of the last few months. With consumers buying more warily and searching for bargains, the taxes on such things as furs, leather goods, communications, and transportation, to name a few, have been strong deterrents.

Taking account of the danger of losing Federal revenue and adding to the deficit, Mr. Ruml meets the issue head-on. He believes that the loss in excise-tax revenue would be almost entirely offset as a result of the boost in sales and employment the affected industries would enjoy. This boost would raise Federal revenues through the additional corporate income taxes paid by these industries and through the personal income taxes of people who might otherwise be unemployed; and it would reduce unemployment insurance payments as individuals now unemployed are returned to their jobs.

It would be foolish to make exaggerated claims either for the stimulus that repeal would provide or for the offsetting revenues it would engender. But if Congress is still concerned about losing the billion dollars, more or less, that repeal might entail, it has a further offset at hand. That would be an across-the-board cut in the original appropriation requests for all purposes on which it has not yet acted. On the grounds of eliminating sheer waste in Federal spending practices, such a cut has ample justification. As a companion piece to excise-tax repeal, its justification is strengthened.

Arthur Lobsenz, Polio Victim

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. CANFIELD. Mr. Speaker, I was shocked and grieved this morning to read of the death Saturday morning of Arthur Lobsenz, 17-year-old son of my friends and constituents, Mr. and Mrs. Meyer Lobsenz, of 11 West Parkway, Clifton, N. J. He was a victim of polio, and death came a week after he became ill with a severe cold. His parents were in Sweden at the time, arriving in New York just a few hours after his death.

The Associated Press report was as follows:

SON, 17, DEAD OF POLIO WHEN PARENTS ARRIVE

CLIFTON.—Mr. and Mrs. Meyer Lobsenz, of 11 West Parkway, expected to be seeing the sights in the Scandinavian countries today. Instead, they attended the funeral of their son, Arthur.

Arthur, 17, salutatorian last term at Montclair College High School, died Friday of poliomyelitis in Albany, N. Y., hospital.

When Mr. and Mrs. Lobsenz left for Europe July 6 Arthur was a swimming instructor at a camp on Lake George. His brother, Theodore, was a boating instructor at the same camp.

A week ago Arthur became ill of what was thought to be a severe cold. When his condition became serious last Thursday, Theodore attempted to reach his parents in Stockholm, Sweden, by trans-Atlantic phone but did not succeed.

He got through to them Friday, and they left for home, arriving at New York Saturday morning, only to learn Arthur had died.

On the same page of the newspaper carrying the story of Arthur Lobsenz' death there appeared the following International News Service account of the national polio epidemic:

POLIO VICTIMS EXCEED 7,000; NEARLY 350 DIE

(By International News Service)

The toll of infantile paralysis victims stood at well over 7,000 in the Nation yesterday and fatalities neared 350.

Texas was the hardest hit, with 1,125 cases, and California was second with over 700 polio victims.

Parts of Idaho faced a new emergency when All Saints Hospital at Idaho Falls said polio cases had filled the institution to capacity.

EMERGENCY IN IOWA

At Rexburg, Idaho, the State toll for July rose to 76 when 2 children were stricken.

In Dubuque, Iowa, an emergency also was declared and children under 16 were quarantined.

Also from the Middle West—in Springfield, Champaign, and Centralia—public gatherings were banned. Twenty-one new cases were reported in Illinois through Saturday.

In Muncie, Ind., townsfolk improvised respirators from old alcohol barrels and vacuum cleaner parts.

PRAY FOR RELIEF

They took time off from fashioning the makeshift lungs to hold home devotions to pray for the end of the epidemic.

From the eastern part of the country came reports of 35 new cases in New York City and 21 in Cleveland.

Washington, D. C., also faced with a rising number of polio cases, called for all unemployed nurses to report immediately to aid in polio hospitalization.

This morning I phoned the Surgeon General, United States Public Health Service, Dr. Leonard A. Scheele, who had a few minutes before discussed the situation on long-distance phone with Basil O'Connor, head of the Warm Springs Infantile Foundation. I was advised that the Government is watching the picture very carefully and was continuing its

research into the basic diseases believed to contribute to poliomyelitis. Most of the great polio research is through the Foundation and other private programs.

Dr. Scheele informed me that much valuable information was obtained at the international conference on polio held in New York City last spring and, while no magic formula had been developed, definite progress was being made. He expressed hope there would soon be a break in the number of cases being reported throughout the Nation.

I informed Dr. Scheele that I had supported the Federal grant-in-aid research program to the fullest and if more funds were deemed to be necessary I would do everything possible to expedite their appropriation.

The Government Most Dangerous To Us Is Our Own

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. JUDD. Mr. Speaker under leave to extend my remarks in the RECORD, I include the following article from the Washington News of July 27, 1949:

WORLD'S BEST PLAN: MIND OWN BUSINESS
(By E. T. Leech)

Our country is a system of free individuals. That is what Lincoln meant when he called it a "Government of the people, by the people, for the people."

A lot of countries have claimed or now claim to be free. So long as a nation is not conquered and controlled by some outsider, that claim is true to a degree. But the real test is whether its individual citizens are free. Throughout history most peoples have lost freedom not by conquest but to their own governments.

Outside governments may be dangerous, but none is so dangerous as the one at home. That is the one supreme lesson of political history. And the greatest wisdom of those who established our Government lay in the fact that they knew it.

They thought of freedom in terms of the individual. And they realized that Government—including the one they were setting up—is the great enemy of personal liberty. So they tried by all sorts of checks and balances to put Government in its place. The Constitution is above all else a document designated to restrain officials.

It is at this point—the emphasis on individual liberty—that the freedom established in America differs from the general definition of such freedom as has existed through most of history. And it is at this point that our liberty is now in danger.

We of this generation have worried a lot about losing our freedom to some outside system—personified first by the Kaiser, then by Hitler and now by Stalin.

But the real danger is at home.

We can keep free from Stalin and any other outside dictator and still lose our liberty. We can lose it to Washington easier than any other way.

What we have had for 160 years is the right to mind our own business. To run our personal affairs. To succeed or fail, to gain or lose, according to our own personal merits, efforts and desires.

These rights had to be curbed to bar excesses. One man's liberty must be limited when it infringes on that of somebody else. But, by and large, we have had the highest type of freedom—individual.

Those 160 years are just a minute in the long course of time. Yet no other nation has enjoyed such a minute of liberty. In that time we have achieved higher living standards, more wealth, a wider distribution of goods, greater leisure, better health, a bigger reduction of poverty and suffering, and larger opportunities than any other people ever knew.

The job isn't perfect or finished. Much that is good still is faulty or barely started.

So a lot of people become impatient. They want a short cut to utopia. And that short cut turns out to be the oldest, roughest, longest road in the world—worn by the tired feet of untold millions—the road to state control and lost liberty. It is strewn with promises never fulfilled and hopes which were dashed. It is littered with state planning which failed.

Yet it is always tempting. Because there are always those who beckon us onto the road with promises that government will give something for nothing. They offer personal security at the cost of individual freedom.

That is the price which is always paid, and the security is never delivered. For government can't provide it. Government never created anything. It never built an industry. It never perfected an invention. It never created a moral code, produced a work of art, or made a dollar.

All progress has come from the personal efforts of individuals. Of a very few people—just a tiny percentage of the whole. Yet by their hard work, inspiration, superior mentality, or plain desire to forge ahead, they did something of benefit to their fellows. That is the only way mankind has progressed. Civilization is the sum total of many personal accomplishments.

Man has done best only when allowed to mind his own business. He has done worst when government tried to mind it for him.

Mary Teresa Norton

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. KELLEY. Mr. Speaker, with permission to extend my remarks in the RECORD, I am including an article from Labor newspaper under date of July 30, remarking on the success of Congresswoman MARY TERESA NORTON in guiding the anti-poll-tax bill through the House. It accurately describes it as a "great triumph" for the gentlewoman from New Jersey.

This victory will recall another outstanding one in 1938, when Mrs. NORTON sponsored and led the fight for the passage of the Wages and Hours Act. She has long been a champion of the rights of underprivileged groups, and her many years of service in the House of Representatives has never been equalled by a member of her sex, and by few of the opposite sex. No doubt her success has been due to her conscientious desire to do good. Always entirely unselfish and never sparing herself, she has made an enviable record and a reputation which will not be dimmed through the years.

The article follows:

After a 2-day battle the House on Tuesday, by a vote of 273 to 116, passed an anti-poll-tax bill. It was a great triumph for Congresswoman MARY NORTON, Democrat, New Jersey, veteran backer of good causes.

To get the bill before the House, MARY had to "lick" the Rules Committee, which refused to bring it out on the floor. She did that by using, for the very first time, a new rule which the House put into effect at the beginning of this session. Her honor of being the first will have a big place in House history.

Mrs. NORTON'S bill, which is part of President Truman's civil-rights program, would forbid States to make their citizens pay a poll tax as a requirement for voting in primary or general elections affecting Congress or other Federal offices.

When seeking votes in last year's campaign both parties put into their platforms anti-poll-tax pledges. The Taft Republicans, however, have made a deal with the Byrd Democrats to kill any civil-rights legislation in the Senate.

That deal will be carried out to the end, so House passage of the anti-poll-tax bill does not mean that it will become law.

Railroad Safety

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1949

Mr. SHORT. Mr. Speaker, it always has been my conviction that any private concern that deals daily, closely, and intimately with the operations of its own business, knows better how to run it with greater efficiency, economy, and safety than any Government board, bureau, commission, or agency.

Under leave to extend my remarks, I include a letter from a good friend of mine whose company has four factories in my district. His position on House bill 378 is so clearly and logically stated that I need not add anything to it. Mr. McLain's letter follows:

THE RAILWAYS ICE CO.,
Chicago, Ill., July 13, 1949.

HON. DEWEY SHORT,
House Office Building,
Washington, D. C.

HONORABLE SIR: As an owner of some shares of railroad stock and of a business which depends for its livelihood upon railroads, I am much disturbed by House bill 378, which is now pending. I understand that under the guise of "safety" this legislation proposes to give to the Interstate Commerce Commission the power "to establish rules, regulations, and practices with respect to operation of trains intended to promote safety."

On the face of it, it would seem that nobody should quarrel with or be suspicious of such legislation. Looking deeper into the effect of such legislation, however, the result becomes much more significant and sinister.

By their records certainly the railroads of this country neither deserve nor need control and dictation from a governmental body on safety measures. The railroads have the finest record of safety per passenger-mile

and per man-hours worked of any form of transportation in the world. Their record is better than the record of busses, automobiles, taxicabs, and air lines. Their record for safety is getting better every year for both passengers and employees. Their record is infinitely better than when the railroads were operated by the Government during the First World War. The railroads have proven that they are conscious of, continually strive for, and are successful in attaining proper safety programs.

We have had quite a little experience in the last 50 years with innocent phrases and the far reaching results of their application. Under the elastic interpretation and application of the general welfare and interstate commerce clauses in the Federal Constitution, we have seen farfetched and far reaching inroads into our form of government. It is very easy to visualize how far afield the small group of men constituting the Interstate Commerce Commission could go in their regulation and domination of the railroads in regard to finance, labor, rates, and all other operating factors under the proposed legislation ostensibly to establish practices to promote safety.

Just why the small group of men constituting the Interstate Commerce Commission could better conceive and put into effect proper safety measures and practices in the railroads than those same railroads are already conceiving and making effective, is hard to understand. The railroads already have more than their share of Government controls, taxes, and criticism. The proposed legislation is iniquitous, dangerous, and unwarranted. I do hope you can find it within your conviction to oppose the bill in question.

Very truly yours,

HAROLD MCLAIN.

Poll-Tax Bill

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. WILLIAMS. Mr. Speaker, in my opinion the civil-rights program offered by the President and supported by both major political parties is the most hypocritical legislation ever to come before the Congress of the United States. It is nothing more or less than an attack upon the powers granted the States under the Constitution of the United States, and is being used as a means to bring about a completely centralized government. The so-called anti-poll-tax bill, part of the President's program, which passed the House the other day, is but merely the opening wedge. In this connection, I wish to include herewith an article written by Hodding Carter, a Mississippi newspaperman and Pulitzer prize winner, which appeared in the Washington Post on yesterday:

LOOKING SOUTH—HOUSE MAKES ANOTHER PASS AT POLL TAX

(By Hodding Carter)

GREENVILLE, MISS.—If the House of Representatives can waste 2 days in passing anti-poll-tax legislation, I ought to be able to waste a few paragraphs commenting on the hypocrisy, the futility, and the unconstitutionality of such action.

A majority of the citizens of 42 States obviously think the poll tax, as a voting requisite, is a bad tax. Perhaps a majority of the citizens of the remaining six also think so, and in time will abandon it. I hope so.

But if the Constitution of the United States means anything—and you'll have to ask the Supreme Court, not me, if it does—the decision to change now rests with the citizens of those six States. Only a constitutional amendment can properly take away the present right of the States to set their own voting qualifications.

However, bloc votes are more important than the Constitution, so a majority of the boys in the House came across with the good old gesture last week. For the fourth time they've passed a bill outlawing the poll tax as a requisite for voting in Federal elections.

If any of them honestly believe that the Senate will concur, they ought to be barred from voting themselves on the grounds of mental instability. There isn't a chance of anti-poll-tax legislation getting by the Senate. Southern Senators would again filibuster a poll-tax measure to death, and everyone in the House knows it. Filibuster is a horrible word, but it isn't as repugnant as the recurrent attempt to ramrod an unconstitutional act through Congress because it seems smart politics to do so.

And it probably is smart politics. On the one hand are six Southern poll-tax States, whose total electoral vote is small and whose political behavior can usually be ascertained in advance. On the other are clamorous blocs of voters in large and politically uncertain States, to whom poll-tax repeal by Federal action has been sold as a holy crusade and a politically advantageous kind of retaliation.

Inciting them—and influencing the lads who learned back in Kansas City that great machines can be built from little blocs—are honest and dishonest spokesmen for greater centralization of Government as the only panacea for our democratic failures.

The poll tax is virtually meaningless in the Nation. Left to themselves, the six poll-tax States will in time repeal their statutes. Or, if that appears too long to wait, certainly the citizens of 42 States would approve a constitutional amendment outlawing the poll tax in Federal elections.

But such procedure would be too orderly to produce immediate political results. Congressional repeal is the smart way, boys, so damn the Constitution and full speed ahead to the same old starting point.

Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. DAVIS of Georgia. Mr. Speaker, I have received from Mrs. Gertrude Harris, the able and distinguished president of the Georgia Federation of Women's Clubs, two resolutions adopted by the executive board of the federation.

One of these resolutions commends the activities of the House Committee on Un-American Activities for its intelligent and constructive approach to the problem of safeguarding the security of this Government.

The other resolution endorses legislation to raise the standards of health, welfare, and education of Indians.

I commend these resolutions to the attention of this body, and under leave previously granted, I insert these resolutions herewith:

Whereas the Committee of the House of Representatives of the United States Congress on Un-American Activities reports that there are 800,000 foreign agents organized to sabotage United States industry and Government in time of crisis; and

Whereas information on the infiltration of such agents and of subversive organizations is essential to the protection of our national security; and

Whereas the Committee on Un-American Activities, under the leadership of its chairman, Hon. JOHN S. WOOD, Congressman from the Ninth Congressional District of Georgia, is making an intelligent and constructive approach to the problem of safeguarding the security of this Government, and at the same time giving due protection to the rights of individuals; and

Whereas Chairman WOOD is proposing to Congress that it enact legislation to provide heavy penalties for Government employees and for those working on Government contracts found assisting the Communist Party, or its fronts, through membership in or contributions to such organizations as are designated as subversive by the Attorney General: Therefore, be it

Resolved by the executive board of Georgia Federation of Women's Clubs, That we go on record as approving the enactment of such legislation as will protect the security of our Government, the continuation of the Committee on Un-American Activities and of its policies of giving Congress and to the public information concerning the activities of foreign agents and subversive organizations; and be it further

Resolved, That a copy of this resolution be sent to the Honorable JOHN S. WOOD, and to the members of the Georgia delegation in the Congress of the United States.

This the 28th day of June 1949.

Mrs. Z. V. PETERSON,
Legislation Chairman.

Resolved, That the executive board of the Georgia Federation of Women's Clubs pledge its cooperation to the General Federation in its efforts to secure reforms in the policies and administration of the Office of Indian Affairs to the end that Indians may have equality or standards of health, welfare, and education with other communities, achieve unrestricted citizenship, and have protection of land ownership; and be it further

Resolved, That this board go on record as disapproving bill S. 363 wiping out Alaskan Indian land titles and bill S. 3 which would force Indians in Nevada to sell land at 1934 prices to white squatters; and be it further

Resolved, That we request the Members of Congress from Georgia to support long-range program for the proper care of the Navajo Indians.

This the 28th day of June 1949.

Mrs. JESSE W. BUSH,
Indian Welfare Chairman.

Hawaiian Relief, Courtesy of Bridges

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I in-

clude the following editorial by Kyle Palmer, from the Los Angeles Times for June 15, 1949:

HAWAIIAN RELIEF, COURTESY OF BRIDGES

(By Kyle Palmer)

Depressing news dispatches and indignant reports by returning mainlanders; statistics on dangerously low food supplies, on business failures and job losses; and slow strangulation of the economic life of an American community of more than 500,000 men, women, and children are incidental items in the tragic story of strike-bound Hawaii.

Merits in the dispute between striking dock workers and their employers are secondary considerations.

In the light of the far greater issue raised by the situation in Hawaii—an issue as vitally related to the welfare of all the people of this country as to that of the helpless Hawaiian population—the question of which side is right, or partly right, in arguments for and against wage increases loses much of its significance.

Hardships of those in far-away places, the sufferings we read about, but do not ourselves experience, even the distress of a distant community in which our own friends and relatives are among the hapless victims, never seem quite as real or as unbearable as the ills and evils we share or have immediately before us.

But the fact remains that the country's mainlanders are sitting by complacently while more than a half million of their fellow citizens are experiencing an ordeal—now well into its second month—which would not be tolerated overnight by public opinion within the contir ental United States.

Whether Harry Bridges represents to you a species of Red devil bent upon destroying the economic, political, and social system of this country, or in your estimation is an inspired defender of the rights of his underprivileged fellow man, Mr. Bridges by calculation and design has been able, for all practical purposes, to isolate the Hawaiian Islands from the rest of the world.

Again, it seems to me, that his motives are relatively unimportant; whether he seeks to better the lot of his union members, as he maintains; whether he is carrying out a deliberate communistic scheme to dominate Territorial politics and economics, as many believe, or whether he merely intends to solidify his position as a dominating figure in management-labor relations.

The important thing, from the standpoint of any citizen who has due regard for his own rights, freedom, and welfare, is that Bridges has been able to accomplish his objective; that he has been permitted to accomplish it, first, by an unaroused public opinion, and, second, by a remarkably and inexplicably indulgent national administration.

A dock strike in Hawaii, backed up by refusal of dock workers on the mainland to handle cargoes destined for Hawaiian ports, represents in all respects what a joint shipping, truc'ing, and railway strike would mean to a mainland community. To Los Angeles, for instance.

And in view of the distances involved, the Hawaian dock strike is even more crippling; for Honolulu and all other Territorial areas are absolutely dependent for adequate supplies of virtually all essentials upon waterborne commerce.

Not a freighter may be loaded or leave port or discharge its cargo except by the grace of this union boss; and while one branch of the Federal Government marshals its forces to prove him a perjurer and an active Communist leader whose original alien status should be restored preliminary to his deportation, other divisions of the Government profess themselves powerless to interfere with his destructive program.

And once again, a discussion of this situation need not inquire into his reasons, nor seek answers not related to the basic question that should appeal to all:

"If Harry Bridges and his union members can bring the people of Hawaii to their knees by reckless and ruthless exercise of arbitrary power, what is to prevent him—or others—form exercising that power elsewhere?"

True, neither Bridges nor any other union leader, even with the collaboration or collusion of a prolabor national administration could get away with such tactics on the mainland now.

But how about next year, or the year after that, or 10 years hence, if the Hawaiian experiment succeeds?

The dock strike in Hawaii is an object lesson, both of what is happening and of what can happen. Yes, what can happen here.

Dock strikers have demanded a specified pay increase and their employers, offering less than the union demands, must eventually come to a decision.

Compulsion by Government agencies exerted against either side will not meet the issue, nor will a one-sided victory by either prove beneficial. Somewhere along the line a fair meeting ground can be discovered.

In the meantime, Bridges keeps his thumb on the jugular vein of the Hawaiian people—their maritime commerce.

And in the meantime the constructive and productive activities of the islands are withering.

Pineapple and sugar industries in Hawaii are "big business." That such industries are periled is not, perhaps, a matter of great concern to Bridges and his island lieutenants.

Yet the economy of the islands rests upon those two major operations, and the livelihood of tens of thousands of families depends upon their success.

There were less than 10,000 persons listed as unemployed in Hawaii when the strike of longshoremen and warehouse workers started on May 1. Now the unemployed number over 20,000.

And this expanding army of the enforced idle may suddenly reach disastrous proportions if unionized sugar and pineapple workers—controlled by Bridges—carry out threats of strikes in those industries.

The Federal Government is ever on the alert to break up and penalize the threat of industrial monopoly, but here is a monopoly—a monopoly of power, of political pressure and of economic control—that can say "stop" or "go" not only to business, but to the workers, to the politicians and to government itself.

Surrender to such a threat, on any basis, might bring temporary labor-management peace to Hawaii and a resumption—on Bridges' terms—of the commerce of the islands.

The evils thus halted for a time in Hawaii, however, would reappear in more malignant form. Their spread could not be stayed.

Thus, Harry Bridges has challenged the right and the capacity of the people—not of the Territory of Hawaii alone, but of the Nation itself—to conduct their ordinary and proper affairs unhindered by the particular interests or the special objectives of any man or set of men.

Make no mistake about this dock strike in Hawaii. It goes far beyond the limits of an employer-employee dispute; is more fundamental than any struggle between capital and labor. It is a supreme bid for power by a resourceful and highly intelligent man who, if he succeeds, will never be satisfied by one or two such triumphs.

The solution to this puzzle does not lie primarily in Hawaii, where the people are under siege. It is really up to the people on the mainland to take cognizance of an unbearable and an insufferable condition which, as it affects the fundamental rights of a few, affects the rights of all.

How far shall the oppression of Bridges be tolerated?

To date, milk production in Hawaii has been curtailed about 10 percent.

More than 350 business establishments, in the face of dwindling supplies of dying trade, have been forced to lay off hundreds of workers.

Salaries have been reduced in some firms by managements hoping to weather the storm without curtailing their staffs.

For the first time in many years, dividend payments to investors have been cut.

Many little businesses either hang upon the edge of bankruptcy or are about to take the plunge.

In some instances poultry growers have slaughtered flocks, destroyed baby chicks and hatching eggs because of empty feed bins.

Passengers and mail arriving on trans-Pacific ships are being unloaded off the port of Hawaii and lightered ashore.

The record of petty annoyance and major outrage is endless.

A relief ship is on the way. Harry Bridges permitted it to be loaded and allowed it to sail. The ship will be unloaded, Bridges willing.

Excise Taxes

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1949

Mr. SHORT. Mr. Speaker, most everyone realizes that during the war it was necessary for us to raise additional revenue by so-called luxury taxes. This so-called luxury tax covered a very wide field. It included taxes on perfumes, furs, silver, amusements, transportation, and communication.

Of course, it was necessary to have taxes on these articles not merely to raise revenue, but also to discourage the public's buying and use of these commodities and services during wartime. No reasonable person had objection to those taxes when the safety of our Nation was at stake. Now that the shooting war has been over for 4 years, many of our citizens cannot see the necessity, wisdom, or justice of continuing these wartime taxes in time of peace. All of the managers and many of the patrons of these businesses are vigorously opposed to the continuation of these taxes and want them entirely removed or greatly reduced.

Certainly the taxes on transportation tickets, telephone calls, and telegrams are a great burden to the people, and these services are not a luxury but a necessity. The taxes on amusements, if reduced, would perhaps bring in more revenue because the small amusement centers cannot operate under their present-day load of expenses and taxes.

Recently I have received many communications from people in different businesses—both inside and outside my district, protesting the continuation of these excessive wartime taxes.

Under leave to extend my remarks, I include the following two letters—one from R. D. Fisher, manager of the Star Theatre, Willow Springs, Mo., and the other from Tom M. Hayes, passenger traffic manager of the Wabash Railroad Co. in St. Louis, Mo. It seems to me that the logic in both of these letters is unanswerable and the only way we can avoid financial ruin is to cut down on Government expenditures and to give a little more consideration to the people at home than we give to those abroad.

In line with this, I want my people to know that I have signed Discharge Petition No. 5, offered by our former Speaker, Mr. MARTIN of Massachusetts, who is now our minority leader, to remove or drastically reduce these excise taxes.

STAR THEATRE,
Willow Springs, Mo., July 18, 1949.

Hon. DEWEY SHORT,
House Office Building, Washington, D. C.

DEAR DEWEY: Since a bit of legislation relating to theater admissions is about to come up, I thought you might be interested in this pertinent bit of information relating to my business.

For the month of June 1949 my net profit amounted to $186.25, little more than a living wage, and certainly no return worth noting on my investment in the business of over $30,000.

My Federal admissions-tax payment to the collector of internal revenue for the month of June 1949 was $346.14. This is almost twice my profit. Seems almost confiscatory, doesn't it, especially when you consider that that sum represents 20 percent of my intake, the State then takes another 2 percent, before I even begin paying my costs and expenses, plus all the other normal taxes everyone pays.

The rider to H. R. 3905 purportedly would reduce the Federal admissions tax from 20 percent to 10 percent, or half. Actually this is not so. On my 30-cent admission, the Federal tax would be reduced from 5 cents per ticket to 3 cents per ticket; and on my 25-cent admission, the Federal tax would be reduced from 4 cents per ticket to 3 cents per ticket. Of course, this would be a big help and, naturally, I urge you to help in every way you feel right to accomplish this reduction for us.

However, many people I have noticed, particularly some editors, and people who should know better, hail this proposed reduction to 10 percent as a return to prewar level, or an elimination of the war tax on admissions. This is not so, and if any of your colleagues are laboring under such a delusion, you might provide them with this brief history of theater admission taxation.

Before July 1, 1940, the only Federal tax on admissions was 10 percent on admissions of over 40 cents. All admissions under that were exempt. That meant all small-town theaters were relieved of this burden, and the tax applied only where the admission price indicated it could be borne without hardship. On July 1, 1940, the law was changed reducing the exemption to admissions under 20 cents, still at the 10-percent rate. I believe it was called a defense tax. Then on October 1, 1942, the exemption was taken off altogether, becoming a straight 10-percent tax on all adult admissions. Then on April 1, 1944, the rate was doubled to 20 percent, and has remained unchanged to this date. The doubling was called a war tax or emergency measure. Theaters raised little or no opposition to its imposition as at that time we were certainly in a state of emergency with the war progressing very slowly in our favor at heavy costs.

Now, almost 4 years after the war, if a roll-back to the 10-percent tax on all admissions is all the cut-back we're going to get, why I'd say we'll take it gladly and be grateful for the 25 percent to 50 percent relief it grants us, but it seems we should go a step further and set an exemption admission price of 30 cents or 40 cents, which will relieve the small town and subsequent runs where the admissions are low—patronage is from the low-income groups—and retaining the tax on the admissions which by their price show they can afford it.

For some theaters a change in the admissions tax may result in a lower admission price, where the tax was originally added to the admission price. For others, where the tax was absorbed and paid by the theater, holding the admission price to the patron the same, it will be a wonderful relief to the small owner who has been paying several hundred percent of his fair share of the tax burden. Many small theaters just couldn't add 20 percent to their admissions and still hope to hold a volume of patronage. Low-income groups such as ours just can't pay, and won't pay, higher admissions for their movies, which are their only source of community entertainment.

Well, Dewey, I started to write you a few paragraphs asking if you could help H. R. 3905 with its admissions-tax rider, but seem to have wound up writing a book. But we need this reduction badly, speaking from the standpoint of a small owner, and if there is any way you can use this letter to advantage, please feel free to do so however you wish. I don't know any of the other gentlemen to write to, so you might pass this information around a bit if you wish.

With very kindest regards, and best wishes, I am,

Sincerely,

DICK FISHER.

WABASH RAILROAD CO.,
St. Louis, Mo., July 12, 1949.

Hon. DEWEY SHORT,
Member of Congress,
Washington, D. C.

DEAR DEWEY: It is interesting to note in the President's message yesterday he recommended the removal of the tax on the transportation of goods, but he failed to recommend the withdrawal of the 15 percent Federal tax on the transportation of persons.

It isn't just because I am in the passenger end of the business that I feel it would be even more important to the people of the United States generally that the 15-percent Federal tax on the transportation of persons be removed than it is to the very many fewer individuals who ship goods that the 3-percent tax on the transportation of goods be withdrawn.

The situation with respect to the 15-percent Federal tax on transportation of persons is made doubly onerous because of the condition which exists under the present law which permits individuals to purchase tickets in Canada covering journeys wholly within the United States and, because the purchase of the tickets occurs in Canada, no United States 15 percent Federal tax is assessed. Certain of the air lines (which are so heavily subsidized out of the Public Treasury from revenue to which the railroads contribute so heavily) have established offices at border points in Canada (even at points to and from which some of the air lines have no service at all) and are selling their tickets for journeys wholly within the United States.

To me this doesn't make either sense or justice, and the only way in which I can see that we can meet that situation is to have our Congress remove the 15-percent Federal tax on the transportation of persons, which, as has been pointed out frequently, was put on during the wartime as a deterrent to travel.

I do hope the Congress will take cognizance of this situation and remove the 15-percent Federal tax on the transportation of persons.

Kindest personal regards.

Sincerely,

TOM HAYES.

Another Tribute to Justice Murphy

EXTENSION OF REMARKS
OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I request the inclusion of a tribute to the late and beloved Associate Justice Frank Murphy as expressed by Aaron Kurland, one of Detroit's outstanding lawyers, who knew him so long and so well.

The tribute was published in the Jewish News of July 29, 1949:

FRANK MURPHY EULOGIZED AS JEWRY'S BEST FRIEND

(By Aaron Kurland)

A great leader of American liberal thought is dead. Frank Murphy, Justice of the United States Supreme Court, is now a part of American history. His life and his achievements will long be remembered by the people of this community. The Jewish people, in particular, will not forget this great son of Michigan. He was our best friend. There has never been a man in Detroit public life who was as beloved by the Jewish people as Frank Murphy was. Murphy's personality, his intellectual attainments, his humanitarian policies, his great abilities both as an orator and as an administrator appealed intensely to citizens of the Jewish race.

Frank Murphy was an admirer of Jewish thought and Jewish accomplishments. He was a deep student of Jewish history and never failed to come to our defense when our way of life and our hopes as a people were threatened.

PUBLIC SUPPORT OF ZIONISM

Frank Murphy made his first public declaration in support of the Zionist cause at a public rally held at the Lafayette Theater in Detroit in 1929. This was a gathering to protest the Arab riots then raging in Palestine and to condemn Britain's failure to defend the Jewish position in the Holy Land. Philip Slomovitz, then president of the Zionist Organization of Detroit, presided. Frank Murphy, who was mayor of Detroit at that time, spoke eloquently and with great feeling about the need of the Jewish people for a homeland and pledged his support for Zionist aspirations in Palestine.

Mr. Murphy reiterated his pro-Zionist views at the reception in honor of Menachem Ussishkin at the Detroit City Hall on January 19, 1931, under the chairmanship of the writer of this article.

MESSAGE TO AMERICAN JEWISH CONGRESS

As Governor of Michigan, on October 13, 1938, in a telegraphic message to Mr. Slomovitz, then chairman of the American Jewish Congress, read at a meeting that night at the B'nai David, Frank Murphy stated:

"Please convey to the members of the Detroit section of the American Jewish Congress my good wishes and assure them of my

deep sympathy with the Jewish position in Palestine. Never perhaps has there been greater need for defense of minorities by the friends of democracy and justice than today. The situation there is one of the most flagrant examples of oppression of a minority and I pray that it can be ended speedily, without further violence, and with justice to all."

To demonstrate the strong attachment for Murphy's principles and personality on the parts of Michigan Jewry, it may be recalled that in 1938, a Jewish Committee of One Thousand functioned for his reelection as Governor. Aaron Rosenberg, prominent Detroit attorney, served as chairman of the committee. Writing in support of his candidacy, I stated:

"Let it be known that the pleas for the reelection of Frank Murphy, the organization of a Jewish committee of 1,000, all these are not motivated by anything concerning our problems as Jews. We do not claim any bias or prejudice against anyone. Nor that race, color, or creed is the issue in this campaign. There is, however, among the Jewish people, as there must be among all people who have been nurtured on the Bible and the Prophets, a common memory, a common faith, and a common heritage, of the prophetic admonitions that have stirred our hearts throughout the ages.

CARDINAL VIRTUES

"We are moved when we see that prevailing in this administration are the cardinal virtues of truth, justice, and peace, for these three—declares the Talmud, 'are the pillars of human society.'

"It is because Gov. Frank Murphy has given concrete expression to these yearnings of our people for the correction of wrong, for truth in government, for justice in dealing with all men, for peace among those who labor and those who hire labor, that we rally to his banner and proclaim his virtues so that all may read and be equally moved thereby."

Frank Murphy was the son of a humble Irish-immigrant family. He came from the people, and throughout his career he had been not only tolerant and fair to all races and creeds, but on every opportunity spoke in glowing tribute of the accomplishments and of the genius of the various racial groups which enter into the American melting pot.

There is little need to describe his record. Many articles have been written in the past week demonstrating the impact of this man's life upon American thought during the past 30 years. His philosophy of government, his crusading zeal, his spiritual approach to the problems of our time, as well as his answering heart to the call of the oppressed and those in need will be the focus of man's study for many years to come. History will make record of this man's life, and for generations to follow disciples will walk in the steps of this son of America.

Report on Unemployment

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address by Arthur Gaeth on Monday, July 18, 1949:

I am speaking to you tonight from a typical New England mill town. Lawrence, Mass., on the banks of the Merrimac River, boasts the largest worsted mill in the world. Only 20 minutes from here in one direction is Lowell, in times past called the Spindle City—so important to the early development of the textile industry that even Charles Dickens once visited it. Twenty minutes in the opposite direction from here is Haverhill, once known as the Queen Shoe City—also the birthplace of John Greenleaf Whittier, who wrote the Barefoot Boy, Barbara Fritchie, and other poems.

Two big industries dominate—weaving of woolen worsteds and the making of women's shoes. Both of them were hard hit by recession. It is only a hop, skip, and a jump over to Maine or New Hampshire. New Hampshire with 16 percent—ranks right after Rhode Island which leads in the total percentage of workers drawing unemployment compensation—with 25 percent. Maine is third with 15 percent—then come California and Tennessee and after that Massachusetts. So you see, on this unemployment survey, I am in the heart of an area where unemployment is a real issue.

PROSPECTS NOT GOOD

Until a few days ago, here in Lawrence about 40 percent of the people were either laid off or working 3 days a week, every other or every third week. In Lowell the number was about 25 percent and in Haverhill over 30 percent. The situation has improved slightly as it has in Massachusetts generally. For the last 2 months in the State unemployment has fluctuated between 190,000 and 200,000—twice the number last year. In 1948, taxes levied on employers for unemployment benefits were on pay rolls of about $3,500,000,000; this year those pay rolls will not go over $3,000,000,000, a cut of about 14 percent for the two-million-odd thousand workers employed.

The outlook generally is that unemployment will not change much until September, then it may be down or up. Today there are brighter prospects in the consumer soft-goods lines, darker prospects in hard goods lines. Mills producing women's wear and woolen-worsteds are showing improvement; the shift back is much slower than were the lay-offs. Cotton mills are continuing to trim their staffs. The fall shoe production season is on and more shoe workers have gone back than appeared possible 6 weeks ago.

But a number of factories folded up. Clothing production looks brighter; hat shops are seasonably low; production in electrical machinery and equipment is worse off; jewelry and furniture stronger. Shipbuilding has improved; ship repairs are in the doldrums. Fishing activity is spotty.

There are two dominant attitudes in this State. In the main, the people who show real concern over this recession are the workers, not only those laid off. The corner grocer owner, manager of the near-the-mill eating house or beanery, losing from 25 to 50 percent of their weekly business, show some of the same worry. Of course, the bookmakers are hollering.

BUSINESS OPTIMISM

At the chambers of commerce, and in the larger business establishments, there is considerable optimism, even though some of the people do not know why. They tell me they have been through this before. This is just a case of economic snuffles. Several stores on Essex Street thought it was bad for Lawrence for a correspondent to inquire into unemployment. I have been reading Myer's and Newman's the Hoover Administration. I am astonished at the similarity of attitudes in businessmen of 20 years ago and now. There seems hardly a change.

If I heard it once, it was said a dozen times that most of these laid-off people would rather draw unemployment benefits than work. That was the prewar line but war employment showed its fallacy. I have visited scores of workers in their homes. Believe me these people want to work, not loaf. They are worried. They are relieved somewhat to have unemployment security but they do not regard it an adequate substitute for employment. It just barely covers rent and a subsistence diet. The American worker isn't a slave satisfied merely to be living. He'll work to earn to be able to enjoy what he and millions like him produce. He wants a car, washing machine, television set—actually it is the hope of American industry that he does.

Here in Lawrence, I called at the home of a weaver working at Arlington, one of the Big Four mills which at peak employed almost 30,000 workers—now they are down to about 12,000. He's been weaving for almost 40 years. In 1948 he drew $48 a week, with overtime sometimes $60. This year he is on staggered employment, working 3 days 1 week, drawing $30. For 1 or 2 weeks he draws unemployment compensation of $27. He told me of the fear of the workers. There were rumors the plant would close—the pressure is on to cut wages and speed up the work.

How these workers are eating I learned from the proprietor of a super market. In his words, "It is slow in Lawrence. We did $10,000 a week early this year. Now we are doing $2,500 a week less. Our meat sales took the biggest drop; fruits and certain canned goods are down, too. People are buying bulk items—bread, potatoes, spaghetti—food they can fill up on. They watch prices, let us know if we are off half a cent. As for prices, some groceries are down, but meat and produce are up; food isn't cheaper. People buy more and more on week ends and go bargain hunting. There isn't much misery yet. I don't know how it will be when the unemployment checks stop."

In Lowell a doctor told me his collections were slow. People were not coming for little ailments. They paid with ones and fives, not the tens and twenties of wartime.

SHRINKAGE OF TEXTILE MARKETS

As for textile industry prospects, it will be affected by the shrinkage in purchases from Great Britain, and the sterling bloc. The revival of Japanese industry with American taxpayers' money is going to hurt. American export trade was down 25 percent in 1948 over 1947, and it is shrinking. Whereas Britain is expanding trade with Russia, ours is at an all-time low. In this area people are aware of what is happening to trade; that in the last 2½ years there has been a 50-percent cut in the number of American ships moving in and out of Boston.

While the textile industry is concerned about foreign trade, it is more worried about the contraction of the domestic market. And the workers are worried about methods used to keep in business. It is not only that they are being laid off—at every turn their jobs are drying up. For example, at the Wood Mill of American Woolen in what is called universal winding, where formerly 1 girl tended 6 cans, she now tends 16. Two girls do the work of five. On the so-called "perch line" a machine with 4 operators does the work formerly handled by 43. As the American Wool and Cotton Reporter records it: "Before long, good cotton spinning rooms will have no spinners. A plan is being worked out now which lets the doffer start the frame up and run all the way through without any spinning attendant until the bobbins are full and ready to doff again. The textile industry makes technological advances every day."

And I hear people say: "Ultimately machines will do most of the work. We will need less and less workers." The worker

knows the trend. He feels the aim is to keep industry going, making a profit—his is only a secondary consideration—thus his need for organization—he's worried when his union makes concessions that knock him out of a job. Sit down in the worker's home and he'll tell you a story. Yet it takes more and more people to buy the goods we produce. Put enough of them out of work and you're guaranteed another depression.

Only last week a public official in Boston told me: "Full employment, that is only an ideal." In plants there is a willingness to stagger work or increase sales pressure. When it comes to planning and making changes or instituting public works if necessary—there should be no changes—nothing disturbed. As I said once before, I cannot accept unemployment.

I CANNOT ACCEPT UNEMPLOYMENT

I cannot accept unemployment for what it is bound to do to young people, not to speak of the person who reaches 45 and finds himself pushed off a job. On July 5 a considerate mother in Somerville, Mass., wrote me a touching letter about her son. Her boy has graduated from high school. I quote her: "We are just one of many working people's families who sacrifice * * * to educate their children so they may grow up to be good citizens. Last spring our son, who had a year of office experience at the State House, put his name in several offices and places of business hoping that this summer he would have some work to look forward to, to enable him to continue his education and go to college. Oh! he got all kinds of promises. When summer came around, they proved to be promises. There wasn't a job to be found any place, for him or dozens of other boys whom he knows." The mother explained to me what it did to the boy's mentality. Quote: "Mom," he said, "you don't know what it is to go from place to place looking for something to do only to have the same answer everywhere, 'Sorry, son, no work, things are bad'." It got so, he said, it was like a bell ringing in his ears.

At Boston Commons he met a number of young men like himself—fed up with it all, with all kinds of wild ideas in their heads about what they were going to do and how they intended to get their money. So you see, Mr. Gaeth, it is very serious when the American youth begins to get such ideas in their young heads.

WHAT HAPPENS TO YOUTH?

Young fellows here in Lawrence, some of them, are of a similar frame of mind. Here a youngster who graduates from high school without specific skill or trade may go to college, but generally he looks for jobs in the mills. Mills have not been hiring young people; they have laid off many of their old workers. Said one of these chaps: "We hang around the corner looking for a way to dig up a dollar or two. And many of the ways are dishonest ways. We are pretty cynical about things because we know how the politicians, bookies, and others make their dough. Kids here have it tough anyway. In so many families both mothers and dads have to work in the mill if enough is to come in to keep a family. We grow up tended by our sisters or relatives until we are old enough to be on our own. They don't go in much for day nurseries in this town." We really have a problem to face with these young people.

There is much wishful thinking in northern Massachusetts that the factories will be going full blast again by the time unemployment benefits are exhausted beginning for many in September. But the June 30 American Wool and Cotton Reporter wrote: "Why do they tell us that along the 1st of September we are going to again be in quite extreme activity? We ourselves think we are coming back to normal but it will only come with wage adjustments and lower unit costs. The days of 100-percent earnings are ended; the big profits are gone; the swollen dividends are a thing of the past." That from the Wool and Cotton Reporter which has been speaking for this industry since 1887.

In contrast to what I found in Connecticut last week, there is much more of a do-nothing approach in this area.

In Washington last Friday, Senator MURRAY of Montana, supported by 15 Democrats and 2 Republicans, introduced a bill in the Senate titled "The Economic Expansion Act of 1949" prepared to use $15,000,000,000 in long- and short-term funds and loans to give incentives to private enterprise so that the $300,000,000,000 economy called for by the President can be realized.

While the Nation needs an antirecession program to turn the tide in the next 6 months, the impact of the Murray measure would be felt in 6 years. The interim calls for action in maintaining unemployment security, purchasing power by keeping up take-home pay, and a back-log of public works in areas hard hit. There must come assurance to the people from the Government that the Full Employment Act of 1946 is a reality—not just an ideal. That would remove fear of the future. As one worker told me in Newburyport yesterday: "Now if you have $2 left over after you have paid the grocery bill, you are afraid to spend it. Most of us remember what it was like before. The way things are going, we are sure we are going to get it again."

But, it lies in our power to avert it, if we act in time.

Next week via Springfield, Mass.; Albany, Schenectady, Rome, and Utica, I will speak to you from Syracuse, N. Y.

Now good night until next week at this same time.

An Eloquent Tribute to Justice Frank Murphy

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. DINGELL. Mr. Speaker, I ask unanimous consent to include in the RECORD a deserved and eloquent tribute paid to the late and beloved Justice Frank Murphy by the able and understanding Blair Moody, outstanding journalist and writer of the Detroit News, who more than anyone else of my knowledge knew from close contact and observation over many years the sterling worth and character of the late justice. The tribute merits preservation for the future.

MURPHY'S BRILLIANT CAREER GARNISHED WITH FOLKLORE—BOLD ACTION, DEEP SYMPATHY, MYSTIC TEMPERAMENT LEAVE THEIR IMPRINT

(By Blair Moody)

WASHINGTON, July 20.—Frank Murphy was a man with whom the best interests of the American people, as he saw them, came first.

He built one of the most successful political careers of his time by following his instincts, and they were always on the side of the underprivileged.

No citizen of Michigan ever before held so many high offices with such varied responsibilities as this complex Irishman whose devotion to duty had been instilled by a devout mother, who made him the star and hope of a talented family.

And he leaves not only a record for boldly smashing precedents whenever his deep sympathy for the needs and sufferings of his fellow men seemed to require it, but also a trail of Murphy folklore—a product of his mystic temperament—which continues to provide chuckles for those who watch politics from the inside.

MURPHY'S THEORY

More than any other, more even than Franklin D. Roosevelt or Harry Hopkins, Frank Murphy was responsible for acceptance of the principle that under the American system government has a responsibility to protect the individual family when its income, through no fault of its own, is cut off by national economic catastrophe. He took that philosophy to Washington and sold it—when Detroit was flat on its back in 1932.

With President Roosevelt, he is responsible perhaps more than any other politician for labor's power today. For when the crucial moment arrived, when union men sat down in Michigan plants in 1937, Murphy, as Governor, refused to call in the troops for 60 days. And it was this winking at the rights of property for what he considered the rights of human beings, done deliberately and in concert with a President who also knew what he was doing, that broke the dominance of management and resulted in an economy that is today as laboristic as it is capitalistic. Murphy put labor's foot in the door.

Murphy carried his unswerving insistence on making his decisions along lines which would preserve and extend human rights to his liberal doctrine as a Supreme Court Justice, sometimes as spokesman for the Court, oftener as crusader for the leftward minority. The Yale Law Review called him last fall the modern disciple of Justice Oliver Wendell Holmes.

UNUSUAL POLITICS

A highly successful politician who consistently refused to play politics in the usual sense, he owed his post on the Court in part to this quality. With the third-term nomination coming up in 1940, and convention delegates at a premium, Murphy, as Attorney General, was enthusiastically launched on a drive to put the machine bosses out of business.

With Tom Pendergast jailed in Missouri, Murphy sent O. John Rogge to Louisiana to smash the empire of Huey Long (which he did, temporarily) and then started after Boss Hague in New Jersey and Boss Kelly in Chicago.

At that point his choice as a Justice was sent to Congress in what seemed to be rather a hurry.

It was in 1930, when the voters recalled Mayor Charles Bowles and had 30 days to listen to four candidates to succeed him, that the freckled, muscled, sentimental judge took his big step up in politics. It was then also that the rich store of Murphy stories started to pile up.

IDEALISTIC SPEAKER

Detroit had never seen a politician quite like Frank Murphy and probably never will again. His oratory had an idealistic ring, an inspirational quality, that drew disciples. He collaborated quietly in a movement to draft him for mayor, and in the next 30 days did everything right.

He pleaded for a new philosophy, that later became the New Deal. He urged depressed Detroit to help him provide "the dawn of another day * * * the dew and sunshine of a new morning." His platform was tuned perfectly to the times and the problems of the people, and he felt it and they felt it.

His mood, tempo, and approach changed unconsciously with the type of his audience. This reporter will not forget an evening when Murphy and the three reporters covering his

campaign speeches had to jam sideways, by shoulder-nudging, into a Negro church which was literally bulging with voters.

The candidate wowed 'em. He did not promise any special privileges for the Negro. He merely said, simply and from the heart, that to him all citizens of Detroit were alike, and from him they all would get the same sort of fair deal. He never thereafter lost a Negro precinct, carrying most of them by majorities ranging from 10 to 1 to 100 to 1.

Elbowing out of the church, Murphy went next to an American Legion meeting where his fist-raised oratory as former captain of the AEF got a response that lifted the rafters. Then he went to a small club consisting chiefly of elderly women who had been waiting for some time and moved eagerly to the edge of their chairs as he entered.

As he stood there waiting several minutes for the feminine handclapping to cease, Murphy's eyes dropped to the floor and a flush rose from his collar to his hair-roots. Finally, in a soft whisper, he said: "Ladies, this is much more than I deserve."

PICKED GOOD MEN

As mayor, governor general, governor of Michigan, and attorney general, Murphy was an outstanding executive, because he found and talked into government a high type of man, and let it be known he wanted the public interests served.

He brought to the Detroit City Hall a higher average of ability and competence than any mayor of modern times: The late Joseph E. Mills, from Packard, as commissioner of purchases, commissioner of public works, and finally head of the DSR; Laurence G. Lenhardt, the engineer who supervised the construction of the city's $30,000,000 water-extension system, as commissioner of public works and now head of the water board; Douglas Dow, from Detroit Edison, as purchasing commissioner; James K. Watkins, the attorney, as police commissioner.

Murphy's unpredictable temperament sometimes had his associates turning cartwheels. Like the time when G. Hall Roosevelt, city controller, and the council had been convinced by a financial group that to preserve the city's fiscal stability there had to be a 40-percent slash in city employees' salaries.

A council committee, in a closed meeting, explained the crisis to Murphy. The mayor asked John C. Lodge, dean of the council, to introduce the resolution.

Next morning, with the council chamber packed with employees, Lodge introduced it. But Murphy arose—paused thoughtfully—and spoke against it.

Lodge, who was mad enough to punch someone with red hair, and almost did, escorted Murphy into his private office, separated from the rest of the room only by a 7-foot partition, and called him everything in the book, with the large audience listening in.

DIFFICULT DAYS

Never did a mayor face more difficult days. Murphy had to break new ground, for never before had strong, honest men come to the city hall to plead with tears to their mayor for milk for their babies.

There was no Federal relief then, no unemployment insurance, no credit for jobless automobile workers, no place for them to get food except the city treasury, and Mayor Murphy opened it.

Critics said he was ruining the city. He spent more than $14,000,000 in 1 year on relief alone.

HANDLED LEWIS

Murphy had a deeply instinctive touch in handling men whom others could not handle. When he finally decided the strikers should be cleared out of the Flint plants he called in John L. Lewis and told him the time to settle had come.

"And if I won't?" rumbled Lewis, at that time head of the fledgling CIO.

"I'll order the plants cleared," said Governor Murphy, quietly.

"You wouldn't dare," scowled Lewis.

"Oh, wouldn't I?" countered the Irishman, looking Lewis in the eye. Lewis ordered the men out of the plants.

The Barden Bill

EXTENSION OF REMARKS
OF
HON. JOHN McSWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. McSWEENEY. Mr. Speaker, under leave to extend my remarks, I include a letter which I received from Father Edward Hannon, V. F., of St. Mary Church of my home city of Wooster, Ohio.

The kindly, thoughtful expressions of this letter, I feel, should be part of our country's permanent record. It should do much to allay ill feeling and to give valuable interpretation to a very controversial question.

The letter follows:

ST. MARY CHURCH,
Wooster, Ohio, July 25, 1949.

The Honorable JOHN J. McSWEENEY,
The Congress of the United States, House of Representatives, Washington, D. C.

DEAR MR. McSWEENEY: What a surprise was mine a few weeks ago to see my name listed with yours in Drew Pearson's column. With Wooster mentioned, too, we can really feel that we are getting some place. Too bad that the Barden bill had to be the cause of the recognition. We hope that if such an occasion arises again it will be concerning a more happy situation. Thank you for the letter of July 1, which Mr. Pearson quoted. It was pleasantly received by me and several other of your friends here.

The last paragraph of your letter is heartening. It contained your good will toward those very things for which we are asking, and the very things which Mr. BARDEN would eliminate. In fact, the curtailing of such things is what brought the great protest against the bill. How strange that the press of the Nation insists in writing that Catholics are after Federal or State aid for their schools. Surely all must know now, as you do, that such is not the case; that we are after aid for their children and their parents, not for parochial schools. The exercising of freedom of choice in thus sending their children to parochial schools certainly does not warrant that the Government or the State would then and there wash its hands from all responsibility concerning those children. If such parents were doing something unconstitutional, it would be a different matter. They are just American citizens complying with and doing what the Government of the land permits. Right there, then, as you know, is the crux of the whole situation. One American parent exercises his right in sending his child to a public school; the other to a parochial school.

What we are asking is that both children be treated the same, not to give everything to one and nothing to the other. How this could be confounded as to be brought to be believed that Federal aid for which we are asking for our children is for the supporting and maintaining of parochial schools is something that I cannot understand. We are asking that we be given the same treatment as other children in regards to textbooks, transportation, etc. We can ask this freely for the educational standards of our schools are recognized by and in agreement with the State requirements for the public school. There is no reason whatsoever, from this standpoint, that the parochial school student should not receive his textbooks, etc., as does his friend the public school. Our textbooks concerning Almighty God, His revelation of Himself to man, as well as books giving to our children a knowledge of their great dignity and of their eternal destiny, happiness with Almighty God for all eternity and the means by which that happiness is to be obtained, we can supply ourselves. This would be of necessity for our Government has decreed that not a penny can be spent on the teaching of religion in any form. A lamentable situation, indeed, the depriving of American children of a knowledge of their God. I'm certain that our founding fathers never intended this. However, it has become the final peak in the situation that made it incumbent upon Catholic parents, in the beginning, to establish and maintain their own schools. And for this they should be praised, not penalized, as you so well know. This burden, the establishing and maintaining of their schools, they will continue to bear, God willing. They only ask that in their so doing their children will not be discriminated against, that they will receive the same recognition as the children of parents who choose the public school for them. That is the gist of the controversy. For the life of me I cannot see how any fair-minded American, man or woman, could possibly find fault with it. I feel, too, that the great misunderstanding that has arisen all stems from a lack of knowledge of the question in general, and of the Barden bill in particular. It is regrettable. We are only after aid for our children and their tax-paying parents. It will be a great day when all misunderstandings and misrepresentations will be ironed out. We are grateful, indeed, for your clear grasp of the matter. We Woosterites know that we are well represented in Washington. That you have the interest of your constituents at heart is well known to all of us. That you have the interest of the Nation deep within you is plain from your present endeavors as well as what we know of the record of service you have long since rendered to your Government. Men like you cannot help but give, out of the abundance of their hearts, equal rights to all, regardless of color or creed.

With kindest personal regards to yourself and Mr. Iannarelli, I remain,

Cordially and sincerely yours,
Very Rev. EDWARD S. HANNON, V. F.,
Pastor.

Development of the Los Angeles Metropolitan Area Shows Great Progress

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. McDONOUGH. Mr. Speaker, the Los Angeles area has reached fifth place among the metropolitan areas of the Nation with regard to the total number of employees in manufacturing, and the total wages and salaries paid in manufacturing. Only New York, Chicago,

Detroit and Philadelphia in the order named still rank above Los Angeles.

Of the 50 leading metropolitan areas of the United States in manufacturing volume, Los Angeles has shown the largest percentage over prewar rating, and today accounts for more than half the manufacturing production in California.

Los Angeles has 55.3 percent of the State total of manufacturing establishments.

It has 54 percent of the State total of employees in manufacturing.

Los Angeles accounts for 54 percent of total salaries and wages paid in manufacturing in California.

It has 53.1 percent of the total factory production workers.

It has 51.9 percent of total wages paid to factory production workers, and 51.4 percent of the "value added by manufacture" in the State.

In the Los Angeles metropolitan area, "value added by manufacture" amounted to $2,055,500,000 in 1947, an increase of four times the corresponding figure for 1939.

Los Angeles has experienced a stupendous increase in population during and since the war, manufacturing and business generally has expanded at a phenomenal rate, and the Los Angeles metropolitan area today is firmly established as one of the leading production centers in the Nation.

But this is only the beginning, for all indications point to the continued progress of Los Angeles to make a future as fabulous as the past.

Hardwood Situation

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks, I include the following statement:

CORRECTIONS AND REPLIES TO ASSERTIONS MADE BY THE ECA ON THE SUBJECT OF THE HARDWOOD SITUATION

Assertion: The statement has been made that "To secure the success of the recovery program by 1952–53, the United Kingdom must * * * wherever possible, purchase from nondollar sources." Other statements are made to the effect that nondollar purchases negotiated with Communist satellites are simply barter deals, and that soft currencies, primarily sterling, are being used simply as a medium of exchange.

The facts: It is our contention that in the long run there is no difference between a purchase in a Communist satellite country by barter or sterling than a purchase made with ECA and free dollars. The United States is pumping about $1,000,000,000 annually into the British economy, in addition to the United Kingdom dollar receipts from transportation, services, and goods exported by them to the United States. It is not possible for British goods being sold or bartered to eastern European countries in return for their hardwoods not to have been made in part from material purchased with dollars, or for the sterling used to buy hardwoods from eastern European countries not to have been obtained from products wholly or partly made from dollar-purchased goods. In short, American dollars are releasing British sterling which is then available to purchase hardwood lumber from nondollar sources to the detriment of the American hardwood lumber and plywood industry.

Assertion: ECA press release No. 563 of April 29 is repeatedly referred to as a measure of release.

The facts: This press release announced a policy of the ECA which would require that when ECA dollars were used for the purchase of lumber the American lumber manufacturer would be given an opportunity to bid in competition with any other dollar source. While this policy may be helpful to other segments of the lumber industry, it is of no avail to the hardwood lumber and plywood producers. The policy applies only to dollar purchases, while the hardwoods which are taking the place of the American hardwoods in the world market are being purchased for sterling and other soft currencies.

Assertion: It is repeatedly stated that business would have been much worse if there had been no ECA.

The facts: As there have been no orders for American hardwood lumber this year, from the United Kingdom, it could not get worse. In the absence of the recovery program, American hardwood producers would at least have an opportunity to compete in the world market.

Assertion: It has been stated that ECA did not cause the stoppage of buying of American hardwoods.

The facts: We believe that it is not just coincidence that with the advent of the European recovery program, orders for American hardwoods virtually ceased, and what is practically a boycott has since existed. Not a single order for American hardwood lumber or plywood has been placed since December 1948.

Assertion: It is stated that ECA would eventually assist the hardwood industry by building up the ERP countries.

The facts: This is absurd. Markets once lost are seldom regained. Eventually would be too long because few in the hardwood lumber and plywood industry could exist until the end of ECA in 1953.

Assertion: It is stated that the diversion of hardwood imports by the ERP recipient nations from the United States to Communist countries is necessary in the light of the European economic crisis due to their dollar shortage.

The facts: In the past 50 years there have been a lot of exchange problems. There have been wars, and pounds and dollars have fluctuated on the world market. If the British and other European users, as smart as they are and as good traders as they are, have been buying American hardwoods almost exclusively for 50 years, there must have been a basis or reason for it. Now they are paying 50 percent more for an inferior quality of lumber. We do not believe there is any sterling consideration that can outweigh the need for a sound economic plan.

Assertion: Statements are frequently made which tend to disguise and distort the hardwood-lumber situation by quoting figures and percentages which include United States softwoods, ties, and other products, and by quoting Canadian export figures and percentages.

The facts: Lumber and plywood exported by the American hardwood industry is not in competition with export items produced by United States softwood producers or by the Canadian hardwood and softwood industries. The hard-wood industry is interested in only reestablishing its export market which has always been competitive with European and tropical countries.

Assertion: There has been a tendency on the part of some ECA officials to underrate the importance of our hard-wood export market to the United States economy, because the prewar average was only 300,000,000 feet, which is approximately 20,000 car loads.

The facts: Lumber is one of the most important industries in many of our States. This footage represents a large percentage of the higher grades of the hard-wood species which the mills must produce if they are to run. To cut a tree economically, it is necessary to sell all that the tree produces. Today the markets are glutted with this high-grade stock, normally exported, and it is appalling to see the amount that is rotting and deteriorating in the yards for the want of markets. Serious economic repercussions are developing as more and more mills shut down, throwing thousands of men out of work and curtailing the earnings of thousands more.

We Need a Change in Policy

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. ANDERSON of California. Mr. Speaker, I am including with my remarks some self-explanatory correspondence with respect to the effect of our present foreign food policy on perennial horticultural crops.

It is becoming more and more evident to California farm producers that our present policy in Europe is gradually wrecking a large and expensive industry that has been built up mainly on an export basis. California farmers today are suffering extremely low prices for fruit and vine crops that cost the farmers a great deal of money to produce. Investments that have been made over a period of many years are seriously threatened and I believe it is high time that the State Department and the ECA reexamined our present policy.

I do earnestly hope that when the ECA appropriation bill goes to conference, the conferees will insist that section 112 of the act be used to encourage to the fullest extent possible the exportation of surplus agricultural crops in this country.

The correspondence follows:

ROSENBERG BROS. & CO., INC.,
San Francisco, Calif., July 27, 1949.

Hon. JACK Z. ANDERSON,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN ANDERSON: I am attaching a copy of a memorandum sent to us on July 20 by our vice president in charge of exports, who is traveling through Europe for the purpose of appraising the opportunities for restoring some part of California's dried fruit export trade in those markets.

En route to Europe, he stopped in Washington, D. C., and met with a number of officials in the United States Department of Agriculture and in ECA. He was impressed while there with statements urging that decisions with respect to expenditure of ECA money were made by foreign governments

receiving this assistance and that, therefore, the sensible approach was to stimulate the trade in each of the countries to bring influence to bear on their own governments.

Upon his arrival in Italy he first encountered almost conclusive evidence that the ECA is operating so as to block such decisions by foreign governments. In fact, he was told by one of the ECA men in Italy, in effect, that grants to Italy would be wholly or in part jeopardized by any action on the part of the Italian Government to encourage commercial exports from the United States.

He has since visited Switzerland, France, and is now in Germany. His report, which is attached, categorically declares that there is little hope for surplus American agricultural industries to crack these markets because of the opposition of ECA and other related organizations.

While the tone of his report reflects indignation, let me say that he is a mature observer and we are convinced he would not have made such a report if there was any doubt about his observations.

In view of the fact that members of our industry here in California struggling with this overwhelming problem have been constantly urged by their European correspondents to induce ECA and our Government to relax its policies, it is obvious to us that we are being misinformed by our own Government which repeatedly has advised us that foreign governments have complete autonomy in this respect. The facts are that European governments are buying products like those America has in excessive surplus from foreign sources and are thus building up foreign competitors of American agriculture and using American dollars for the purpose.

We feel that you will want to know about this so, therefore, we are taking the liberty of forwarding this information to you.

Yours very sincerely,

DWIGHT K. GRADY,
Vice President.

FRANKFURT, GERMANY, *July 20, 1949.*

Today I sent you my lengthy cable No. 5, part of which you may consider superfluous. If I sent it, nevertheless, it is because of the extreme importance of the matter involved. If I interpret correctly the contents of the accompanying clipping, the ECA bill has been passed by the House of Representatives and sent to the Senate, qualified by the three riders mentioned in the enclosed clipping, and the first is the one I strongly recommended to Mr. Grady over the phone from New York. Hoffmann, and in a measure, Truman, is on record in opposing these riders, but the first one is the factor which will decide our export business. Without it our export business to Europe will not be more, but possibly less, than last season.

It is all very well for Dwight Grady to urge the importance of having the European trade, and European governments, convinced of the desirability of resuming the California trade, but the best efforts are futile as long as it is the very policy of our own Government to oppose such a development, which is the case as far as ECA is concerned. Please note that I am not guessing in this, but I more or less quote the leading officials, both in the French and German food office, whom I had occasion to see. It goes without saying that the trade in Italy, France, and Germany is clamoring head over foot for dried fruit import permits, and if the local governments had a free hand, we would be further than we are today.

Somebody had the brilliant idea of creating, in addition to the ECA, the OEEC (Organization for European Economic Cooperation). This is a body of 18 European nations, and, I understand, one or several United States observers sit in on their meetings, which will shortly be held in the marble halls of the Rothschild Palace in Paris. The declared purpose of the body is that no ECA, and for that matter, no other dollars are spent for anything that can be obtained elsewhere in Europe. This is what is behind the suspension in the import licenses for Italy I recently wrote you about. It is behind Germany's inability to buy dried fruits from us, and the head of the French Ministry of Economy told me that even if he were to favor the import of our fruits into France, which for reasons of his own he does not, his granting import permits to California would be violently opposed by the OEEC.

He was not bashful in saying that France does not like the OEEC, but was forced into it, and into the interminable arguments it creates. Italy has no use for it, and for all I can make out, it is Mr. Hoffman's and/or Harriman's baby, and it is undoubtedly enthusiastically supported by countries like Greece, Smyrna, and specialty interests in other countries, all of which use it for a perfect set-up for excluding United States competition, and thereby endeavor to exact higher prices for their own produce. Spanish apricots are selling in France for twice the price at best of our landed cost of extra fancy Blenheims, and the quality is 4 to 5 cents poorest paste stock. Greek currants, raisins, and French prunes are selling in France at twice the price of ours, without figuring on any subsidy, and if, like in the case of prunes, it can be readily proven that there is no appreciable supply available outside of the United States of America, the answer is that people had better eat Tunis' and Iran dates instead.

If anyone had deliberately set out to conceive the most efficient plan for excluding the United States trade, and ours in particular, from Europe, they could not have found anything better, or as good. Everytime we open our mouths, and I am told that our Government's representatives do so rarely at these meetings, we are told that this European self-sufficiency must be fostered to stop communism, and it does not seem to occur to anyone that the artificial maintenance of high prices which we could check, and are paying taxes to do so, is as sure a means to foster communism as anything one could dream of.

The most generous thing one could say for this policy of our ECA officials is that it is well intended, but it is handicapped by an amount of ignorance, and in many cases, connivance, which challenges one's imagination. In our simplicity, we seem to be bent on not only paying for everything the European was has cost (two wars), but on atempting to cure the unevenness of European trade, which has existed for decades.

It is true that Europe is not earning enough dollars through its exports to pay for all dollar imports, and the reasons are many, others than those of poverty. They are the whole social fabric, whose fallacy is illustrated by England's dilemma, resulting in production costs frequently twice as high as ours because of a tremendous and constantly increasing bureaucracy, coupled with inefficient work and exorbitant social burdens.

Thus, we have conceived the Marshall plan which so far has done much over-all good. I personnally feel it has done most of its work, including arresting communism. Communism is on the decline everywhere in the Western World, regardless of the talk to the contrary handed us everytime the boys want some more money. It is high time we think of the United States of America, and our distressed industries. The one and only way we may increase our export business is by insisting that some (a moderate amount) of our own money we pour into ECA is used in a small measure to help ourselves. Without this course of action, our ambitious subsidy program will prove largely a flop, and I would be ready to throw it up right now, except for clinging to it as a desperate straw that might, though not necessarily will, help us to get rid of our pears and the like.

If we do not get this rider on the ECA bill, you must not figure that the subsidy program will take anything like our surplus of raisins, prunes, peaches, apples, and pears, and we shall have no alternative but endeavor to pour this surplus once again into the lap of the CCC, which, once stuck with the stuff, will have the urgency of its own predicament to force some of the goods on the ECA, I suppose, the next time for 25 cents on the dollar. I presume you know that they finally got Germany to take 20,000 tons each of raisins and prunes. Did this result in your getting shipping instructions for the 100/120's?

I could go on writing you a book about this mess, all of which will add up to this: There is only one means to force the issue with these past-masters in horse trading in Europe, and that is by tightening the purse strings in the manner proposed. Without such or similar action, our export business will not grow, but become still less.

COPY OF ASSOCIATED PRESS CLIPPING

WASHINGTON, July 19.—The Economic Cooperation Administrator, Paul G. Hoffman, told the Senate today that three amendments to the foreign-aid bill are serious threats to the European recovery program.

In a letter to Senator ARTHUR H. VANDENBERG, Republican, of Michigan, with copies to other Senators, the ECA Administrator objected to:

1. The amendment requiring the ECA to buy surplus farm products of the kinds, and in the amounts set forth, in ECA's budget estimates. These funds would be frozen if not used for farm purposes.

2. The amendment requiring the ECA to set aside $50,000,000 for loans to Spain.

3. The amendment cutting $74,000,000 from the ECA's authorized spending in the last quarter of the fiscal year 1949.

Mr. Hoffman said it would be both "inappropriate and unwise" to include Spain in the foreign-aid bill, adding:

"If Congress decides that a recovery program in Spain is desirable, I believe we should first request Spain herself to develop a recovery program, just as we have insisted that participating countries develop their programs."

America and the DP's

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. DINGELL. Mr. Speaker, so that the RECORD shall be factual and complete, I ask unanimous consent to insert in the RECORD an editorial, America and the DP's, as it appears in this morning's Washington Post dated August 1, 1949. This editorial, it seems to me, is beyond refutation and answers the unfounded and biased views of all unwarranted opposition:

AMERICA AND THE DP'S

A group of Senators led by Senator IVES is considering a move to have Senator MCCARRAN'S Judiciary Committee discharged from further consideration of the displaced-persons bill unless the measure is submitted to the Senate by mid-August. The move is

long overdue. Procrastination appears to have become the deliberate policy of Senator McCARRAN in regard to the liberalization of DP legislation pledged by his party in the last election campaign. The Senate as a whole has an obligation to thwart this policy if it is to avoid sharing responsibility for its tragic impact on the uprooted people still awaiting liberation in Europe.

"In our consideration of the over-all problem," Senator McCARRAN said the other day, "we are aware of a fact which is not generally known, namely, that the United States of America has thus far received or provided for the reception of more refugees and displaced persons than all of the other countries of the world combined." This is a wonderfully ambiguous, not to say disingenuous, statement. It not only lumps together without definition "refugees" and "displaced persons," but also those "thus far received" and those "provided for." And it appears to use as a basis the whole 15-year period since 1934, including immigrants who came in under regular quota laws. What it proves we cannot say, save that at one time, before Mr. McCARRAN took over, the United States was indeed a haven for the oppressed.

But the record of the United States as a participant—the richest and most powerful participant—in the International Refugee Organization in dealing with the postwar problem of DP's is not so creditable. And it is this particular problem with which the Senate of the United States, Senator McCARRAN especially, ought to be concerned. The IRO started operations July 1, 1947. In the 2 years since then, the agency has resettled 505,006 DP's in 87 countries. The number taken in by the principal countries of resettlement up to June 1, 1949, are as follows:

Israel	117,246
United Kingdom	82,085
Canada	63,854
United States	55,307
Australia	45,784
France	33,116
Argentina	26,844
Belgium	22,043
Brazil	18,458
Venezuela	12,052

Thus, it appears that this country has actually received to date slightly more than 10 percent of the DP's resettled under the IRO program. Yet, this country provides 44 percent of the total IRO budget and was counted upon to absorb something like this percentage of the DP's precisely because it is better able than the other members to do so. The obligation is, of course, a moral, not a legal, one. It should be all the more pressing on that account.

Congress Should Act Now on Statehood for Hawaii and Alaska

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. PRICE. Mr. Speaker, one important order of business which Congress should consider before going home is the question of statehood for the Territories of Hawaii and Alaska.

In this connection I include herewith an editorial from the East St. Louis (Ill.) Journal, of Thursday, July 22, 1949, and I find myself in full accord with the expressions of the writer of this article. It follows:

NO STATEHOOD, AGAIN

No statehood for Hawaii and Alaska at this session of Congress.

That appears to be the decision, despite everything the people of both Territories have been able to do and despite the support they have received from individuals and newspapers of the American mainland.

The word has come from Congressman J. HARDIN PETERSON, Florida Democrat, who is chairman of the House Public Lands Committee. He said he would not press for statehood action this year.

"With the House rushing to adjourn and with so much controversial legislation still waiting for action, we might jeopardize the legislation by forcing a vote now," he said. "We will press for action early in the next session, instead, when there will be more time and our chances will be much better."

But why should there not be pressure for action now? Why should the rush to adjourn jeopardize the chances of worth-while legislation? Why should the Members of Congress vote against any bills that deserve passage just because there is other legislation that is controversial still to come before them? Why should they do so just because they would like to adjourn?

Furthermore, why was the legislation regarding Hawaii and Alaska not taken up early in this session? It certainly did not need any further investigation. The worthiness of the proposals for statehood was established at the beginning of the current session, just as much as it will be at the early part of the next session.

Actually, statehood for Alaska and Hawaii is just getting another shoving around. And we should be ashamed of our Congressmen for not facing up to the issue but putting it off to another year.

A Balanced Court

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. BOGGS of Delaware. Mr. Speaker, as a member of the Judiciary Committee of the House of Representatives, my primary interest is in the efficient and proper administration of justice in our Federal courts.

Confidence in the Supreme Court of our land is one of the most important elements sustaining our whole system of government.

With the announcement by the President of his intention to appoint the Attorney General, Mr. Clark, to the Supreme Court to fill the vacancy left by Mr. Justice Murphy, the entire country has been afforded an opportunity to review and reflect upon the status of the Court and the important part it plays in the proper balance of our Federal system.

It is not my intention to cast a reflection upon nor to question Mr. Clark's outstanding service as a public official nor to minimize his ability. However, it most certainly is apparent that this appointment is purely a political appointment and ignores many of tried and proven judicial temperament and experience.

If Mr. Clark becomes a Justice of the Supreme Court, it may be that for several years to come his effectiveness as a member of the Court will be considerably limited because many of the cases which will come to the Court for decision are cases which Mr. Clark set in motion as Attorney General of the United States. Many of these cases are of the most far-reaching significance. Whether Mr. Clark would disqualify himself in these cases because of his previous connection with the cases is a question to be decided by the Justice himself on the basis of the degree of connection or association or activity with a particular case. In the past the Court itself has on occasions announced that it lacks a quorum to pass on a particular case without identifying which Justices have disqualified themselves. With Mr. Clark's close association and connection with the many cases which are likely to come before the Court, we may find many instances in which the Court cannot entertain the case because it lacks a quorum.

As an indication of the deep concern which the people of our country have for the Supreme Court of the United States, I wish to include as part of my extension of remarks several editorials which have come to my attention and which are certainly worthy of the fullest consideration especially by the Members of the other body who are charged with the responsibility of making a thorough examination of such an appointment. They follow:

[From the Washington Star of July 29, 1949]

AN OVERBALANCED COURT

There may be some criticism of the President's choice of his Attorney General to succeed the late Frank Murphy on the Supreme Court which runs to Mr. Clark's personal qualifications for that post. It seems to the Star, however, that a more valid criticism arises from the tendency to overload the Court with appointees drawn from the executive branch of the Government.

If Mr. Clark is confirmed, five of the present members of the Court will have come directly from the executive establishment. And only one of the five has had any appreciable judicial experience. Of the four others, only one had had previous judicial experience worthy of mention.

This is not a trend that is conducive to a strong, competent Court. Nor is it conducive to public respect for the Court. In the past 12 years, 11 men have been named to the Supreme bench. Of these, only two had significant previous judicial experience. On this record, it is not at all surprising that more and more people are coming around to the view that politics rather than merit is the governing consideration in Supreme Court selections.

As for Mr. Clark, the Star believes that he will be a conscientious member of the Court; that he will not take partisan politics with him to the bench. His nomination may be attacked, for, to take two illustrations, there are those who believe, on the one hand, that he was not sufficiently zealous in the investigation of the Kansas City vote frauds, while, at the other extreme, there have been complaints of overzealousness on his part in the tidelands-oil issue. There may be some question, too, of Mr. Clark's views on the subject of presidential power. He was the author, during the Taft-Hartley debate, of the opinion that the Pres-

ident has inherent powers, without benefit of statute, to cope with a national emergency arising from a strike, and, presumably, with any national emergency. That is a novel view, not widely shared. Judging from the opinions of the Court in the contempt case against the United Mine Workers, it is a view that is not shared by any of the present justices.

These are matters, however, which are not likely to have any important bearing on the Senate's attitude toward Mr. Clark's nomination. It also should be remembered that many judges have lived to confound their critics. For example, there was severe criticism of the selection of Mr. Hughes and Mr. Brandeis, but it would be hard to find anyone today who would deny that they proved to be splendid judges. And so, in Mr. Clark's case, the real test of his fitness must await the event. His stature as a judge will be determined after, and not before, he goes to the bench.

The selection of Senator McGRATH to take over the Attorney Generalship is a greater surprise than the choice of Mr. Clark for the Court. There may have been several reasons for the President's preference. Perhaps Mr. Truman was thinking of this as a sort of compensation for the fact that for the first time in more than a half century there will not be a Catholic on the Court. Or it may be that he wanted to clear up the curious political situation which prevails in the Democratic National Committee, with Mr. McGRATH as chairman and the President's fellow Missourian, William Boyle, in the apparent role of the man behind the scenes. Still another, and perhaps more probable, explanation may be that the President simply wanted to reward Senator McGRATH for past services. Certainly, during the political dark days, Mr. Truman had no more loyal or more competent supporter than the Rhode Island Senator, and if the President feels that this should be recognized by the award of a cabinet post, and if Mr. McGRATH wants the post, it would be ridiculous for anyone to raise an objection.

[From the Detroit News of July 30, 1949]

JUDGES OVERLOOKED

For all anyone knows, Tom Clark may prove the greatest thing in the judicial line since Oliver Wendell Holmes. There is nothing whatever in his record to indicate that that will be so, or indeed that he will prove adequate to the task to which he has been appointed.

As Attorney General he has been a prosecutor of no marked distinction, and if his record in that office had been outstanding it still would not commend him to a post which calls for qualities quite apart from those of the advocate.

Meanwhile, the Government maintains a great proving ground of judicial timber in the lower Federal courts. There, a genuine talent can assert itself and come to maturity. But President Roosevelt and his successor have conspicuously ignored this wealth of material.

Appointments to the Supreme Court in their time have been made for a variety of reasons, but seldom solely in pursuance of what ought to be the guiding principle on such occasions: That the highest bench in the land deserves nothing but the finest in its personnel.

[From the St. Louis Post-Dispatch]

TRUMAN'S THIRD JUSTICE

The President's choice of Attorney General Clark for the Supreme Court is very personal and very political. It will be a distinct disappointment to more than one group of citizens.

The choice will disappoint first those who are concerned about the state of civil rights.

During Tom Clark's tenure as Attorney General there has been more witch hunting than at any time since the notorious Palmer regime after World War I. Mr. Clark tried to get Congress to reverse its bar against wire-tapping. Indeed, he has used the euphemism, "technical surveillance," to hide what the late great Justice Holmes properly called a "dirty business." He has blacklisted 140 organizations as subversive even though the offending activity in some cases is no more disloyal than to oppose the poll tax. He has permitted the Civil Rights Section of the Department of Justice to lapse into slumber at a time when many loyal Government employees have been literally persecuted.

The choice will disappoint those who have hoped that the President would promote a judge.

Once again the White House has passed by the bench in favor of a Cabinet member who is essentially a politician. Once more high-ranking Federal appellate and State supreme court judges are told in effect that the way to the Supreme Court is not upward through the ranks but from the top at the Cabinet level. Though Mr. Clark is regarded as a good legal technician, the fact remains that his confirmation will establish on the Supreme Court another Justice who has had no judicial experience.

The choice will disappoint those citizens, who as litigants, will find that Tom Clark cannot participate in many decisions.

As Attorney General, Mr. Clark has already filed more than 160 antitrust suits, whereas the average per Attorney General has been 42. Though Mr. Clark has won a substantial number of consent decrees, many of these suits are pending. In time a large number will go before the Supreme Court. As a Justice, Tom Clark will have to absent himself even more perhaps than any of the several Attorneys General and Solicitors General raised to the high bench in recent years. This will mean more 4-to-4 divisions.

The choice will disappoint those who feel that the President should have named a Roman Catholic to succeed Frank Murphy.

For the first time since Cleveland appointed Edward D. White, the Supreme Court is without a Catholic Justice. It can be argued that a Judge's religious faith should not be considered. Many citizens hold this view and the President expressed himself in announcing the Clark choice. Yet it is reassuring to know that when an issue of church and state comes up, as in the McCollum case, involving use of public schools for sectarian instruction, a Justice who was a Catholic, joined in the ruling.

The choice will disappoint citizens who are still wondering when the FBI is going to catch up with the 1946 Missouri vote thieves.

Mr. Clark was distressingly slow to do anything about the frauds in the Axtell-Slaughter primary in Kansas City, in which the President personally took sides. Mr. Clark went into action only after the election board safe was blown and the burglars made off with impounded ballots and other evidence. For more than 2 years this has been an unsolved crime.

Few things are riskier than appraising a Supreme Court member in advance. The progressive Wilson appointed arch-conservative McReynolds. Conservative Coolidge appointed the liberal Stone. On paper Tom Clark seems to stand near Justice Reed. It will be tragic if he is no more attached to civil liberties than Truman's first appointees, Vinson and Burton. If he is not, then human rights which so often hang by one-Judge majorities, will be set far back.

Undoubtedly Tom Clark will accept. It is probable that he will be confirmed. Therefore may he be a larger, broader, freer, bolder Justice than he has been Attorney General.

[From the New York Herald Tribune of July 29, 1949]

A LOW EBB

Taken as a whole, President Truman's record of appointments has been far from ideal. However, the country could usually take some comfort from the fact that Mr. Truman showed a marked sense of national responsibility in naming men to top posts; it was in the lower echelons—important enough, to be sure, but standing in close personal relationship to the President—that his nominations were subject to the greatest criticism. Thus it might be said that asking Senator McGRATH to become Attorney General was a purely personal and political choice, even granting Mr. McGRATH's competence. But far more important, far more distressing, is Mr. Truman's selection of Mr. Tom Clark to fill the place in the Supreme Court left vacant by the death of Justice Murphy. Together, the President's suggestions—they have not yet been made as formal nominations—constitute a low ebb in this administration.

Mr. Clark's record as Attorney General has been one of failure. When he was not answering to Congress for inability or unwillingness to take action in cases which demanded it, he was engaged in spectacular and largely vain efforts to show how zealous the Department of Justice could be in the pursuit of nonessentials. If, in the course of these activities, there was any slight display of true judicial temperament, any suggestion that Mr. Clark might be a valuable accession to the Supreme Court, it certainly escaped the attention of the public at large. The Eisler case, which placed the United States in the humiliating position of receiving polite lessons in law from an English judge, was only the most striking of Mr. Clark's errors.

On the score of ability alone, Mr. McGRATH would be welcomed as Mr. Clark's successor in the Justice Department—provided the vacancy was created in some other way than by sending its present occupant to the Supreme Court. But as Democratic National Chairman, Mr. McGRATH is far too closely entwined in partisan politics to be eligible for a quasi-judicial post, even if he were to resign his party post. Both he and Mr. Clark should, in the best interests of the country and of the administration, decline Mr. Truman's offers. If they do not, the Senate should not confirm them.

[From the Baltimore Sun of July 30, 1949]

MR. CLARK GETS THE CALL TO THE HIGH COURT

Mr. Truman told the reporters that qualification for the high calling of a judge is the only thing a President should look for in choosing a nominee for the United States Supreme Court. And then he named a man who conspicuously lacks the first and the elementary qualification for the Supreme Court type of judging—experience judging in the lower courts.

Practically every State in the Union has faced the problem of political judges and judges who have to dabble in politics to get or stay in office. Almost everywhere the result has been found bad. Maryland and other States have gradually evolved systems of choice and appointment which minimize these crude political blemishes. Mr. Truman's latest nomination is hardly a model of this wiser procedure.

Once that very grave defect in Mr. Tom C. Clark's nomination for the high bench is mentioned, it may be said that in other respects he measures up to the standards of

adequacy for his new post. He has had extensive practice as a small-city lawyer, and Justice Jackson has already shown us how this kind of experience can slowly mellow the shrill bias of the automatic liberal into something closer to judicial impartiality.

Mr. Clark got his law education at the University of Texas, where he was probably little exposed, if at all, to the philosophical nihilism which has infected instruction at some other law schools. The Attorney General's experience in national politics will at least enhance his knowledge of how actual men really behave in practical affairs. These things, for what they are worth, Mr. Clark brings to the high court.

But the trouble is that this is shockingly meager equipment for a justice of the Supreme Court in the year 1949. The Court at this moment in its history needs superlatively more. Riddled with personal rancors, mired in philosophical disagreements, peopled by perpetual candidates for other office, doctrinaire professors, exlegislators who see the high bench as merely an opportunity for more legislation beyond the reach of electoral control, the Court faces a turbulent future not well prepared.

For let us be clear about the Court's function in our cranky and delicately balanced Federal system. In that system it was conceived as the symbol of justice, of disinterestedness, of something above politics and expediency which could persuade powerful suitors even in their disappointment because they saw in its judgment something more than optical and temporal authority.

Nothing in Mr. Clark's record suggests that he will appreciate how much in the turbulent times ahead it will be necessary for the high Court to invite not merely the respect but the reverence of the men and the groups engaged in the great affairs of the time.

Yet in the wise and solemn words of the late Alfred North Whitehead. "Those societies which cannot combine reverence to their symbols with freedom of revision must ultimately decay, either from anarchy or from the slow atrophy of a life stifled by useless shadows."

[From the Washington Post of July 30, 1949]

CLARK AND M'GRATH

President Truman is right, of course, in saying that a man's faith has nothing to do with his qualifications to be a justice of the Supreme Court. It would certainly be a grievous mistake to withhold appointment from any well-qualified jurist on grounds of his religious affiliation. But it is time to get away from the idea that any particular Supreme Court appointment should go to a Catholic, a Protestant, or a Jew so that the new member will be of the same faith as his predecessor. The only really important point is the nominee's judicial temperament, learning, and experience.

In rejecting one false criterion, however, the President has tripped over another. For his selection of Attorney General Clark to succeed Justice Murphy is not based on the highest judicial standards. Mr. Clark has many admirable qualities, but he has not been an outstanding Attorney General. His courageous prosecution of John L. Lewis and his zeal in antitrust suits are offset by his careless handling of the Eisler case and his more serious lack of good judgment in advising the President as to his emergency powers under the Constitution. It is highly improbable that his name would have appeared on any list of distinguished jurists such as a conscientious President usually assembles before making an appointment to the Supreme Court. Mr. Truman needs to be reminded that a man's good fellowship has nothing more to do with his qualification to sit on our highest tribunal than has his faith.

As for Senator MCGRATH, who is the President's choice for Attorney General, we have no doubt that he will run the Department of Justice ably if he accepts the post. But here again the impropriety of designating the chairman of the Democratic National Committee to head the prosecuting arm of the Government must be noted. The President was so insensitive to the necessity of keeping this quasi-judicial post free from political influences that he said he did not know whether Mr. MCGRATH would resign his political post if he accepts the Attorney Generalship. Combination of the dominant party chairmanship with the Department of Justice would be a high price, indeed, to pay for the elevation of Mr. Clark to the Supreme bench.

We have no doubt that Mr. Clark will be conscientious on the bench, and as his experience broadens with the years he may become an outstanding Justice. Certainly he has at times shown the requisite independence and sense of public duty. But one's hope for the future does not minimize the present disappointment over the President's failure to do his best. He has treated a great coordinate branch of the Government as if it were an institution for the reward of his personal favorites. The fact that this keeps the Court overweighted with former executive officials, leaves it politically lopsided, and seems to close the door of our highest judicial body to the greatest legal minds of our time, appears to have been lightly disregarded.

[From the Omaha World-Herald]

PEACE OF MIND

Henry S. Beer, president of the New York, New Jersey, and Connecticut Federal Bar Association, appeared before the House Judiciary Committee this week to plead for higher salaries for Federal judges.

"There's only one way to get justice," he said, "and that's from judges who have peace of mind."

There is much truth to that observation. Men who carry the massive responsibilities of the Federal bench should not have to worry about the grocery bill, or the cost of sending their sons and daughters through school.

But it should be added that more pay will not automatically produce a first-rate judiciary. The chief trouble with the Federal bench, most particularly with the Supreme bench, is that it is occupied by too many politicians and too few men of fair, judicial temperament. The many ideological divisions on the Supreme Court, frequently by vote of 5 to 4, confirm that unhappy truth.

If the judiciary is to be straightened from the top down, the judges should be given adequate pay. But that in itself will do little good unless stronger, abler, less political judges are appointed.

Which brings up the fact that President Truman yesterday announced he had offered the Supreme Court vacancy, created by the death of Justice Murphy, to his Attorney General, Tom Clark. Such a strictly political appointment will not add to the peace of mind either of the judiciary or the general public.

[From the Wilmington (Del.) Morning News]

TWO CRONIES MOVE UP

President Truman's announcement that Senator MCGRATH will replace Tom Clark as Attorney General is good news. Clark's showing in the office has been undistinguished at best and inept at worst. MCGRATH, judging by the way he has comported himself in the Senate, should make a much better record once he gets the feel of his job and clears away the debris left behind by his predecessor. It is true that almost any choice would have been an improvement, but MCGRATH gives the impression of being adequate for the post.

But Mr. Clark, unfortunately, is not to be fired or demoted to a job whose caliber he fits. He is being promoted. If he accepts, he will occupy the seat on the Supreme Court bench left vacant by the sudden death of Justice Murphy. President Truman, who has generally tried to choose good men for major posts and political cronies for minor ones, has reversed the process this time.

Mr. Clark may, of course, confound us by making an excellent justice. It has sometimes happened that the dignity, prestige, and responsibility of the Supreme Court have brought out in appointees an ability and integrity that no one had suspected they were capable of. But Mr. Clark is an extreme long shot. We can find in his record no evidence of judicial temperament or outstanding intelligence.

The appointment appears to be starkly political. Clark last year was one of the few stalwarts who remained on the burning deck of the Democratic Party whence all but they had fled. Verily, he hath his reward. MCGRATH, chairman of the Democratic National Committee, falls into the same category, which is the one unfortunate thing about his appointment. But since his capacities are greater and the post is a less demanding one, he should fit in.

The appointment of Clark breaks with a tradition of 39 years' standing—that there should be one Catholic on the Supreme Court. If Clark were of outstanding caliber we should have no fault to find with that. But Catholics, we feel, can hardly be blamed if they resent Mr. Truman's passing over many Catholics of real ability in order to appoint a less able man.

Army Barber-Shop Quartets

EXTENSION OF REMARKS

OF

HON. TOBY MORRIS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. MORRIS. Mr. Speaker, 11 years ago, a movement was started in Oklahoma to revive an old Amerian tradition of barber-shop quartet harmonizing. This movement started in Tulsa, Okla., in 1938, and has already spread to over 600 cities and towns in the United States and Canada. Today, I am informed by Mr. Edward R. Place, associate public relations chairman of the SPEBSQSA that it is the Army's intention to organize barber shop quartets and choruses at all of our Army posts in this country and overseas. I can think of nothing that will be more morale building for our Army troops than this movement.

I now insert the official Army statement in regard to this movement:

ARMY BARBER-SHOP QUARTETS PLANNED IN NEW PROGRAM

A new program to encourage barber-shop quartet singing in the Army as the first step toward expansion of recreational music opportunities for soldiers in their leisure time was announced today by Maj. Gen. Russel B. Reynolds, Chief of Special Services, Department of the Army. He said that through this program a maximum number of soldiers

can be reached with a minimum of equipment and supplies.

Objectives of the plan are three fold: To have at least one Army barber-shop quartet in every service club on Army posts; to organize a post barber-shop chorus in addition to quartets on every large post; to encourage qualified soldiers to seek membership in chapters of the Society for the Preservation and Encouragement of Barber Shop Quartet Singing in America, Inc., in communities near Army posts.

The SPEBSQSA, international organization, is cooperating on a partnership basis with the Music Section of Army Recreational Service in this new all-Army project, General Reynolds said. Lt. Col. W. A. Bishop, Chief of Army Recreational Service, and Capt. H. H. Copeland, Chief, Music Section, are working on the project for the Army.

Through its international president, Mr. O. H. King Cole, of Manitowoc, Wis., and its international executive secretary, Mr. Carroll P. Adams, of Detroit, Mich., the society has offered to the Army the professional services of its approximately 600 chapters and 30,000 members to assist in developing barber-shop singing among Army personnel. The 600 chapters include local community groups throughout the United States, two in Alaska, and one each in Guam and Hawaii.

To help get the movement under way, the SPEBSQSA has appointed a three-man international committee, headed by Mr. Dean Snyder, president of the District of Columbia chapter, to work with the Department of the Army Special Services office. Other members are Mr. Edward Fahnestock, Wichita, Kans., and Mr. E. Wesley Enman, Needham, Mass., both international board members.

Under these men are seven area chairmen, one for each of the six United States Army commands and the Military District of Washington, who will work directly with the command's Special Services officer on an area basis and collaborate with local SPEBSQSA chapter presidents slated to act as advisers to Special Services officers of nearby Army posts. The seven and the Army commands in which they will work include: Mr. J. Bailey Harvey, New York, N. Y., First Army; Mr. John C. Bell, Baltimore, Md., Second Army; Mr. Al Ostuni, Atlanta, Ga., Third Army; Mr. Harvey McDonald, San Antonio, Tex., Fourth Army; Mr. Robert L. Irvine, River Forrest, Ill., Fifth Army; Mr. John A. McDonald, San Francisco, Calif., Sixth Army; and Mr. James L. Ewin, Washington, D. C., the military District of Washington.

Advisers from the local community chapters will assist the post Special Service officers and Service Club directors in organizing quartets, choruses, music festivals, and other special programs, and in helping to train Army leaders. Soldiers will be encouraged to visit local SPEBSQSA chapters in civilian communities to see at first hand how they operate and to hear their quartets "barber shopping." In turn, Special Services officers and Service Club directors will invite the advisers to bring outstanding civilian quartets and choruses to the posts to demonstrate barber-shop singing, to show what fun it can be to stimulate wide interest in the program.

Essential promotional and training aids will be furnished to Army posts by Army Recreational Service, Office of the Chief of Special Services, Department of the Army. These will include barber-shop quartet kits and subscriptions to The Harmonizer, official quarterly magazine of the Society for the Preservation and Encouragement of Barber-Shop Quartet Singing in America, Inc. Kits contain an album of 3 phonograph records made by SPEBSQSA quartets and 5 folios of barbershop quartet music, each folio consisting of 12 numbers. Other aids will include a record album of four selected songs from the quartet folio. One side of each record will contain the individual tenor, lead, baritone, and bass parts from which the soldier can learn his own part of the song; the other side, a rendition of the same song, enabling the soldier to sing the number with the full quartet after he has learned his part.

General Reynolds, in discussing the project said: "For the energetic young men in today's Army, it is necessary to provide wholesome, satisfactory off-duty recreation in approved environment. In this program, Army Special Services is grateful for the cooperation and active assistance of so successful and influential an organization as the Society for the Preservation and Encouragement of Barber Shop Quartet Singing in America, Inc. We are confident that this association will make possible recreational benefits to the soldier which otherwise would be unattainable; will provide soldier relationships with representative members of the community and help to acquaint civilians at first hand with the fine quality of young men who make up our peacetime Army."

Waterways Bill

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Arkansas Gazette of July 29, 1949:

WHY THIS SWITCH?

As this is written, there has been no public explanation of why the House Rules Committee suddenly decided not to send the $1,120,000,000 waterways bill to the House floor for consideration. This is the omnibus measure that provides for all construction and planning on the rivers and harbors of the Nation. Arkansas, of course, has a big stake in it, because it contains funds for the further development of the Arkansas Basin, the irrigation project on Grand Prairie, and other items of the first importance to the State.

Some of the opposition to the measure within the Rules Committee doubtless comes from those who persist in regarding all river development projects as tainted with the "pork barrel." There has also been some speculation in Washington as to the possible political implications of the action. The Rules Committee is controlled by the administration and a good many of the Southern Congressmen whose States stand to benefit under the waterways measure have been consistently opposing the Truman program.

Be this as it may, the action of the committee should at least serve to lay the ghost of the so-called Arkansas switch. The switch allegedly took place a few months ago in connection with the House voting on labor legislation. In return for voting with the administration, so Newsweek and other publications alleged, the Arkansas delegation was assured that the river projects in which it was interested would have administration support.

Well, it is quite clear that these Arkansas projects not only do not have the support of House administration leaders at the moment, but actually have their active opposition. It would seem to be incumbent upon Newsweek at this juncture either to retract its earlier story on the Arkansas switch, or print a new one about the great administration double cross.

Shall a Democratic Union Replace United Nations?

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Item:

SHALL A DEMOCRATIC UNION REPLACE UNITED NATIONS?

When the Atlantic Pact was ratified by the Senate last week, we called attention to this significant implication of the treaty:

The pact is potentially an organization which can replace the United Nations, if Soviet sabotage continues to keep the UN from functioning.

Action looking to bring about just such a development was initiated in several quarters yesterday. Resolutions were introduced in both Senate and House calling for preliminary discussions of such a federation. One of these was fathered by Representative BOGGS, of New Orleans.

At the same time, in New Orleans, Will Clayton of Houston, formerly Under Secretary of State, now a vice president of the Atlantic Union Committee, issued a statement urging favorable consideration of these proposals.

The various suggestions thus put forward have one central purpose. They would give the united backing of world democracy to an organized movement for world peace.

One proposal by Senator TOBEY, of New Hampshire, would transform the United Nations into a federation with power to enforce peace. Necessarily, this involves a significant amendment to the UN Charter.

The plan put forward by Senator KEFAUVER, of Tennessee, on behalf of himself and 15 other Members of the upper House, embodies the principles sponsored by the Atlantic Union Committee. It would bring the signers of the North Atlantic Pact into a federation of world democracies.

It proposes that the nations signing the North Atlantic Pact name delegates to meet in the United States this year to explore "how far their peoples, and the peoples of such other democracies as the convention may invite" can work out among themselves a free federal union.

NO MORE SHADOWS INSTEAD OF SUBSTANCE

Adoption of such a resolution would not bind this country to do more than explore the possibilities of such a step. It would not of itself set up a federation of world democracies.

But it would put the totalitarians in general, and the Soviet Union in particular, on notice that the time for double talk and double dealing has come to an end.

It would give articulate expression to the determination of democracy throughout the world not to sacrifice the substance of world organization for its shadow.

It would say to world communism:

"We are done with appeasing you. That is too big a sacrifice of principle to make in return for preserving the impotent and sterile form of what we thought we had brought into being at San Francisco."

It is to be noted that the Kefauver resolution suggests that not only the signers of the Atlantic Pact be asked to meet for such a purpose, it specifically uses the words "and the people of such other democracies as the convention may invite."

There can be little doubt that this is a reference to the 21 Western Hemisphere nations which signed the pact of Rio nearly 2 years ago.

A union such as this would be a formidable one. Linked by mutual trust and understanding, it could succeed within its sphere where the United Nations has failed.

Moreover, it could muster the force needed to meet any challenge world communism might deliver in the furtherance of aggressive designs.

UNION NOW WOULD DIVIDE THE WORLD

Even at the discussion stage, the proposed pan-Atlantic Union might immediately divide the world into two hostile camps. That is the line Russia and her fellow travelers and sympathizers are sure to take in opposing such a measure.

So what?

The world is already divided into two hostile camps. It is naive not to admit it.

The division was brought about when Russia closed the borders of her iron curtain bloc to her partners in the UN.

It was intensified when Russia refused to permit UN observers to witness the travesties of Balkan elections.

The rift was further widened when a Soviet coup d'etat swallowed Czechoslovakia, when efforts to disrupt the Governments of Italy and France by Kremlin-directed general strikes were made, and when the blockade of Berlin was imposed.

These were all acts of force in everything but the resort to arms. It was even called the cold war.

Some facts—perhaps many of them—are unpleasant. But it is better in the long run to recognize they are facts than to pretend they do not exist.

The League of Nations pretended that Japan's invasion of Manchuria on the pretext of the Mukden incident, Italy's unprovoked rape of Abyssinia, and Hitler's Anschluss of Austria were not lawless acts of aggression.

The United Nations has been pretending that Russia's harsh authoritarianism is not a contradiction of the UN principle of world federation.

RUSSIA HAS MERELY REVERTED TO TYPE

Both views were unrealistic. Both were wishful. Both were predicated on the untenable theory that "if we give in to them on this, maybe that will satisfy them. Maybe they will be good from now on."

Russia was Hitler's treaty partner until attacked by him. Russia thereupon—and not until then—became a champion of freedom. Russia is now once again pursuing the course she followed originally as Hitler's partner.

The democracies can go right on pretending that this is somehow different; that it is not endangering the peace of the world.

Or they can recognize it for what it is.

In the name of the greatest and gentlest apostle of peace in all mankind's history it was said; "He that is not with me is against me."

The democracies of the world know that communism is against them.

It is within their power to unite now—not after another Armageddon.

Upper East Tennessee

EXTENSION OF REMARKS

OF

HON. DAYTON E. PHILLIPS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. PHILLIPS of Tennessee. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD an article which appeared in the Manufacturers Record, July issue 1949. The article was written by Mr. L. D. Farrar. The article in question points out the industrial and agricultural growth of the First Congressional District of Tennessee. This section of America is rapidly becoming the playground of the United States. The rapid growth of TVA, together with the natural scenic beauty such as is found at Gatlinburg, Tenn., in the heart of the Smoky Mountains, together with a cool and air-conditioned climate make this one of the outstanding attractions of all of America. I think it is important to include in the Appendix of the RECORD the following article, which is self-explanatory:

UPPER EAST TENNESSEE—ONE OF THE SOUTH'S GREATEST INDUSTRIAL AREAS, THIS REGION HAS MADE THE TRANSITION FROM "WILDERNESS TO SMOKESTACKS" IN LESS THAN 50 YEARS

(By L. D. Farrar)

The region known throughout the South as Upper East Tennessee is one of the most unusual political and economic divisions in the United States today.

A mountainous area, resplendent with high peaks and colorful valleys, it evolved from virtual wilderness country into a fertile agricultural idyl and, in the brief span of a half century, it has become one of the most highly industrialized areas in the South.

Unique area: It is unique for many reasons. One is the fact that, although geographically in the midst of "Democratic country," the area is intensely Republican. One county—Johnson County—is considered the most Republican political unit in the United States, casting virtually 95 percent of its votes for Republicans. At least 75 percent and likely more of the people in this region have been born and reared to vote Republican and never will vote any other way. Another reason the area is unique is that its population is composed almost wholly of native-born white Americans, descendants of hardy English and Scotch-Irish ancestors who carved civilization out of the mountain wilderness. Their forebears came from Virginia and the Carolinas, and they instilled in their children and grandchildren the same love of freedom that they nurtured and held.

The area is unique also because of its industrial growth since the early 1900's. Virtually an island of undeveloped resources until a few eastern industrialists recognized its potentialities, the area has become of greater and greater importance in the South's industrial scheme with each passing decade.

Boundaries: Upper east Tennessee roughly is measured by Rogersville, Tenn., on the west; Knoxville on the south, and Greeneville on the southwest; Kingsport and Bristol on the north and northeast; and Mountain City on the east. It comprises virtually the entire First Congressional District of Tennessee, plus some smaller towns and sparsely settled counties south and west of this district.

Principal cities: Principal cities in this area include Bristol, one of the few United States cities that is split by a State line—in this instance the Tennessee-Virginia boundary; Kingsport, perhaps the fastest-growing southern industrial city of its category and by all odds the most beautiful; Johnson City, the commercial hub of the area; Elizabethton, which nestles in Happy Valley at the base of towering Roan and Unaka peaks; Greeneville, the center of the burley tobacco market in the area; Jonesboro, former capital of the famous State of Franklin; Erwin, home of the Clinchfield Railroad shops and other industries, and other smaller towns too numerous to mention.

KINGSPORT

Of the cities in the upper east Tennessee area which has grown the fastest and has created the biggest industrial splash in recent years, Kingsport undoubtedly is the leader.

Official statistics on Kingsport population are not available for the new census, but the town undoubtedly is close to 35,000 population today, with three or four times that many more persons in its logical trading area. At least 22,500 workers are employed in its environs. The smallest of the Tri-Cities—Johnson City, Bristol, and Kingsport—in 1940, it is without doubt the largest of the three today.

Kingsport has had two births. Its first was as a sleepy port community on the Holston River back in the late eighteenth century, when that section of America was first settled. A man named King shipped farm and other produce out and brought finished material back to the area by boat. Hence the name "King's Port," which was later combined into one word.

The area both before and during the Civil War was something of an industrial section, what with numerous iron-working plants in the section. But these did not prosper when more important iron ore deposits were found elsewhere, and by 1909, when the Clinchfield Railroad purchased 6,000 acres there, in hopes eventually of helping the area develop so that the railroad's future would be assured.

Dr. John Nolen, famous city planner of Cambridge, Mass., was engaged by the railroad to develop a plan for a city that, eventually, could care comfortably for 50,000 persons. For a design for city government, the founders turned to the Rockefeller Foundation for advice on a model city charter. Kingsport became the first city in Tennessee to institute the city-manager form of government now in wide use, and the nonpartisan character of its administration has been an important factor in the town's unhampered growth.

Industries: Fred Johnson, the late industrial development wizard who died in 1944, was the "power behind the throne" in Kingsport's recent spectacular development. He oversaw both the town's development, its political growth, and its sponsorship of various industries, which worked toward the maximum industrial growth of the area.

The first industry located on the site of this new community was a cement plant, then a brick plant, followed by a tannery. A hosiery mill, a pulp mill, and a wood-alcohol distillation plant were established. This distillation plant, using the abundant supply of wood and water, both close at hand, was to grow into the present extensive Tennessee-Eastman Corp., with its highly technical processes and large-scale production of plastics, acetate yarn, and chemicals of many kinds.

Industrial growth was planned as intelligently as the political and geographical development of the city. Studies were made of available raw materials and experts sent to specific industries which could use these materials successfully and could prosper in this favored locality. There likely has never been a better example of how a town can be built up by use of intelligent methods than the town of Kingsport.

Just how one industry brought another is a saga of industrial wizardry.

Take the Kingsport Press, Inc., as an example. This company was organized to produce a series of cloth-bound "classics" in 1922. It located in a fine new plant constructed in Kingsport during World War I to produce harness, but never used.

A supply of paper and book-cloth being essential, arrangements were made with the Mead Corp., of Dayton and Chillicothe, to acquire a small pulp mill already operating in Kingsport and to install necessary paper-making equipment for producing the

book paper needed by the infant industry next door. Included in the equipment of the new book-making establishment was a small, but complete, book-cloth production unit, known as Clinchfield Mills.

Today, Kingsport Press is the largest private publishers of books in the world. It has more than 1,250 employees, and is virtually the only supplier of books that can carry the job through from paper manufacturing at its door to book-back making. In addition to its manufacturing facilities for complete bookmaking, the company maintains its own mechancial, electrical, and plant maintenance divisions, cuts its own brass stamping dies, casts its own composition press ink-distributing rollers, operates its own adhesives laboratory, cafeteria, first-aid rooms (with trained nurses in attendance), provides its own steam and compressed air (it buys its electrical power), and constructs many new pieces of mechanical equipment.

Largest of the plants in Kingsport, of course, is Tennessee-Eastman, which employs more than 10,000 persons, far more than it carried on its pay rolls even during World War II.

Plants in the area, all of which have settled there since Johnson began waving his magic industrial wand in the mountains, include those which manufacture glass, plastics, hosiery, textiles, and dozens of smaller machine shops which serve the larger industries.

The city is the headquarters for the far-flung Mason-Dixon Lines, one of the largest trucking companies in the South.

Kingsport is noted for its beautiful municipal buildings, its wide and spacious avenues, its zoned residential suburbs, its cleanliness, its civic pride, and its efficient municipal government. A sample of how this progress has been made can be seen in the large hospital, which serves the area. Johnson held the site of this hospital open for more than a decade, while the money was raised by public subscription to build and equip it completely.

Industrial inducements: To obtain the scores of good industries for the section he loved so well, Johnson offered no tax concessions, no local wealth, no free sites, no fabulous underground resources. All he could offer was wood and water—and a free people who knew what work meant and wanted to work. He offered industrialists nothing but a square deal, a chance to serve in the community and freedom from labor unrest if they would pattern their labor relations along the lines of this thinking. He was never opposed to unions, but he believed that management, with or without union pressure, should treat employees fairly, should go out of its way to make working conditions more pleasant and should pay the highest possible wages commensurate with productivity and a fair profit to stockholders.

Time and again, he spurred leaders in industrial life to take an active part in the political life of the city, pointing out to them that most people gripe about the kind of government they get and yet leave the governing to politicians without experience in business or management.

Kingsport has turned down industries that wanted cheap labor, and, in fact, once courteously invited a silk-mill owner to move out "kit and kaboodle" when he refused to pay fair prices to his helpers.

The population of Kingsport was roughly 5,000 in 1920, a few years after the town was founded. By 1930, it had doubled to 11,914. By 1940, it was almost 15,000 and the new census undoubtedly will show it pushing the 40,000 or 45,000 mark.

BRISTOL

Bristol, next youngest of the Tri-Cities, is unique, as noted, because much of the urban center is in Virginia and much of it is in Tennessee. Although it necessarily has two city governments—one operating on each side of the Main Street, which is the Tennessee-Virginia State Line—Bristol for all practical economic purposes is one city.

Served by the Norfolk & Western Railroad and the Southern Railway system, Bristol in 1940 had a population of 23,772. It likely has close to 40,000 today, due to its steady growth.

The principal agricultural products of Bristol's hinterland are tobacco, poultry, and dairy products, livestock, and vegetables. Its manufactures include wood pulp and lumber, textiles, iron and steel products, pharmaceutical supplies, and wood plastic aircraft material. It likely is the most important retail center of the Tri-Cities.

JOHNSON CITY

Johnson City, which was founded through the initiative of an early entrepreneur who built a station on the Southern Railway system so that the trains would stop at his junction, is the most centrally located city in the area. About equidistant from Bristol, Kingsport, and Greeneville and without "shouting" distance of Kingsport, Johnson City has shown a steady and uninterrupted population growth for the past 30 years. Its industrial and commercial development have not been spectacular, but they have been sure through the years.

The principal industries in Johnson City consist of flour mills, hardwood flooring manufacturing company, a silk mill, a rayon mill, and a number of foundries and iron-processing plants. The city is served by the East Tennessee Western North Carolina Railroad, the Clinchfield Line, and the Southern Railway system.

Johnson City is the oldest of the Tri-Cities. It was settled about 1787, incorporated as a town in 1879, and as a city in 1887.

GREENEVILLE

Greeneville, whose principal claim to historical fame is that it was the adopted home town of President Andrew Johnson, who operated his famous tailor shop there for many years before being elected Governor of Tennessee, then to the Senate, and then as Vice President on the ticket with Abraham Lincoln, whom he succeeded as President.

The rich farming area around Greeneville has given an impetus to native, home-grown industries that process the milk and can the vegetables grown in the area.

ELIZABETHTON

Elizabethton, one of the most beautiful cities in the upper east Tennessee area, also is in the midst of a region surrounded by most natural resources—minerals, timber, fertile land and water power. The Tennessee Valley Authority has constructed dams both on the Watauga River above Elizabethton and on the Holston River above Bristol.

The principal manufacturing industry in Elizabethton is the famous North American-Bemberg plant, or plants, which makes rayon yarn used throughout the world. Originally begun by Dutch interests, the plant was taken over during World War II by the Federal Government and now is under completely American management.

Elizabethton, with nearby Jonesboro, is one of the oldest settlements in the region and is rich in historic associations. Under a giant sycamore still standing on the Doe River was held the first court in what is now Tennessee. At Sycamore Shoals, revolutonary soldiers met for drill, and from here marched to the battle of King's Mountain. There is an iron furnace that was used in Revolutionary days, and on the banks of the Watauga is the last home of President Johnson. Although chartered as a city less than a half-century ago, in 1905, Elizabethton today has probably 15,000 residents, not counting a prosperous, well-inhabited hinterland.

JONESBORO

Jonesboro, the capital of the famous "State of Franklin," which was set up under the leadership of John Sevier, hero of King's Mountain and a colorful figure of early settlement days, has had a rich historic past. Although without industries of note, Jonesboro still is the county seat of Washington County, which includes the populous area embracing Johnson City, and is famous because of the documents containing signatures of the great of days long gone.

ERWIN

Erwin, one of the older towns in the area, is noted as the home of Southern potteries, one of the highest-paying industries in the area. This pottery, which employs hundreds of persons and uses the kaolin found in the mountains of western North Carolina as its base product, is one of the most stable industries in the area.

Vatican's War Against Reds

EXTENSION OF REMARKS
OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. MADDEN. Mr. Speaker, I am submitting with my remarks an enlightening editorial by H. B. Snyder, editor of the Gary Post-Tribune in Gary, Ind.

He states therein that the Vatican's war against the Reds should have the support of free, worshipping men everywhere. The curtailment of communism and totalitarian dictatorship is not the Vatican's war alone, but it is also a war to preserve Protestant churches, synagogues, and free religious worship in every liberty-loving, democratic nation in the world.

If the Communists succeed in overrunning Europe and Asia, their control in this hemisphere will eventually be achieved. All God-fearing nations and all churches, whether Catholic, Protestant, or Jewish, will be liquidated and we will be living in a godless world.

The communistic scourge is everybody's fight and the sooner all churches realize this fact, millions of lives and billions of dollars will be saved.

Up to this time, the Catholic Church, with its centuries of tradition and millions of communicants throughout Europe, Asia, and the rest of the world, has been the main organized bulwark which has impeded the progress of the communistic dictators who seek to enslave the world.

ALL FREE MEN HAVE INTEREST IN VATICAN'S WAR AGAINST REDS

The Catholic church and totalitarian communism are locked in bitter struggle throughout the world. The chief battleground right now is eastern Europe. But why should a religious organization be fighting the advocates of a political and economic system?

The answer is that communism, like any totalitarianism, cannot limit itself to the purely practical realm. It fans out into the spiritual sphere and seeks to supplant or destroy the regular religious authority.

Catholic leaders therefore see their historic guardianship over the spiritual life of millions of Europeans—not to mention others—threatened with extinction.

The Vatican has tried for a long time to arrive at an ideological truce that would allow

Catholicism and communism to live side by side. But the Mindszenty affair in Hungary and the current attacks on high churchmen in Czechoslovakia convinced the Pope an accord is impossible.

These events led to a papal decree ordering excommunication for all Catholics who join or support the Communist Party anywhere. It is the heaviest weapon the church has ever brought into play against a totalitarian system.

Why do Communists in the predominantly Catholic European countries feel it necessary to engage so stubborn a foe?

The answer is, of course, that a dictatorship like communism can brook no opposition whatsoever. It demands one single overriding loyalty—to the state. Ties of allegiance to church, union, social organization, all these must be severed.

For any one of these minor loyalties could serve as a rallying point for opposition to the regime, a nucleus for the forces of rebellion.

* * * * *

Above all, Communists are bent upon maintaining themselves in power wherever they enjoy it. What is more sensible, then, than to keep the people in a great shapeless, helpless mass? Revolt takes organization as well as weapons.

It should be evident immediately that the Catholic church is the toughest possible center of resistance to communism in eastern Europe. Because it has many millions of followers, Catholicism wields a power far beyond its mere spiritual guidance in one country or another.

That fact is all we need to remember as we watch the Communists work relentlessly to crush this force in Russia's European satellites.

For the sake of Europe's Catholics and all free-worshipping men everywhere, let us hope the Communists somehow fail to marshal the strength they need to achieve full success in this effort.

Where Would You Rather Live—In United States of America or Russia?

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. VAN ZANDT. Mr. Speaker, the Americanism department of the Veterans of Foreign Wars recently released a very interesting statement in which comparison is made between the American way and life under the Russian system of government.

The statement follows:

VETERANS OF FOREIGN WARS,
AMERICANISM DEPARTMENT.

WHERE WOULD YOU RATHER LIVE—IN U. S. A. OR RUSSIA?

We may not always see communism clearly when we talk about ideologies but figures comparing the bread-and-butter side of democracy and life under the Russian system of government make things very clear to us.

How much better off are we as individuals working for a living in the United States, compared with what we could get with our hourly wage or salary if we lived in Russia? Here is some recent information from a reliable source:

In the United States you work—

Nine minutes for a pack of cigarettes; in Russia that would cost you 2 hours and 4 minutes of work.

Ten minutes for a quart of milk; in Russia that would cost you 1 hour and 18 minutes of work.

Seven hours and 15 minutes for a pair of shoes; in Russia that would cost you 13 days' labor.

Three hours for a cotton shirt; in Russia that would cost you 2 months' work.

Two hours for a pair of woolen gloves; in Russia that would cost you 7½ days' work.

Seventy-five hours for a good winter coat; in Russia that would cost you 25 weeks' work (luxury only for party big wigs).

Thirty hours for a wrist watch; in Russia that would cost you 1,600 hours' work (if available).

Forty weeks for a new medium-priced auto; in Russia Soviet workers cannot buy an auto.

COMPARING YOU AND IVAN

Here in the United States you can spend your money where and when you choose. You can go anywhere in the United States—or around the world if you want to.

Under the Communist system a worker must get a police permit to leave his home town for a single day. He must show his papers to the police wherever he goes.

However, the Soviets tell us their workers are happy under communism. Then let's remain unhappy, but free in democracy.

REMEMBER THIS

Our people represent only 7 percent of the world's population and our free-enterprise system may have rough spots in it but still—we own 86 percent of the world's electric refrigerators and 83 percent of the automobiles (try to get those in Russia), also 81 percent of the world's bathtubs, 79 percent of the radios, 76 percent of the vacuum cleaners and 78½ percent of all the life insurance (life is too much of a gamble elsewhere).

WHICH DO YOU CHOOSE?

Consider all these facts the next time a Communist mouthpiece starts telling you how much better off you would be living under the Russian system.

Consider all these facts the next time someone starts ranting against our capitalist system of government.

Consider all these facts when Communist agitators start tearing down American labor benefits.

Don't let anyone confuse you with double-talk about ideologies. Just weigh your advantages as an American wage earner, with what you would get as another unfortunate Ivan. Remember you're working for yourself and family. You are not slaving out your heart to perpetuate an endless 5-year plan which, in Russia, merely produces soft jobs for Communist Party straw bosses and keeps vodka-filled bellies in the Kremlin.

The Great "I Am General Pick" Can Spend the People's Money With a Reckless Abandon

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. BURDICK. Mr. Speaker, on page 10378 of the CONGRESSIONAL RECORD of July 28 appears the following statement from JOHN TABER, ranking member on the Appropriation Committee of the House:

Mr. TABER. Mr. Speaker, I hold in my hand a copy of the Oneonta Star paper of New York of July 8, 1949, and I read:

"This is an inspection of the Chief of Army Engineers. The inspection group arriving in Keyes Airport in the general's DC-3 Army transport was met by three Government cars sent from Baltimore, Md., to transport the party to the dam."

That is 350 miles. It probably would cost to send those three cars up, including the per diem of the chauffeurs and the mileage and maintenance and all that sort of thing. from $400 to $500. In the brackets in the article is this statement:

"An Oneonta tax firm estimated that the party which required three cars, and took an hour and 40 minutes, could have been provided local transportation at a cost of slightly more than $10."

Here the TABER speech ends with this statement:

Mr. Speaker, this is a sample of the way the bureaucrats are wasting the money of the people of the United States.

In other words, this aristocratic Chief of Army engineers and his party supposed to inspect this dam in the State of New York flew to New York, and at the same time had three Army automobiles drive all the way from Baltimore to New York to convey this party to the dam site, when the same service could have been provided for a cost of slightly over $10.

At the present time I am trying to find out how much money has been spent by the Army engineers in the building of Riverdale, but I have been given the runaround for 3 months and still cannot find out. I know it is a lot of money—too much money to spend on what will be a ghost town when the dam is completed. The Army engineers are not concerned with expense, but I believe the taxpayers are.

It seems that nothing but a congressional investigation will ever disclose what General Pick is doing with our money. We do not know how many Senators and Members of the House have been carted around in Army planes and that the people ought to know. Is there any relation between these free trips of Members of Congress and their vote in Congress perpetuating the civil functions of the Army engineers? The people ought to know that also. I cannot find out how much money General Pick has spent in the unauthorized buying of land. He admits that the acreage was 43,000. With absolutely no right to spend a nickel for this land to accommodate a pool of 23,000,000 acre-feet, the amount paid will make a considerable sum. The people should know the facts.

The Committee on Appropriations in the House could, with very little added expense, conduct this investigation, and the people are entitled to know the truth.

Problems of Small Business

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. ANDERSON of California. Mr. Speaker, supplementing my extension of

remarks entitled "Federal Taxes in Small Business" in the CONGRESSIONAL RECORD on July 26, 1949, I wish to include herewith two self-explanatory newspaper articles:

DEFENSE WORK FOR LITTLE FIRMS STIRS ARGUMENT—COMPTROLLER REBUKES NAVY FOR BUYING SHOES FROM OTHER THAN LOW BIDDER

WASHINGTON, July 24.—A lively controversy is being waged behind the scenes in Washington over the issue of whether the armed services may divert some contracts to small businesses even though they do not submit the lowest bids, it was learned today.

The outcome of this dispute will determine whether millions of dollars' worth of military contracts may go to small companies which are apparently unable to bid competitively with industrial giants producing the same items.

Three agencies are directly involved in the contest—Congress, the National Military Establishment, and the Comptroller General's office.

It all started 2 years ago when Congress enacted the so-called Procurement Act of 1947 with the express intention of giving small businesses a bigger share of Government contracts.

"It is the declared policy of the Congress," the act declares, "that a fair proportion of the total purchases and contracts for supplies and services for the Government shall be placed with small business concerns."

Acting under this mandate, the Navy Department some months ago advertised for bids for 700,000 pairs of shoes and then awarded the contracts in such a manner as to insure small business a fair share.

Twenty-three companies bid. Three large shoe manufacturers submitted the low bids and the bulk of the order, 590,000 pairs, was divided up among them. The rest of the order, for 110,000 pairs, was diverted to two other firms which submitted the low bids among those companies qualifying as small businesses. The contracts with these two small manufacturers called for prices ranging from a few cents to 25 to 30 cents higher a pair than the bids submitted by the large companies.

Comptroller General Lindsay C. Warren scrutinized the contracts and on May 20 handed the Navy a sharply worded reprimand. While he let the shoe contracts go through on the theory that they were awarded in good faith, Mr. Warren ordered the Navy to award no more contracts to other than the lowest bidders.

NOTES FLAW IN PROVISION

As the basis for his decision, Mr. Warren noted that Congress had not carried out its declared intent to give small business a fair share of contracts by such means as permitting the armed services to award contracts to other than low bidders. Despite the 1947 Procurement Act's declaration of intent, the award of contracts to small businesses which fail to submit low bids in competition with larger companies is not specifically permitted under the act, he maintained.

Mr. Warren asserted that the act "does not authorize and was not intended to authorize the awarding of contracts to other than the low bidder, in those cases where advertising is required, solely on the basis that a bidder qualifies as a small-business concern."

Congress skirted this issue in drafting the legislation. The act provides that all contracts and services must be let through advertised bidding with 17 exceptions. Small business is not cited directly in any of these exceptions.

CONGRESSMEN STIRRED UP

One section of the act gives the armed services the right to negotiate contracts to keep certain manufacturers in business in event of a national emergency. It does not, however, give the armed forces express permission to award contracts to small businesses which fail to submit low bids.

Mr. Warren's decision, nevertheless, has stirred up Members of Congress who helped to draft the act and who now maintain that the Navy's action in awarding the shoe contracts was within the intent of the law.

Representative JACK Z. ANDERSON, Republican, of California, who headed the House Armed Services Subcommittee which drafted the act, sent last week letters to John R. Steelman, acting head of the National Security Resources Board, and Arthur B. Barrows, Acting Chairman of the Munitions Board, taking Mr. Warren to task for his decision.

"In my judgment this decision raises an issue of the utmost importance to the mobilization of our national security resources in preparation for any possible future emergency," the Congressman wrote.

"Basically the question is: Shall we take positive steps to reverse the trend toward concentration of industrial activity in larger enterprises, recognizing the fact that as a general rule the larger concerns, as a result of economies incident to consolidation, will be in a better position to offer lower prices than their smaller competitors?"

Representative ANDERSON called on Mr. Steelman and Mr. Barrows to give him their interpretation of the act and to indicate, if they agreed with the Comptroller General, whether they would recommend that the act be revised to permit procurement from small businesses at slightly higher prices.

A spokesman for the Comptroller General indicated today that Mr. Warren would not back down from his decision. The Comptroller General's office, this spokesman noted, regards any award of contracts to other than the lowest bidders as an invitation to rigged bidding.

CLARK STUDYING PLANS TO HELP SMALL BUSINESS—TO DECIDE WHETHER LAW IS NEEDED TO DROP LOW-BID SYSTEM OF THE SERVICES

(By Jack Steele)

WASHINGTON, July 27.—The Justice Department is studying the possibility of giving the armed services broader procurement authority to divert more Government contracts to small business, it was disclosed today.

This issue has stirred up an intergovernmental controversy resulting from a difference of opinion as to whether the present procurement law permits the armed forces to award contracts to small businesses which do not submit the lowest bids.

It was brought a head by a ruling of Comptroller General Lindsay C. Warren forbidding the armed services to award advertised contracts to other than the lowest bidders.

John R. Steelman, Acting Chairman of the National Security Resources Board, revealed today that this question had been referred to Attorney General Tom C. Clark to determine whether new legislation is necessary or desirable.

CONCEDES RIGHTS MAY BE LIMITED

Mr. Steelman, in a letter to Representative JACK Z. ANDERSON, Republican, of California, conceded today that the procurement authority of the armed forces may be undesirably limited in this respect.

His letter was in answer to a demand from Representative ANDERSON that Government procurement policies be clarified in light of the Comptroller General's ruling. Mr. ANDERSON headed a House Armed Services Subcommittee which drafted the present procurement laws.

Mr. Steelman wrote that the Attorney General had undertaken a study of the general problem "looking to the recommendation of legislative action if necessary."

A similar investigation is also being made by the Procurement Policy Council of the Munitions Board, according to Rear Adm. F. C. Denebrink, director for military supply of the Board.

"We appreciate the seriousness of the questions you have asked and will do our best to provide you with a comprehensive analysis of the situation from the viewpoint of the National Military Establishment," Admiral Denebrink informed Representative ANDERSON.

The Work of the Office of the Solicitor General of the United States

EXTENSION OF REMARKS

OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. FALLON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Philip B. Perlman, Solicitor General of the United States, before the fifty-fourth annual meeting of the Maryland State Bar Association, Hotel Traymore, Atlantic City, N. J., Saturday, July 2, 1949:

The midwinter meeting the this association in 1947 took place on February 1, the day after President Truman sent to the Senate my nomination to be Solicitor General of the United States. Out of the kindness of its collective heart, perhaps superinduced to some extent by the circumstance that Chief Judge Ogle Marbury, of our court of appeals, and my former law partner, was then our president, this association adopted a most flattering resolution on the nomination, offered by Judge Levin C. Bailey, and sent copies of it to the President of the United States, and to the Committee on the Judiciary of the United States Senate. However, one Senator on that committee who was not impressed by Judge Bailey's eloquent and enthusiastic treatment of the nomination was the chairman of the subcommittee in charge of the matter, and 6 months of delay and of hearings aimed to disprove your resolution then took place, capped by a filibuster beginning at midnight on the last day of the first session of the Eightieth Congress and lasting until about 4 o'clock in the morning, when the forces of darkness and evil were defeated, and your action in my behalf was finally and at long last given senatorial approval. Believe it or not, therefore, it can be truly said of the first session of the Eightieth Congress that I, personally, am the last act of Congress.

I took the oath of office July 31, 1947, and I have now served through two terms of the Supreme Court, which last from October into June of each year. Therefore, when I was invited to speak here today it seemed to me to be an appropriate occasion to make something in the nature of an interim report to you, with whom and among whom I was engaged in the practice of law from the time I was admitted to the bar until I went to Washington 2 years ago to represent the Government of the United States. Of course, there are many who labored last year under the mistaken belief that any report I might make at this time was bound to be a final report, but President Truman and the gods of national elections decreed otherwise, and so I am in the happy position of being able to promise to tell you still more at some future time. I suspect that any general exposition

of what goes on in the Solicitor General's office is not nearly as interesting to others as it is at present to me, but there are at least some few matters which seem to warrant consideration.

The primary function of the Solicitor General's office is the conduct of Government litigation in the Supreme Court. In all Government litigation (except perhaps certain Interstate Commerce Commission cases) where the decision of the lower court has been adverse to the Government, the Solicitor General decides what cases shall be taken to the Supreme Court by way of certiorari or appeal; and the Solicitor General is responsible for defending the Government in the cases brought to the Supreme Court by others, through appeal or writs of certiorari. Moreover, the Solicitor General is in charge of all Government litigation which originates in the Supreme Court, as, for example, the recent so-called tidelands cases brought against California, Texas, and Louisiana. All Government briefs on the merits, petitions for certiorari, and briefs opposing certiorari are finally reviewed, revised, or rewritten in the Solicitor General's office. Except when the Attorney General decides to participate, cases are argued by the Solicitor General personally, by members of his staff, and by other Government attorneys, under his direction.

The importance of the work is indicated by the proportion of Government cases to the total amount of business transacted by the Supreme Court. During the 1947 term the Government was involved in 57 percent of the cases argued orally before the Court on the merits, and in 41 percent of all appellate cases before the Supreme Court. The proportion in the 1948 term is about the same.

As every lawyer knows, it is very difficult to tell from statistics of cases won or lost how a lawyer does his job. The best lawyer cannot win the worst cases, and the worst lawyer cannot lose the easy ones. A Government lawyer has an advantage over counsel for private interests in that he cannot be pressured by a client to appeal cases in which he believes the chances of reversal are remote; or to appeal cases where success may be relatively of minor importance, or may establish rules that would be detrimental in other connections. From this it should be expected that the Government will win more appeals than it will lose. Furthermore, since it is necessary not to swamp the Supreme Court with more business than it can handle, the Solicitors General, in order to assist the Court to function efficiently and expeditiously as a vital segment of our governmental structure, have long recognized the wisdom, from the standpoint of the general public interest, of attempting to bring before the Court only those cases in which there seems to be real need for Supreme Court adjudication. The result is that in many cases which the Government loses in the lower courts petitions for certiorari are not filed, even where the Government attorneys are not convinced that the decision below is sound, or sound in all particulars. Thus during the 1947 term certiorari was authorized in only 46 out of 312 cases decided against the Government below and submitted to the Solicitor General for decision as to further action.

As a result the proportion of cases heard on the merits in the Supreme Court in which the Government is successful has long been high, and the proportion of Government petitions for certiorari granted is many times as great as the percentage of petitions for certiorari granted in favor of other parties—about 10 times as great as the percentage of petitions granted over the Government's opposition. For example, during the 1948 term, the number of Government petitions granted exceeded 80 percent. The percentage granted to petitioners opposing the Government was but 13. The Government joined in requesting certiorari in some of these cases, so that only 8 percent were granted over Government objection.

It would be difficult for anyone to improve upon the record of the Solicitor General's office in these respects during the decade before my term of office began. During the preceding 9 years the Government won, on an average, about 75 percent of the cases which it argued on the merits in the Supreme Court. During the last two terms the percentage has been slightly higher.

I emphasize the fact that it would be greatly misleading for anyone to judge the work of the Solicitor General's office by any standard as superficial as a mere statistical record. The Solicitor General would not perform his duty to the Government or to the people if he took to the Supreme Court only cases which he thought would add to the Government's score of victories. Cases often involve questions of such importance that the public interest requires that they be brought to the Supreme Court for settlement or clarification, irrespective of the chances of winning the particular controversies. And it is but fair to point out that too good a score in the record of petitions for certiorari granted or in the number of cases decided in the Government's favor may be as consistent with undue timidity as with effective advocacy. If, therefore, you are willing to believe that I have not been unduly timid in the matter of taking appeals or applying for writs of certiorari, the statistical record would seem to indicate that there has been no lowering in the previous standards of achievement by the Solicitor General's office.

The duty of the Solicitor General, in making decisions as to whether to apply for review, has been described in an opinion by Justice Frankfurter,[1] as follows:

"The various governmental agencies are apt to see decisions adverse to them from the point of view of their limited preoccupation and too often are eager to seek review from adverse decisions which should stop with the lower courts. The Solicitor General, however, must take a comprehensive view in determining when certiorari should be sought. He is, therefore, under special responsibility, as occupants of the Solicitor General's office have recognized, to resist importunities for review by the agencies, when for divers reasons unrelated to the merits of a decision, review ought not to be sought."

Another of the Solicitor General's duties is to determine what cases should be appealed to the circuit courts of appeals. When the Department of Justice loses a case in the district court, a recommendation for or against appeal is made to the Solicitor General by the division of the Department which handled the case. During the 1947 term appeals were authorized in 200 out of 581 such cases. There were six other appeals direct from the trial court to the Supreme Court.

There are many instances where the decision not to appeal is an easy one to make. For example the Food and Drug Administration of the Federal Security Agency recently brought suit in the United States District Court for the District of Oregon to seize 238 cases, each containing 24 cans labeled in part, "Ski Slide Brand Center Cuts, Tips Removed, All Green Asparagus, Contents 1 lb. 3 oz." The story is told in the following opinion, handed down by his honor, Judge Claude McColloch:

"Defendant is an asparagus packer. One of his products is the center cut of the asparagus. This retails for 20 cents per can (1 pound 3 ounces) containing 95 to 100 cuts, as compared with 40 to 50 cents per can for the choicer tips.

"The Government contends that defendant's center cuts are fibrous and woody beyond the permissible limits set up by the Federal Food, Drug, and Cosmetic Administration. Three witnesses for the Government said that they had each eaten a can (or attempted to) of defendant's cuts. The composite of their testimony was that 25 percent or more of the cuts were inedible, and the Government's witnesses condemned them as a food product.

"On the other hand, the Director of Mary Cullen's Cottage found only 5 or 6 pieces out of 100 that she had to lay aside. Confronted with this conflict in testimony, I obtained counsels' consent to eat a can. This I have done, although I confess had I understood all the difficulties of the undertaking, I might not have been so bold.

"To eat a can of asparagus, hand-running, as the saying is, is quite a chore. I took 3 days to eat the can. That, I can now state, is as much as an old protein user should attempt on his first venture into herbalism. I suspect the Government witnesses tried to eat their cans all at one time, and that may explain the severity of their judgment about defendant's asparagus.

"I can see where after 50 or 60 cents, eaten without spelling oneself, one might become very particular.

"My test more than confirmed Miss Laughton's good opinion of the cuts. She found 5 or 6 percent inedible, whereas I ate all of my can, and felt that I was helped by it. There was one runty, tough piece and two or three slivers, but I treated them as de minimis.

"I agree with the director of Mary Cullen's Cottage that this is an excellent product, particularly considering its low price. Not everybody in this country can 'keep up with the Joneses' and eat only asparagus tips. Indeed it seems strange to me that the Government should be interested in keeping from the market a moderately priced, wholly nutritious food product. I should think in this period of declining income the Government's interest would be the other way. If Mr. Prendergast will prepare appropriate findings, I will give his client's center cuts a clean bill of health. They deserve it.

"Dated May 9, 1949.

"CLAUDE MCCOLLOCH, *Judge*."

Under date of June 7, 1949, I received a recommendation from the Assistant Attorney General of the Criminal Division that no appeal be taken. This recommendation was concurred in by the United States district attorney and by the Federal Security Agency and by two members of my staff. I approved it at once.

The matters submitted to the Solicitor General range from those involving cans of asparagus to those involving many millions of dollars, and from what may be regarded as petty offenses to those involving the gravest criminal prosecutions.

You will probably be surprised to learn that the Solicitor General's staff consists of only eight other attorneys. Since the number of briefs which they are called upon to review, and in some instances to write—in addition to much other work—exceeds 400 per year, you may realize that the office is not overmanned. During the past year two experienced and able men left the staff. I was able to replace them by promotion within the Department of two of the topmost lawyers in the Department's appellate sections—one a former note editor of the Columbia Law Review and the other a former note editor of the Harvard Law Review. And politics played no part whatever in their selections. As you may have suspected, most of these eight lawyers were honor men in their law schools, and some of them later served as clerks to Justices of the Supreme Court or judges of the lower appellate courts. They provide talent of the highest order, and it is their ability and unselfish devotion to duty that is primarily responsible for the record of the Solicitor General's office. They are

[1] *Andres* v. *United States* (333 U. S. 742, 764–765) note 9, concurring opinion.

badly underpaid and overworked, and it is only the fascination of Government service that keeps them from private practice and from great monetary rewards.

During the 1947 term we had the cases upholding the constitutionality of the Renegotiation Act[2] which involved the disposition of more than $10,000,000,000, and the constitutionality of the rent control law,[3] enacted under the war powers in order to deal with the housing shortage brought on by the war but after hostilities had ceased. During that term there was a large number of antitrust cases, many of them of major importance. The number of these cases and the large size of the records, many of which consisted of thousands of pages, were so great that the staffs of the Antitrust Division and of my office were barely able to cope with the problem of preparing briefs in all of them during a single term. Among the most important of the antitrust cases were three involving the motion-picture industry, in one of which the Court held that the motion picture distributing companies, acting in combination, had violated the Sherman Act in a number of ways, and indicated the propriety of a decree divorcing the production and distribution from the exhibition of motion pictures.[4] In the Lime Materials[5] and United States Gypsum[6] cases, the Court held that price-fixing by patentee in combination was unlawful, and severely restricted, although it declined to overrule, the old General Electric[7] case which had upheld such price fixing. The basing-point method of price fixing came before the Court in two cases from the Federal Trade Commission. In the first, the Cement Institute[8] case, the Court upheld the Commission's order based upon a finding that the industry in combination had established a multiple-basing-point price system. During the 1948 term, in the Rigid Steel Conduit[9] case, the Court divided evenly as to whether a similar system established without actual combination but having precisely the same effect was unlawful, the equal division resulting in an affirmance of the finding below in favor of the Government. The uncertainty caused by the latter decision may prompt Congress to clarify the law as to delivered prices. During the 1947 term, in the Columbia Steel[10] case the Court held, 5 to 4, that United States Steel could acquire, without violating the Sherman Act, the largest steel fabricating plant on the Pacific coast, inasmuch as that company comprised only a small percentage of the west coast industry.

The difficulties and delays encountered by the Government in the enforcement of the antitrust laws were brought into sharp focus recently by the Wallace & Tiernan[11] case—the case against the chlorinating equipment industry. The Antitrust Division began a comprehensive investigation of that industry as far back as 1942. After some 4 years of intensive investigation, the Government presented the case to a Rhode Island Federal grand jury which heard evidence over a period of 6 or 7 months in 1946. Some 200,000 pages in documents were subpoenaed, and, chiefly on the basis of those documents the grand jury returned an indictment in November 1946. At the same time the United States simultaneously filed a civil suit in equity to enjoin future violation Shortly thereafter, the Supreme Court handed down a decision in *Ballard* v. *United States* (329 U. S. 187), in which it ordered an indictment dismissed in a mail fraud case because women had been excluded from the Federal grand jury in California which had returned indictment—one of the principal defendants in the Ballard case being a woman. The issue was not a constitutional one; it was merely a matter of Federal statute which made applicable the local State practice, and since women were eligible for jury duty in the California State courts, the Supreme Court ruled that it was error to exclude them from the Federal grand jury in California.

Taking their cue from the Ballard case, the defendants in the antitrust case promptly asked that their indictment be dismissed, since there were no women on the Federal grand jury panel in Rhode Island which returned the indictment. It thus became necessary to look into the Rhode Island State practice as to women jurors. And here a most unusual condition was found. The Rhode Island law provides in substance that women are eligible if the jury commissioner certifies that the accommodations and facilities in the particular courthouse are such as to allow of the service of women. Under that law women serve as jurors in some courthouses in Rhode Island, and not in others. However, there had never been any certification by a jury commissioner as to the accommodations and facilities of that particular Federal courthouse in Providence, R. I., and indeed the Rhode Island Federal district court had ruled in another case several months before the grand jury was empaneled for our case that the toilet facilities were unsuitable for women jurors. Nevertheless, upon motion of the antitrust defendants, the matter was reopened. And, after an architectural and plumbing survey of the building and its toilet facilities, the same judge reversed his prior ruling, concluding that while the facilities were not the best obtainable in this day and age, they nevertheless could be used. Accordingly, he ruled that women should not have been excluded from the grand jury panel. The result was that the indictment against large corporations and certain officers was dismissed.

The Government then attempted to go forward with the civil suit against the defendants. But it was met with the contention that it could not use as evidence any of the documents which had been produced before the grand jury. The reasoning was that when the grand jury turned out to be an illegal grand jury, the production of the documents before the grand jury amounted to an unconstitutional search and seizure, and that the evidence could not thereafter be used against the defendants, even if called for by new subpenas. This contention seemed fantastic. But it was accepted by the district court, which entered judgment of dismissal of the civil suit, there being no other substantial evidence to support the complaint. The Government was thereupon compelled to appeal that judgment to the Supreme Court, and it was only in May of this year, 1949, that the Supreme Court reversed the district court.

Thus, the case is now going back to the district court. But note what has happened. It had taken a staff of men several years to collect and digest and correlate the evidence. But the United States has not yet had the opportunity to try the case. Meanwhile most of the lawyers who worked on the case have left the Government. And now that it has been determined that suit may be tried, a new group of lawyers will have to be broken in. Such are the obstacles that were put in the way of protecting the public interest in this important litigation—merely because women did not sit on a grand jury that indicted corporations and male officers, where the absence of women was utterly without prejudice to the defendants, and where their absence, in turn, depended upon the doubtful application of Rhode Island concepts as to the adequacy of toilet facilities for women jurors in the particular Federal courthouse.

The length of time it takes to reach a decision in large antitrust cases is illustrated by two other cases decided during the 1947 term. In the case against the gypsum industry,[12] the United States filed its complaint in 1940 and an expediting certificate in 1941. A trial was begun in 1944, and the close of the Government's case the defendants moved to dismiss on the Government's evidence. The court halted the trial at that point, and 26 months later in 1946 filed its opinion granting the motion to dismiss the complaint. This was reversed by the Supreme Court in 1948, and the case sent back to the district court for continuation of the trial. Although the district court then granted summary judgment for the United States, the case has not yet been concluded, since further proceedings are necessary as to the nature of the judgment. The case took 8 years to reach the Supreme Court, and then only with respect to a preliminary ruling made in the middle of the trial as to the sufficiency of the Government's evidence. You can guess how long the case might have taken if the Government had not filed an expediting certificate.

In the Paramount movie cases,[13] the original complaint was filed in 1938. There was a 3-year lapse by reason of a trial-consent decree. The final decision of the Supreme Court was rendered in 1948, 10 years after the case was begun. And, there, too further proceedings in the district court have been necessary.

I have read several articles recently in various publications commenting upon the Government's success in tax cases before the Supreme Court. It was pointed out that 7 tax cases had been decided up to June 6 during the 1948–49 term, and that all 7 were decided for the Government, that all 5 of the tax cases decided during the 1947–48 term were disposed of in the Government's favor; and that, of the 10 Federal tax cases in the 1946–47 term, only 1 was decided against the Government. We are proud of this record. But I should like to say a word about these figures, lest they be misinterpreted. They do not mean that the taxpayer does not have a chance in the Supreme Court. Rather, they reflect the great care taken by the Solicitor General's staff to present to the Supreme Court only those cases in which there is a substantial basis for the Government's position. Nor does this mean, on the other hand, that these were easy cases. To the contrary, nearly all of them involved issues of considerable difficulty, and some of them evoked sharp dissents within the Court.

Cases involving civil rights were significant both in number and in importance during the last two terms. Civil-rights cases come before the Solicitor General's office from two different directions. In criminal cases the defendants frequently contend that their convictions violate some civil liberty, such as the privilege against self-incrimination and the right to be free from unreasonable search and seizure. In such cases, unless we are convinced that a person's rights have been violated it is our duty, of course, to attempt to sustain the convictions. In most of them the question is whether a person who is guilty of crime shall be free because of

some alleged error of the Government's investigating or prosecuting officials. During the past two terms there have been a number of cases in the Supreme Court involving alleged illegal searches and seizure, most of which we lost by a division of 5 to 4.

In cases involving other types of civil liberties, such as discrimination because of race, we have appeared frequently as amicus curiae, in support of the civil right. In the racial restrictive covenant cases,[14] (to which I shall refer again), we filed a brief amicus curiae and argued orally, and the Takahashi [15] case, we filed a brief amicus curiae successfully attacking the California statute prohibiting aliens ineligible for citizenship—which meant only Japanese—from acting as commercial fishermen in the Pacific waters off California. In Railway Labor Act litigation [16] we intervened to attack the continued discrimination by the Brotherhood of Firemen against Negro workers.

One of the important issues determined during the 1947 term, but which thus far has not attracted much public notice, was involved in the Shapiro [17] and Hoffman [18] cases. Those cases decide that the Government may use, in criminal prosecutions, records required to be kept by statute or by appropriate regulation, where such records relate to transactions in which the dealer could engage solely by virtue of a license granted under the statute; and a claim of immunity under the Compulsory Testimony Act of 1893, or under the constitutional privilege against self-incrimination, is no bar to such use.

Those elements of our population, although fortunately small in number, who have embraced totalitarian philosophies, have involved the Government in much litigation with which the office of the Solicitor General has been concerned. Since shortly after VE-day, when the President issued a proclamation directing the Attorney General to remove dangerous alien enemies, every possible legal device has been used by alien Germans found to have been Nazi adherents, to forestall this removal program. Mass habeas corpus proceedings were followed by mass injunction proceedings and, upon failure of both, new proceedings were instituted which were virtually indistinguishable from those previously found baseless. Despite a refusal of the Supreme Court to review these cases,[19] the litigation continued, in the District of Columbia and other jurisdictions. Consequently the Government was, in many ways, pleased by the Supreme Court's decision to consider and finally dispose of the claims made and rejected so often in the inferior Federal courts. The result was that, in *Ahrens* v. *Clark* (335 U. S. 188) the Court dismissed a habeas corpus petition filed by 120 Germans on jurisdictional grounds, and, on the same day, went on to sustain, on its merits, the validity of the executive removal action under the Alien Enemy Act.[20]

We have had cases involving the Communist problem in various forms. The question as to the validity of the anti-Communist affidavit provision in the Taft-Hartley Act has not yet been determined. In the first case in which that question arose, the union had not complied with the informational requirements of the statute, and the Court sustained their constitutionality without reaching the validity of the Communist affidavit requirement. Two cases [21] squarely presenting the latter question came before the court this term. The first was scheduled for argument in January, but the court ordered the case postponed. Subsequently both cases were postponed again on the request of counsel. The wisdom of the provision, and the language in which it should be stated, if adopted, is still being debated by Congress.

The conviction of Marzani [22] for concealing his membership in the Communist Party from the State Department was affirmed twice, after two arguments, by a four-to-four division. The conviction of Gerhart Eisler [23] for contempt of Congress was also argued. Although I must, in all modesty, disclaim any connection, the fact is that after my argument in the Supreme Court he fled the country, forfeiting his bail in that and other cases. We then suggested that the court dismiss his petition for certiorari, leaving his conviction and sentence stand. We also suggested that Eisler's petition, subsequently filed, to review his conviction for making false statements to the State Department be denied, leaving that sentence stand against him. The Supreme Court last Monday, June 27, 1949, decided to remove the contempt case from the docket, without decision at this time. The Court denied the petition for certiorari in the other case.

The last two terms witnessed other important matters, such and the Church and Spiegel estate-tax cases,[24] the decision construing the prohibition against political contributions by labor unions in the Taft-Hartley Act as not applying to a labor-union publication (a decision which made it unnecessary for the Court to decide whether the statutory provision was unconstitutional),[25] the so-called overtime on overtime case under the Fair Labor Standards Act,[26] and a recent decision in the field of administrative law that oral argument was not an inexorable requirement in administrative and judicial proceedings.[27]

Last week, at the Judicial Conference of the Fourth Circuit, meeting in Asheville, N. C., I spoke on the subject of habeas corpus and extraterritoriality, and described the habeas corpus cases which, in the Supreme Court, and in the lower Federal courts, are raising the question as to the rights of aliens and citizens tried by American courts or military commissions sitting in occupied territory in Germany and in Japan. In restating here some or the things I said last week, it should be noted that in October 1947, the motion of General Milch—a German war criminal—for leave to file an original petition for a writ was denied by an equally divided court.[28] The Chief Justice, and Justices Reed, Frankfurter, and Burton did not expressly indicate why they thought leave to file should be denied, but presumably it was their view that, as in the case of the Americans detained abroad, the Supreme Court was without jurisdiction. Justice Jackson did not participate because of his connection with the great trial at Nuremberg. Justices Black, Douglas, Murphy, and Rutledge announced the view that "the petition should be set for hearing on the question of the jurisdiction of this Court." For Justices Black, Douglas, and Rutledge this seemed to be somewhat of a change in opinion from their position of the previous year—on the denial of habeas corpus petitions filed by seven American citizens—that relief must be sought, if at all, in the appropriate district court.

Since October 1947, when Milch's petition was denied, some 200 German war criminals—tried by various types of war crimes tribunals—have followed him in directly petitioning the Supreme Court for writs of habeas corpus. The 4 to 4 division of the Court on the Milch petition has become standard and has marked the pattern for the disposition of almost all of the subsequent cases. Four of the Justices have insisted that the Court has no jurisdiction of such original petitions, and four desire that argument be had to settle that question for all time, and what remedy, if any, the petitioner has. The Court has never undertaken to determine a German war criminal's petition on the merits.[29]

The Supreme Court has rejected original petitions for habeas corpus filed in that Court by American nationals and by alien enemies held abroad, but it has not yet given the answer to the question whether such Americans or enemy war criminals can have recourse to any lower Federal court in the United States. However, the Court's opinion in *Ahrens* v. *Clark, supra,* decided just a year ago, bears upon that problem and reveals at least some of the considerations which must be weighed in the balance. The opinion in that case expressly leaves open—by way of a significant footnote—the "question of what process, if any, a person confined in an area not subject to the jurisdiction of any district court may employ to assert Federal rights."

In December of last year (1948), the problem of habeas corpus and extraterritoriality came to the front again in the case of the Japanese war criminals, but against a striking international background which dominated all the action. This was the well-known case of Hirota against MacArthur.[30] The petitioners were 11 high Japanese officials and military men who had been convicted by the International Military Tribunal for the Far East—the far-eastern analog of the Nuremberg tribunal—after a lengthy trial, of various war crimes; crimes against peace, conventional war crimes, and crimes against humanity including murder. Some had been sentenced to death, others to imprisonment for life or a term of years. They were imprisoned in Tokyo by Gen. Walton Walker, an American Army general, who was holding them pursuant to the direction of General MacArthur as supreme commander for the Allied Powers in Japan, in accordance with the sentence of the International Military Tribunal. The respondents named were Generals MacArthur and Walker, who were in Tokyo, and General Bradley, Chief of Staff; Secretary of Defense Forrestal; and Secretary of the Army Royall, who were in Washington.

When the petitions were presented, the Court took the unusual step of setting them for argument. The four Justices (the Chief Justice, Justices Reed, Frankfurter, and Burton) who had continuously held that the Supreme Court had no jurisdiction to consider original petitions by persons detained in Germany, whether German war criminals or Americans accused of other offenses, declared that in their opinion there was the same lack of jurisdiction in the Japanese

cases. In an unprecedented and most candid statement, Justice Jackson announced that he would break the deadlock which existed in the German cases by voting for a hearing in the Far Eastern matter in which he felt no legal disqualification, but added the hope that it would not be necessary for him to participate in the final decision. As it turned out, this hope was fulfilled. The argument on behalf of the Japanese was made by a number of American lawyers, most of whom had been flown by the Army from Tokyo for that purpose.

Two major issues were presented to the Court in the Japanese war criminals proceeding. The first was, of course, the same issue which had been mooted in the German cases: whether the Supreme Court has jurisdiction under its original or appellate jurisdiction to issue a writ of habeas corpus on behalf of these alien enemies detained in Japan. In its final decision the Court found it unnecessary to pass upon that point because it was persuaded that, even if general jurisdiction to issue the writ existed, the international nature of the tribunal which had tried and sentenced the petitioners foreclosed any relief in our courts. The International Military Tribunal for the Far East was not, the Court found, "a tribunal of the United States" and and therefore the courts of the United States have no power or authority to review, to affirm, set aside, or annul the judgments and sentences. The four Justices who had previously indicated their belief that the Court lacked general jurisdiction of such petitions for an original writ joined in this disposition on the merits as did Justice Black. Justice Douglas concurred in the result for reasons stated in an opinion, which he handed down last Monday, June 27. Justice Rutledge reserved his vote. Justice Murphy dissented without opinion, and Justice Jackson took no part in the final decision.

Although I have held office for almost 2 years, I am as much impressed today as I was during the summer and fall of 1947 with the character of the role played by lawyers in the Federal Government. In the routine matters that come over my desk every day—petitions for writs of certiorari, briefs in opposition to petitions filed by others, briefs on the merits of pending cases, requests from various departments and agencies for authority to file petitions for certiorari, to take appeals, and for authority to allow judgments and decrees of trial and appellate courts to become final without application for review by a higher tribunal—in this routine, I am amazed, again and again, as I have stated at every opportunity, by the amount of care and consideration given to each case, no matter how relatively unimportant in the general scheme of things.

I have found that, although such matters are our daily grist, they have not ceased to be matters of great importance to those entrusted with them, because it is recognized that each involves the liberties or properties of human beings and that, in our society, the individual and his welfare is of vital concern to the Government.

Quite recently, for example, a question was submitted to me for decision which, while of some consequence in the administration of a particular statute—the Soil Conservation Act—cast no great shadows on our national life. Nevertheless, I had placed before me a recommendation from the Department of Agriculture, six memoranda written by attorneys in the Claims Division of the Department of Justice, expressing various views, and memoranda from each of two members of my own staff. This procedure is typical and is indicative of the care and consideration which is given to each problem. And I ask your indulgence to allow me to repeat what some of you have heard me say before: questions affecting the punishment of a person convicted of crime, touching the rights of a poor and obscure widow applying for social security benefits, or concerning the rights of a single sailor ordered deported for alleged violation of the immigration laws, are debated by attorneys in the Department of Justice with a vigor and earnestness that bespeak Attorney General Tom C. Clark's unflagging determination to see to it that the Government acts fairly and honestly toward all of its people.

I have found that Government lawyers, generally, are more interested in arriving at exact justice, with a proper consideration of the equities involved, than in making a record based on a won-and-lost count of cases. None of the less fortunate persons whose interests have been involved may ever know of the time and effort and talent expended in their behalf by lawyers they never heard of and whose services they could not employ, but it is a fine and great thing for those close to Government procedure to know that the word "justice" has vitality and meaning, that it is alive and active, and that it guides our judgments and tempers our actions. I am, with this experience, prouder of my profession than I have ever been before, and prouder of my Government.

Permit me to tell you, therefore, in more specific terms, something about what may be called the nonadversary role of the Government lawyer. The facts are taken, only because I am familiar with them, from the Government's relations with the Supreme Court. Government lawyers who practice before other courts could undoubtedly tell you much the same tale. Indeed, in some respects our activities do not greatly differ from those of private practitioners who take literally and seriously the fact that an attorney is an officer of the court. But in the nature of the real world of private practice—a world in which I lived for many years—there are limitations on the attorney which deny him the semijudicial or nonadversary role which is the unique aspect of the practice of Government law.

The nature of the Supreme Court's jurisdiction is such that it affords special opportunities to practitioners before it to serve the Court, and through the Court, the entire Nation. A very large proportion of the cases decided by the Supreme Court are cases the assumption of jurisdiction over which is entirely discretionary with that Court. This was not always true; the discretionary review jurisdiction exercised through the statutory writ of certiorari was greatly expanded in 1925 by Congress, in order to reduce the burdens of the Court and thus ensure more deliberate judgments on matters which are of the highest national importance.

It was found necessary to put into the hands of the Court the power to discriminate among the cases presented to it for review, and to enable it to weed out those cases which, on a comparative scale, do not demand the study and consideration of our highest tribunal. The grant of that power, however, has not sufficed to make the task of a Supreme Court Justice an easy one; the increased exercise of governmental powers and the ever-growing complexities of life have kept the Court's docket large.

Quite recently, the Supreme Court has noted that "a Federal court can always call on law officers of the United States to serve as amici."[31] The Supreme Court itself does this on occasion and, at this last term of Court, the Government was invited to, and did, file an amicus brief on a question of intergovernmental immunity from tax. In that case, we took the position, which the Court sustained, that the State of Oklahoma could constitutionally tax the gross income of a lessee of lands of restricted Indians who are, in a sense, wards of the Federal Government.[32] Similarly, when the Court, following a practice prescribed by statute, notified the Attorney General that the validity of an act of Congress, conferring on the Federal district courts jurisdiction over suits between citizens of the District of Columbia and citizens of any State or Territory, had been brought into question in a case before it, the Department of Justice filed a brief and argued orally in support of the constitutionality of this act. Although the Government had no direct interest in the particular litigation, we were interested in sustaining what we deemed to be a salutary removal of an unfair discrimination against the citizens of the District of Columbia who had theretofore been denied the same access to the impartial Federal judiciary as was available to citizens of the States proper.[33]

Apart from specific invitations to the Government to participate in a case as amicus curiae, the Court, through its standing rules, permits the Government to file such briefs when they are sponsored by the Solicitor General. The same privilege is extended to States and their political subdivisions, but others who wish to file amicus briefs are required to secure the written consent of the parties to the case.[34] Pursuant to this rule, the Government, each year, participates in a substantial number of cases in which it is not a formal party but in which it has an interest.

In more than one case during the last 2 years,[35] I have filed briefs, on behalf of the Securities and Exchange Commission, in cases raising questions with respect to the administration of the bankruptcy laws. The National Labor Relations Board[36] and the Federal Power Commission,[37] too, have been sufficiently concerned with cases to which they were not parties as to justify governmental participation. In each of these cases delicate and difficult questions were raised as to the relationship between Federal and State authorities, and it became my duty to see to it that the views of the interested Government agencies were presented to the Court.

An illustration of the fact that the Government lawyer's position is not always dictated by the interests of the Government's pocketbook is the role played by the Department of Justice in *Kennedy* v. *Silas Mason Co.*[38] That case involved employee claims to rights under the Fair Labor Standards Act. The employer involved was a cost-plus contractor, and the United States would be liable for any judgment entered against the employer. Despite this, and despite the fact that the Department of the Army was of the view that the employer's petition had merit, the Department of Justice supported the petitioning employees, for the Department also has the duty, in cooperating with the Department of Labor, of enforcing the Fair Labor Standards Act. In our brief amicus, we told the Court that—

"The Department of the Army is of the view that respondent's position has merit for the reasons set forth in the brief filed by respondent. The Army is concerned with the great cost to which the Government will be subjected if the numerous suits akin to this are lost, or even if it must bear the cost

of defending them. * * * we cannot regard these factors as controlling in the interpretation of an important regulatory statute which is the duty of the Government to enforce. The Department of Justice and the Wage and Hour Administrator have consistently regarded these cost-plus contractors as subject to the Fair Labor Standards Act."

In another case[39] involving suits against Government cost-plus contractors, the Department of Justice in the district court was a party on the merits in support of the contractor against the employees. The only issue in the case when it came to the Supreme Court, however, was whether the employee should have been allowed to appeal in forma pauperis. This involved the construction of the in forma pauperis statute, which is designed to enable poor persons to take their cases to the appellate courts even though they lack the money to pay the costs of appeal. Although the Government was financially interested in the case, we filed a brief amicus which discussed impartially a number of questions as to the meaning of the in forma pauperis statute, in some of which we supported the employees' position, in some the contractor's position, and as to others merely set forth the authorities and principles for the information of the Court. This brief prompted counsel for one of the parties to state to the Court that he had never seen a brief like that in all of his legal experience, and that it wasn't his idea of how to write a brief at all. Whether or not what we filed was a brief, we were pleased when the Court's opinion approved what we had suggested.

One of the most difficult situations for the Solicitor General arises from differing interpretations of statutes, instances where the interests of the Federal agencies involved are in sharp conflict. A familiar example relates to the enforcement by the Department of Labor of the provisions of the Fair Labor Standards Act where work is being done for an agency of the Government by cost-plus contractors. The longshoremen case involving overtime on overtime, and the case of Kennedy against Silas Mason Co. have been mentioned. In both of these controversies the Solicitor General was required, in the presence of conflicting views of its agencies, to determine what position the Government should take in the Supreme Court. In the case of *Vermilya Brown Co.* v. *Connell* (335 U. S. 377) we filed a brief amicus urging the Court to reverse a judgment holding that the Fair Labor Standards Act applied to work done on our leased military base in Bermuda, and that employees of American contractors were entitled to overtime pay in accordance with the provisions of the act. But in the case of *Foley Bros.* v. *Filardo* (336 U. S. 281 (decided Mar. 7, 1949)) we appeared for the Army cost-plus contractors and successfully argued that the 8-hour law does not apply to work done for the United States in Iraq and Iran. The Supreme Court distinguished the finding as to the leased base in Bermuda on the difference in language between the 8-hour law and the Fair Labor Standards Act. You may appreciate what a hard time the Solicitor General has when the agencies he represents do not agree with each other, and each is certain that its position is the one that truly represents the public interest.

The subject of the Government as amicus leads me to mention again the racial restrictive covenant cases.[40] We told the Supreme Court in our brief that the Federal Government, although not a party, took part both by way of brief and oral argument because:

"The Federal Government has a special responsibility for the protection of the fundamental civil rights guaranteed to the people by the Constitution and laws of the United States."

Our brief stated:

"Racial restrictive covenants on real property are of comparatively recent origin. If limited in number, and confined to insignificant areas, they would not have been of such public importance. But they have already expanded in large cities from coast to coast. They are responsible for the creation of isolated areas in which overcrowded racial minorities are confined, and in which living conditions are steadily worsened. The avenues of escape are being narrowed and reduced. As to the people so trapped, there is no life in the accepted sense of the word; liberty is a mockery, and the right to pursue happiness a phrase without meaning, empty of hope and reality. This situation cannot be reconciled with the spirit of mutual tolerance and respect for the dignity and rights of the individual which give vitality to our democratic way of life. The time has come to destroy these evils which threaten the safety of our free institutions."

What we conceive to be the Government's duty to the Court and to the public is performed not only through the device of amicus curiae, but also through methods in which the cases are presented.

A striking example, before my time, is the case in which the United States prosecuted one Cramer for treason.[41] The case was argued before the Supreme Court in March of 1944, with the then Solicitor General, Charles Fahy, representing the United States, and Mr. (now judge) Harold R. Medina, representing the defendant as assigned counsel. It became apparent that a most difficult question was presented by the case: Whether an overt act sufficient to support a conviction for treason could be merely a step, innocent in itself, taken in execution of the traitorous design, or whether the overt act must itself manifest a criminal intention and tend toward the accomplishment of the criminal object. In addition, the scope and meaning of the rule requiring two witnesses to the overt act was mooted.

Two months after the first argument, the Court entered an order directing reargument of the cause, and asking for discussion of specific questions by counsel. The Government responded by submitting a series of studies covering more than 400 pages, in addition to its brief proper. These legal and historical analyses were prepared at the request of the then Solicitor General, in the main by persons not connected with the Department of Justice, but believed to be fully qualified by training and experience in the respective fields assigned to them. The experts whose services were enlisted for this project were the chief of the Foreign Law Section of the Law Library of Congress, a research assistant in that section, a professor of history of Canon Law at Catholic University, who was honorary consultant in canon law to the Library of Congress, and an associate professor of law at the University of Wisconsin. The Government stated to the Court, in submitting these studies, that—

"The authors of the appendices were requested to avoid argumentative support of any particular position, and to select material for inclusion or exclusion solely on the basis of its reliability and its relevance to the questions under review by the Court. At the same time we have recognized that the task of intelligently selecting material for these studies inevitably involves a factor of personal judgment on the part of authors of the studies, and, further that such studies would lose much of their value if the views of the authors as to the significance of the material with which they have dealt were eliminated. Consequently, we have chosen to present the studies to the Court in the form in which they were prepared and submitted to us, and we offer them as constituting in our judgment a fair, dispassionate and informative analysis of the history of the law of treason. In so offering them we do not in any way assume responsibility for, or necessarily agree with, all the inferences drawn or the conclusions expressed by the authors."

In reversing Cramer's conviction, the Court took occasion to comment on the materials submitted to it by counsel. Through Mr. Justice Jackson, it said of the questions which it had ordered discussed (325 U. S. at 8, note 9):

"Counsel for petitioner, although assigned by the trial court, has responded with extended researches. The Solicitor General engaged scholars not otherwise involved in conduct of the case to collect and impartially to summarize statutes, decisions, and texts from Roman continental and Canon law, as well as from English, colonial, and American law sources. The part of the study dealing with American materials has been made available through publication in 58 Howard Law Review 226, et seq. Counsel have lightened our burden of examination of the considerable accumulation of historical materials."

Of lesser magnitude, but undoubtedly of considerable help to the Court, was the submission by the Government, at this last term, of a documentary appendix in the cases in which Japanese war criminals sought review of the judgments of the International Military Tribunal for the Far East.[42] The Government there made available to the Court and to the petitioners the texts of such documents as the Potsdam Proclamation, the Instrument of Surrender, the Charter of the International Military Tribunal for the Far East, and the Directive to the Supreme Commander for the Allied Powers.

The most unusual nonadversary role of the Government is, I believe, cases in which the Government confesses error. For obvious reasons, confessions of error by private counsel are extremely rare. But the Government, whenever convinced that an injustice has been done, informs the Court of its view and joins in the application for relief.

One of our most eminent Federal court of appeals judges is said to have remarked that "it is bad enough to be reversed by the Supreme Court, but I'll be damned if I will be reversed by the Solicitor General." That is an understandable reaction, but, I think, subject to some qualification, because the Supreme Court is free to accept or reject the Government's views.

As a matter of fact, some years ago, a junior member of the staff of the Solicitor General, now a professor of law at the Harvard Law School, made his maiden appearance before the Court instructed to confess error on behalf of the Government. He made every effort to persuade the Court of the error of the Government's ways, but he failed.[43] He took the position, thereafter, that he could not lose a case even when he tried.

During my first few months as Solicitor General, a case came into the office which involved the validity of a deportation order. The circumstances were these: an alien had entered the United States legally and, during the war, he had shipped as a seaman on an American ship bound from Los Angeles to New York. After passing through the Panama Canal, the ship was torpedoed. The alien seaman was rescued and taken to Habana, Cuba, where he was cared for by the American consul until, about a week later, he was returned to the United States. Within 5 years of his return, he was con-

[40] *Shelley* v. *Kraemer* (334 U. S. 1); *Hurd* v. *Hodge* (334 U. S. 24).

[41] *Cramer* v. *U. S.* (325 U. S. 1).

[42] *Hirota* v. *MacArthur* (336 U. S.).

[43] *Weber* v. *United States* (315 U. S. 787).

victed of a crime involving moral turpitude. Under the law, conviction of such a crime within 5 years of an alien's entry is ground for deportation and, hence, the question was whether the alien's return to the United States after his rescue constituted an entry. The Federal court of appeals, relying on some broad language in previous Supreme Court opinions, had held that this return was an entry, but we became convinced that there was no real justification for this view. The alien had not voluntarily gone to Cuba, he had simply sought to serve our Nation during time of war and had found himself there after his ship was torpedoed. A member of my staff appeared before the Supreme Court and successfully urged reversal of the judgment below.[44]

Another immigration case which arose during this last term again involved such circumstances as to lead me to conclude that the relief requested by the petitioner in the Supreme Court should not be resisted by the Government. In that case, an alien, who had been ordered deported to Greece, alleged that he was neither a citizen of Greece nor had he been a resident of that country; if that allegation were true, the deportation order would have been invalid under the law. But the alien had been denied an opportunity to attack the order on this ground because the district judge had been of the view that a denial of a previous application for habeas corpus, filed on the alien's behalf, was res judicata on this issue even though the issue had not been raised in the previous proceeding. We thought the law was clear that res judicata had no application to habeas corpus. We asked the Court to give the alien an opportunity for hearing on this question and the finding below was reversed, the Court noting that the action was being taken "upon suggestion of the Solicitor General." [45]

The denial of an opportunity for hearing again led me to confess error in a prosecution for failure to register for service under the Selective Service Act. The defendant had urged that he was over age but, on conflicting evidence as to his real age, he had been convicted. Thereafter, a motion for new trial was filed on the ground that an immigration record had just been discovered which had been overlooked before because the defendant's first name had been anglicized since his arrival in this country. The denial of a new trial seemed to me to be an injustice and I so informed the Court. Again my suggestion was adopted, the action of both the district and the appellate court was reversed, and a new trial orderd.[46] Similar action was taken upon my suggestion during this last term in two other criminal cases. In one, it was felt that a defense of entrapment had not been fully canvassed,[47] and, in the other, that evidence had been introduced which had been obtained as the result of an unlawful search and seizure.[48]

In another case the defendant had been convicted under a section of the Selective Service Regulations not in effect at the time the offense was committed, a point not discovered until the case reached the Supreme Court. The Government conceded that the conviction was improper.[49]

You will note that confessions of error are most frequently made in criminal cases or cases which, although not technically criminal, could result in drastic and serious consequences. Quite naturally, it is cases of this type that are most carefully weighed by the Government in an effort to avoid injustice.

But error is occasionally confessed in other cases. In the naturalization case of *Wixman v. United States*,[50] decided at this last term of court, citizenship had been denied to the petitioner on the ground that he was not attached to the principles of the Constitution and well disposed to the good order and happiness of the United States. A careful consideration of the record led me to conclude that the evidence was not sufficient to warrant a refusal of citizenship. At the same time it was not clear that the applicant had demonstrated his qualifications for the great privilege. We suggested that the Court reverse the judgment, and send the case back for renewed consideration. The applicant objected, contending that the Supreme Court should, on the record, grant his application, but the Court adopted our views, and remanded the case for further proceedings.

Another illustration of the effort to promote fair and speedy administration of justice occurred during the 1948 term in a case [51] concerning a prisoner in a Federal penitentiary, serving a long sentence under the judgment of an Army court martial. He applied for a writ of habeas corpus, but his application was denied by a district court. On appeal the judgment of the district court was reversed and the prisoner was ordered discharged. The Government applied to the Supreme Court for a writ of certiorari. Before any action was taken, we learned that the warden of the penitentiary had been changed, and the prisoner had not applied for a substitution of the new warden as respondent within the period fixed by law. To take advantage of the situation would mean that the case would be abated, and the prisoner would have to start his proceedings all over again. We informed the Court of the situation, suggesting that the Government be allowed to waive the omission, so the case could proceed. The Court treated our memorandum as a motion by the Government to substitute a new respondent, and allowed the proceedings to continue.

A rotunda near the Attorney General's office on the fifth floor of the Department of Justice Building bears the following inscription: "The United States wins its point whenever justice is done its citizens in the courts."

I have endeavored to show you the continuing vitality of that approach to the proper function of a Government lawyer. I have told you of recent instances in which the Government tried to act, not narrowly, but broadly, with full consideration of equities. That conception of the duty of a Government lawyer is not a recent one. The history of the inscription to which I have referred gives some suggestion as to the continuity of the tradition. So far as I have been able to discover, the phrase first appeared in a brief filed by Solicitor General Frederick William Lehmann, who was appointed to that office on December 12, 1910, by President Taft. Attorney General John G. Sargent of Vermont, appointed in 1925, used the phrase in one of his addresses, and it was again referred to by Attorney General William D. Mitchell of Minnesota, a few years later. When the new Department of Justice Building was erected, John Lord O'Brian, a former Assistant Attorney General, and today one of the most eminent lawyers of the country, suggested that the statement be inscribed on the rotunda near the Attorney General's office. This was done, and all of us can hope that it will continue to influence those who are there now, and those who are to come to the Department of Justice in future years.

You, who are my friends, and who have shown such a sincere and sympathetic interest in my career, will be interested in knowing that I have received nothing but the most generous and friendly cooperation from everybody in the Department of Justice, beginning with the Attorney General. Nobody could possibly work harder and more conscientiously than Tom C. Clark, and nobody could win the affection and loyalty of his division heads more completely than he has done. I shall always be grateful to him for his many kindnesses to the newcomer from the State of Maryland. Under his leadership the Department of Justice, facing some of the most complex and difficult problems in history, is making a record which, I hope, will entitle it to your approval and the approval of the people of the Nation.

Address Before the National Convention, Reserve Officers' Association, Grand Rapids, Mich.

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I include an address delivered by me July 29, 1949, before the National Convention Reserve Officers' Association at Grand Rapids, Mich. This reads as follows:

Members of the Reserve Officers' Association, distinguished guests, ladies and gentleman, I have just slipped away from Washington from a busy legislative program there to be with you here; and tomorrow I will return as quickly as I came to take up again our legislative burdens.

This has been a busy session of Congress for us on the Armed Services Committee. It has been a session which has seen our committee functioning almost every day. It has seen us pass out with approval a large number of important measures, many of which have already or will soon become the law of this land. It has seen our numerous subcommittees investigating many military problems; and within the near future, it will find the full committee taking up the B–36 investigation. The future of the committee is not altogther prosaic; and I dare say, in the light of this investigation, will not be altogether quiet.

Almost every problem which comes before Congress has a national defense aspect. For instance the foreign-air program, Atlantic Pact, arms to Europe, public-roads program, Agriculture, and Veterans Affairs, all have defense implications and must all, in a greater or lesser degree, be studied from the national-defense angle.

Nor are we puzzled by realizing this fact for, was it not mutual safety and common defense that were impelling reasons for causing the formation of our Nation? In the olden days, they called our reserves, militia. Of course this could mean either organized or unorganized militia. I became interested in the present-day usage of this word, "militia", and I looked up its meaning in Webster's unabridged dictionary. I was not surprised to find, in fact, that the word "militia" means—

"Those citizens collectively, who are enrolled and drilled in military organizations other than the regular military forces."

So, under this general and historic definition, I suppose all of us here today could be called militia. We prefer, of course, to use the stricter and more modern definition of "Organized Reserves" and "National Guard."

The Webster definition went on to explain that:

"In Great Britain, the militia was a constitutional force which, originating in Anglo-Saxon times, existed continuously in varying forms until the passage of the Territorial and Reserve Forces Act of 1907, by which it was abolished as such, and the militia battalions were converted into reserve battalions of the existing line regiments. The militia in the United States consist of the National Guard and the Reserve Militia."

This definition of the word militia leads me to better understand the statement of Gen. George Washington when, as commander of the Continental Armies, from his headquarters at Newburgh, N. Y. on June 8, 1783, in a circular to the States, he said:

"As there can be little doubt but Congress will recommend a proper peace establishment for the United States, in which a due attention will be paid to the importance of placing the Militia of the Union upon a regular and respectable footing; if this should be the case, I would beg leave to urge the great advantage of it in the strongest terms. The militia of this country must be considered as the Palladium of our security and the first effectual resort in case of hostility."

I think that should George Washington be with us today he would repeat these words without changing a syllable and we would all agree with the statement. The defense policy of this Nation today is fundamentally the same as in the days of Washington—a small Regular Defense Establishment and a large Reserve of well-trained civilian soldiers.

We have, however, in modern days neglected this defense policy; and, unfortunately, in my judgment a large part of our neglect has been visited upon our Reserve components. We are doing too much talking and taking too little action. We sit by and neglect the great reservoir of citizen soldiers who are still the bulwark of our Nation's safety and will remain so for hundreds of years to come. We must not let this situation continue. I, myself, am sick and tired of the actions of some of those in high authority who continue to kick our Reserve Establishment around.

I was a member of the Military Affairs Committee of the House of Representatives when the first signs of World War II began to appear. I was there when Austria and Czechoslovakia were invaded and Poland was dismembered. I was there when France fell; and I remember how, late one afternoon, we, in consultation with chiefs of the Regular Establishment, began in dead earnest to check the strength of our Reserve components. We then began to realize how widespread our neglect had been.

We found our organized Army Reserve to number 120,000 officers and men—117,000 were officers and 3,000 were enlisted men. The enlisted Reserves were almost entirely from our Regular Establishment and were scattered throughout the country.

When France fell we immediately called into active Federal service our National Guard; and when this had been accomplished, we began to call the Reserve officers and enlisted men. In all we obtained some eighty to ninety thousand Reserve officers in the Army. Subsequent events proved that we needed 800,000. In other words, we barely had in our Army Reserve Establishment 10 percent of our needs. We called all of the 3,000 enlisted Reserves who were able to bear arms, and then we called 8,500,000 additional persons into the Army of the United States. It was obvious to all of us at that time how pitiful had been our program in the field of Reserve activities; and when the storm came, our national-defense umbrella was found to be far too small to give us the protection which we needed. Similar situations existed in the Navy and Marine Reserves. They were somewhat better but they were not adequate.

God grant that another world war may not come to this land; but since the time of permanent peace is yet distant, we must give the Nation better protection in the future. A number of worth-while recent developments have occurred, some of which we should mention here. The Gray board has made a thorough and extensive report with 90 recommendations for improving the Reserves. I do not agree with many of those recommendations. These recommendations have not been put into effect. The ROTC is, in effect, withering on the vine. No arrangements for expansion in the field of junior colleges have been made, and no proper expansion of the ROTC in the universities and high schools has occurred or has been planned.

The Holloway plan, as used by the Navy, should be adapted to the Army and Air program, or vice versa, and more young men with talent, ability, enterprise, initiative, and ambition should be given an opportunity to take military training in college and specialized work elsewhere for use in the armed forces.

The establishment of the Civilian Components Policy Board in the Office of the Secretary of Defense on June 14, 1949, was an event of noteworthy significance for the armed forces, and we are all very hopeful that this policy board may bring us worthwhile accomplishments in the field of Reserve activities.

In addition to this, a special subcommittee has been established in my own Committee on Armed Services, for the purpose of considering the entire field of Reserve component activities. I am a member of this subcommittee. We have not been active this year as the subcommittee has been awaiting action of the executive department. I anticipate with the beginning of the new year this committee will be found investigating the plans from the Pentagon Building and checking the need for any additional legislation.

I think it is obvious to anyone familiar with Reserve problems that the organized Reserves have three basic problems confronting them at this time. These problems are: first, a program fully thought out and put through on the highest levels of the Military Establishment; second, a sound personnel procurement program; and third, matériel.

Of these, certainly the most important—and the one most inexcusably overdue—is the thinking out in the Military Establishment of an integrated and sound Reserve program—a program having the wholehearted and unreserved support of all of the leaders of the national military organization. It may be that the Civilian Components Policy Board will correct this situation. Certainly I hope so. Let me assure you here and now that if the board does not carry out its responsibilities adequately, I will certainly do what I can to compel immediate action by the Special Subcommittee on Reserve Components of the House Committee on Armed Services. We propose to get action. And we shall.

In the field of material shortage, our problem is even more difficult. Much more equipment is needed by the Reserve organizations in all parts of the United States to bring the training program to top efficiency. A great deal of additional equipment can yet be obtained from the surplus stores owned by the United States Government but, in my opinion, the time to obtain this matériel is short.

The European arms program, which has come to the forefront this week in Congress, and which calls for the rearming of the independent republics of western Europe, may require much surplus equipment and, in a sense, this program may come into direct competition, if we are not careful, with the program of our Organized Reserves. Congress must be on the alert lest, in the enthusiasm of the program of arming western Europe, we may strip our stocks and supplies of arms to the point of robbing our Reserves of much that is badly needed in their training programs.

My committee has before us at this hour a bill to authorize a half billion dollars for further construction of armories throughout the country. We have held up action on this bill, hoping that a program satisfactory to all of the Reserve components may be worked out, and that the National Guard, Army, Navy and Air and Marine Reserves may all come to our committee with a well-studied and harmonious program for the utilization of armory facilities throughout the United States. When this hour strikes I feel sure that Congress will proceed to give the Reserve components the billion dollar armory program which is so badly needed in the training at the present time.

Incidentally, I am advised that the Committee on Facilities of the Munitions Board, which has been charged with armory studies, has just been transferred to the jurisdiction of the Civilian Components Policy Board in the Office of the Secretary of Defense. This committee is now in the process of making a detailed study of the armory facilities in every State in the Union. It will submit to the Congress by January 1, 1950, a completely integrated armory program for all of the civilian components. This is one of the most constructive steps in this field in the Nation's history.

I appreciate the major problems confronting the Reserves at the present time and I am pleased that we have accomplished much even in the short time which has elapsed since the end of the Second World War. In my judgment, our National Guard and our Reserves are in better shape and are stronger than they have been at any other comparable period in our history. The tendency, of course, following a great war is for the public to become apathetic toward anything of a martial or military character. The present period is not unlike those periods in our past history; but in spite of this, with able and aggressive leadership in many quarters, we have developed the Reserve components of our Military Establishment in numbers and in organization and in strength.

In the course of the last Congress—the Eightieth Congress—we passed two very important bills for the Reserves. The first was the inactive duty pay bill, and the second was the Reserve retirement bill. I was interested in both of these bills, but I devoted 8 years of my legislative life in the development of Public Law 810, of the Eightieth Congress—sometimes referred to as the Brooks retirement bill. Last week in the House, in a short bill, we voted to change the date of the computation of the year of "satisfactory service" from the date of enactment of the bill to "July 1, 1949." This amendment was badly needed by thousands of men in the Army, Navy, and Air Reserves, and will, when it is enacted into law, permit these people to qualify under the Reserve retirement statute.

I realize other amendments are needed and in due course, when the retirement bill is fully implemented and has become an integral part of our Reserve system, I think the Congress should go over the entire bill with a fine-tooth comb with the idea of correcting inequities and smoothing out the operation of the bill wherever changes are justified. To my mind, these two bills con-

stitute monuments along the road of progress for our Reserve program.

The Reserve program, as indicated by appropriations, is a huge one. For this year, Congress is expected to appropriate over a billion dollars for the Reserves. This is 7 percent of our entire military budget. The total Reserve establishment, including Army, Navy, and Air Force, is 3,106,990 and Congress is appropriating funds to place 979,878 in a drill pay status.

As I indicated in the beginning of this speech, this Nation has depended upon its citizen soldiers even before the organization of the Union and up to this very hour. In every war it has been our citizen soldiers who have come forth from their homes and their peaceful occupations to bear arms in defense of our institutions. How well they have done the job in times of great emergency is written in broad letters of indelibile ink across the annals of the history of the United States.

America has always recognized this service. General George Marshall is only one of a long list of great Americans who have voiced their appreciation of the service rendered by the citizen soldiers in time of war and emergency. He said:

"Just what we would have done in the first phases of our mobilization and training without (the Reserve) I do not know. I do know that our plans would have had to be greatly curtailed and the cessation of hostilities on the European front would have been delayed accordingly."

So the record of our history is replete with the great acts of heroism and courage of our soldiers, sailors, and airmen. We continue the historic policy of a reasonably small, well-trained Regular establishment, together with a large organized Reserve. In following this policy it has not been the purpose of this country to engage in war. On the contrary, our policy has been to stay out of war and to remain at peace as much as possible. Today, I advocate again a return to our basic time-hallowed policy of defense. I do this with the clear knowledge of the heavy responsibilities which rest upon this country and its people following two great world wars. I do this with the knowledge that if permanent peace is to be achieved in this world it is largely our responsibility and insofar as we meet this responsibility by a well-organized defense establishment, to that extent will we achieve our goal of "Peace on earth to men of good will."

Power Costs in New England

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include copy of a letter sent by the Honorable Chester Bowles, Governor of the State of Connecticut, to Mr. Charles L. Campbell, chairman of the board, Connecticut Light & Power Co., Hartford, Conn., which is self-explanatory.

This is a very interesting subject matter having to do with the cost of power in New England, which is affecting the industries in that part of the country. In my humble opinion it demands immediate attention of the Congress if these New England States are to retain their business in that section of the United States.

STATE OF CONNECTICUT,
EXECUTIVE CHAMBERS,
Hartford, July 28, 1949.

Mr. CHARLES L. CAMPBELL,
Chairman of the Board, Connecticut Light & Power Co.,
Hartford, Conn.

DEAR MR. CAMPBELL: Last month in a statement to the press, you took issue with some facts about Connecticut electric power rates which I had presented. I did not reply at once because I wished to have a very careful and detailed study made of all the facts, and some of the special questions you had raised. My study has even further convinced me that the Connecticut consumers of electricity—families, and commercial and industrial users, should know the honest facts about the State's light and power rates.

The statement which I had made and with which you publicly disagreed was this: "The average price of electricity in Connecticut is 50 percent above the national average." Although my statement did not mention residential costs, but was intended to include commercial and industrial costs, you replied that I had "departed from the facts," and that Connecticut residents pay only 7½ percent above the national average.

Since that time I have made a special study of the costs of all types of electricity service in Connecticut in comparison with those of other areas and of the United States as a whole. I used the reports of both the Edison Electric Institute which you had quoted and studies from the Federal Power Commission in Washington.

The facts, as determined by these reliable sources, are, I regret to say even more disturbing than I had originally presented them, especially for the commercial and industrial users of power.

The facts—all the facts—are these, as reported by the same Edison Electric Institute which you cited:

Comparison of average 1948 Connecticut electric light and power costs with national United States average

Class of service	Average revenue per kilowatt-hour		Connecticut percentage is above United States average
	Connecticut	United States	
	Cents	*Cents*	*Percent*
Residential or domestic	3.24	3.01	7.64
Small commercial and industrial	3.47	2.67	30.0
Large commercial and industrial	1.71	1.01	69.3
Weighted average, all users	2.46	1.79	37.4

It is thus clear that the average cost of electricity per kilowatt-hour was well over one-third higher in Connecticut in 1948 than the national average for all classes of customers and more than two-thirds higher for large commercial and industrial users.

The Edison Electric Institute reports show further that Connecticut costs for every class of user was substantialy higher, in comparison with the rest of the country, in 1948 than in 1947. Connecticut costs for large industrial users for instance in 1947 were only 61.9 percent above the national average; in 1948 they had gone up to 69.3 percent higher. In short, it seems clear that on the average not only are Connecticut costs higher, but they are going up still higher than costs nationally.

Certainly this is true in Hartford. According to Federal Power Commission studies of typical electric bills in January of this year, Hartford's electric bill for residential users increased 3 times as much in 1948 as residential bills nationally. For instance, the average 1948 increase for residential users of 250 kilowatt-hours (users who have electric stoves, refrigerators, vacuums, and some other standard electric appliances) was 9 cents throughout the country; in Hartford it was 30 cents. For users of 500 kilowatt-hours (who in addition use electricity for water heating) the Hartford increase was 60 cents against a national average increase of 16 cents.

Hartford, moreover, has the second highest rate in the country for small residential users (consuming 25 kilowatt-hours). For these users a typical Hartford bill is $1.78 against 75 cents for the second lowest United States city, Chattanooga, or a difference of 137 percent. Chattanooga, of course, is supplied by a publicly owned utility through TVA, but in Birmingham the same 25 kilowatt-hours supplied by a privately owned utility costs only 81 cents against Hartford's $1.78 or 120 percent less.

According to the Edison Electric Institute, New England as a region has the highest power costs in the country when averaged for all classes of users. But it is extremely significant to the businessmen and industrialists of Connecticut that only two States in this highest-cost region—Massachusetts and Rhode Island—exceed Connecticut in costs of commercial and industrial power.

For small commercial and industrial users, according to the Edison Electric Institute, Connecticut prices for electric power in 1948 were about 18 percent above those of the middle Atlantic region, and the Midwest, which are also largely supplied by private power companies; and 80 percent above those in the Pacific region, largely supplied by public power. For large commercial and industrial users the difference is even more shocking and disturbing. Connecticut costs are 167 percent higher than on the Pacific coast, 66 percent higher than in the middle Atlantic region, and about 40 percent higher than the Middle West.

Figures compiled by the Federal Power Commission in Washington make it clear just what this means in dollars and cents to businessmen and industrialists. In the five large cities of Connecticut (Bridgeport, Hartford, New Haven, New Britain, and Waterbury) a commercial user of 6,000 kilowatt-hours pays $195.64 when in the Pacific area cities he could get the same number of kilowatt-hours for $96.09 (largely via public power), or for $140.02 in the middle Atlantic cities (via private power), or for $120.01 in central southern cities.

For large industrial users the difference in out-of-pocket costs is even more disturbing. The largest users in Connecticut's five industrial cities pay $3,846 for the 200,000 kilowatt-hours that would cost them $2,132 in Pacific coast cities, or $2,756 in cities in the middle Atlantic region, a difference of $1,714 and $1,090, respectively. Or the same amount would cost $2,292 in Houston and $3,016 in Kansas City (both cities being supplied by private power).

It would be easy to go on citing the differences between Connecticut and national power costs. Startling examples are too many and too numerous to mention. I believe, however, I have cited enough to make clear the inadequacy of the 7½ percent figure which you cited on Connecticut's high electric costs. I believe that Connecticut consumers are entitled to know the whole truth, and not one misleading segment of the whole.

My concern goes further than this, however. Sky-high costs for electric power—or rates far out of line with those of other cities and areas—are a most serious economic matter, especially at this time when unemployment, lagging sales, and production are a grave problem in Connecticut and all New England. Families whose breadwinner has been laid

off or put on short time find high electric rates hard enough to meet with their sharply reduced earnings. And businessmen and manufacturers who are trying to cut costs so that they can lower prices and stimulate more sales are forced to pay prices far out of line with those paid by their competitors in other areas. It is certainly not enough to say that electric power costs are but a small part of business and industrial costs (as the recent bulletin of the Connecticut Light & Power Co. implies), or that there is no proved case where an industry has left New England because of high power costs. All costs or any costs which are out of line put pressure on business, pressure toward higher prices, toward redced sales, and lower employment. And while no industry may have found high power costs the primary reason for leaving New England, or failing to establish itself here, the high cost of power must certainly be one of the factors in any such decision.

Private power companies, like business and industry in all fields, are certainly fully and wholly entited to an opportunity to a fair return on their actual investment. But when in one State such as ours, and one whole area such as New England, privately supplied power costs far in excess of either privately or publicly supplied power in other areas, it seems clear that private utility executives have a heavy responsibility to study and foster every possible means for bringing down those costs. Stubborn refusal to discuss new proposals and new ideas, blind resistance to the possible benefits to business and industry of public power, or the covering up of actual facts about high costs, merely prevent an intelligent rational approach to a grave problem to which some solution must be found.

You may remember that the reason for my original statement about Connecticut electric costs was to urge the legislature then in session to approve the two nominations I had made for Connecticut's Public Utilities Commission. You agreed, in your reply to my statement, that the commission is subject to some improvement perhaps.

The two men I selected are Irston R. Barnes, of Hamden, and Charles W. Knapp, of West Hartford. I had chosen these eminently capable men to replace two present members of the commission, Eugene Loughlin and Frederick Holbrook, neither of whom had the slightest experience in the intricate and highly complex field of utility regulation and whose chief qualification for the job seems to be that they were both prominent members of the Republican State central committee. Under both of these gentlemen, gas and electric costs, telephone bills, water rates, and bus fares have climbed steadily upward in the past year. And as I have already shown, Connecticut power costs averaged for all classes of users have been permitted to continue their climb far above national average costs. This is especially true in the case of large commercial and industrial users. I do not challenge any individual decision made by the commission, or the personal honesty of its members. But I do challenge in the most vigorous terms, its competence, experience, and political complexion.

The house of representatives refused entirely before its adjournment to accept or even consider my nominations of Mr. Barnes and Mr. Knapp to the commission, although the senate, with the Democratic majority, agreed to them. Yet both of these men are outstandingly qualified, through experience within Federal power and regulatory agencies, and have no political connections.

I repeat, that the Connecticut people are entitled to know the facts—all the facts—about electric power costs in Connecticut, and to have a public utilities commission composed of able, experienced nonpartisan men who can be counted on to act in the public interest. It is my hope that regardless of the irresponsible action of the house of representatives, a commission will eventually be set up in which the public can have complete trust for fair and impartial decisions. I hope that you and your colleagues will devote yourselves to that end.

Sincerely,

——— ———,
Governor.

Security Must Be Earned

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. GRANT. Mr. Speaker, recently, Hon. Earl M. McGowin, a representative in the Alabama Legislature, from Butler County, contributed to the Montgomery Advertiser a guest editorial entitled "Security Must Be Earned."

This editorial is forthright and I am sure that those who are interested in the future of our great Nation will appreciate the sentiments expressed therein.

SECURITY MUST BE EARNED

(By Representative Earl M. McGowin, of Butler County)

I have been asked to express my views on where the line should be drawn in our drift toward socialism so that free enterprise and liberty as we have known it can be preserved. The prize is worth the effort though there obviously can be no exact answer.

History is not without its parallel in this instance, as Hallam wrote in 1813: "No unbiased observer who derives pleasure from the welfare of his species can fail to consider the long and uninterruptedly increasing prosperity of England as the most beautiful phenomenon in the history of mankind. In no other region have the benefits that political institutions can confer been diffused over so extended a population."

That unhappy island can make no such boast today, but the statement may properly be ascribed to this country. Our spectacularly high standards of living on so broad a base is certainly a beautiful phenomenon, and the system of government that created it is worth preserving.

The purpose of government is to provide an organization by which individuals may achieve security through orderly processes. It is impossible to conceive of a state of nature, as no individual is ever a free agent in an absolute sense. "Man is born free but is everywhere in chains." Everyone is born with responsibilities, starting with those to his family and extending to his community, State, and Nation; and paradoxically, it is by a common acceptance and practice of these responsibilities that the over-all freedom is preserved.

Government services and activities have spread in many directions, particularly during the past 20 years, and unless the trend changes we, too, will soon become a full-fledged socialistic state, which is but a stopping place on the road to totalitarianism. There is no middle ground. Either we have free enterprise with its system of rewards, and benefits, or we have a planned economy with a single master mind as ultimate sovereign.

In evaluating Government activities in an attempt to find a line of demarcation, certainly two important considerations are:

1. Does the service or activity tend to discourage or dry up venture capital?

2. Are we willing and able to pay for it without leaving the burden for future generations?

As to the first—Government services should be regarded as tools available to all and designed to help the individual achieve whatever standard of living is within his capacity. There can be no guarantee of security to any normal person. Security must be earned. It is not an inalienable right. The Government cannot create wealth and can only assure equality of opportunity.

Services and activities that provide the tools and methods and leave the achievement to the individual do not discourage venture capital. In this category would come roads, schools, health services, experimental stations, and methods of conserving natural resources. On the other hand confiscatory taxation, competitive enterprises operated from public funds, and subsidies and tariffs for the benefit of any particular group tend to destroy initiative and consequently dry up potential sources of new wealth.

One of the greatest contributions an individual can make to the common welfare it to operate a business—commercial or professional. Free jobs are made and taxes paid and that is the very antithesis of the so-called welfare state.

As for the second consideration, it would appear that the willingness to extend the Government further into fields that lead to socialism, or provide service beyond our capacity to pay for them would be better held in check if we should hold our spending to visible levels. There is always a temptation on the part of public officials to make extravagant promises, and people never consider the stopping point so long as funds appear to come from some far away and apparently limitless reservoir. If the general public can see how and where their funds are spent, much of the drift would be stopped.

Many will argue this viewpoint will slow progress, but it seems to me far better to move forward slowly on a solid foundation than to risk the whole structure by moving too fast. Consider the distance this State has come since its major economic tools were destroyed in the Civil War. I doubt that Governor Miller could have envisaged what we have today so recently as 18 years ago. Yet many services have been added, all within the framework of our capacity to pay for them; and the burden has not been left for our children.

We have rich resources and a healthy people, but we need a new spirit and a fresh determination to preserve our way of living. Our political leadership needs basic intellectual honesty to value our precious freedom more than any election. There must be a genuine desire to maintain our form of government, and to do that public men must talk frankly to their constituents and admit there is no wealth in the Government other than that created by the individual.

What the Bankhead-Jones Farm Tenant Act Has Meant to Indiana

EXTENSION OF REMARKS
OF
HON. THURMAN C. CROOK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. CROOK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter

from Ralph C. Phillippe, Indiana State director, Farmers Home Administration, Lafayette, Ind., disclosing how the Indiana families that were benefited by the provisions of the Bankhead-Jones Farm Tenant Act will be honored on August 3, 1949.

The prevailing farm conditions in the Hoosier Commonwealth today are quite a contrast to a few years back when thousands of farms were being sold over the auction block to meet encumbrances.

UNITED STATES
DEPARTMENT OF AGRICULTURE,
FARMERS HOME ADMINISTRATION,
Lafayette, Ind., July 27, 1949.

The Honorable THURMAN C. CROOK,
House of Representatives,
Washington, D. C.

DEAR MR. CROOK: Wednesday, August 3, 1949, several hundred Indiana families from every section of Indiana will assemble at the Union Building, Purdue University, to be honored for their achievements under the farm ownership program of the Farmers Home Administration. These families so honored represent those who during the past 10 years through their own efforts have retired in full their 100-percent loans authorized by the Government for the farms they purchased under the provisions of the Bankhead-Jones Farm Tenant Act.

Through the cooperation of Purdue University and the College of Agriculture a special program has been arranged for the day that will permit each family present to visit various points of interest on the campus. So far we have been informed that over a thousand people plan to attend the morning session to be conducted in the Union Building.

In view of your keen interest in matters pertaining to the welfare of Indiana agriculture, I cordially invite you to be with us on August 3 if it is possible for you to do so and meet our guests who are to be honored. Mr. Dillard B. Lasseter, Administrator of the Farmers Home Administration, Washington, D. C., will be present as well as other recognized leaders of agriculture from Indiana and adjacent States.

If you happen to be in State on August 3 and can arrange to be present, I assure you that you will be most welcome.

Sincerely yours,
RALPH C. PHILLIPPE,
State Director.

When Electricity Comes to Your Neighborhood

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks, I include the following interesting article appearing in the June 1949 issue of the REA Progress a monthly magazine published by the Kiamichi Electric Cooperative of Wilburton, Okla.:

WHEN ELECTRICITY COMES TO YOUR NEIGHBORHOOD

High lines that bring electricity to your farm also bring it to the schools, churches, meeting halls, stores, and locker plants in your neighborhood. They make possible development of local rural industries so that more of the products you raise can be processed locally.

Local industrial development means jobs for members of your family who do not intend to or are not able to farm, or who farm only part time, seeking work off the farm in slack seasons. Such development also often means lower prices for the manufactured goods you buy and higher prices for the raw materials you sell, because transportation costs and sometimes production costs can be reduced, or because you or someone in your neighborhood can add value to the product which your farm has produced.

Electricity is important in modern education. It provides students with better lights so that young eyes are not strained. It makes possible modern, sanitary plumbing in schoolhouses. And it helps provide hot lunches for growing children—lunches that will help make them better pupils and better citizens. Teachers depend on electric power for sewing, cooking, and shop classes. They use motion pictures, slide films, and radio in their classroom work. No wonder rural school teachers eagerly seek electric power for their schools, and that teachers are attracted to those schools which are equipped with the modern conveniences that electric power can bring.

Community canning centers and repair shops are easy to organize when a neighborhood enjoys the advantages of electricity. Working together, folks are able to employ to the fullest, high-speed, effective modern tools for this ideal type of community enterprise.

Community locker plants, too, become possible with the coming of electricity. There are many indications that home freezers will come into common use—but locker-plant facilities will be needed for butchering, preparing, blanching, and cooling foods which may later be stored in home boxes. Living on the farm becomes richer, fuller, and healthier with an all-year supply of fruits, vegetables, and meats as your family needs them.

Power resources spell new life to your rural community.

Barden Bill

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Tablet, a Catholic weekly, Saturday, July 30, 1949:

GIST OF THE CONTROVERSY

In the current discussion on the education question there is no issue more bogus than that helping children who attend religious schools would violate the principle of separation of church and state. This is merely a subterfuge to cover the discrimination now openly practiced against children who attend schools in which love of God and morality are taught. It is akin to the invoking of freedom of speech when one desires to calumniate his neighbor on account of the latter's race or religion, or a sorry defense used by one seeking to betray his country.

There is only one reason for Federal aid to education and that is to help needy children, irrespective of their race or religion. Those who invoke, and misrepresent, the first amendment—"Congress shall make no law respecting an establishment of religion"—deliberately falsify the issue using the phrase "Federal aid to schools" when the aid is not for schools but for American children.

What did the founding fathers mean by an establishment of religion? When the Constitution was adopted, some of the original States had established churches and all citizens, irrespective of their religious affiliations, were taxed to support these churches. The constitutional provision respecting separation of church and state was written to prevent the government from setting up any established church after the fashion prevailing in some States.

Again, it never occurred to our founding fathers to envisage modern social services such as health, transportation, and lunches being restricted to a portion of our children in schools financed exclusively by tax funds. As a matter of fact, the present public-school system dates back only to Horace Mann. When the Constitution was adopted, private and religious schools were the only schools.

Today the Federal Government pays out money for the benefit of students studying in various religious institutions, for GI bill programs, lunches, and so forth. In addition, some States and cities provide money for such nonsectarian purposes as transportation, textbooks, health, and library service for all pupils regardless of whether or not they attend religious schools. In these States, the lawmakers are interested in the welfare of all little children, and they do not discriminate. Just how do these instances of nondiscrimination breach the constitutional prohibition respecting the establishment of religion?

It would be more logical to fear Catholic control of the public-schools system and the eventual power of Catholics to set up an established church because Catholics are contributing an increasingly large proportion of tax funds for the support of public schools. Yet no one has proposed that Catholic citizens be barred from paying taxes to finance the public schools.

According to their misinterpretation of the church-state separation principle, the Barden bill's sponsors, although they would deny Federal aid for even nonsecterian purposes to any child in a nonpublic school, they would include the latter in the count on which the Federal grant is to be based.

If Barden bill sponsors want to counter the charge they are dishonest, let them raise an outcry against counting in children in parochial and private schools in calculating the amount of Federal moneys to be given only to children in public schools.

Those who back the Barden measure and its spirit must do so only because of ignorance, misinformation, or blind prejudice, Catholics who sympathize with their specious arguments in the least are, through ignorance too, betraying their meek acceptance of the role of second-class citizens. Catholic taxpayers contribute a large bulk of the support without which public schools could not exist. The public schools belong to Catholics as well as to non-Catholics and the latter are usurping a right which is not theirs if and when they deny a voice to Catholic citizens and taxpayers. The Catholic parent has the civil right, likewise, to send his child to a public school as well as to a parochial school. If he chooses the latter he is not thereby relinquishing his interest in the education of children in the public school. The education of all children is his concern and he is failing in his duty as an American if he sits idly by while others misuse his money to discriminate against two and a half million children who happen to be in nonpublic schools.

Over 20 years ago the Tablet asserted: "Catholic schools are run by Americans, paid for by Americans, and train American children. They are part of the great American system of education. The American people have freedom of education as guaranteed by the Constitution, but when they are penalized for exercising their right, they are treated unjustly. They and their children are victims of discrimination and on account of religion. Those who raise up the false issue of union of church and state because religious school children and their parents might be helped by public funds—which means Catholic as well as non-Catholic taxes—might just as logically protest against the traffic policeman guarding the crossing outside the Catholic school, or the alert fireman ready to quench a blaze in a religious school, for these men are paid out of public funds and so are the streets and sidewalks adjacent to religious schools and traversed by religious school children."

That was our position yesterday and it holds today. The Barden bill, and similar measures founded upon discrimination, are worthy only of rejection. The false issue of union of church and state should not be permitted to legalize injustice or dignify hypocrisy.

Study Commission on Arkansas-White and Red River Basins

EXTENSION OF REMARKS

OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2 (legislative day of Thursday, June 2), 1949

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by me before the Committee on Public Works, favoring the enactment of the bill (S. 1576) to establish the United States Study Commission on the Arkansas-White and Red River Basins.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STUDY COMMISSION ON ARKANSAS-WHITE AND RED RIVER BASINS

Mr. Chairman, I am happy for the opportunity to testify in behalf of this legislation in which I am vitally interested.

Every year there is some flooding everywhere and terrible floods somewhere.

Every gallon of water that moves across and out of a State without having been properly used is a public loss.

I was Governor of Oklahoma in May 1943, when the most devastating floods I have ever seen invaded northeast Oklahoma.

We saw the flood waters recede. We saw the lands dry out. We saw the farm families who had been compelled to flee their homes, as from a pestilence, return—repair the soil and plant again. But in the latter part of July and August we saw a withering drought burn up and destroy the second crop as completely as the floods had ruined the first.

We asked ourselves then and have continued to repeat the question since: "How long before the intelligent, enlightened people of Oklahoma and across the Nation will arise in their wisdom and power and develop a program to prevent the destruction by water in flood times, and control and save it for its life-giving value in dry times?"

I took the problem to heart. In fact, I took it so seriously that when I sought a seat in the United States Senate, my opponents called me, "The land, wood, wind, and water" candidate. They put the emphasis on the "wind"—I put the emphasis on "water" because I have never forgotten the flood of 1943 and the drought which followed it.

That, gentlemen, is the reason I appear before you today, in behalf of S. 1576. Since 1943, I have given this problem careful study and much thought.

I have worked with the Corps of Engineers, than whom I have never seen a more highly trained, skillful group with more able leadership. They have built great flood-control projects of great benefit, and have built them with commendable technique and efficiency. They are indeed a splendid part of our fine armed forces.

I have worked with the Department of the Interior in their Bureau of Reclamation. I have seen their careful plans for irrigation turn deserts into oases, and I have marveled at their ability.

I have worked with the Department of Agriculture in their Soil Conservation Service. The raw wounds which once ran unchecked in our land have been soothed by their healing hand and gained a new health by the efforts of these experts.

Yes, I have worked with all these people and for all of them I have the deepest and most profound respect.

There has come a time, however, when those of us concerned with the common cause of controlling water and water resources, must work together. Only a team can have teamwork. Only a team can come forth with one plan, one program, one solution for all the multiplicity of problems which each basin contains. The plans for the people, by the States and by the various Federal agencies and departments must be integrated into a single- basin-wide comprehensive plan. Such a "single" plan has long been in evolution, and its desirability is today firmly established in principle.

Without such a plan, we have discovered to our own chagrin, full control and utilization of water resources is not possible.

Take the Missouri Basin, for example. Overlapping, duplication, and feuding reigned until the Pick-Sloan plan, a shotgun wedding, so to speak, took place between the Corps of Engineers and the Bureau of Reclamation. This union was born of necessity. Without a comprehensive plan, coordinating for a single purpose, maximum development there, as elsewhere, was an idle dream.

On the other hand, scarcely 2 weeks have passed since this very committee heard from competent witnesses about the bugaboo of conflicting authority, overlapping jurisdiction, and duplication of effort that was taking place in the Columbia Basin. A plan for this basin must soon be found. I am confident that it will be found in a single plan of coordinated development.

Gentlemen, the Government of which you and I are an official part, is contemplating the expenditure of huge sums in the watersheds of our country. The actual grand total is estimated to be almost $58,000,000,000. This includes the projects already built, under construction, and those which are planned.

On the face of it, $58,000,000,000 is a tremendous sum. But when you realize that present flood-control structures prevent an estimated $350,000,000 in damages each year and that when the rest of the dams are built and in operation, another $450,000,000 will be saved annually; when you realize the added production and value of thousands of reclaimed acres of land through reclamation, as well as the host of other economic benefits involved in water resources control, you see that the figure of $58,000,0000,000 is not out of line at all.

But this much is a certainty. If we plan to spend a total of $58,000,000,000 for the Nation's water resources, it does behoove us to take every possible precaution to get the most for our money.

We think that this bill will help find the answer for the Arkansas-White and Red River Basins. The people have a mighty future there in that area, if it is properly developed.

I believe in its future. I believe in it because 7,500,000 of sincere hard-working people live there on more than 177,000,000 acres of good land. Our annual farm production in these eight States already exceeds several billion dollars.

We produce the greatest variety and amount of fuel resources of any comparable area in the United States. We have 37 different minerals in commercial quantities.

Nevertheless, only 10 percent of our potential electric power has been developed. Hundreds of thousands of acres of land still await the magic of reclamation. Our rivers lack only plans and construction to furnish new waterways from our area to the Mississippi.

In an area so vast, so rich, so potentially wealthy and yet so comparatively undeveloped, there is without question much to be done. Many studies have been and need to be made. The old studies need to be coordinated with an over-all plan and new studies need to be made to complement and complete the total development.

When S. 1576 was introduced I was gratified that members of this committee saw fit to cosponsor this legislation. In all, 10 of my colleagues joined me in seeking optimum development of this region at minimum cost.

Now let me remind you of some of the phases outlined in S. 1576.

First of all, a 13-man group would be created as a study commission. Eight States will be represented by one member each, as will be the Corps of Engineers, the Bureau of Reclamation, the Soil Conservation Service, and the Federal Power Commission. Three months after this Commission has submitted its report, it will automatically cease to exist.

I want to reiterate here, for the record, that this bill is not a regional authority bill. It will not take from the powers of any existing agency. It will not interfere with projects already authorized and projects which are proposed for authorization. It will not detract from the rights of the States in their water development.

Actually, the total meaning of the entire bill may be said to be this: All known facilities, agencies, and studies will be pooled, to gain an over-all picture of what needs to be done for complete, maximum development, and how the same can best be done.

One other important point is contained in the bill. It is an enlarged and expanded yardstick of economic justification for construction of projects, which is already recognized in principle but not by law.

This bill does not represent any radical change in the thinking of those concerned with water development. It does not constitute any radical departure from the basic and accepted policies of our Government.

As a matter of fact—and it is fact—this proposal in S. 1576 at one time was passed by the House and the Senate and signed by the President.

Two men, farsighted and gifted as few Americans have been, were responsible for that legislation. They were the pioneers, the missionaries, the crusaders for the cause of controlling the Nation's water resources. All the new ideas of today such as multiple-

purpose dams, basin-wide development, coordination of existing agencies, the whole story that has been almost 50 years in the telling, was advocated by these two men.

They deserve eternal credit for the great work they did. In a manner of speaking, and speaking without exaggeration, one can say that these men gave their lives for water development. One of them was George Hebard Maxwell, former executive secretary of the National Reclamation Association. The other was an esteemed and revered colleague in the United States Senate from 1902 until 1917, when he died in service—Senator George Newlands, of Nevada.

At this point, gentlemen, I wish to introduce into the RECORD a copy of the law found in section 18 of the River and Harbor Act, August 8, 1917. I quote from that act, "That a commission * * * is hereby created * * * to bring into coordination and cooperation the engineering, scientific, and constructive services, bureaus, boards, and commissions, * * * of the United States created by Congress that relate to the study, development, or control of water and water resources * * * with a view to uniting such services in investigating with respect to all watersheds in the United States, questions relating to the development, improvement, regulation, and control of navigation * * * including therein the related questions of irrigation, drainage, forestry, arid, and swamp-land reclamation, clarification of streams, regulation of flow, control of floods, utilization of water power, prevention of soil erosion and waste, storage and conservation of water for agricultural, industrial, municipal, and domestic uses, * * * to secure the necessary data, and to formulate and report to Congress, as early as practicable, a comprehensive plan or plans for development of waterways and the water resources of the United States."

That, gentlemen, is the law of August 8, 1917. It is a pity that it died in the same year as its author. Frankly, the law did not have a chance to show its workability. It was not on the statute books long enough for that. I cite it now to show the ideas and proposals embraced in S. 1576 are not new nor are they innovations.

In view of these facts, I am convinced that if you report favorably S. 1576 and Congress should pass it, we will have, indeed, taken a mighty step forward to improve and develop one of the richest areas of our Nation; and we will do it more cheaply, more efficiently, and more completely.

The Honor List of Dead and Missing of the Military Personnel for the State of Mississippi in World War II

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am including a statement and a list by counties of the brave soldiers from Mississippi who gave their lives in the recent conflict.

This list is published by the War Department for the information of public officials, the press, the radio, and interested organizations. I am inserting it in the RECORD in order that it may be available to the loved ones of those boys whose names are here listed among the honored dead. I hope to get and publish a similar list of the ones who gave their lives in other branches of the service.

It contains the latest and most complete data available on all military personnel from Mississippi who were killed or died, or became and remained missing, between the President's declaration of unlimited national emergency on May 27, 1941, and the cut-off dates of this report, January 31, 1946, and includes both battle and nonbattle dead or missing.

The foreword to this list is explanatory of the list itself. It reads, in part, as follows:

The State of Mississippi contained 1.63 percent of the population of the United States and possessions (excluding the Philippine Islands) in 1940 and contributed 1.54 percent of the total number who entered the Army. Of these men and women of Mississippi who went to war, 2.32 percent failed to return. This figure represents 1.16 percent of the Army's total dead and missing.

No civilians are included in this report. Red Cross personnel and other civilians serving with the Army became casualties during the war, but procedure for reporting civilian personnel differs from that for reporting military individuals.

The following pages show a break-down by counties and types of casualties, followed by a break-down alphabetically by counties, the counties themselves being listed in alphabetical order.

In the preparation of these lists, it was necessary to establish a set of criteria on which the proper location of each individual's name would be determined. The following procedure was set up:

(1) If an individual gave an address as his home address when he entered the Army, his name is listed in the county in which the address was located.

(2) If he gave no home address, but designated a beneficiary or next of kin—either of whom must be a relative in limited degrees of kinship—or in the absence of relatives an emergency addressee who may be a friend, his name will appear in the county in which the address of the beneficiary, next of kin, or emergency addressee is located.

(3) If neither home nor emergency address was given (this was the case in rare instances where aliens were without family or residence in this country) the county of the draft board of origin is the one in which he is listed.

(4) In the case of certain Regular Army personnel who moved their homes from place to place according to the exigencies of the service, the only address available is "The Adjutant General," and these personnel will be listed in the District of Columbia booklet.

(5) A very few cases exist in which none of these four criteria obtains. It is impossible to determine the county in these cases and such individuals are listed in some State volumes under "State at large," a listing following the last county listing in the book. No instances have been found wherein it is impossible to locate a person as to State except as mentioned in (4) above.

The lists which follow contain information as to individuals in the following order: Name, Army serial number, grade, and status of casualty. A word of explanation of methods of listing and of symbols used follows:

Name: Because of standardized usage for names in the Army, some individuals listed herein may not be shown under the name by which they were called in civilian life. For instance, a man listed herein as "Smith, William P." may have been known to his friends as "Paul Smith" because in civilian life he did not choose to use the name "William." In Army usage the first name is used in full and other given names follow in order as initials. Names prefixed with "Mc" are listed between names beginning "Ma" and those beginning "Me," and similarly names beginning "Mac" will be found after "Mabry" and before "Madison." Because of a peculiarity of the machines used in these tables, prefixed and hyphenated names do not always appear in strict alphabetical order, and absolute correctness in the order of alphabetizing names does not govern after the tenth letter of a name. However, for all practical purposes the names will be in alphabetical order and cases will be extremely rare where a name will be more than one or two lines out of place.

Army serial number: Because of the tremendous number of individuals who have passed through the Army, serial numbers are given to prevent confusion. Using the name "William P. Smith" as above as an example, it was found that at the time of writing there were 84 men of this name in the Army, and several hundred men with the name "William Smith" without respect to initials. In attempting to identify one of this number much confusion could arise, and this is obviated by the use of a serial number.

Serial numbers are assigned with great care and according to a set of regulations. Consecutive serial numbers, for example, are not assigned to twins since this might cause confusions of identity between two perons with the same birth date and same general physical characteristics.

Grade: This is synonymous with the misnomer "rank", and the abbreviations which may be found in this book are as follows: GEN, General (four star); LT G, Lieutenant General (three star); M G, Major General (two star); B G, Brigadier General (one star); COL, Colonel; LT C, Lieutenant Colonel; MAJ, Major; CAPT, Captain; 1 LT, First Lieutenant, 2 LT, Second Lieutenant; C WO, Chief Warrant Officer; WOJG, Warrant Officer, Junior Grade; FL O, Flight Officer; AV C, Aviation Cadet; M SG, Master Sergeant; 1 SG, First Sergeant; T SG Technical Sergeant; S SG, Staff Sergeant; TEC3, Technician Third Grade; SGT, Sergeant, TEC4, Technician Fourth Grade; CPL, Corporal; TEC5, Technician Fifth Grade; PFC, Private First Class, and PVT, Private.

Type of casualty: This is indicated by the symbol at the far right of each column. An individual who was killed in action, whether at the front or by enemy action in the rear areas, or if a prisoner of war, whether by air bombardment of his prison camp or by being shot while escaping, is designated KIA. Persons who were wounded and later died are marked DOW—died of wounds. Those who suffered fatal battle injuries as opposed to wounds, in combat or in combat areas, and died in a line-of-duty status, are designated DOI—died of injuries. Other line-of-duty deaths, such as from sickness, homicide, suicide, or accidents outside combat areas (including training and maneuver deaths) are listed DNB—died, nonbattle. Individuals who were determined to be dead under Public Law 490 are designated FOD—finding of death. Missing persons are marked with the single letter M.

Patriotic organizations will find these lists of value in establishing or checking honor rolls in their communities. In this connection, it should be emphasized again that these lists are preliminary and will one day be superseded by a list which can be considered final. Changes in status may occur between the time of publication of these lists and preparation of new ones, and actuarial tables indicate that new names will be added. In some rare cases names of persons already dead may have been eliminated inadvertently from these lists.

At this point I am inserting the tabulation by counties and types of casualties:

Tabulation by counties and types of casualties

County	KIA	DOW	DOI	DNB	FOD	M	Total

Luxury Taxes

EXTENSION OF REMARKS

OF

HON. HARRY. J. DAVENPORT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following reprint from the Pittsburgh Sun-Telegraph on the so-called luxury taxes:

POCKETBOOK PLAGUE—THAT BILLFOLD A LUXURY?—CONGRESS BELIEVES IT IS

(By Mina Wetzig)

Did you ever try to carry your clothes in a key case?

Congress must think it can be done—it classes key cases as luxurious pieces of luggage and slaps on a 20-percent tax.

Billfolds, brief cases, women's handbags, laundry cases, salesman's sample cases, diaper bags, tooth brush cases—they're all on the long list of taxable luxury luggage items.

Yet there is no tax on liquor flask cases, golf bags, sun lamp cases, diaries, animal-carrying cases, or bowling ball bags, for instance.

Not that any of these things should be taxed—they're just examples of the inconsistencies of the Federal Government's 20 percent excise tax that was originally passed as a wartime measure and never lifted.

Take the matter of a woman's handbag. All jokes to the contrary, a handbag is essential to a woman. It's no more of a luxury than the 9 to 12 pockets in a man's suit. There's no tax on suit pockets, but there is a tax on a woman's purse.

SALESMAN NEEDS BRIEF CASE

Brief cases and sample cases are as necessary to a salesman as his suit of clothes. The salesman would look like a peddler if he walked into a business office carrying his papers or samples in a paper bag.

But Congress says the brief case and the sample case are luxuries—and the old 20 percent pocketbook plague gets added on to the price.

The luggage story gets sillier when you start scanning the list of taxable and nontaxable items. A laundry case without a handle is tax-free. Put even a 10-cent handle on it and it goes into the taxable bracket.

The same way with a jewel case—if it has a handle it's taxable.

A veteran going to college and living in crowded quarters buys a locker trunk in which to store his belongings. He pays the tax. A schoolgirl needing a zipper-ring notebook pays the tax.

RECORD CASE TAX-FREE

But anybody can buy a phonograph record carrying case without getting nicked 20 percent.

You can buy a fiber suitcase tax-free if you swear on a stack of Bibles that you're going to use the suitcase for tools. But if the store salesman even suspects you might try to sneak a shirt and a pair of socks into the case, it's 20 percent, please.

And those words—20 percent, please—are said too often about too many things that are necessities, not luxuries.

Maybe Congress is right, however—maybe a billfold is a luxury when taxes don't leave you anything to put in it.

Just Too Much Pay Roll

EXTENSION OF REMARKS

OF

HON. WILLIAM M. McCULLOCH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. McCULLOCH. Mr. Speaker, total civilian employment in the executive branch of the Federal Government now exceeds 2,120,000. New employees are being added at the rate of more than 300 per day.

An editorial in the Washington Daily News of August 2, 1949, is of especial significance in view of the above facts.

The editorial follows:

JUST TOO MUCH PAY ROLL

Greek civil servants plan a walk-out, which would paralyze the Government, if their demands for a 65-percent wage boost aren't granted.

They have rejected a Government offer of a 30-percent increase, contending the cost of living is up 100 percent. The Government says it cannot make a better offer because 65 percent of its total revenue now is absorbed by pay roll and pensions.

This is what happens when more and more people are taken out of production and put on the public pay roll. Greece has been doing that for years, until the Government is burdened with a top-heavy, underpaid bureaucracy it is afraid to break up but which it can no longer support.

But let's not look down our noses at the Greeks. We are moving up the same dead-end street ourselves. The only difference is that we have had more fat to work on before the bad news catches up with us.

Spotlight of World Scrutiny

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. RODINO. Mr. Speaker, it is a small thing indeed for a man to look down upon another simply because he is not of the same color, creed, race, or station in life. For this is the way of the intolerant and prejudiced mind. In our America, founded on the concept that all men are created free and equal regardless of race, color, creed, or station in life, there can be no room for such discrimination.

Under leave to extend my remarks in the RECORD, I include herein the following editorial which appeared in the July 31 issue of Il Progresso Italo-Americano which sheds interesting light on the subject of discrimination:

SPOTLIGHT OF WORLD SCRUTINY

Not so long ago too many Americans failed to realize that the leadership of the world rested in the United States. Today, too many Americans still fail to realize the responsibilities that go with such world leadership. In fact, too many of our citizenry do not yet understand the meaning of world primacy in an age like ours—in an age torn by the conflict between two irreconcilable and incompatible ideologies, totalitarian communism, and democracy.

Whether we want it or not, whether we like it or not, everything our Nation does, every policy our country pursues at home or abroad is now under the searchlight of world public opinion. Often, our words and deeds are under the scorching spotlight of fiendishly hostile eyes—the eyes of the Kremlin hierarchy and its millions of minions and quislings throughout the world. Here is an enemy ever eager and ready to break through our weak spots, to take meanest advantage of even our smallest mistakes in order to advance its brutal and brutalizing power.

Hence our very position, as well as moral grounds and social justice, now demand that we put our house in order—and keep it in order—clean and strong and equitable in all the relations among ourselves. Here we are led immediately to deep concern over the lingering evil of nationalistic prejudices and racial and religious discrimination which still constitute a reprehensible blemish on our shield of national honor and decency. Far be it from us to minimize the progress our Nation has made in reducing this pernicious evil. But we still have a big job ahead of us.

TERRIBLY COSTLY

It has been authoritatively estimated that racial discrimination alone costs American economy at least $6,000,000,000 a year. This conclusion arrived at by Mr. Joseph J. Morrow, eminent personnel director of Pitney-Bowes, Inc., does not include the many billions of dollars of loss suffered by our industries as a result of prejudices growing out of differences in national origin and language and religious background. Indeed, here we have one of the costliest of leaks in our national economy—a leak which we can and must plug without delay, if we are to beat back and crush the ruthless challenge of totalitarian communism.

We cannot underscore too heavily our agreement with Mr. Morrow that the Communists know that a nation split by internal divisions and group resentments makes a weak enemy. It is entirely understandable, therefore, why these termites in our household have picked as our most dangerous weakness the plight of those in our midst who are given to bitterness and frustration because of the disadvantages to which they are subjected—disadvantages rooted in discrimination and prejudices grown out of racial and religious antagonisms and variations in national origin.

We know of no more dangerous or worse folly than to refuse someone a job in a plant or a school or a profession because he or she happened to be born in Italy or Poland or because he or she worships as a Catholic or Jew or his or her skin is of a different color from ours. The phenomenal progress of our Nation is due above all to the very variety of our national origin, to the very diversity of our people and their cultural backgrounds. The melting pot that is America has given forth a Nation that is a steeled and polished amalgam of the virtues, virility, and vitality of all of mankind. Why undermine it? Why negate it? Why belittle it? Why not cultivate and strengthen this mighty mainspring of our national strength and success

SIGNIFICANT HEADWAY

It is in this light that every citizen must sincerely approve and heartily applaud the efforts being made by the Secretary of National Defense, Mr. Louis Johnson, to wipe out every vestige of racial discrimination in the Army. It is in this spirit that we take great pride in the numerous notable achievements our Nation has registered in eliminating racialism from our midst. This progress shows that no task is too difficult for the American people once we realize its value and its urgency—once we realize that our highest ideals and most vital national interests demand its thoroughgoing fulfillment.

Of course, emotional factors that are deeply rooted and that are fed by ignorance, malice, and prejudice cannot be overcome overnight. It does take time to cure a patient. It takes no time to kill him. In this regard, the recent declaration of Dr. Charles S. Johnson, president of Fisk University, is as significant as it is encouraging. This noted academician has pointed out that the beneficial changes in race relations last year were so surprising in character that they have assumed the proportions of an orderly revolution within the framework of our democratic society. As it should be, broader changes are occurring in the South than anywhere else. And what is most important is that the issue and cause of abolition of discrimination and racialism are no longer the concern of some active pioneering minority or of victimized groups themselves.

The center of gravity of the struggle for genuine national unity, for an American people united and free from all vestiges of nationalistic prejudices and religious and racial discrimination, has moved from the specified segmented minorities to the realm of total national concern. There could be no greater touchstone of progress. There could be no better guaranty for our basic national health and ability to resist the virus of totalitarianism of all types and stripes. Here is powerful proof of our maturing world responsibility. There can be no source of greater hope for mankind today.

Bomb and Man

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Post, Boston, Mass., July 31, 1949:

WORLD ROCKED 35 YEARS AGO—BOSNIAN BOY'S BOMB STARTED FIRST GREAT WAR—MANKIND TODAY STILL UNDER ITS SHADOW

(By Lester Allen)

It was all long ago and far away—35 years ago this week—when the powder train lighted by a callow Bosnian high-school boy sputtered and set off an explosion that blasted the world so that it would never be the same again.

His name was Gavrilo Prinzip. It is doubtful if he knew the consequences of what he planned to do back in late June 1914, when he tossed a bomb at Archduke Francis Ferdinand, of Austria, in the Bosnian town of Serajevo, missed and pulled a pistol to kill the archduke and his wife.

What he did still has an enormous effect on international affairs and will continue to alter the course of world history until men renounce their nationalities and lay down their arms forever.

NEEDED GOOD EXCUSE

It wasn't that the Archduke Francis was important. He was just a symbol of power, an excuse to hurl divisions into battle. Actually he was a sort of bumbling prince who was heir to the Austrian throne because his brother had committed suicide. There was another heir to succeed him—Archduke Charles Francis Joseph.

The German Kaiser had long sought an excuse for going to war with Russia, a war which would drag all the other European nations into the conflict. The Kaiser and the German general staff knew they would have to fight all the other powers and they were ready to do so if only a good excuse presented itself.

Russia then had a protective interest in the Slavic Serbians—the Yugoslavs of today. Any nation that attacked Serbia would have to deal with Russia as well. Austria-Hungary was prodded into attacking to punish Serbia for the assassination of Archduke Francis. The Kaiser didn't even go to the funeral. He was busy arranging the order of battle with the German general staff.

CARDS STACKED

The cards were stacked in Germany's favor. Germany could field an army of 1,220,000—a militia reserve of 600,000 and 1,500,000

reservists as well immediately because of the tight network of railroads leading to her east and west frontiers. Russia could field an army of 1,384,000 men who were scattered all over Europe and Asia. It would take weeks or months to bring the Russian strength into position.

The plan was to destroy the Russian Armies, turn and destroy the French Army, and secure mastery of Europe and Asia. On July 31, 1914, the German Armies moved against Russia. On the western frontier German troops were already foraying across the French and Belgian frontiers. During the week that followed July 31, 1914—Belgium, France, and Britain went to war with Germany.

It was to be a short war. All the military experts except Lord Kitchener said it would last 1 to 18 months. Kitchener said 3 to 6 years. A poll of American Army officers agreed that it was a war of all resources and that until all the resources were exhausted the fight would go on and that whichever side was beaten would require more than half a century for recovery. Exactly 20 years later the world was convulsed by another and greater struggle caused by the aftermath of the First World War.

THIRTY NATIONS BATTLE

More than 30 nations—small and large—entered the conflict. Over 30,000,000 people died. Over 6,000 ships were sunk.

The war laid waste to Serbia, Poland, and Belgium; left scars which may still be seen today on France, Austria, Rumania, and Russia. Austria-Hungary fell apart. Russia fell into the hands of Bolshevik revolutionaries. France and England were bled white. Germany was left only with an obsession that but for small, unforeseen events Germany could have mastered the world. Japan rose to the stature of a world power of first rank—stealthily preparing for the Second World War.

Turkey lost Arabia, Mesopotamia, Palestine and Syria. Bulgaria, which had turned on its Slav ally, Russia, and wherever an old grievance vexed a people—there was fighting, even in the jungles of Africa, on the veldt.

BIGGEST WAR

It was the biggest war the world had ever known—up to that time. The submarine and gas were used to the fullest extent—weapons which military experts had once deemed frightful. The concept of war changed. Instead of struggles between uniformed men—war became total involving men, women and children in death and destruction. The civilian no longer was a bystander.

The armies of Xerxes and Alexander the Great, deemed the mightiest hordes ever assembled under arms—were dwarfed to battalion size. In our Civil War there had never been more than 1,300,000 men under arms, including both sides. The killed for both sides did not exceed 190,000.

Four years of struggle in World War I cost the lives of 7,345,000 men killed in battle or died of wounds—and the toll of civilians, starved, dead or war-caused disease and other causes will never be known. Over 13,000,000 men were under arms on all sides. We were to come to bigger and better things. United States had better than 14,000,000 under arms in World War II. Gavrilo Prinzip didn't know what he was starting.

Napoleon in all his battles never fielded an army of more than 500,000 men and the greatest battle prior to World War I at Leipzig in 1813 had 474,000 men engaged. In World War I over 3,000,000 were constantly engaged on a single front in France and Belgium.

The causes of World War I are in deadly parallel to the causes of World War II. They can be divided into economical, military, political, industrial, diplomatic, racial and psychological causes. The nations were being organized on lines of industrialized capitalism with competitive rivalries which took the form of trade barriers, competing military and naval forces, secret treaties and alliances and colonial expansion.

Disproportionate wealth of Germany, Russia, Great Britain and France, rampant nationalism and worship of the state which would be above all law arrayed the powers one against the other. Europe was divided into two camps. Another 20 years and the world would be divided into two camps as it is today.

ALMOST TRAGIC-COMIC

Looking back on the Triple Alliance and the Triple Entente it is almost tragic-comic, just as Mussolini and Hitler have taken on the aspect of comic characters whose buffooneries were taken seriously by millions of people who should have known better after what they went through in World War I as a result of the buffooneries of Kaiser Wilhelm, the aged Franz Joseph of Austria, and the Russian Czar.

The cult of racial superiority had as much to do with the vast convulsion as anything. Germans had been taught that they were supermen, invincible in battle, destined to rule the world, just as Japanese were taught that they were invincible, and just as Russians today are taught that all good stems from their race and political ideology.

The Germans had ample encouragement in this belief. Their successes at arms and in diplomacy under Bismarck had given them confirmation of the superman belief, and their extraordinary industrial expansion in 40 years convinced them that they were elect among men.

AFFECTING RUSSIANS

This kind of a delusion can affect any race. It is affecting the Russians today who worship the 5-year plan and are envious of the industrial might of the United States. It could even happen to the United States.

Thirty-five years ago this week the people of the world began to learn a horrible lesson, a lesson which they still have not committed to memory for all time. The lesson is simple. No great and distressing problem is ever settled by force of arms. The issue settled by arms is which nation or coalition of nations will be able to inflict its ideas upon the vanquished. It will not suppress the martial spirit of the vanquished, nor will it make a peace certain.

Washington Reporting

EXTENSION OF REMARKS

OF

HON. HARRY J. DAVENPORT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my column which appeared in the Penn Progress on July 28, as follows:

WASHINGTON REPORTING

A visitor to my office last week made the following remark during our conversation on the state of the economy:

"What this country needs is a good-depression. It would be like a cleansing process. Labor would stop asking for wage increases. Businessmen who don't know the score would be forced out of business and we would get back to low-cost and efficient production."

This sort of talk sounds like 1929. It is defeatist talk. It makes it appear that good times are freak periods and that our normal state is one of depression. Actually, if you go back through our history, you will see that while we did have our economic ups and downs, good periods came frequently and lasted a long time.

Our economy is getting more complex every day. There was a time when you could say with some feeling of certainty that A was caused by B. Now, more likely, A would be caused by B, C, D, etc. There was a time when the economy could operate more efficiently if left to its own devices. While this is almost true today, we know that there are times when it operates better if aided by Government.

This is especially true of periods such as we are in today. The Gallup poll shows that the American people are more concerned with unemployment today than with any other subject. Business no longer feels certain that the economy will continue to expand during the coming year—as it should if we are to have full employment and a high level of purchasing power.

That is why many of us in Congress have banded together to push the Economic Expansion Act of 1949, authorized by the Honorable Senator JAMES E. MURRAY, of Montana. In 1946, when Congress passed the Full Employment Act, we thought we had the answer to depressions and instability. We were wrong. The act did little more than create an advisory economic board to whom the President could turn for economic advice.

Senator MURRAY'S bill has been offered with the idea of correcting the shortcomings of that legislation. We hope it will make a living reality of the 1946 act, which had as its goal maximum employment, production, and purchasing power. The Economic Act of 1949 would do several things of major benefit to all Americans.

It would establish a new agency, known as the National Economic Cooperation Board. This board would be composed of representatives of industry, labor, agriculture, and consumers. It would meet regularly with the President and make recommendations to expand the economy.

The act would promote private investment and production. Studies would be made of the levels of investment and production necessary for full employment. These would be made available to industry, local business groups, local and State governments and appropriate Federal agencies. All aid possible to make this level of investment and production would be forthcoming.

The act calls for an annual national conference on wage levels. This conference would seek to formulate general principles and methods to encourage a steady expansion of read wages and purchasing power did not expand to buy the increased production.

The act also calls for the creation of a shelf of local public works, which would always total $15,000,000,000. Every agency of the Government would be expected to prepare a 10-year advance program for construction projects. Grants would be given to State and local governments to finance their plans.

Another important provision of the act calls for quick action on loans to businesses that are in serious economic trouble. And workers who could find employment outside of stricken areas would be able to receive up to a $1,000 noninterest bearing loan to move to the new job.

I think the important thing about the Economic Expansion Act of 1949 is that it recognizes that all parts of our economy and all the American people have a right to share in decisions affecting their future well-being. And also important is the philosophy behind the Murray bill that the best way to cure economic instability is to expand production, employment, and purchasing power.

Rural Roads

EXTENSION OF REMARKS

OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2 (legislative day of Thursday, June 2), 1949

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by me before the Committee on Public Works, favoring the enactment of Senate bills 244 and 1471, to supplement the Federal Aid Road Act, approved July 11, 1916, as amended and supplemented, to authorize regular appropriations for the construction of rural local roads, and for other purposes.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

RURAL ROADS

In today's modern world, speed with safety is more important than ever before. We are constantly seeking new ways to get places—and get there faster.

Today's automobile is not only an engineering marvel, it is the friend of all mankind; because it takes us there and back, on business and pleasure. One of the warmest friends the automobile has, is the American farmer.

He depends on his car today, much as he used to depend on old dobbin. But to use the farmer's language, there's one hitch to the automobile. Without good roads in bad weather, it isn't much good. Low centers of gravity and larger tires have made riding safer and easier—but also, has limited travel to far too few of our present roads.

Year round farm travel is limited to all-weather roads almost as much as a street car to its tracks. Farm business can't wait on weather, school can't dismiss when it rains, mail must be delivered, snow or no snow.

Farmers own 30 percent of the Nation's trucks and 20 percent of our automobiles but this fact remains painfully clear: Farmers don't have their fair share of good roads. If they own these automobiles and trucks, we must assume that they need and use them. And as they do use them, they pay a highway-user's tax which should be allocated to the improvement of rural roads.

Congress has an obligation to see that this money comes back home to the farmer in the form of improved rural roads.

Far more than half of our rural roads are not of all-weather variety. Nearly half of them are ungraded, undrained, and unkept passageways that scarcely deserve the name of roads. Actually, they are nothing more than section lines.

But the farmer is not the only one who suffers through this deplorable situation. His family suffers, too. More than 1,500,000 miles of these so-called roads are the routes of the R. F. D. mailmen who fight mud and snow, dust and rain to see that letters and newspapers to our farm families finally arrive.

If the farmer or his family needs a doctor, heaven help him if the weather has been or is bad, because in all probability, his friend, the physician, may be a long time arriving, regardless of how ill the patient may be or how much the doctor is needed.

And what about farmer's children? After all, our school busses travel 2,000,000 miles each school day to haul farm youth from farmhouse to schoolhouse. The pupils, unfortunately, however, spend more time in the bus than they do in any single class. They spend an average time of 50 minutes in the bus going to school, another 50 minutes getting home. They ride an average of more than 23 miles a day. Yes, and it takes them more than an hour and 40 minutes to do it.

True, there is no way of knowing, no way of showing, how much of this wasted time is caused by rural roads which are in poor condition or impassable in bad weather. But there is every reason for us to assume because of the fact that more than half of the farmer's roads aren't of the all-weather type, that when the rain falls or the snow flurries, the trip will take proportionately longer and often many pupils do not get to school for one or many days.

Surely this Government has a deep and compelling concern in properly encouraging the fullest development of farm prosperity, and as a matter of common justice, to be as diligent and effective in bringing about the building of rural roads as either primary or secondary highways.

Testimony in this hearing will prove the following facts:

1. There is a great and growing necessity for more and better rural roads in this Nation.

2. Present construction and current improvement are not equal to depreciation and current wear and tear, to say nothing of increasing needs.

3. Present specifications prescribed by the Public Roads Administration are far too severe to permit sufficient rural road building from available funds to ever meet existing requirements.

4. Those specifications are being made more rigid and burdensome each year. This results in less and less roads, when there should be more and more.

5. In reality, and in spite of legislation intended by Congress to be otherwise, we have no farm-to-market or rural road program in which the Federal Government participates. All money presently allocated for programs, as operated by and under the Public Roads Administration, goes into primary or secondary highways, not into rural or farm-to-market roads.

6. Existing legislation, if liberally administered, which it is not, is wholly inadequate to bring about the building of rural roads in proportion to primary and secondary systems.

7. Unless this or similar legislation is speedily enacted, the situation will grow steadily worse instead of better.

8. The building or improvement of the type of roads contemplated in this bill is the most acute and worse neglected road need in this Nation today.

Mounting Cost of Government

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2 (legislative day of Thursday, June 2), 1949

Mr. O'CONOR. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement I have prepared regarding the mounting cost of government, in which I quote an editorial from the Salisbury Evening Times of July 28, 1949.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. HERBERT R. O'CONOR, OF MARYLAND

As all of us here in the Senate know full well, it is highly desirable that we keep in close touch with the sentiments of our constituents, to the end that we may be sensitive to their thinking and wishes with regard to important phases of our Government's functioning.

I have had a great many communications recently from businessmen, professional leaders, and other representative citizens, expressing concern over the high and continually mounting cost of government. They feel that lavish expenditures for projects that, though desirable, are not essential, may lead either to deficit financing or, what is possibly even more dangerous in this critical era of business, to increased taxation.

It has often been urged, and I have frequently expressed the conviction, that when taxes reach a certain high point, they tend to defeat their own ends, in that they cause a lessening of business activity, with a consequent reduction in resultant tax receipts.

A letter received this morning from Raymond A. Magee, of the Magee Oil Co., Berlin, Md., oil distributors, contains a very interesting and thought-provoking editorial from the Salisbury Evening Times, Salisburg, Md., Thursday, July 28, 1949. As Mr. Magee truly says, "It shows an alarming situation in our midst. We hope you can do something about it." The editorial from the Salisbury Evening Times reads as follows:

"TIME TO QUIT

"Up in Delaware a huge poultry plant is closing its doors, and several hundred employees are losing their jobs.

"The plant is not facing a lack of business. Week after week the plant has processed 300,000 chickens. Profits have been good, and that is the trouble.

"The owners find that if they continue to operate for the remainder of the year at a profit Uncle Sam will take the profit in taxes. If they continue to operate, and through bad market breaks run at a loss, then they will, of course, lose their own money.

"It's a case of not being able to win, and of facing a possible loss. So they are quitting the game while they are ahead.

"It is unfortunate that the operators are throwing their hundreds of employees, who have contributed to their success, out of work. But the plant may open soon under new management.

"It is more unfortunate that the Federal Government's tax structure has reached the point of diminishing returns. A point where it is more profitable to go out of business than it is to continue to earn money to be taxed away."

When taxes are so high that it is to the interest of the businessmen to cease operations rather than to continue in business, we can be sure there are ominous days ahead for business. What has made America prosperous in the past has been the incentive, the very proper profit incentive, which businessmen had to inspire them to develop and expand their enterprises.

Admittedly, this is a single instance, and it may be an isolated one. Should the time come, however, when business people generally feel that it is to their advantage to cease business rather than to expand and develop it, then indeed America will have cause to worry with regard to its future.

The answer, based on all my experience and my business contacts, is to follow the accepted rules of business and to live within our national income. As it is now, with a deficit for fiscal 1949, and a much larger deficit looming for fiscal 1950, our people are

losing confidence in Government bonds and here is a sample of businessmen who have lost all incentive to furtherance of their business. As I said, this is a thought-provoking editorial. It deserves the utmost consideration by every Member of the Congress and by every State, county, and municipal official throughout the length and breadth of this great Nation.

Old Hands Run Germany Again

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2 (legislative day of Thursday, June 2), 1949

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Old Hands Run Germany Again," reported from Frankfurt, Germany, and published in the United States News and World Report of July 29, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OLD HANDS RUN GERMANY AGAIN

Come-backs of German bankers, industrialists is under way. Men who ran the prewar business empire for Hitler are taking over.

Big names are missing. But old-line managers are bossing the coal mines, steel mills, other plants under Allied control.

German recovery, coming competition in world trade, is arousing fears in Britain as customers become harder to hold.

Great Britain, unable to pay her own way in the world, is beginning to worry seriously about competition from Germany's reviving industries. German newspapers, analyzing the British crisis, are saying openly the United States should ditch Britain and take on Germany as its No. 1 business partner in Europe.

United States idea is to let the Germans go all out for recovery. Production and sales are being encouraged as American officials take over more and more control of the German economy. The tendency is to turn things over to the Germans to see what they can do.

The fear among British businessmen is that the west Germans, about to get their own Government, will be back in their old market places soon, bidding for customers at a time when Britain is struggling to boost its own sales all over the world. Goods from German plants are moving out in increasing volume now. German products are finding customers in Europe, in Latin America, and other traditional British markets.

Back of the fear of Germany's reviving industry is the fact that the industrialists and bankers who built Germany to the peak of its wartime strength are making a strong come-back. These men, or their lesser-known protégés, are getting back the management of an industrial machine that is, potentially, the most productive and efficient in the world outside the United States.

The Ruhr, heart land of Germany's heavy industry, is booming, and the Germans, running the plants, are on the look for world customers. The acute shortage of goods inside Germany has been overcome. Prices are dropping. A steadily increasing share of goods made in Germany is being offered to the outside world, often at prices British manufacturers cannot match.

German steel production is running at a rate higher than 8,000,000 tons a year, almost half the total British production. Nearly 45,000 manufacturing plants are working in western Germany, turning out everything from toys to steel bridges. Factory after factory is producing almost as much volume now as it did in the years before the war.

Machinery and optical goods are being turned out at a rate that is 84 percent of 1936 production. Chemical production is 82 percent of the prewar rate, and increasing. Textile manufacturing is 85 percent of 1936. German pottery and glassworks are making more tableware now than they did before the war.

All of these things are being pushed for sale to customers in other countries. Practically all of them are products that compete with British exports.

German exports so far this year have amounted to $566,000,000, almost equal to the total sales of 1948. German products sold abroad in June brought in $104,000,000. Almost half the total was in general merchandise and manufactured goods. Exports of machinery have doubled in less than a year. By 1950, the Germans expect to be selling $225,000,000 worth of goods to France alone.

Back of this recovery in production is the steadily increasing influence of the German industrialists. Control of the Ruhr now rests in the hands of a few hundred men, as it did during and before the war. Most of the Ruhr's present bosses are men who reached their peak of power during the Hitler period. Of the top industrialists who emerged between 1919 and 1933, only a few are still around in person, and their future roles are not yet clear.

Hugo Stinnes, 52, one of Germany's most powerful steel, coal, and shipping magnates in the period between the two world wars, is regaining part of his industrial stature. He has reclaimed his shipping and textile companies from the Allies. Stinnes is free to resume his business activities and is trying to line up capital to regain his prewar position as the Ruhr's most energetic organizer of industry.

His partner, Fritz Thyssen, is generally considered to be too old to make much of a come-back. He is 75. Thyssen, one of the original organizers of the giant Thyssen-Stinnes United Steel cartel, is living in Belgium, managing what remains of his widespread interests from there.

The Krupp family is out of business. But some Krupp executives are running sections of the Krupp works under allied trusteeship. A Krupp-trained executive, for example, is managing Germany's largest tank plant in Essen, now converted to a repair plant for locomotives.

The steel mills and coal mines of the Ruhr have been separated from the wartime trusts by order of occupation officials. Ownership is held by the Allies while the plants are being reorganized into competitive companies. The plants, meanwhile, are being run by German trustees and directors. In many cases the present executives are the same men who operated the plants during the war. The old owners, meanwhile, have reclaimed their ventures that were not tied directly to the steel or coal industries, and they are back in business.

The Ruhr's business combines, such as the Thyssen-Stinnes United Steel cartel and the Mannesmann and Kloeckner trusts, still control big holdings in such fields as chemistry, machinery, metal-working, shipping, and other industries that tend to compete directly with the British. Inside the Ruhr, the old combines operate gas and water works. They are deeply involved in banking and commerce, and even own textile plants, theaters, and hotels. The prewar owners are confident that eventually, as the build-up of western Germany takes hold, they will be able to get back their steel and coal interests.

Steel industry is under the direction of Heinrich Dinkelbach, 58, who was a director of United Steel from 1929 through the war. Dinkelbach, for many years a top executive of the Thyssen-Stinnes trust, is head of the Steel Trustees Association that runs the Ruhr steel industry. He was appointed to that job by the British, who decided that his financial aid to the Nazi Party was small when compared with the extent of his industrial holdings in Germany. Dinkelbach is one of the few Ruhr industrialists who worked his way up from humble beginnings as the son of a laborer.

Many of the men he has appointed to operate steel plants are the men who ran them before and during the war. United Steel, which controlled 47 percent of Germany's prewar production, has directors in 10 of the industry's 25 plants. Directors of the Mannesmann combine are running three plants. Men from the Kloeckner trust run three other plants and share in the management of a fourth.

The chairman of the board of United Steel operates two Ruhr steel plants and has extensive interests in coal and other industries. He is Herman Wenzel, a wartime executive who was director of 21 firms, and chairman or deputy chairman of eight of them, during the Hitler days.

A former Mannesmann executive, Karl Bungeroth, is running two steel plants at Düsseldorf and Duisberg. Gerhard Bruns, a former steel-plant manager and a director for 15 other firms, is the commercial director of the Ruhr's second largest steel plant. During the war he directed arms production in most of eastern Germany.

Coal production, although officially separated from the steel industry, is being handled by German industrialists who are equally at home in coal, steel, and a host of other industries that dominated much of industrial Europe before the war.

Head of the coal industry, for example, is Hans Joachim von Loebell, who has charge of coal distribution for all of western Germany. He was hired in 1934 by Hjalmar Schacht, then Hitler's financial wizard, to boss the Nazi take-over of the Saar coal mines. He now holds directorships in a number of important coal, shipping, and synthetic-oil industries.

Working with him is Heinrich Kost, a general director of one of Germany's biggest coal companies and also connected with chemical, gas, and oil firms. Kost was appointed by the Allies to head the German coal-mine management board. Helping him are Herman Reusch, chief representative of one of the biggest old-line steel cartels, and Wilhelm Roelen, for years a Thyssen executive. Roelen is now director of one of the Thyssen sequestered steel plants.

In finance, men who were powers of German banking and investment operations before and during the war are back in positions of influence. Herman J. Abs, a Berlin banker who was highly regarded by Hjalmar Schacht during the Nazi rise, often is called the most powerful man in Germany now.

As head of the Deutsche Bank, Abs was Germany's biggest financier under Hitler. Before the war, he held as many as 75 corporation directorships and was a financial backer of the giant Mannesmann steel combine. Now he is the head of a German corporation set up to finance the growth of industry. In his new job he dominates industrial investment in reviving Germany.

German recovery, under United States guidance, is to be in the hands of such men. Top power is being taken over directly and indirectly by the same men who held it during the war. These men with the know-how will be on hand as Germans go back into the markets of the world to try to regain a big share of the business done by German industrialists in the years between the wars.

The Farm Parity Question

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, August 2 (legislative day of Thursday, June 2), 1949

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Football of Politics," published in a recent issue of the St. Paul Pioneer Press. It deals with the farm parity question.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOOTBALL OF POLITICS

The Senate committee on agriculture has opened the way for a nonpolitical settlement on farm legislation at this session by laying aside the Brannan plan.

There has been too much thought at this session on what would be good for one party or the other, not enough about what will be good for the farmers. The dominating idea of the administration has been that a change had to be made from the Aiken Act, because it was adopted by the Eightieth Congress, which of course was Republican.

As a matter of fact, the Aiken Act was neither Republican nor Democratic, and might as well have been passed by this Congress as the one before it, if the sound planning for agriculture were the only consideration.

That act is supposed to go into effect next year, if not repealed. It represents the end result of long, serious bipartisan thinking on the farm problem that goes back into the Roosevelt administration. The principle is flexible support prices that go down as surplus production goes up. The idea is to encourage a sensible adjustment of farm production to changing market conditions. It was first adopted in the Agricultural Adjustment Act of 1938, which was set aside under war conditions when it became necessary to stimulate all-out production of just about everything the soil will yield.

The Aiken Act was adopted after great study and deliberation as the most promising method of seeing agriculture through the postwar period. It was the work of men of both parties and was signed by President Truman. He had nothing but good to say of it then nor did he make it an issue during the campaign.

Since the election, however, and perhaps with his heavy farm vote in mind, President Truman has seemed to feel the need of a farm plan of his own brand. The Democratic leadership in Congress, especially in the House, has gone along to the extent of thinking that it ought to get rid of the Aiken Act because it bears the imprint of the Eightieth Congress. It has voted for repeal of the Aiken Act by junking the flexible feature and retaining the present flat supports at 90 percent of parity for another year. Even the Senate committee, in rejecting the Brannan plan, wants its subcommittee to produce a new bipartisan program.

If farm legislation is written with the main idea of getting talking points for a political campaign the result is likely to be bad for farmers.

Rural Telephones

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Tuesday, August 2 (legislative day of Thursday, June 2), 1949

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by me before the Committee on Agriculture and Forestry, on June 11, 1949, favoring the enactment of the bill (S. 1254) to amend the Rural Electrification Act to provide for rural telephones.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

RURAL TELEPHONES

Mr. Chairman and members of the committee, I would not presume to even attempt to tell this committee just how important the American farm family really is. You know that better than I.

But, on the other hand, if the American farmer is respected the world over for his capacity to produce the utmost from every acre he has under cultivation, if the American farmer has caused this Nation to be known as the bread basket of the world, if the American farmer has been amazingly successful in supplying food for two global wars—and the American farmer has done all these things—then you, of the Agriculture Committee, are entitled to the genuine gratitude of the American people for helping provide ever finer opportunities to our farm families.

This committee, through the years, has assisted the farmer in many, many ways. One of these was to give him the opportunity to secure electricity. You helped give him power for his machines and light for his home. That electric power came to him over lines of the Rural Electrification Administration, created by Congress under your leadership.

Today not less than 4,000,000 rural customers enjoy the blessings of electric lights and power.

TABLE 1.—*Number and percentage of farms electrified with central-station service by States, 1935–48*

Area	Farms receiving central station electric service, Dec. 31, 1934		Farms receiving central station electric service, June 30, 1948		Increase in electrified farms from Dec. 31 1935, to June 30, 1948	
	Number [1]	Percent	Number [2]	Percent	Number	Percent
Alabama	11,053	10.9	135,782	60.8	124,729	1,128.5
Arizona	5,577	29.6	10,577	80.5	5,000	89.7
Arkansas	2,943	1.2	108,051	54.4	105,108	3,571.5

[1] Edison Electric Institute.
[2] REA estimate.

Figures compiled by U. S. Department of Agriculture, Rural Electrification Administration.

But while we can point with pride to the advances of the American farmer, in almost every field, there is one exception. Today there are fewer rural telephones than there were in 1920.

TABLE 2

Census year	Number of farm telephones	Percentage of farms with telephones
1920	2,498,493	38.7
1930	2,139,194	34.0
1940	1,526,954	25.0
1945	1,866,109	31.8
949 (R EA estimate)	2,473,000	42.2

This unfortunate situation exists despite the fact that more than ever before the farm is a place of business as well as a home. Farmers need telephones to carry on their business, to market their crops, to get weather information, and even to secure medical aid.

In my own native State of Oklahoma, according to the 1945 census of agriculture, only 24 percent of the farms have telephones. In our rural areas, there is only one telephone for each 18.6 persons; while on the other hand, in cities, there is about one telephone for each two persons. Furthermore, Southwestern Bell Telephone Co., which operates in this area, states that nearly one-fourth of its rural telephones are still the old-fashioned crank type.

TABLE 3.—*Number and percentage of farms with telephones in the United States, 1945 (U. S. Census of Agriculture)*

	Total number of farms	Number reporting telephones	Percent reporting telephones
Total	5,859,169	1,866,109	31.8
Alabama	223,369	11,162	5.0
Arizona	13,142	4,661	35.5
Arkansas	198,769	13,815	7.0
California	138,917	60,421	43.5
Colorado	47,618	22,106	46.4
Connecticut	22,241	17,225	77.4
Delaware	9,296	3,694	39.7
Florida	61,159	6,429	10.5
Georgia	225,897	13,558	6.0
Idaho	41,498	17,421	42.0
Illinois	204,239	124,039	60.7
Indiana	175,970	97,236	55.3
Iowa	208,934	165,760	79.3
Kansas	141,192	91,299	64.7
Kentucky	238,501	42,118	17.7
Louisiana	129,295	6,434	5.0
Maine	42,184	22,642	53.7
Maryland	41,315	17,137	41.5
Massachusetts	37,007	26,295	71.1
Michigan	175,268	68,858	39.3
Minnesota	188,952	103,178	54.6
Mississippi	263,528	9,797	3.7
Missouri	242,934	109,055	44.9
Montana	37,747	7,847	20.8
Nebraska	111,756	63,195	56.5
Nevada	3,429	1,508	44.0
New Hampshire	18,786	11,795	62.8
New Jersey	26,226	13,842	52.8
New Mexico	29,695	3,175	10.7
New York	149,490	78,484	52.5
North Carolina	287,412	14,539	5.1
North Dakota	69,520	23,641	34.0
Ohio	220,575	111,461	50.5
Oklahoma	164,790	41,101	24.9
Oregon	63,125	25,643	40.6
Pennsylvania	171,761	69,455	40.4
Rhode Island	3,603	2,338	64.9
South Carolina	147,745	6,306	4.3
South Dakota	68,705	31,145	45.3
Tennessee	234,431	36,365	15.5
Texas	384,977	67,725	17.6
Utah	26,322	8,479	32.2
Vermont	26,490	14,604	55.1
Virginia	173,051	31,835	18.4
Washington	79,887	35,502	44.4
West Virginia	97,600	21,599	22.1
Wisconsin	177,745	86,107	48.4
Wyoming	13,076	4,054	31.0

This situation has been slowly worsening, despite the efforts of our citizens to improve it. The Oklahoma State Legislative Council and the Bell Telephone Co. have worked together on a splendid cooperative basis but have not solved the problem. Nor will they, I am convinced, until the Federal Government lends it support.

Senate bill 1254 will enable the Government to give that needed support. It provides:

1. That the Government can loan money to groups or companies on a long-term, low-cost basis for the purpose of installing telephones.

2. Authority for the Administrator to make loans for refinancing existing indebtedness of telephone companies where such money is needed.

3. Existing companies shall have priority to such loans.

4. If no company is presently operating in the area, a group of citizens may join together for such purposes and be eligible for a Government loan.

I would like to emphasize that, in no sense, does this bill put the Government into the telephone business. Nor does it affect the authority and jurisdiction of local and State regulatory bodies.

As to the feasibility of the plan proposed by the bill, I would like to call attention to the striking success of the REA, particularly in Oklahoma. The two plans are highly comparable. Only 2.6 percent of our farms had electricity in 1935 before the REA. In 1948, 44 percent of our farms were served. Telephone service can be extended in a like manner.

As to the economic feasibility of the plan proposed by the bill, I would again cite the success of the REA in Oklahoma. To March of this year, $40,000,000 had been advanced to our REA program. As of April 1 of this year, more than $4,500,000 of this money had been repaid, with interest. More than $400,000 has been paid on the principal in advance of the due date. Furthermore, 14 out of the 27 borrowers were ahead on their payments and not a single one was behind in payments. The farmers in Oklahoma wanted power, needed power, and could pay for power. And the figures prove it.

The same situation exists today in regard to farmers' telephones. They want them, they need them. They can pay for them, provided the Government will help.

There is every reason to believe that telephone service today can be extended even more cheaply than before. Technological improvements have made such extensions more practicable as well. Some of these improvements are:

1. New, different types of wires with higher tensile strength, less weight—permitting wider spacing of poles and thus, cheaper line construction.

2. Improved machinery for installing poles.

3. A new plow which digs a trench, installs an underground wire, and closes the trench, all in one operation.

4. The practicability of using the same poles for both electric power and telephone lines.

5. Use of carrier systems.

6. Radio telephones.

Some of these improvements cannot be used, but the day is rapidly approaching when they can.

In view of these facts, I have coauthored Senate bill 1254 because I sincerely believe it is the fastest, safest, soundest way to give American farmers the telephone service which they need.

I thank you for the privilege of appearing before you, and I earnestly urge this committee to give favorable consideration to this legislation.

Big Government Versus Big Business

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. BOGGS of Delaware. Mr. Speaker, there appeared in the New York Journal of Commerce from July 18 to July 22, 1949, a series of five editorials, all devoted to a study of monopoly and entitled "Big Government Versus Big Business."

In my opinion this is a splendid series of editorials on a subject of tremendous importance and significance to the Members of Congress and to the people of this Nation. Many aspects of this problem which have previously received too little attention or no consideration at all are discussed in a clear, convincing and easily understandable manner.

Mr. Speaker, I include as a part of my extension of remarks this fine series of editorials and recommend that in the best interests of the people of this country and of our Nation's future economic stability and growth, that these articles be read and given fullest consideration by all the Members.

The editorials from the New York Journal of Commerce follow:

A FIVE-PART STUDY OF MONOPOLY—BIG GOVERNMENT VERSUS BIG BUSINESS

(Pt. I)

The stage is being set by the Government, through the offices of Attorney General Tom Clark, for a gradually intensifying drive which has for its objective the liquidation of big business.

News dispatches from Chicago, where antitrust action has been filed against the du Pont empire, General Motors, and United States Rubber, make this important fact clear: The attack on bigness in business is a main prop of the Government's latest trust-busting drive.

An important clue to the administration's philosophy was supplied last week by Attorney General Clark, as the initial witness before a Special House Judiciary Subcommittee.

Mr. Clark said that he considered the du Pont suit the most important case in the history of the Sherman Act. And he stressed his belief that competition does not thrive even where there are four big concerns in a given field of competitive endeavor, in addition to numerous smaller firms.

This badness, per se, was explained last month by Assistant Attorney General Herbert A. Bergson, who said it has only recently become clear that the Department of Justice has the power to reach the Big Three-Big Four combinations, despite a lack of direct evidence proving conspiracy.

In the American Tobacco case, for instance, the court found a combination and conspiracy, according to Mr. Bergson, from evidence showing that each of the Big Three in the tobacco industry used substantially similar practices cumulatively beneficial to their own common interest and detrimental to their competitors and competition in the industry.

If applied to sports, this concept would mean, for instance, that each football coach would have to devise basically different plays,

though the rules of the game for all were the same. Yale, for example, would be unable to use the lateral pass because Harvard used lateral passes and they had been found to be "beneficial (to Harvard) * * * and detrimental to competitors and to competition. * * *" In baseball, the Dodgers would have to use underhand pitchers because the Yanks had overhand pitchers, and the Giants probably would have nothing left but to roll the ball on the ground.

While this seems silly, it makes as much sense as condemning the fact that two, three, or four companies, operating in the same industry under the same economic conditions and under identical antitrust laws, should come up with many similar business practices.

In the case of du Pont, General Motors, and United States Rubber, the Government's cause for alarm is even more curious. It is claimed by the Justice Department that, by taking in each other's washing, all three companies waxed fat. The Government suit alleged that the du Pont Co. "subsidized" its expansion "by using for such purpose the profits derived by it from the sale of its products on a closed-market basis to General Motors and United States Rubber."

Here are the facts, based on sales records: The dollar volume of du Pont sales for the 10 years 1938 to 1947 totaled $134,000,000 to General Motors and $72,000,000 to United States Rubber, or 2.6 and 1.4 percent, respectively, of du Pont's $5,090,000,000 of sales to all customers in that period. During the same 10 years, du Pont's expenditures for new plant construction and equipment were $458,000,000, or double the sales volume to the two firms.

It does not seem possible that one could contend seriously that the profits from such a small percentage of total sales could support an expansion program of such magnitude, but that is what the Justice Department claims.

From this fragmentary examination, two points begin to take shape. One is that the Government is breaking into new ground when it attempts to recast the American economic system on the theory that bigness is badness. The other is that its "district attorney" indictment stretches some conclusions to extraordinary thinness.

If it were not for the fact that Government success in its prosecution of bigness can well pull down the whole economic structure of our mass production, low cost industries and disrupt the Nation's entire course of progressive improvement in living standards and constantly growing industrial (and military) might—then the extremes that the bureaucratic agents of Government are going in their attempts to destroy big business might be ludicrous.

But it is far from funny. The little men of big Government are deadly serious in their intent to liquidate big business. In the words of Crawford H. Greenewalt, president of E. I. du Pont de Nemours & Co.:

"The ability of the United States to advance in peace and survive in war is threatened by this contention that bigness is bad in anything but Government."

BIG GOVERNMENT VERSUS BIG BUSINESS

(Pt. II)

With the revival of the Democratic administration's attack on bigness in business, as exemplified by its suit against three companies—du Pont, General Motors, and United States Rubber—the question arises, Why does the Government think business is badness?

Unfortunately, the Government is not too clear on this subject, except to reiterate that bigness is bad per se. And not only is bigness bad when it exists in one giant concern, but it is claimed that separate and competing industrial concerns—in the same general lines of business—are monopolies by the very nature of their combined sizes. This concept has been advanced as the big three-big four theory of economic concentration.

Such a concept, of course, is a dramatic and drastic departure from the traditional understanding of competition. Even a casual review of the economics of our commercial economy will reveal that the big, mass-production, low-cost producers are the very cornerstones of our industrial system. And around these cornerstones swarm millions of other businesses ranging from tiny to the moderately big.

It is plain to any student that to break the big ones into little ones would tremendously alter our economic structure. But no one, not even the Government's big-business prosecutors, has convincingly shown how our economy might continue its astounding record of productivity under a new set of rules which would outlaw all big firms. For that is the logical end product of successful Government prosecution—the disappearance of all big business.

The precise relationship of big and little business never has been defined, this despite the millions of learned words written on the subject. In fact, just what is too big is not known, except it is known that, under a competitive system, with antitrust laws to enforce competition, too big would become extinct, just as did the dinosaur.

For instance, General Motors may be more aptly described as a superassembly line, rather than a competition-eating entity in the field of auto manufacture. Surely GM is dependent upon small business. Such dependence has been amply demonstrated by the fact that GM has had to close down its assembly lines when small suppliers were struck. On the other hand, it is just as fair to say that thousands of small suppliers depend on GM.

In truth, it is impossible to say which depends more on the other—big or little business. But there can be no doubt that big and little business are interdependent, and this should mean, even to the Justice Department, that if one is removed the other will suffer.

Law enforcement, as any corner policeman could tell Attorney General Clark, is not so much a matter of enforcing the letter of the law as it is applying common sense and maintaining law and order. A "rule of reason" has been evolved by the Supreme Court in dealing with antitrust suits against large enterprises. But the Justice Department apparently will have none of this "rule of reason" and constantly is seeking more and more strained and tougher interpretations of the laws. Such is the case with its bigness theory.

This is a matter too important for lawyers—even as able as Mr. Clark—to decide. Personal ambition—perhaps to be recognized as the Nation's greatest trust buster—a blindness to the needs of the Nation and other personal failings of the individual, no matter who he is, contain too many dangers for the Nation's security in this important matter.

If this administration is to persist in its attempts to blast our economic system into smithereens, then it is time for Congress to take a firm hand. If bigness is illegal, then Congress should say so and take the responsibility of defining what is "big" and what is "medium" and what is "small." And, if Congress does not think bigness is illegal, it should say so. This would take the responsibility for seeking tortured interpretations of existing laws out of the hands of the lawyers.

And, while Congress is doing this job, it ought to take a look at bigness in Government.

There are 48 medium governments in this Nation and thousands of small governments. In the past 16 years, Uncle Sam has gone further in gobbling up the taxing power and other prerogatives of little governments than big business ever dreamed of in attempts to overshadow competitors.

BIG GOVERNMENT VERSUS BIG BUSINESS

(Pt. III)

Since the Government is avowedly out to smash big business just because it is big, now is a good time to examine the matter of who benefits and who suffers from the bigness of the du Pont empire, Standard Oil, American Telephone & Telegraph, General Motors, and scores of others.

Attorney General Tom Clark and his assistant, Herbert A. Bergson, have whipped up a new line of attack on big business. It is their theory that the mere existence of three or four large companies in a given industry is economic concentration or monopoly, per se. By their mere size, even though they compete actively, they are in violation of the antitrust laws. This is an interesting concept, one not found in any ordinary reading of the Sherman or Clayton Acts, but growing rather out of some involved interpretation of these laws.

The owners of big business, like any other incorporated enterprise, are the stockholders. And like all stockholders they are interested in profits. Therefore, if big business is preying upon the public, the profit and loss statements should reveal this fact. But they do not. As a matter of fact there is some evidence that profitwise, when measured against investment, big business does not necessarily do better, and at times does poorer, than small business, although studies of this point admittedly leave much to be desired in completeness.

The most expensive, elaborate business study ever made, the New Deal-sponsored and New Deal-rigged TNEC investigation, produced this interesting conclusion to a series of tests of which is more profitable: On the average, about one-third of the total number of companies in each test showed a higher rate of return than the largest company.

Other studies show an even more remarkable tendency for smaller concerns to compare favorably with the large. And most economists will testify to the fact that there is little or no evidence to indicate that bigness is a guaranty of larger return on capital investment.

On the other hand, there is hard, factual evidence that many—though not all—big businesses do pay higher wages than small business. And the more concentrated an industry is, the greater is the wage differential between the biggest and the smallest.

According to the United States Bureau of Labor Statistics, the two largest producers of radio sets in 1937 (latest survey figures) paid all workers 73.1 cents an hour; other radio companies paid 53.1 cents. The big three electrical goods companies paid 82.4 cents an hour; intermediate companies, 66.9 cents and small companies, 58.6 cents. The big three in explosives paid 81.9 cents; other companies in the industry paid but 65.3 cents. The large soap companies paid 76.2 cents an hour to labor; the others only 57.5 cents. The big four in meat packing paid 70.1 cents; intermediate companies 63.6 cents and small, 56.2 cents. And so the story goes for those industries in which studies show economic concentration to be greatest.

Obviously then, it would appear that labor is one of the chief beneficiaries of the efficiency of big business in the form of wages higher than the relative inefficiency of small business will permit.

Are there other beneficiaries of big business? The only other logical place to look is straight at Mr. Consumer. And just one example will show that the consumer, which is the country itself, is the real beneficiary of the efficiency of big business.

For instance, the du Pont Co. was one of the leaders of the drive among American chemical manufacturers to make this country independent of Germany in dyestuffs. That effort took an investment of over $43,000,000 in 18 years before profits offset accumulated losses.

The same risks were taken in the development of many new du Pont products, such as nylons, neoprene, plastics, moistureproof cellophane, synthetic camphor, agricultural chemicals, high-tenacity rayon, quick-drying lacquers (that broke the manufacturing bottleneck in the auto industry), synthetic ammonia and many products coming from high-pressure synthesis. In each of these, there were investments running into many millions of dollars, and the lapse of a considerable number of years before there was any assurance that any would be profitable. Today 60 percent of the sales of du Pont are in products that did not exist or were not being manufactured on a commercial scale in 1928.

And here is the punch line: Most of these products now are used chiefly as raw materials by other companies. In other words, small businesses, literally thousands of them, were enabled to exist and prosper and give employment to countless thousands of workmen—jobs which would not have existed had not big du Pont had the resources, the efficiency, the bigness, if you please, to conceive, invest in, and develop these new products which contribute so heavily to our high standard of living.

This is what the Justice Department wants to take away; what it calls bad.

If creating opportunity for thousands of new enterprises and many more individual jobs, if paying labor the highest wages, if contributing to making this Nation the strongest and most prosperous nation in the world—if these be sins, then truly this Nation long ago should have gone to hell.

BIG GOVERNMENT VERSUS BIG BUSINESS

(Pt. IV)

A lot of poppycock is spouted by the hate-big-business clique in Washington. They say 60 families rule the Nation or 2 percent of the Nation own 90 percent of the wealth, and so on.

This is the kind of stuff which makes the Administration's repeated assaults against this Nation's industrial might such beautiful political pyrotechnics.

Any businessman can answer such nonsense, and should answer it on every occasion. Take, for example, that canard about the 2 percent owning 90 percent.

The answer, of course, is to ask: Who owns the radios, the houses, the dresses and suits, the television sets, the automobiles? Who indeed? That 2 percent would need mighty big closets and garages if the statement were true.

Then there are abundant statistics, breakdowns and surveys demonstrating beyond any reasonable doubt that America's corporations are owned by the mass of people and not by any chosen few. And even a quick look at a Government analysis of savings in the United States will show that the mass of the people own the mass of the savings. Yet these myths persist.

Attorney General Tom Clark has declared that the Government's recent suit against the du Pont empire, General Motors and United States Rubber is the most important in the history of the Sherman Act. He is probably right, but not for the reasons he thinks.

It is the most important because in the postwar reemergence of the Fair Deal's continuation of the prewar New Deal drive to smash big business, a new concept, strangely slanted against this Nation's welfare and terribly dangerous to its future strength, has been unveiled. This new concept is the contention that big buiness is bad simply because it is big. It totally disregards the fact that ours is a commercial economy and that it represents a carefully balanced and logically developed counter and interplay between big, medium, and small businesses.

This new drive is at last in the open where everyone can see it and judge for himself if it is what this country needs. And that is the important fact.

Under the concept, as outlined by Attorney General Tom Clark and his assistant, Herbert A. Bergson, one must get the impression that a handful of power-hungry monopolists have reared money-making Frankensteins in carefully selected industries—in the automobile, tire, chemical, steel, tobacco, and telephone industries. One would think that it was mere chance that they happen to pick these hapless industries for their depredations, leaving relatively alone shoes, leather, furniture, hosiery, knitted underwear, machinery, and others low on the list of concentrated industries.

That kind of reasoning, like the 60 families and 2 percent arguments, holds up just so long as no thinking is done. But the question is bound to arise in any discussion of goodness or badness of bigness as to why this industry or that industry is the scene of operation for such big companies and another is so unconcentrated. And in answering that question, the "hate bigness" gang in Washington will run into trouble.

For the answer to it, in part, is that the bigness is a logical development in the American industrial society. Hence, to destroy the bigness is to attack the very foundation of our national security and prosperity—and with no proved better substitute in hand.

It does not take a genius to figure out that both economic theory and horse sense indicate that the optimum allocation of society's limited stock of capital demands that all classes of business organizations should earn relatively (in proportion to risk, etc.) the same rate of return. If any systematic differential exists, it is an indication that capital could be used to better advantage elsewhere, as indicated. Since studies do not prove that big business is to great degree any more profitable or less profitable to the owners of capital than is small business, it would seem that there exists in these facts a powerful argument in support of the present system of determining the size of business units by private decision rather than by public policy.

The inescapable conclusion is that large business units, in the particular jobs being done by such large units, are of about the same degree of efficiency as small units, in the particular jobs being done by small business.

In other words, where the most efficient job can be done by large business units, they have come into existence. And they continue to exist only by virtue of proving, against the daily test of a free, private competitive enterprise system, that they still are the most efficient.

It is undeniably true that economic bigness opens avenues for abuses of power not available to smaller firms. But that is why we have antitrust laws and public guardians of that trust imposed by these laws. The antitrust laws should be enforced vigorously, but all evidence indicates there is no reasonable justification for the present rash and dangerous attack against business as now is actively sponsored by the Truman Fair Deal.

The consequences of the attack are too grave to entrust to an administrative arm of the Government. It is the duty of Congress to investigate thoroughly and to clarify the antitrust laws so that there is no possible doubt as to their intent.

BIG GOVERNMENT VERSUS BIG BUSINESS

(Pt. V—Conclusion)

It is more than plain by now that there has been a hate-big-business campaign under way for some time.

It has its current genesis in the New Deal and culminated in the TNEC report. The TNEC investigation's report came out in 1941, just as the Nation was burgeoning into the greatest military potential ever seen in the history of the world.

President Roosevelt's TNEC Committee had then labeled the du Ponts "the largest aggregation of wealth" and many New Dealers avidly favored a policy of complete atomization of big business. But the TNEC report lay quietly dormant while big business, along with little business and the rest of the Nation, was busy supplying the weapons of war. Not only was du Pont's vast industrial potential an almost unbelievably efficient war asset, but its terrific research capacity marked it for a prominent place in development of the atomic bomb.

Now, many of the same New Dealers, with their old ideologies, are rallying once more under the banner of "Economic concentration" to enforce their strange concepts upon a big and patient Nation.

Attributing only sincere, patriotic motives to those who are the prime movers of the smash-big-business drive, obviously then there is something wrong in their basic philosophy. Either that, or we really do have a cancerous growth in our economy.

Actually, there is much evidence that the viewpoint which would liquidate big business is out of date. It is just about as reactionary as can be: such a viewpoint would turn back the clock and abandon all progress made in the evolution of our commercial economy.

In earlier years, it is true that there was suspicion, and justifiably so, of bigness—both here and abroad. History is replete with examples of abuses of power by both big industrial enterprises and highly centralized governments. And everywhere but in America, big business and big government have tended to team up. The classic recent examples, of course, are Mussolini's Italy, Hitler's Germany, and Stalin's Russia—each of which depended upon business control as a keystone of power.

But in America, with the free play of competition, under such rules as the evolution of the economy indicated (the Sherman and Clayton Acts, for example), big business evolved in a pattern uniquely American.

That this has happened is a great tribute to the American system and to the American spirit. And it is specifically a tribute to the wisdom of the people and their elected representatives, and to the industrial statesmanship of American business management. For it is only in America that we have seen big business develop a social conscience, that management has met the challenge of taking the good, which does exist in bigness, and weaving it into the social fabric of our free-enterprise system.

Therefore, those who fail to distinguish between the old fear of bigness and the integral and vitally important part that such enterprise plays in our modern economy must suffer a very serious blind spot. Since the prosecutors of big business are high in the offices of big government, it is not so sur-

prising that such a blind spot does exist. For there is plenty of evidence that big government has failed miserably in learning the lesson American businessmen have learned so well.

Instead of conducting itself so that, in the process of evolving to bigness, the interests of individuals and the various governments making up the Union are adequately protected, the Government, in becoming big, has grievously encroached upon rights of others. Consider these examples:

The ability of the people to control their own savings is being impaired. Over the long term, the traditional savings of United States citizens has been about 10 percent of what they make. This contributes to one of the basic differences between this Nation and other nations—creating the abnormally large middle or buffer class which gives the United States its political stability. The various social security and other schemes advanced by the New and the Fair Deals will take just about this much of the people's savings. In other words, the Government, not the people, eventually would control these important savings, giving in return a dubious security.

Rights of States constantly are being sniped at. Our new Secretary of the Army, Gordon Gray, prior to his appointment by President Truman, headed up a military survey which recommended nationalization of the States' National Guard units. A storm of protest fortunately made that recommendation a dead pigeon, for the present at least.

The States have lost much of their independence through the extreme lengths to which the power of taxation centers in Washington. This high level of Federal taxation leaves little else for the States to tax. Naturally this makes the States susceptible to the illusion of patronage in the form of grants-in-aid from the big, central Government.

And so it goes. Now, big Government (which has bigger corporations than has private industry—the RFC, for example) would seem to be dangerously short-sighted not only in its attack on business but in the conduct of its own, mammoth affairs.

For these and other reasons, those who would preserve the peculiar independence of the American system of representative government and the framework of competitive enterprise which has grown within its structure are more than casually alarmed over the general drift of things. In particular that is why so much emphasis is placed by this newspaper on the Justice Department's concept of what constitutes monopoly.

The fate of du Pont, General Motors, and United States Rubber, their stockholders and employees and customers is not the really big stake of this grand game. The prize to be lost, if all big business is smashed, is the most coveted prize in the world—American freedom and prosperity.

Little business actually has more at stake than big business. And should little business be told that the Government is acting in its behalf—as it has been told—it should investigate thoroughly the diseased economics which lay under the glittering Pandora's box offered by an ill-advised administration. It must be remembered that both big and little business are interdependent. The collapse of one would spell dire trouble for the other.

This newspaper holds no brief for violators of antitrust laws. It believes that if du Pont, General Motors, and United States Rubber have broken these laws they should be prosecuted and punished as fully as the circumstances warrant.

But this newspaper does not believe that efficient, mass production companies are bad for this country solely because they are big. If efficiency under laws assuring a full play of free, private competitive enterprise is bad, then the very heart of our national economy is bad and we have been for 173 years living in a fool's paradise.

Smoke Screen or What?

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Tuesday, August 2 (legislative day of Thursday, June 2), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "Smoke Screen or What?" written by Mr. Thomas F. Lamon, which appeared in the Brandywine Record, Wilmington, Del., on July 27, 1949. This article relates to the inconsistency in the recent antitrust suit filed by the Attorney General, Mr. Tom Clark, against the du Pont Co.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SMOKE SCREEN OR WHAT?

(By Thomas F. Lamon)

Attorney General Tom Clark seems to have the native ability of doing the wrong things at the wrong time—or perhaps he's playing the old game of covering up critical errors by throwing up a gust of swashbuckling bushwah.

Just about the time the country was shocked by the news that the attorney general had suffered another defeat in losing the Alger Hiss case—came the Nation-wide announcement from Tom Clark that he had filed suit against the du Pont Co., charging that it had gained control of 23 percent of General Motors Corp. stock, 17 percent of United States Rubber Co. stock and had also gained heavy holdings in other great manufacturing organizations.

He forgot to mention in his publicity releases that the du Pont Co. has a 100 percent record when it comes to honesty, progress and welfare of the Nation—a record which is more than 100 years old incidentally.

If Russia had within its boundaries an industry such as the du Pont Co., it could and would not hesitate a moment, to conquer the world.

The du Pont Co. is one of America's chief bulwarks against some of the world's most powerful antidemocratic nations.

The record of the du Pont Co. and what it can do in times of war—as well as peace—as demonstrated in both world wars, is one of the major factors which has kept America strong and feared by nations such as Russia.

In the beginning the du Ponts made black powder in Wilmington. The United States of America has won every war since 1812 when du Pont plants became the principal source of powder.

About 25 or 30 years ago the du Pont Co. took the lead in establishing the chemical industry of America, including rayon, plastics, nylon, cellophane, antifreeze, Duco, and the best dyes in the round world.

Of course, the du Pont enterprise has become one of the greatest industrial empires in our Nation, and the reason for it all is that Irenee du Pont left France one day and landed on the Atlantic coast in the year 1800. His descendants are today running the same manufacturing plant that Irenee established 150 years ago, and during those 150 years the du Ponts have kept expanding their holdings and increasing their usefulness to their Nation.

All this background leads up to recent action upon the part of Attorney General Tom Clark.

When the United States was crying for dyes the du Pont Co. spent $20,000,000 out of its own treasury to solve this crying appeal of the Nation for dyestuff—and the du Pont Co. now makes better dyes than Germany.

Whatever investments the du Ponts may have made in chemical products, powder, or what have you, those same du Ponts widened their spheres of usefulness in the activities of the good old United States of America. As Frank Saylor so ably put it in the Labor Herald recently:

"If it's a crime to be big, as Tom Clark holds, what then of the Federal Government, which has grown so big that it has obliterated States' rights, bypassed Congress' power to declare war, the Senate's to write treaties, used the income tax to grab capital that could be more gainfully employed by business, and taken so much of earned wealth that local communities and States are hard put to pay for the obvious services they provided for the citizens?

"If the bigness of an industry acts in restraint of trade, what then of the very effective restraint upon trade which occurs when a big Federal Government requires all the wealth created in the States west of the Mississippi to support it yearly? Conceive, if you can, how much trade and industry would be spurred if this burden upon it were largely removed?"

It appears that the big offense of the du Pont Co. is its success as an industrial venture. Bureaucrats do not like success in the business world. Somehow, indirectly, it reflects upon their miserable time-serving endeavors in pursuit of nothing. With little to do they turn their attention toward this industriousness, this purposeful and remunerative creation of better things for better living. To them success is associated with wrongdoing. Tainted unconsciously with Marxism they assume that prosperity can only come through exploitation and monopoly, not knowing that the greatest monopoly is tolerated and even favored by Government and its various adjuncts: The monopoly that puts a landless man in the chain gang and contrives the situation whereby we have recurrently the phenomena of idle men, idle land, and idle capital.

We remember after World War I when a theory that munition makers were responsible for war was given considerable credence and Senator Gerald Nye had committees investigating, among other things, the du Pont Co. That the du Pont Co. was called upon during the emergency of war as it has been from its founding apparently was lost upon the investigators in their consideration of the sale of war plants by the du Pont Co. The Senators had a field day. The three du Ponts testifying were spared the placing of a dwarf upon any of their laps as happened with John P. Morgan but as we remembered there was a lot of copy devoted to their pipe smoking. And that was about all that came of the investigation.

We are not speaking with any auhority but we understood that the company was reluctant to again undertake military production—which this time included work upon the atom bomb—because of experience after the First World War. Now it appears that history is duplicating itself. Once again it was called upon. Again it responded, and again it is being rewarded and not with postwar E's for oustanding performance and efficiency as was the rule during the war.

Library of Congress Bollingen Award to Ezra Pound

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. JAVITS. Mr. Speaker, my demand for an investigation regarding this award to a man adjudged insane and indicted for high treason, is pending. The appended letter from the Fellows of American Letters of the Library of Congress and the editorial comment of the Saturday Review of Literature, which first gave detailed consideration to the whole subject of this award, has a very important bearing on what the Congress ought to do with reference to this case.

Since my colleague, Mr. PATTERSON, of Connecticut, and I first broached the subject in the House, many have written questioning how anyone could expect to improve American letters and create suitable models for our young authors by rewarding work emanating from such a source. They have questioned, as Mr. PATTERSON and I question, whether our creative artists in poetry are so barren of talent that the Fellows could find merit only in Ezra Pound.

The matter above referred to is as follows:

[From the Saturday Review of Literature of July 30, 1949]

MORE ON POUND

The following letter to the Saturday Review carries the names of all the members of the United States of Congress-Bollingen Award jury save that of Paul Green:

THE LIBRARY OF CONGRESS,
Washington, D. C.

SIR: The Fellows of the Library of Congress in American Letters assert that the decision of the jury for the Bollingen prize was arrived at wholly by democratic procedure. We indignantly protest the impugnment through the editorial and articles in the Saturday Review of Literature of the integrity of motive of any of the Fellows.

We wish publicly to thank Mr. Paul Mellon and the officers of the Bollingen Foundation for their generous encouragement of American letters and to state that they had no part in nor knowledge of the jury's deliberations.

We wish publicly to thank the Librarian of Congress for his courage and wisdom in upholding the principle that a literary jury should have complete feedom of judgment.

Conrad Aiken; W. H. Auden; Louise Bogan; Katherine Garrison Chapin; T. S. Eliot; Robert Lowell; Katherine Anne Porter; Karl Shapiro; Allen Tate; Willard Thorp; Robert Penn Warren; Leonie Adams, Consultant in Poetry at the Library of Congress and Secretary to the Fellows.

Mr. Green declined to sign the letter, he informs SRL, because he did not share the "indignation" of the Fellows. "I think the laugh is on us Fellows of the Library of Congress," he writes, "for giving the Bollingen award to Ezra Pound's book. I am willing to let it go at that. Naturally, everybody agrees with the fine statement of Dr. Evans that literary judgments and preferences, like other matters of the mind, should be free. They certainly were in this matter."

To take up the three main points made by the fellows in their letter:

1. We accept without further question their assurance that the decision of the Bollingen jury was "arrived at wholly by democratic procedure." Doubt still remains, however, concerning democratic procedure in the announcement of the awards. The original announcements created the impression that the fellows were unanimously behind the choice of Ezra Pound. Mr. Hillyer was able to establish that such was not the case—a fact confirmed by Paul Green in SRL June 11. As for the democratic nature of the award, there is the comment by Mr. Auden, one of the judges, to the effect that the prize is not the concern of the American people. This though the prize carries the name of the American Government. We are indebted, too, as we pointed out in an earlier editorial, to Mr. Auden for the statement that he would have been in favor of suppressing The Pisan Cantos if there had been any chance that the people would read it, for most people were to be "regarded as children who have not yet reached the age of consent in this matter (anti-Semitism), and from whom, therefore, all books, whether works of art or not, which reflect feeling about Jews—and it doesn't make the slightest difference whether they are pro or anti—must be withheld"; and then, as a demonstration of his own superiority, Mr. Auden says he would award the cantos a prize before withholding it.

But these are all side issues. The main issue, to which the Fellows have not addressed themselves, concerns the award itself. We had hoped that there might be some defense of the Pisan Cantos as poetry, which Mr. Green, one of the judges, described as a "volatile fever-fret of wordage," and which Mr. Luther Evans, Librarian of Congress, believed was "an unfortunate choice * * * hardly poetry at all." This is no private award, no closed-to-the-outsider affair where it is presumptuous to call for a public accounting. The award is made in the name of an important agency of the American people, and they have a right to demand that sense be made. It is the direct obligation of the Fellows to justify their choice. Let them agree, if they can, as to what each section of the Pisan Cantos means. Then let them justify Pound's grotesque pseudo-scholarship, his counterfeit Greek and Chinese classicism. Then let them square the obscene political content of some of Pound's lines with their excuse made in behalf of the award that art must be kept separate from politics. Let them defend Pound's destruction of values that are inseparable from a society in which culture is possible. It is the obligation of those who are defending Pound against the charges of treason on the grounds of insanity to explain that this insanity in no way interfered with his poetry.

2. As it concerns the Bollingen Foundation, we have already stated on this page that it has been proved to our satisfaction that the foundation had nothing to do with the award beyond the donation of the prize and its own name. A more fundamental question, however, concerns the right of the Fellows to accept sums from private organizations for the purpose of making official or quasi-official awards. Government prizes do not fit in too well with democratic ideology, and the early laws of this country specifically discouraged donations to Government agencies by private individuals or organizations. Totalitarian states specialize in prizes—in order to advance desired objectives. For a democracy, however, the danger, made explicit in this case, is that a single school might use the prestige of the Government for advancing its own idiom.

3. We agree that Mr. Evans probably acted wisely in not attempting to substitute his judgment for that of the Fellows, even though he categorically disapproved the award. But that doesn't mean that the United States Library of Congress, as an institution, is any less responsible for any award made in its name, nor that its administrators can avoid repercussions caused by the actions of their subordinates. Nor that the award to Pound should be disregarded in any appraisal of the work or value of the Fellows.

The Trouble of New York's Biggest Bank in Exchanging Foreign Money

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1949

Mr. WHITE of Idaho. Mr. Speaker, the fact that people and foreign governments are clamoring for dollars to buy the things they need demonstrates as nothing else can the crying need for a sound, adequate, workable international monetary system. The recent pronouncement of our country's largest bank inserted in part herewith calls attention in a striking way to the irregularities and deficiencies inherent to the unredeemable managed paper currencies and the difficulty of transacting business between the firms and people of the several countries with the kind of money we now have.

The following is taken from the July report of the National City Bank:

A correspondent from Canada writes us in part as follows:

"If a Canadian visits the United States and offers our Bank of Canada notes in payment of anything what happens? Probably a blunt refusal to touch the stuff, or at best a whopping discount is taken for accepting them. Even in border cities the procedure is the same and bank cashiers in such cities know, if they know anything, that our notes are as sound as any on earth.

"We wonder ceaselessly why our currency is so discriminated against; and trying to reason it out on a factual basis reduces us to helpless frustration. The thing simply does not make sense."

Why the Canadian dollar is "so discriminated against"—which so mystifies our correspondent—is very simple, although it would be more proper to say "discriminated between." To an American, there are two different kinds of Canadian dollars—"official" dollars and "free" dollars. "Official" Canadian dollars are equal in value to United States dollars and have been since the "upvaluation" of 1946. The Canadian Government, through its Foreign Exchange Control Board and Bank of Canada, stands back of them and guarantees to the foreign holder convertibility into United States dollars at par.

"Free" Canadian dollars, held by Americans, have no guarantee of value or convertibility from the Canadian Government. On the other hand, the Canadian authorities offer no objection to the transfer of the "free" dollars among Americans and have rules under which they can be brought back and used in Canada. This gives them substantial value. The discount—now 4 or 5 cents in the New York market—is determined by supply

and demand without any responsibility on the part of any government for the price at which they sell.

If the Canadian Government did not interfere, the official gold and dollar reserves might be drained away and control of the rate lost entirely. What the Canadian Government does is to tell their people for what purposes they can have United States dollars and for what purposes they cannot.

The world has never been so full of inconvertible paper money issues as it is today.

To the average American, as to our correspondent, it "doesn't make sense" to have some Canadian dollars worth 100 United States cents and others worth but 95 cents. Much less does it make sense to observe, circulating in the world, thirty-odd kinds of pounds sterling, only one of which is freely convertible into United States dollars at the official parity of $4.03. Indeed, it is an unusual country today that, like the United States, and Cuba and Mexico to the South, has only one kind of dollar, pound, or peso. These strange things are a product of exchange controls—of efforts to protect the national currency reserves, to discriminate between various holders and uses of a currency, to bottle up capital that wants to leave the country, to postpone or avoid the necessity for currency revaluation. Generally the exchange controllers forbid free trading among the different kinds of currency at home. This is a way of suppressing the fact that all units of the national currency are not maintained on a parity with one another. But differentials show up in foreign centers, beyond the range of authority or influence of the exchange control, and thus we have, in some of the most out-of-the-way places on the globe, mushrooming gold and foreign exchange markets.

Nothing like this ever could have happened under the old gold or gold exchange standard. Every unit of a nation's currency was just as good as any other, at home or abroad, and equally exchangeable into gold at the option of the holder. Arbitragers in London, New York, and other key financial centers, kept the exchange rates in line. A government had nothing to do except freely buy and sell gold, sterling, or dollars at established rates, or allow private banks to do so. In most countries this job was done by a central bank operating in conjunction with the foreign exchange market.

The broad pattern has been that too many countries—by overambitious capital development programs, unbalanced budgets, easy-money policies, and inadequate incentives to production—have developed, or worsened, fundamental disequilibrium in their balances of trade, notably with the dollar area. They have been unexpectedly reluctant to invoke exchange-rate adjustments, fully justifiable under the fund's statutes. Instead they have chosen to meet the resultant dollar shortage, and bring their international accounts into line, by shutting out imports from the dollar area and refusing to convert their currencies at the rate they are supposed to be worth in dollars. Imports from the American area are directly cut down; and exports to the American area are retarded by prices higher than the American market will pay. More than $4,000,000,000 a year are being supplied by the ECA, but even these far from fill potential foreign demands for American goods. This is evidenced by continuing needs for rigorous import and exchange controls.

It is also significant that the three countries which upvalued their currencies in terms of the dollar—Canada and Sweden in 1946 and New Zealand in 1948—all subsequently had to strengthen their barriers against imports from the American area. On the other hand, devaluations have been unsuccessful, and quite naturally, where internal inflation has proceeded apace. Here China and Greece are the extreme examples.

One way out would be another wide turn of the price-wage spiral in the United States which would enable inflation here to catch up to inflation overseas. This would work new hardships on our people of limited fixed incomes.

The result of a new rise might only be to precipitate a fresh wave of inflationary disturbances all over the world. It is hard to stabilize on the tail of a kite.

A second way is deflation of wages and prices in soft-currency countries to a point where their international trade would balance out. Thus, the gold-standard treatment, involves the pains of numerous business failures and temporary unemployment for many people.

It is apparent from the above statement of this country's largest bank that if the world is ever to have enduring prosperity the nations of the world need and must have a sound, adequate, workable international monetary system, money of intrinsic value independent of the value of the national credit of any country.

The attention of the National City Bank should be called to the declaration of monetary policy now on our statute books as embodied in section 311 of the United States Code. This law which has never been repealed is inserted here for the attention of the National City Bank and for the attention of international financiers and banks everywhere.

SEC. 311. Policy of United States as to bimetallism: It is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States, in the markets and in the payment of debts.

This declaration of our monetary policy was never repealed. In making this declaration of monetary policy the Congress has pointed the way and approved the principles of the best plan that can be undertaken to establish an international monetary system that will automatically supply money of universal recognized value independent of the value of the credit of any nation—a money system that will increase in volume with the growth of population and commerce. It has been thoroughly demonstrated that the production of gold alone will not suffice the world's money needs. Gold joined with silver on an established ratio of value in line with the volume of production and the visible supply of gold and silver at an established ratio is the only practical plan that has ever been devised to give the nations of the world a sound, workable, and adequate money system.

Merrimack and Connecticut Valley Authorities

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a statement made by Paul E. Seymour, president, district 2, United Electrical, Radio and Machine Workers of America, CIO, Boston, before the Senate Committee on Public Works on July 20, 1949, in favor of S. 253, filed by the Honorable HENRY CABOT LODGE, Jr.

This testimony offered by Mr. Seymour is most comprehensive, instructive, and enlightening and reflects the power-situation picture in New England.

I sincerely hope that every Member of Congress will take time to read this excellent statement by Mr. Seymour.

STATEMENT OF PAUL E. SEYMOUR, PRESIDENT, DISTRICT 2, UNITED ELECTRICAL, RADIO, AND MACHINE WORKERS OF AMERICA, CIO

Mr. Chairman, and members of the committee: I am here today as the representative of 80,000 workers in the electrical, radio, and machine-manufacturing industry of New England who are members of my union.

First of all, we wish to congratulate Senator LODGE for his initiative and imagination in introducing the bill which is before you today, S. 253. We fully support such a curvey. In fact, our union has urged a Connecticut and Merrimack Valley Authority for several years.

There has never been a more suitable time to undertake such a survey. Many manufacturing concerns have left New England. There are now some 200,000 industrial workers unemployed in Massachusetts, 100,000 in Connecticut, 60,000 in Rhode Island. If this survey resulted in congressional authorization of New England river-valley projects, thousands of jobs would be created both directly and indirectly.

Our union has a particular interest in these projects, especially at this time. There are already more than 15,000 New England workers in the electrical and machine-manufacturing industries who have been laid off within the last year. The authorization of work on river-valley projects would mean that these men and women would be rehired to make turbines, dynamos, wire, switches, machines, and many other products needed.

Cheap power means greatly increased power consumption, greater use of electric home appliances. The establishment of multiple-purpose river-valley projects throughout New England would greatly stimulate the electrical-manufacturing business, thus creating thousands of new jobs and benefiting the whole community through the increased purchasing power of gainfully employed workers.

Aside from these reasons, which pertain especially to the industry in which our members are engaged, there are many other strong and cogent reasons why such a survey as Senator LODGE proposes, is urgently needed at this time.

The most important and startling reason for this survey is the astounding fact that, although 149 public power projects are in operation, under construction, or authorized,

in the South, Southwest, Rocky Mountains, and the Pacific coast, not one single project is in the New England States.

New England has the highest over-all electric rates of any region in the United States. The reduction of private company rates in the Northeast has not kept pace with the reduction of rates in the other three-quarters of the Nation, although the Eastern States supposedly have the oldest and most efficient regulatory commissions.

This is due to the fact that the low rates established by TVA and other projects have forced the private companies to reduce their rates and, incidentally, also forced them to make more money. New England electric rates are 60 percent higher than private company rates in the TVA area.

New England has the lowest average residential use of power in the country with one exception (west-south-central region). New Englanders used an average of only 1,160 kilowatt-hours per year for household purposes in 1947, while the average for the Nation was 1,400 kilowatt-hours.

The average cost of the monthly bill for 100 kilowatt-hours for residential use in New England was $4.32 in 1947. In the United States as a whole it was $3.74. It goes down to $3.01 in the Pacific Northwest, but the highest on the list is New England. New Englanders used an average of 1,160 kilowatt-hours per year for household purposes in 1947, while the average for the Nation was 1,400 kilowatt-hours.

If we rank the Nation's cities of more than 50,000 population in the order of average annual consumption per residential customer, we find that Massachusetts cities, with two exceptions, rank in the bottom half of the list, and the eight cities of lowest rank are in New England. Their average bill is not so low, however.

Average annual kilowatt-hour consumption per residential customer, 1946, cities of 50,000 or more—rank from high to low

City	Rank	Annual use, kilowatt-hours	25-kilowatt-hour users, average monthly bill, rank from low to high
Lawrence, Mass.	218	588	175
Fall River, Mass.	217	627	156
Boston, Mass.[1]	216	630	175
New Bedford, Mass.	215	645	134
Lowell, Mass.	214	694	212
Lynn, Mass.	213	715	198
Providence, R. I.	212	723	165
Pawtucket, R. I.	211	770	199
Boston, Mass.[2]	205	811	175
Somerville, Mass.	204	819	175
Malden, Mass.	197	871	140
Cambridge, Mass.	191	912	72
Medford, Mass.	182	968	140
Quincy, Mass.	178	986	92
Worcester, Mass.	163	1,086	92
Springfield, Mass.	128	1,181	58
Holyoke, Mass.[3]	95	1,295	31
Newton, Mass.	39	1,551	175

[1] Boston Consolidated Gas Co.
[2] Boston Edison Co.
[3] Publicly owned utility.

If we compare these positions with the top five, the results are startling. Householders in Tacoma, Wash., for instance, use eight times as much power on the average as in Lawrence, Mass., and pay only about twice as much for the total.

The high rates in New England have naturally resulted in a low per capita rate of industrial power consumption. The New England average per capita use of power for industrial purposes amounted to 1,067 kilowatt-hours per year in 1947. The United States average is 2,000 kilowatt-hours per year; in the State of Tennessee it is 2,150 kilowatt-hours and in Alabama 1,890 kilowatt-hours.

City	Rank	Annual use, kilowatt-hours	25-kilowatt-hour users, average monthly bill, rank from low to high
Tacoma, Wash.[1]	1	4,772	24
Portland, Oreg.	2	4,276	12
Seattle, Wash.[2]	3	4,165	8
Do.[1]	4	4,099	8
Spokane, Wash.	5	3,946	17

[1] Publicly owned utility.
[2] Puget Sound Power & Light Co.

The average rate for industrial use of electrical power per kilowatt-hour in New England was 1.54 cents in 1947. In the United States, as a whole, it was 0.98 cent; in Alabama, 0.60 cent; Georgia, 0.93 cent; and in Tennessee, 0.44 cent.

Taking the figure of 100,000 kilowatt-hours per month for industrial use, a manufacturer would pay in:

	Cost per 100,000 kilowatt-hours per month
Boston	$1,912
New Haven	2,100
Springfield	1,900
Worcester	1,800

Looking at some other cities, we find the following:

	Cost per 100,000 kilowatt-hours per month
Chattanooga (municipal)	$1,000
Atlanta (private)	1,300
Spokane (private)	1,000
Portland, Oreg. (private)	800

A comparison of industrial rates per kilowatt-hour in Chattanooga, which has a municipally owned utility distributing power from TVA sources, and typical New England cities (Boston, Fall River, Lowell, Worcester, Portland, Manchester, Rutland, Providence, Hartford) shows that Chattanooga rates are from 0.62 to 1.29 cents per kilowatt-hour lower in the small industrial user group; 0.75 to 1.06 cents per kilowatt-hour lower in the medium industrial group; and 0.62 to 0.97 cent lower in the large user group.

The cold facts are that New England rates, both industrial and residential, are too high.

The United Electrical, Radio, and Machine Workers of America unequivocably favors the development of multipurpose projects in New England. Interested as we are in the development of cheap public power with its job-creating opportunities and low rates to consumers, we are equally interested in the flood control and river pollution aspects, with the collateral improvement of recreation areas and soil conservation.

The Federal Power Commission has estimated that there is a power potential of 2,500,000 kilowatts capacity to be developed from New England rivers. The New England Council, a business organization, estimates only $420,000. This discrepancy arises from the fact that the council does not consider the development of a river as an entire unit. It considered only separate, unconnected, self-liquidating projects. It studied the sites from the point of view of power development alone. The council's estimate was made on the basis of privately financed projects which would have to earn double the amount of public projects.

The over-all approach, of course, is the one which should be taken—not only because it would result in a greater development of power, but also because of its flood control aspects (for example, Connecticut River floods caused an estimated $80,000,000 in damages from 1927 to 1947; the 1936 flood alone on the Merrimac River caused an estimated $36,000,000 in damages); the development of recreation areas; prevention of pollution, currently receiving much attention in New England because of a prolonged drought; and conservation of the land.

The fact is that we have a lower per capita use of electricity in New England for both industrial and residential purposes. The level of economic well-being is closely related to the use of power. New England needs more power. New England has many unemployed. They must be given work. Public power development can provide that work, both directly and indirectly.

The Federal Power Commission, in a recent memorandum (to Senator SALTONSTALL) stated:

"Comprehensive basin-wide investigations should be made for all of the major river systems of New England to determine more fully and definitely the possibilities for their further development for production of hydroelectric power, flood control, navigation, and other purposes. It is suggested that this can be accomplished through the present cooperative procedures of the Corps of Engineers and the Federal Power Commission in river-basin investigations, as provided by the various flood-control acts and river and harbor acts since 1933. Legislation and appropriations specifically authorizing the necessary investigations in New England are, however, needed, before this work can be undertaken."

I would prefer to be before this committee in support of the authorization of actual projects. Failing that, however, I believe Senator LODGE's bill carries out the practical recommendation of the Commission. It is sound and valuable legislation. I sincerely trust that your committee, Mr. Chairman, will give it a unanimously favorable report.

(Sources: Power figures and rates from Federal Power Commission reports and statements. Unemployment figures from State reports.)

President Truman's Chicago Speech

EXTENSION OF REMARKS
OF
HON. EARL T. WAGNER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1949

Mr. WAGNER. Mr. Speaker, under leave to extend my remarks, I wish to include an article from the Polish American Journal of July 30, 1949, written by Mr. Ludwik Lesnicki, a Washington political columnist observer for the Current News Bureau and other newspapers. His views are shared by many correspondents.

EYE OPENERS—H. S. T.'S MESSAGE

(By Ludwik Lesnicki)

President Truman's speech in Chicago at Soldier's Field will rank as a great historic document. In no utterance of an American President have the facts been faced more fearlessly. In no utterance has the logic of those facts been more clearly perceived and stated. In words whose force is immeasurably increased by the background of long months of forbearance he summons us to bear the responsibility of world leadership and calls upon this Nation to maintain a strong and stable economy as the basis of our own well-being and as the primary source of the free world.

Said H. S. T.: "The peoples of the world look to the United States for the leadership of this great crusade for peace. We have not

taken up this task lightly, and we will not lay it down. We must go resolutely forward step by step, toward the creation of a world in which we, and all people can live and prosper in peace." That conclusion of the historic speech is strong meat for strong men and women. It means the utmost cooperation with the nations whose leaders have not cut off communications, and have not built barriers of suspicion between their people and the outside world.

It is this cooperation that will show that a government of the people, by the people, and for the people is capable of asserting and maintaining at any cost those rights without which nationality becomes a byword and a sham; those rights for which Capt. Harry S. Truman, A. E. F., fought so gallantly in 1917 and 1918, and our GI's in the last war.

A solemn time this is in our history.

We must listen to the trumpet call of duty.

The Nation now, men and women, must stand behind their chosen chieftain, the custodian of democracy, our President Truman.

Thus we must labor for the rights of men, for a free citizenship, for a free world.

The President summoned us from my beloved Chicago (and I am always proud to say: Chicago is my home town) to set the final seal upon our national unity.

It summons us—the daring dreams of the men and women who died for the men and women.

It summons us—the daring dream of the dead, the voice of the living, the voice of our people yet to be.

This column believes that for what he has done, for what he has not done, for what he is inducing this Nation to do, President Truman deserves and will get the cooperation as our great spokesman for liberty, freedom, happiness, and peace.

International Federation of Free Journalists of Central and Eastern Europe and Baltic and Balkan Countries

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a summary of a communication to the United Nations on the subject of freedom of information and press, by Zygmunt Nagorski, Jr. This is a very interesting article and should be of great interest to Members of Congress:

The federation was born last year in Paris. It is composed of writers, editors, newspapermen of all denominations, nationalities and political creeds who have one goal in common. This goal is the restoration of lost freedoms in their native countries. Poles, Czechs, Slovaks, Rumanians, Hungarians, citizens of Baltic States, Yugoslavs as well as Ukrainians and White Ruthenians living in the West are members of the federation. This is the only professional body of that kind, if not mentioning various trade unions, which, also suppressed by the communist regimes, seek reestablishment of their ranks in exile.

Freedom of the press and of information is the main interest to all those grouped within the federation. This freedom has ceased to exist in all the iron-curtain countries. No one defends it, no one abroad seems to be able to defend it. A communication to the United Nations, submitted over a sharp opposition of the Soviet delegate seems to be the only way of bringing once again this sad matter into the daylight.

Russia moving westward brought with herself this new conception of freedom of the press. The Soviet constitution in its article 125 guarantees freedom of speech, of the press and of the assembly. But this freedom is secured—and I quote—"by placing at the disposal of the working people and their organizations printing shops, supplies of paper, public buildings, the streets, means of communication and other material requisites for the exercise of those rights." That gives a full control of all the press and information to the state, and state in Russia is the Communist Party. The most influential papers which are published in the Soviet Union are "Izwiestia," a state paper, "Pravda," party paper, "Krasnaya Zvazda" edited by the Peoples Commissariat for War, "Robochaya Moskva," the official organ of the Moscow soviet, "Krestyanskaya Gazeta" and "Komsomolskaya Pravda," all party papers. They serve as main source of information for provincial papers and the daily news broadcasts by the official press agency Tass complete the picture for any paper anywhere in Russia.

It is natural therefore that the same principle of a uniformed press and controlled public opinion has been introduced whereever Russia expanded. In today's Poland, governed by a small Communist minority against the will of her people, the state is the sole owner of all printing establishments. They have been nationalized and are operated either by the government or have been lent by the government to political parties supporting the regime or organizations controlled by Communists. Last year the state took over five independent Catholic printing presses working for Catholic papers. The state has also full power in the distribution of papers. A cooperative, called the Reader, has the sole right of distribution all over the country. No paper can be sold without the assistance of this body. This is state-owned and run by members of the Communist Party.

The same control is executed in the allocation of newsprint. The central office for the control of press and entertainment sees to it that the only vestige of independent press in Poland—which is the Catholic press—gets barely enough newsprint to serve regular subscribers.

Moreover, the state has in its hands the monopoly of information; with news supplied by Reuter, Associated Press, United Press, and other agencies completely barred, the Polish press has to rely only on two agencies, the Russian Tass and the Polish Press Agency, an official organ of the government. To complete the entire ring a government-controlled organization of journalists has been established, directed by the Ministry of Information, which also has a special section dealing with the activities of newspaper editors.

With all that in mind one cannot wonder the kind of information the controlled press in Poland gives its readers. A Communist periodical called Przekrój recently introduced a page called Who is Who in America. And here I quote one paragraph from this page: "Senator ———, Member of the United States Senate where each of the 48 States has two representatives. Senate is even more reactionary than the lower Chamber. The only exception is Senator GLEN TAYLOR, a nominee of the Progressive Party to the office of Vice President. Senators lately are busy trying to get an increase of their salaries."

Similar lines were introduced into Yugoslavia, Rumania, Hungary, and other countries. Over 130 papers are published in today's Yugoslavia and not a single one with a breath of opposition. The only two independent papers—Demokratia, edited by Milan Grol, and Republica, were both suppressed. The reason given was that the freedom of the press does not apply to all—in plain words to anyone holding different views from those of the Communist Party.

Semnalul, a liberal Rumanian paper, ceased publication last year. Another liberal paper, Viitorul, has been closed for printing within a report of an official reception the initials and titles of British officers present. It was asserted that the letters K. C. B. or K. C. N. G. must for certain contain code messages. A similar fate met Zornica, the oldest Bulgarian paper, Zname, a democratic sheet, and Svobodne Narod, the organ of the Bulgarian Socialists. After the Czechoslovak coup d' etat, such internationally known publications like Narodni Politika and Narodni Listy disappeared. with 200 journalists and writers ousted from their posts and most of them fleeing the country. The nationalization of all publishing channels was immediately introduced. The three Baltic states, officially annexed by Russia, used to have before the war a very fine democratic press. In Latvia alone about 200 dailies and magazines were published, 80 percent of them in Latvian, 11 percent in Russian and the rest in different languages. Today Latvia has 87 papers, all communist, with 39 of them published in Latvian and 48 in Russian.

The purpose of this communication is to call upon the subcommission of freedom of information and the press to see to it that this freedom is enforced not only on paper but also in life. If the United Nations will be unwilling or unable to face the unpleasant but imperative task of seeking to reestablish the lost human freedoms in the countries overrun by the Soviet Union, the same United Nations would give a mortal blow to its prestige among the people of all nations. It will also testify by its inability its unpreparedness for the work for which it has been created.

Valley of the Dammed

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1949

Mr. LEMKE. Mr. Speaker, I include in my remarks another article entitled "Valley of the Dammed," by Bigelow Neal. To say the least, these articles are startling and thought-provoking. Our sense of justice is shocked. I am satisfied that these articles will have far-reaching results. Bigelow Neal has raised the iron curtain. He has turned the spotlight on the negotiators and the Real Estate Division of the Army Engineers Corps. From now on there will be less coercion, less threats and more honesty in the taking of private property for public use.

I am satisfied that these articles will have a wholesome effect throughout the Nation and that in the future the innocent victims of land acquisition will be treated more fairly. I am sure that Congress will in the end take appropriate steps to stop the reenactment of the injustice that has taken place in the Valley

of the Dammed. Here follows Bigelow Neal's article:

VALLEY OF THE DAMMED

(By Bigelow Neal)

To the Congress of the United States:

Knowing that this document appears with some regularity on your desks and learning that I already have a considerable audience among you, I am attempting this rather informal method of placing the cause of perhaps more than a hundred thousand men, women, and children before you.

Out here in the valley of the Missouri a great and truly horrible injustice is daily being perpetrated in your name. Nor is it confined to us alone for, in almost every State in the Union where public works are in progress, people are being torn from their homes and cast out to make a new beginning with no thought of the "just and fair" compensation which was promised us by you, the Congress of the United States.

From this comes not only human suffering but also a lowering of the standards of citizenship. My neighbors have been taught to believe in the greatness, in the justice, in the humanity of our Government. When they learn that agents of that Government are capable of cruelty, injustice, and deceit and that the flag of your country and mine flies high over an organization devoted to these barbarous things, instead of things that are good, they lose faith in all Government. And that loss of faith will be passed on to their children and on down for many generations, creating a malignant sore in the very heart of our country.

While it may become calcified in time, yet it will always be there ready to break open and run afresh, discharging the serum of hate and distrust.

A year and a half ago, when I saw my neighbors being driven from their homes one after another by fear of their own Government, I decided to turn in my tracks and fight. I was absolutely alone. Those who should have been beside me were either frightened out of their wits or were afraid that something I might do or say would endanger the building of the Garrison Dam. The only ally I had on the face of the earth was the consciousness that I was in the right and faith in the same Government.

After a few months I found one friend in the editor of this paper, Mr. Herbert Callies of Garrison, N. Dak. Without his loyal support I couldn't have gotten even as far as I have. Both of us have been constantly reminded of Leavenworth, Atlanta, Alcatraz, and an exceedingly fiery hell. We have gone ahead on the theory that we were not fighting our Government but only a cancerous growth that has grown within it. We offer no objection to the building of the dam or to the condemnation of our lands. Indeed we are in full favor of both. What we fight is a land-acquisition policy born of iniquity, a cruel thing that has come to take the place of justice.

The Real Estate Division of the Army Engineer Corps would have me believe I am unpatriotic, a chiseler and a poor citizen. It has been hinted that I am in league with subversive organizations, out to overthrow the Statue of Liberty.

I am not a Communist. I never was a Communist or any part of a Communist. As far as I know I have no friends who are Communists. I know many fine people who as Socialists are, I believe, guilty of idealistic and wishful thinking. I hold them as men of good intent but I am not of them. I have, in times of war or threatened war, sworn allegiance to the Government of and the Constitution of the United States on three occasions. All three oaths are still in effect.

I have lived here in the valley of the Missouri for 58 years. Always I have lived on a farm. I have been a professional writer—of few parts—for a quarter of a century. In this document I elect to consider myself under oath. I may have made mistakes but no word I have written on this subject is knowingly untrue.

The Real Estate Division of the Army Engineer Corps came among us. We trusted them. They appraised our lands but they refused to tell us the amounts of the appraisals. Then we could no longer trust them.

They sent men among us whom they called negotiators. These men offered us amounts, a thousand or more dollars below their own appraised valuation. Then they used every means at their disposal to frighten us into acceptance. They threatened some of us with the Department of Justice and if we were uneducated, the threat went home to cause fear. They attempted, in some cases, to shake our faith in our own courts. They said that if we didn't accept their offers, we would be driven with our families out into the snow. They told us that, if we didn't sell to them for a song, we were unpatriotic, that we would be branded forever as chiselers. They said if we didn't accept their offer, the Government would condemn our lands and we might receive even less than they offered. They never told us our rights under the law—not in a single case of which I have ever heard. They told us that, if we went into United States district court and asked to have our cases arbitrated—as you of the Congress so wisely provided—we were fighting our own Government, more than that, were fighting our Government in a court owned by that Government and thus they caused many of us to feel that we stood no chance, that all the power of the United States was against us, that we had no rights and no friends whatever.

If you care to read the sordid details, they are either on your desks now or will be when I am through, provided you do not withdraw the permission for their publication that you have so kindly given.

Now there are many things of sentiment for which we do not ask pay. You can never pay us for the memories of our children playing under the trees, you can never pay us severance damages for the loss of so much that we loved so well. You can never pay us for years and years of labor, the results of which are invisible cords tying us to the past. You can never pay us for the dreams which never came true.

But you could legislate prosperity for countless thousands through the building of these dams and we cannot understand why we who must lose our homes should be asked to sacrifice more than is necessary. It is my appeal to you, the Congress of the United States, that you investigate what I have written and find if it is true. And, if it is, I ask you in the name of all these people that you wipe out all that has been done, appoint a just and fair commission to fully compensate, relocate, and rehabilitate every man among us who must sacrifice his home that prosperity may come to others and then to see to it that, in all the years to come, no public work shall be undertaken without first providing for the real rehabilitation of the man who must give the land.

When a negotiator for the Real Estate Division of the Army Engineer Corps came to see me, he carried a document he called an option.

This option—insofar as I was concerned—might as well have been a deed. Once it was signed, I was a gone goose.

But, from the standpoint of the Real Estate Division, the option had certain quaint advantages. With it and my signature in their possession, they could sit back and do nothing at all for a long period or they could come back to me, at will, and announce that somebody had decided they couldn't give me that much.

If I remember correctly, I read about three paragraphs out of enough words to build a young novel and handed it back to the negotiator. And about that time some things occurred to me.

Why a negotiator? The Government of the United States had full powers to take my land. Why not take it? Why this negotiating? Why this dickering and bickering? Why not have some sort of a commission appraise my land and then tear off the last sheet of their findings—exactly as an assessor does; hand it to me and say, "There is the appraised valuation of your land. If you don't like it, you have a statutory right to have the United States district court arbitrate your claims."

Wouldn't that have been a much simpler and much nicer way? Wouldn't that have left a cleaner taste in my mouth? And wouldn't you, in whose name this was being done, have had a better opinion of yourself?

But no. Here was a man who called himself a "negotiator," coming to me with all the power of the United States behind him, armed with the support of the Department of Justice, and even the Army—if he needed its help. And what was he there for? I decided he was there to pit his brains against mine. In some way, maybe through flattery, maybe through fear, to buy my land at the lowest possible figure and making his opening offer even lower than the appraised valuation. Think of that! Knowing that my home had been appraised by a proper governmental agency at $7,000, he offered, and tried by every means in his power, to get me to sell it for $6,000.

Well, I've told you about that already. No use rethreshing that straw here. But I did some more thinking. It occurred to me that he had no power to put me off my land whether I signed that option or not. He spoke freely of the Department of Justice but I knew that the Department of Justice had no more power to drive me out of my home than he did. The Department of Justice might start legal proceedings to that end but right in the middle there was a hurdle, and a high hurdle at that. They would have to go through the United States district court to get an order evicting me. And that court belonged to you and to me, not to the Department of Justice and not to the Real Estate Division of the Army Engineer Corps. That court was put there by us to protect both the Government and every single one of its citizens. That court was meant to defend the right and not to chase people over the hills. Putting full confidence in that court, I had no fear whatever of the negotiator. I told him so. He had pitted his brains against mine and he—had lost. Not because I was the smarter man but because I had faith.

For months nothing happened. I got the idea that maybe the Department of Justice had forgotten me. But it seemed they had better memories. So one day comes a cheerful son of the old sod, the Deputy United States marshal. He carried more papers. He carried so many papers that I couldn't have read them if I'd kept at it ever since. He carried so many papers that he couldn't remember if he'd left all of them or just half of them and pretty soon comes his plaintive call over the horizon for me to admit I'd been served with all of them. I didn't know whether I had or not but I admitted it. Why make him unhappy over two or three bushels of words?

But now the plot had thickened. I had 15 days to get an answer into the United States district court. So I sent the date and the number of my summons to my attorney. He did the rest. And then there was a delay of—I believe it was a lot over a year before the court had time to hear my case.

And from those who have been told that they might have something to fear from the unquestioned power of the United States district court, let me say again, you have nothing whatever to fear. Before that court, the Department of Justice and the Real

Estate Division of the Army Engineer Corps, both put together, are not one bit bigger than you are. And it won't tip the scales against you if they throw in the Army Engineer Corps.

And as for the threat of persecution at the hands of the Department of Justice, that's unadulterated hooey. The United States district attorney represents the Department of Justice. He's there to see that you don't ask an unreasonable sum for your home but in doing his duty he won't forget that he is, first, a gentleman. And if any of you have been told that he might—just might—drag in some figures from your income-tax return, forget that, too. I say again, he's a gentleman.

Well—a jury listened to my side and then they saw that I needed some money so they gave me a sum which added up to $4,500 above the first offer the Real Estate Division tried too hard to get me to take. And that's the same way they treated every one of my neighbors. Andrew Welsh made a clean get-a-way from that court room with $9,000. Some got as high as nearly $20,000. All of which reminds me that USHER L. BURDICK made a speech last fall in which he told everybody not to sign those options. All I know is that those of us who didn't are many, many thousands of dollars ahead of those who did. And anyway there's no negotiator trotting around the country who can brag that he's any smarter than I am and that's what he most certainly would be doing if he'd gotten away with any of my ink. Because that's exactly what he was there for—to buy my land cheaper than he could get it in any other way. Any time I sign an option, he's the winner and I'm the loser—or—he wouldn't ask me to sign it.

Before I go on next week with a consideration of the rental program of the real estate division, a policy which really makes people take to them thar hills, I should like to discuss some of the fundamentals underlying the building of the Garrison Dam.

Disregarding the possible correct order, let's begin with the Red River Valley in general and Fargo in particular. I chose Fargo because I lived there for some years, have many friends there now and I would, had I the power, send nothing but good its way.

Fargo is short of water. There is a common saying among its people that, given water enough, the city would double its population in 15 or 20 years. For that reason Fargo looks with longing eyes toward the Missouri. Naturally it wants the dam. Whether this is wishful thinking or not is no part of my story. The fact is that Fargo and the whole Red River Valley expect to profit greatly by the building of the dam.

Minneapolis and St. Paul? Yes, they also expect to profit through a greater and more prosperous market for the things they manufacture and sell or resell.

Devils Lake hopes to get a refill from the dam, thus putting a gigantic summer resort in the north-central part of the State. I believe that's a worthy objective. Even though it involved considerable sacrifice for those people, demanding both the water and the power farther west, I believe Devils Lake should be filled and kept filled with fresh water. And when it is, property values of the city of Devils Lake will be far higher than they are today and a greater prosperity will come to all.

For one reason or another, every section of the State dreams of great prosperity to come through the dam or the Pick-Sloan plan when in full operation.

Now as we go down the Missouri, we find other hopes and other dreams of greater prosperity to come from the building of this dam. To them it is irrigation, river traffic, power and flood control. It means—to them—that countless thousands of families can build permanent homes along the Missouri and Mississippi without fear of floods.

Thus we find literally millions of people who expect—in a greater or lesser degree—to grow rich from the building of this dam. All right. I have no quarrel with that. If the necessary sacrifice of a few can bring prosperity to so many, then it means that the few must make that necessary sacrifice.

But now listen, if you expect to make so much, why, instead of sending among us men to frighten us into selling our homes at the lowest possible figure, with no regard whatever for our future, why don't you come among us as neighbors, as friends or even as brothers and take us by the hand and say something like "We're sorry, fellers, that we gotta route you out, and because we can't help it we're going to lead you over the hill here to a new home, maybe even a little better than the one you've got now and we're going to see that all your expenses of moving are paid so that when you are settled in your new homes you can go right on from where you left off without the loss of a single cent"?

Am I overidealistic? Am I oversentimental in asking this of you in the name of the men, women, and children who must suffer that you may prosper so much? Or do some of you agree with me that there should be no room in a transaction like this for cruelty? Think it over.

And think this over, too. The dollars they gave us for our land were worth only about 45 cents each. In short, our lands and property were appraised at half their actual replacement value and then paid for with dollars worth less than 50 cents.

At What Should a Farm Bill Aim?

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Tuesday, August 2 (legislative day of Thursday, June 2), 1949

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "At What Should a Farm Bill Aim?" published in the Christian Science Monitor on August 1, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AT WHAT SHOULD A FARM BILL AIM?

The Senate now has an opportunity to write a good farm bill. It must write it in not the easiest of economic and political atmospheres. So we shall not be surprised if the product falls short of the ideal. But we shall be disappointed indeed if the Senate fails to improve on the House measure.

There seems not the slightest doubt that supports to agriculture will be continued. It appears equally realistic to expect that the methods finally chosen will turn out to be some compromises and adaptations based upon all of the three plans urged upon Congress—the Hope (which the House would continue), the Aiken (which the House would repeal), and the Brannan (which the House would reject).

In the meanwhile, however, while the Senate bill is in the making, it might be helpful to back off from the details and to ask what a farm bill ought to aim at.

First, as we see it, it ought to stabilize the violent ups and downs of farm income in relation to the income of the rest of the Nation. This is basic. How that stabilizing is done is a matter of method.

Second, in our view, whatever method is employed should be designed to forestall wasteful surpluses. The rest of the Nation should not be called on to buy unneeded and nondisposable products nor to underwrite speculation.

Third, as an expedient of enlightened self-interest, it behooves a people to insure an indispensable industry as a socially invaluable way of life against calamity. An endeavor to guarantee that industry prosperity, however, raises a point of fairness and more serious questions of how far can such a concept go without disaster. Help to get farmers started on a supplementary, eventually self-financing program of their own is another matter.

Fourth, whatever method is chosen ought not to ignore the values of independence and self-respect. Whether a government supports an impersonal market or sends subsidy checks direct to quite personal farmers is by no means a distinction without a difference—as generally unfavorable farm reaction to that feature of the Brannan plan would indicate.

Fifth, if the Nation insures its farmers against repetition of past mass bankruptcies, the farmers should be required to assure the Nation that its soil shall not go the way of China's. Some minimum soil-conserving practices should be made a condition to eligibility for Government support, in whatever form that support may be given.

Holding up to these somewhat abstract but, we believe, valid standards the three lots of grist which the Senate mills will grind, we are still of the opinion that the substance of the Aiken approach should prevail.

Moscow's Pearl Harbor

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Tuesday, August 2 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial appearing today in the Washington Daily News, entitled "Moscow's Pearl Harbor."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MOSCOW'S PEARL HARBOR

While American attention has been diverted by Communist problems in Europe, the Reds have been making hay in the Pacific.

They have opened a front which extends all the way from Korea south to Australia and east to Hawaii.

From Red China they are sending supplies to rebel forces in Burma and Indochina, and agitator agents into Siam and Malaya. Communists hold strategic positions in the Indonesian Republican movement. They are backing the peasant revolt in the Philippines and labor disturbances in Japan.

In Australia, the Reds are attacking the economy of that country through a crippling coal strike.

Harry Bridges, the west-coast union leader, is directing a similar attack against Hawaii from his headquarters in San Francisco.

In Moscow's operation Hawaii the Communists are using a new technique. If it

works, it will be extended to the Philippines and Japan, it is understood.

Edwin C. Heinke, a Scripps-Howard reporter, has made an on-the-spot investigation of the Hawaiian situation, and the first of four stories on his findings is published today in this newspaper.

He found that all of the islands' workers are being organized under one big union—the old IWW idea. This is the so-called International Longshoremen's and Warehousemen's Union, which has organized shipping, sugar, and pineapple workers, in order to control Hawaii's three principal industries.

Under the direction of Mr. Bridges, this union has blockaded incoming and outgoing ocean commerce. A ship cannot load or unload at an Hawaiian port without this man's consent.

Communists dominate this union, and through the union they have worked their way into control of the Democratic Party organization in the islands. That's the new Moscow pattern for conquest by infiltration—control of economy and politics by dominating unions and political organizations.

Further to weaken American influence in the islands, they are fomenting racial unrest in the islands. This is the dynamite they expect to transport to the Philippines and Japan—the "Asia for Asiatics" agitation used with such effect by the Japanese imperialists.

Just as the State Department so long regarded the Chinese Communists as "honest, agrarian reformers," President Truman has treated the Hawaiian situation as "just another labor dispute." But he would know better, if he would review evidence which reflects the true situation, in the Government's own official files.

A congressional investigation, with the power of subpena, is urgently needed in Hawaii to bring this underground attack into proper focus. Now that the Communists are digging in right at our own back door, the problem can't be ignored any longer. The facts Mr. Heinke presents, in the series beginning today, show why such an inquiry is needed.

Big Government Can Save Money by Dealing With Small-Business Men

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2 (legislative day of Thursday, June 2), 1949

Mr. MUNDT. Mr. President, it is my sincere hope that out of the disclosures and investigations connected with the operations of the so-called "5 percenters" here in Washington, there may come legislation and procurement practices which will enable small business and industrial establishments to find an effective way in which to make their products available to the Government.

To this end I am preparing legislation to be introduced shortly which would create a Federal clearing house here in Washington from which all entrepreneurs would be able to secure, simultaneously, complete information concerning prospective purchases by the National Government. By working with and through this central Government agency, businessmen would be free from any necessity or compulsion for employing special representatives, or agents, to intercede in their behalf with Government procurement authorities or to secure for them the specifications and detailed information required in order to enter their bids on Government contracts and purchases.

In this connection I call attention to an editorial published in the South Bend Tribune, of South Bend, Ind., which comments upon this proposal, and I ask unanimous consent that the editorial may be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COULD BE BETTER

While hints of scandal in the "5-percent" situation in Washington are increasing it should be kept in mind that those responsible for the manner of Government contract negotiating and awarding practically invites abuses. "Smart" go-betweens, persons "knowing the ropes," are and have been practically necessary for private businessmen seeking Government contracts. Official Washington is literally a maze. The situation is accurately and briefly summarized by the Indianapolis Star as follows:

"The United States Government is the biggest business in the world and also the most tangled and confused. Giant corporations may know their way through the red tape jungle but smaller enterprises find they need help in learning what contracts are to be let and how to get them. That is where the 5-percenter enters the picture. He knows the ropes or pretends to. A grateful businessman then agrees to give him a commission for putting him in touch with the right people."

In other words any "smaller enterpriser" not willing to deal with "5 percenters" might as well be reconciled to lack of success in his efforts to get Government contracts. Of course, some operators in the "5-percent" zone have specialized largely in pretense. They do not have as much influence as they pretend to have but by "dropping names" and assuming authoritative airs they have managed to convince some contract-seekers that their services are decisively valuable.

Senator KARL MUNDT, South Dakota Republican, has gone to the root of the matter in his reform proposals growing out of the current "5-percent" revelations. He proposes establishment of an official Federal clearing house to furnish information that would help businessmen to understand the contact and contract situation in Washington. Some "go-betweens" impliedly would be needed if that were done because most businessmen are not equipped to conduct all contract negotiations themselves even when the fundamental information is available. For good measure Senator MUNDT proposes that the solicitors and recipients of financial commissions in the contract procedures be compelled to register officially for congressional information. Professional lobbyists are under statutory compulsion now to do that. Adoption of the Mundt proposals apparently would improve the situation remarkably.

New Seaway Proposal

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2 (legislative day of Thursday, June 2), 1949

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Cumberland (Md.) Times of June 6, 1949, entitled "New Seaway Proposal."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW SEAWAY PROPOSAL

Once more legislation has been introduced in the Senate to authorize development of a seaway linking the Great Lakes with the Atlantic Ocean through the St. Lawrence River. It is called a nonpartisan proposal, and appears to have new support for an old idea. A good deal of the recently acquired support for the seaway proposal is credited to a change of heart on the part of certain industrial and shipping interests in the Great Lakes area. The change is attributed mostly to the discovery and impending development of rich new iron-ore fields in Labrador and Quebec. The question of whether this ore goes partly to inland mills fed through Great Lakes ports, or almost entirely to mills supplied by Atlantic ports, rests on development of a suitable waterway. Hindsight often discloses astigmatic foresight. In the past the St. Lawrence development project has been opposed by many persons who feared new competition for their little industrial or commercial empires. Now some of them suddenly see that the same medium which might bring new competition would also bring new sources of supply and new markets for themselves. A sound transportation development represents progress, and the same is true of the needed power development which would accompany the seaway project. Progress helps the whole region where it takes place, and helps everybody who is ready to accept it and collaborate with it.

The Limitation on Earnings of Old-Age Insurance Recipients Should Be Raised Substantially

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1949

Mr. KEATING. Mr. Speaker, it now appears unlikely that we will be permitted at this session to vote on much needed amendments to the social-security law. Many of us have urged repeatedly that these benefits should be substantially increased and the base broadened to include many not now eligible. Our entreaties have apparently fallen on deaf ears, even though this step can be taken without any cost to the taxpayers and probably even without an increase in the burden on either the employers or the employees.

Certainly, if this is to be the sorry plight of this legislation, one step which should be taken promptly, and which seems to have nearly unanimous backing, is an increase in the amount which one receiving old-age insurance may earn on the outside without losing insurance benefits. The present limit of $15 a month is ridiculous.

Under leave to extend my remarks, I include an editorial from the Olean, N. Y., Times-Herald urging enactment of my bill to permit these recipients to be paid up to $50 a month without sacrificing

their benefits. Indeed, it is suggested that there perhaps should not be any top limit on this incentive toward more productive and useful lives among our older citizens.

The editorial follows:

OLD-AGE SECURITY

In connection with various measures now before Congress whose object is the liberalization of old-age pension regulations, it is worthy of note that Representative KENNETH B. KEATING, of Rochester, N. Y., has urged the House Ways and Means Committee to grant persons receiving old-age insurance a chance to earn more on the side.

Under the present regulations, of course, persons 65 or over are ineligible for old-age insurance if they earn $15 a month or more.

Reminding the members of the Ways and Means Committee that already he had introduced a bill under which that $15 ceiling would be raised to $50, Congressman KEATING had this to say:

"My study shows that this would not cost the Government substantially more than the amount it is now paying.

"It would give these older people greater latitude in supplementing their income from outside sources; and this desire to continue their contribution to the country's economy should not be discouraged, as is happening under the present law."

The Rochester solon added that his measure would result in improved living standards "for these older people who have worked hard all their lives, paid into this insurance fund, and now want to taper off, gradually, from their hard-working days without giving up entirely."

All of which would seem to be eminently sound.

But why set any limit at all?

Why not permit persons of 65 or over to receive their old-age payments and make all they can on the side for their relatively few remaining years of their lives?

What possible objection could there be to such a course?

Eggs in a Cave

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include a sorry story from the Packer, as follows:

EGGS IN A CAVE

In a cave in the side of a hill at Atchison, Kans., are stored more than a thousand carloads of dried eggs. The eggs, in barrels weighing from 150 to 200 pounds, belong to the Government.

The officials in the Government hope that some use will be found for the eggs, although they have nothing definite in mind. All the bureaucrats know is that they bought a lot of eggs in powdered form in a colossal effort to increase the price consumers have to pay for them. The barrels are stored in that cave because it is cheaper to keep them there than in commercial storage warehouses.

The Government's purchases are from big produce dealers in the rural areas who undertake to break and dry eggs and deliver the dried product in barrels at shipping points in the Middle West. The usual price is $1.26 a pound. Fifty million dollars of tax money has already been spent by the Government on this program this year.

Since the first of the year, the Government has rendered 160,000,000 dozen eggs unavailable for family use. In all of 1948, the Government bought 85,000,000 dozen. In a little more than 4 months, the Government has destroyed far more fresh eggs than it did all of last year.

There are several remarkable facts to be considered in this connection. The price of chicken feed is down 25 percent from a year ago, thanks to the big corn crop in 1948 compared with the short crop of 1947. Also, hens have been laying better, so that with fewer birds to feed, more eggs are produced. Finally, eggs have been selling close to last year's prices which were the highest on record. Thus, the Government has stepped up its egg destroying operation in spite of an improvement in the condition of the poultry raisers.

The activity of the Government during March and April in diverting vast quantities of eggs into the drying plants not only made for high egg prices in these months, but makes very high egg prices certain in the fall and winter. Eggs laid in March and April are best for storing for the period of short production.

Because of the high price of fresh eggs last year, the quantity going into storage was small and at the end of the year the commercial stocks of eggs were the second smallest on record. But on May 1 of this year, there were only a third as many eggs in storage as on the same date in 1948.

Having already spent $50,000,000 for eggs to be rendered unfit for table use, the Government has indicated it will continue these activities all year. The excuse offered for this waste is that the welfare of the country requires it.

Factories—or WPA?

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. LODGE. Mr. Speaker, one of the principal reasons for the serious unemployment in the State of Connecticut is the removal of plants from Connecticut to other parts of the country and the financing of factories outside Connecticut in part with Connecticut money.

In particular, the removal of the Chance-Vought Division of the United Aircraft Corp. from Stratford to Dallas, Tex., is causing great hardship. In view of the fact that this plant played a vigorous and significant part in the war effort, surely here is a case where Federal responsibility is clear.

Under leave to extend my remarks, I am inserting a most informative and excellent editorial which appeared in the Bridgeport Post on July 28. I am also inserting a copy of a letter which I have written to the President of the United States regarding the enormous burdens which have been imposed on the entire Bridgeport-Stratford-Milford community by the removal of the Chance-Vought plant. They follow:

FACTORIES—OR WPA?

Calling attention to the fact that in the year ending June 30, 1948, the citizens and industries of the State of Connecticut paid into the Federal Treasury approximately $665,000,000 and that during this same period this State received back in Federal grants a little over $13,000,000, or less than 2 cents on the dollar, Chairman Clarence F. Baldwin of the State Republican Party told an audience in East Haven the other night that the money thus drained out of Connecticut has been spent in part to build airfields, factories, and industrial sites in other parts of the country, which facilities are now being used as bait to tempt Connecticut industry to move out of this State.

"Connecticut has been forced to pay an unfair, burdensome share of the cost of building factories in other States at Federal expense," Mr. Baldwin said.

"It is the Truman-Bowles philosophy of government which forced us to contribute toward construction of the plant in Texas which lured Chance-Vought from our State. Removal of the Chance-Vought plant from Connecticut to Texas meant the removal of 8,000 jobs from our State.

"The Bridgeport Brass Co. has a new plant in Indianapolis. The Aluminum Co. of Fairfield has a plant in Atlanta, Ga. New Departure, Meriden, has a new factory in Sandusky, Ohio. The Kolynos Co., once of New Haven, is now operating in Indiana. Clocks formerly manufactured in Waterbury are now being made in Arkansas and Texas."

Various reasons have been given for the removal of plants from Connecticut to other States, or the opening of branch plants in other parts of the country instead of the expansion of the local firms. One of the excuses is cheaper labor cost, which we question. A Connecticut textile company which opened a branch in the South not long ago has since closed it. "Cheaper labor" was so inefficient the plant was not a success.

But there is no doubt that the removal of Chance-Vought was a Government-engineered job. Not only were the facilities furnished at less than cost (thanks to the taxes we Connecticut citizens have paid) but the Government pressured Chance-Vought to make the move on the theory that too many of the Navy's facilities were concentrated in this area, constituting a defense weakness.

Perhaps Mr. Truman is graciously planning to start another WPA for our relief. But if his administration continues its policy of taxing capital out of Connecticut and using this to create industrial plants in other parts of the country as a direct incentive to Connecticut industry to move out of this State, no WPA will be big enough.

We'll all want to be on it.

JULY 29, 1949.

The PRESIDENT,
Washington, D. C.

DEAR MR. PRESIDENT: As you know, the Chance-Vought division of the United Aircraft Corp. has moved from Stratford, Conn., to Dallas, Tex., thereby throwing 7,000 skilled workers out of work and adding materially to the already critical unemployment problem in the Bridgeport-Stratford-Milford area. This move, which is sponsored by the Federal Government, has also had a most depressing impact upon numerous businesses in this area since the purchasing power of these workers has been lost to the community.

While the Chance-Vought plant was begun some 21 years ago, it increased tremendously during the war years and therefore can properly be considered as a Federal activity.

I have heard a number of explanations for the removal of this plant and I confess that these explanations have not seemed to me to be convincing. I have heard it said that the plant was moved from Stratford to Dallas for security reasons. Yet it would appear that Dallas is as vulnerable to aerial bombardment as Stratford. I have also heard the argument advanced that jet planes could

not be tested in Stratford. But they cannot be tested in Dallas either since, as I understand it, a lake behind the Grand Prairie site prohibits such testing. Indeed, the jets to be produced in Dallas will have to be flown more than 150 miles to Oklahoma for testing.

However, it is not the purpose of this letter to reargue the validity of the reasons for the removal of the plant. We are now faced with a very distressing condition, a condition for which the Federal Government should assume responsibility, whatever the real reasons are for the transfer of this huge enterprise.

In view of your expressed desire, through the Steelman committee, to allocate Government orders to areas affected by current unemployment, I believe that the Stratford case should be given top priority. I can assure you that the people of my district, though they are citizens of tested loyalty, energy, and thrift, are nevertheless perplexed to learn that extensive Federal business is being allocated to areas where the Government cannot, as in the Stratford area, properly be held directly responsible for unemployment or curtailed production.

Government orders cannot be allocated to the Stratford plant at the present time because the legal status of the plant has not been determined and because the plant is not only idle but empty. Accordingly, it is urgent that the several Government agencies which are interested in this installation should clarify its legal status since obviously the plant cannot be put on the market or disposed of in any other way until the legal title has been determined.

But beyond this clarification of the legalities involved, it is my considered view that the Federal responsibility here is clear. And it is also my opinion that in the interest of our expanding air force and in order to meet any emergency which may arise, it is vital to have a readily mobilizable aircraft industry. Surely, the greatest asset in such an industry is the skilled workers who actually turn out the planes. Surely, it is in the interest of our national security that these workers should not be dispersed and thereby lost to the aircraft industry.

In these circumstances I respectfully request that the executive department be instructed through it agencies to examine the Stratford case in detail in order that some phase of Government-sponsored activity can be assigned to this factory, thereby meeting the Federal responsibility for these unemployed workers. It would, of course, be preferable that the assignment consist of aircraft production in order to preserve the skills of these workers as an added insurance in a dangerous world.

Respectfully and sincerely yours,

JOHN DAVIS LODGE.

Jefferson's 1816 Letter Holds True on Hopes, Fears of Today

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1949

Mr. DOYLE. Mr. Speaker, the following is an editorial which appeared in the Long Beach Press-Telegram, Long Beach, Calif.—my home city in Los Angeles County—on Friday, July 29, 1949. It is referring to Thomas Jefferson and John Adams back in April 1816; together with its reminder that one of the leading industrialists of our Nation had recently made it clear at a meeting in Los Angeles, Calif., that there was basic soundness in the Nation. The whole editorial is so applicable to this day that I take pleasure in calling it to the attention of all of my colleagues in this important Congress:

JEFFERSON'S 1816 LETTER HOLDS TRUE ON HOPES, FEARS OF TODAY

There isn't any actual necessity for Americans to talk themselves into another depression.

The reaction of many Americans to the problems of the postwar period suggests something Thomas Jefferson wrote to John Adams in April 1816:

"I think, with you, that it is a good world. There are, indeed, gloomy and hypochondriac minds, disgusted with the present, and despairing of the future; always counting the worst will happen, because it may happen. To these I say, 'What grief has been caused by the evils that never happened!' I steer my bark with hope in the head, leaving fear astern."

This Nation cannot afford to be an economic hypochondriac; for a country, like an individual, can worry itself sick.

Nevertheless, fear has won a beachhead in the United States and there is the danger that fear, unknown during the war, could produce the confounding paradox in the richest and strongest Nation in the world of persuading the American people to talk themselves into a depression.

Dim views of America's economic health have apparently gained considerable acceptance.

This, although the facts of America's economic strength are widely known. Charles Luckman, president of Lever Brothers Co., speaking recently at the breaking of ground for his concern's new $25,000,000 plant to be built in East Los Angeles, made clear the basic soundness of the Nation in these figures:

1. Fifty-nine million workers on the job.
2. Two hundred billion dollars in liquid savings.
3. Two hundred and fifteen billion dollars in personal income for 1949.
4. High purchasing power, some 53 percent greater than prewar.

"It would appear preposterous," continued Mr. Luckman, "that anyone could manipulate these figures and come up with an answer that spells disaster. Yet that is precisely what some Americans are doing.

"The sort of emotional arithmetic indulged in by these alarmists is typical of Pravda, in which America as a land of opportunity and promise has long since been written off. The Russians who, according to Pravda, invented the electric light, airplane, radio, penicillin—and the safety pin—also invented the theory that America is headed for the most colossal bust in history.

"Today's counterparts of those gloomy individuals of the past confuse fears with facts. Though knowing, in their hearts, the essential health and vitality of this free economy, they yield weakly to the counsels of despair.

"But how can we confuse shadows with realities? With our spiritual heritage, and with vast material resources at our command, how can we compromise our future by a liaison with fear?

"Only through a lack of faith in America and in ourselves, could we mark down the world's most dynamic economy. Too many of us have accepted jabber-jitter estimates of what is wrong with America, instead of finding out for ourselves what is right with America.

"No one can deny that America faces many grave problems today, both at home and abroad. No one can deny that American business has an ample share of these problems which it must solve itself if it is to continue its robust tradition of individual competitive enterprise. But I do deny, and most emphatically, that these problems present any logical reason for doubt. There is all the difference in the world between being aware of complex problems and being afraid of them. This moment demands a clear-eyed appraisal of the facts, not an emotional concern with shadows. I call for a renewal of faith in the vitality of our American way of life."

Mr. Luckman's remarks can well take Americans back to the wise Jefferson. Citizens of today should join in repeating his words: "I steer my bark with hope in the head, leaving fear astern."

Prayers for Peace

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. KLEIN. Mr. Speaker, a movement quietly started last fall by Mr. Herve J. L'Heureux, the kindly, harassed, and always gracious Chief of the Visa Division of the State Department, has grown with a rapidity most impressive, considering its spiritual nature and the lack of ballyhoo.

On last October 28, in his home town of Manchester, N. H., Mr. L'Heureux proposed to the Last Man's Club of the William H. Jutras Post of the American Legion a resolution which called upon the members of the post to pause for 1 minute at noon each day to pray for peace.

SIX HUNDRED GROUPS ENDORSE

The resolution was adopted, and the news spread.

Except for the postage furnished by Mr. L'Heureux, there has been no concerted propaganda; yet more than 600 organizations have adopted the same or similar resolutions. Mr. L'Heureux informs me that he has received 6,400 letters from 16 countries; there is strong expectation that the resolution will be proposed and adopted at the next national American Legion convention; and there has been intimation that if this is done President Truman, the No. 1 Legionnaire of the country, will endorse the proposal.

Mr. L'Heureux is a veteran officer of our Foreign Service, who has spent many years in the consular and departmental service. The greatest impression on his mind and soul was made by 10 years of consular service in Europe.

He conceived a hatred for the brutality and waste of war, and decided that physical armament was not enough to guard the world against its ravages.

From a single minute of prayer by a vast number of people all over the world, he decided, would spring a unity of thought and purpose which would give a moral armament against the hatreds and quarrels from which wars come.

I wish to endorse the idea, Mr. Speaker, and I wish to draw to your attention the fact that already, less than a year after its first public introduction, the

idea has found approbation among people of all creeds—Protestant, Catholic, and Jew. It is nonsectarian, and the idea is free. When Mr. L'Heureux is told by people that they want to join he tells them that all they have to do is to pray—he wants no money, no fame, no thanks.

Under consent, I am inserting a brief outline of the proposal's history, including text of the original resolution; text of a resolution adopted by the grand lodge, B. P. O. E., at Cleveland; a letter from Bernard Weitzer, Washington representative of the Jewish War Veterans; and a brief biographical sketch of Mr. L'Heureux.

PRAYERS-FOR-PEACE MOVEMENT

RESOLUTION

"Having complete confidence in the ability of our fellow men, with the aid of Almighty God to establish a just and enduring peace in the world,

"We, the members of the Last Man's Club, William H. Jutras Post, No. 43, American Legion, do hereby unanimously resolve to pause for 1 minute in the midst of our daily task, at 12 o'clock noon each day, and, raising our heart and mind toward God, ask Him to help us adjust our international differences to enable the nations of the world to secure an equitable and abiding peace; further,

"We urge that this movement be endorsed by all the spiritual, civic, and business leaders in the United States, and that a similar resolution be adopted and implemented by every organization in our country to the end that this custom may become universal in effect."

ORIGIN

The prayers-for-peace movement sprang, spontaneously, with the adoption of the above resolution October 28, 1948. It was first suggested by a veteran American Foreign Service Officer who had recently spent more than 10 years in Europe and who is convinced that, in addition to demonstrating that the United States is prepared and determined to fight, if necessary, for the preservation of liberty, something tangible should be done to correct certain widespread mistaken impressions abroad by an unmistakable manifestation of the true character and ideals of the American people.

PURPOSE

Aside from the well-recognized efficacy of prayers for peace, the realization of this national custom would provide unity of thought and unity of purpose; it would give moral encouragement to the millions who, for a brief space after the war, enjoyed the illusion of liberty but who now, instead of building their lives in security and peace, look to the future with dread; it would demonstrate that the masses of the American people are essentially God loving, God fearing and peace-minded. Through the Voice of America, for example, peoples in other lands could be increasingly encouraged to join us, spiritually, in the accomplishment of our commonly desired objective: peace.

SPONSORSHIP

The plan was conceived and implemented by war veterans. It is affiliated with no denomination or faith. Each person is invited to offer his prayer silently, in his own chosen manner. Every person, regardless of race, color, or creed is urgently requested not only to endorse the plan personally but also to bring it to the attention of every group with whom he associates to the end that this custom may become universal in effect. The resolution quoted above may be adapted to any group by substituting its name for the Last Man's Club, William H. Jutras Post, No. 43, American Legion. Business firms and other organizations are uregd (1) to adopt this or a similar resolution, (2) to reproduce this or a similar circular and (3) to circulate it as widely as possible.

SCOPE AND SPREAD OF MOVEMENT

Since October 28, 1948, the prayers-for-peace movement has spread to many States and to several foreign countries. Scores of organizations, including American Legion Posts, the Americanism Committee of the Army and Navy Union, individual units of the Gold Star Mothers and of the Blue Star Mothers, the Manchester Rotary Club, private firms, student bodies of schools and universities and church groups have adopted the above or a similar noon-day-prayer resolution. Commendatory editorials have been published. The Governor of the State of Michigan in a proclamation endorsing the movement stated: "I * * * do urge that the people of Michigan adopt this proposal and that individuals, schools, churches, and civic organizations join in this Nation-wide daily prayer program for peace and good will."

PROMOTION AND COORDINATION

Additional information regarding this movement may be obtained from the Chairman, Prayers-for-Peace Movement, 5201 Thirty-eighth Street NW., Washington 15, D. C. Personal endorsements and comments, as well as copies of any similar resolution that may be adopted by any club, firm or other organization may also be sent to the chairman.

SELECTED COMMENTS

The Manchester Evening Leader, in commending the Last Man's Club for adopting the prayers-for-peace resolution, stated, "It is fortunate for all mankind that there are those among us whose spiritual faith still stands as a formative bulwark against the rise of materialism and godlessness. There has never been a time in our history in which man was in greater need of spiritualistic inspiration and help in meeting the grave problems that have become a part of our day-by-day life."

Bishop Matthew F. Brady, of Manchester, hearing of the suggestion, said: "It is a pleasure to endorse and to encourage this movement which leads men to realize the power of God and the dependence of all humanity upon His divine omnipotence in a matter which so vitally concerns their present lives and the lives of future generations. May the King of Peace listen to prayer so devoutly recited and grant the favor of peace to the disturbed minds of all."

A prominent professor at the University of Notre Dame commented: "The plan is so easy to understand; so plain and simple; so brief to carry out; so true to man's nature as a child of God; so terrifically needed for life, liberty and the pursuit of happiness. This clear-cut, naturally and supernaturally, understandable, workable, personally appealing plan captured and captivated me. It seems also to be catching the considered fancy of people all over the land. May it win everybody everywhere!"

The Takoma Park Journal, in commending the members of the Cissel-Saxon Post, No. 41, American Legion, at Silver Spring, Md., for having adopted the resolution, stated: "We commend the Legionnaires for this action in a day when wars, people and plans seem only to beget the very thing we seek to avoid. Magnificent as we are in war, so futile are we in peace. * * * Is it not time all citizens put aside wishful thinking, and united, call in the Master Planner?"

The following resolution was adopted by the members of the Benevolent and Protective Order of Elks of the United States of America at a regular session of the annual meeting of the grand lodge, B. P. O. E., held in the city of Cleveland, Ohio, on the 13th day of July 1949:

"Whereas two dreadful wars and the present disconcerting international circumstances have left this world in confusion; and

"Whereas mankind seems unable to find a basis upon which to build a happier understanding among the nations of the earth: Be it

"*Resolved*, That we, the members of the Benevolent and Protective Order of Elks of the United States of America, a fraternal organization, at a regular session of the annual meeting of the grand lodge, B. P. O. E., held in the city of Cleveland, Ohio, on the 13th day of July 1949, approve the prayers for peace crusade, which was originally proposed by the Honorable Herve J. L'Heureux at a meeting of the William H. Jutras Post of the American Legion at Manchester, N. H., October 28, 1948, and which has received wide approval since that time; and be it further

"*Resolved*, That all members of the Benevolent and Protective Order of Elks are urged to participate in this movement by joining in 1 minute of prayer at 12 o'clock noon, each day, and that each of us, in his own way, will ask God to reveal to mankind the way to peace on earth and good will to all men, so that man's mind shall be receptive to God's way and we can thus speed this intelligent move toward peace through prayer."

This resolution was submitted by New York Lodge No. 1.

JAMES E. MULCAHY,
Exalted Ruler.

JEWISH WAR VETERANS OF THE
UNITED STATES OF AMERICA,
Washington, D. C., May 31, 1949.

Mr. HERVÉ L'HEUREUX,
Chief, Visa Division,
Department of State,
Washington, D. C.

DEAR MR. L'HEUREUX: I was delighted to note the enclosed article in the Washington Star last evening on the Prayer Program of which you told me last time we saw each other. I also heard Earl Godwin quote liberally from the article in his radio talk last evening. It is the best thing I have heard him say on any radio program.

I am happy to see that your suggestion is getting public attention. It is certain that prayer as you suggest, can clear the chaos from which our world is struggling to lift itself.

The more I think of it, the more I am determined to bring up your proposal at our national encampment in Miami, October 19. Please send me a few additional copies of the mimeographed material covering your talk at Manchester, last October 28. I can put them to good use.

With best wishes.

Cordially yours,

BERNARD WEITZER,
National Legislative Representative.

BIOGRAPHICAL SKETCH ON HERVE J. L'HEUREUX, ORIGINATOR OF PRAYERS-FOR-PEACE MOVEMENT

Born: March 6, 1899, at Manchester, N. H.

Education: A. B., George Washington University (1925); LL. B., University of Detroit (1935).

Military record: Served in United States Infantry; wounded in action; received Silver Star.

Occupation: Has been an American foreign service officer since 1930; served as consul at Windsor, Ontario; Stuttgart, Germany; Antwerp, Belgium; Lisbon, Portugal; and Algiers, Algeria, respectively, from 1930 to 1944, and as consul general at Marseilles, France, from 1944 to 1947. During 1943–44, also served as member and secretary of the North African economic board, as executive-administrative

officer of the civil affairs section, Allied Force Headquarters, at Algiers, and as acting chief civil administrator for north and west Africa. Presently a foreign service officer class 1, and assigned as chief of the visa division of the Department of State.

Member following organizations: American Bar Association, New Hampshire Bar, Delta Theta Phi Law Fraternity, American Legion, Society of American Legion Founders, Last Man's Club, American Legion, La Societe des 40 Hommes et 8 Chevaux, Post Mortem Club, Yankee Division Veterans Association, New Hampshire State Society, American Foreign Service Association.

Foreign Policy Endangered

EXTENSION OF REMARKS
OF
HON. LAURIE C. BATTLE
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. BATTLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial that appeared in the Birmingham News on July 27.

FOREIGN POLICY ENDANGERED

The maintenance of American foreign policy since the end of World War II has been no easy matter. In its conception and shaping, fortunately, it has been for the most part bipartisan. But through every session of Congress it has had to run a barrage of criticism and attempts at alteration.

Now again several of the most important features of policy are in trouble again in Congress. This week a strained and irritable Senate has been considering appropriations for the second year of the European recovery program. And various Senators, with particular axes to grind, have sought to laden the appropriations bill with restrictive amendments.

One of the amendments would require that up to about $2,000,000,000 of the proposed $5,723,000,000 program be spent for surplus United States commodities. This would rid us of certain surpluses, and they might be welcomed in Europe by consumers; but it would set back carefully worked out European plans for basic reconstruction. Another amendment would give Spain $50,000,000 in aid; this would run contrary to established American policy and European feeling about the Franco regime in Spain. Other amendments would provide for cuts in the over-all funds; these would have the effect of slowing down the program.

Democratic Leader LUCAS says he feels sure that efforts to chop away these amendments will be successful. It is to be hoped that the program's supporters will succeed.

The arms-for-Europe program is running into even greater difficulties. Congressmen appear to fear that they are being rushed in this matter, since the bill was presented so soon after the Senate's ratification of the Atlantic Pact.

It is on this program that bipartisan policy is in greatest danger of breaking down. Senators VANDENBERG and DULLES, the leading Republican foreign-affairs experts, are reported to be working on a plan to cut this $1,450,000,000 program by more than half.

Even the Democrats in Congress are not sure as to what should be done. Senator GEORGE, for instance, who usually goes along with the administration on foreign policy, thinks that action on the arms-aid program should be postponed until the defense council provided in the treaty is set up and has studied integrated defense requirements.

The American public, we feel, is quite well sold on the wisdom of continuing the European recovery program unimpaired. As for the arms-aid program, there would seem to be a need for more information and better understanding.

There should be better understanding of the attitude in western Europe toward the military program. The European governments would like to have the aid certainly, but the American public should try to understand the ancient fears back of their eagerness. Doubts about American policy still linger in France and Italy especially.

The right kind of debate in Congress should serve to clear up much about the arms-aid program.

New Naval Commandant Proves Admirals Can Swim

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. LANE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Boston Sunday Post of July 31, 1949:

NEW NAVAL COMMANDANT PROVES ADMIRALS CAN SWIM—REAR ADMIRAL THEBAUD LIKES RESERVES—HAS FINE RECORD OF WAR SERVICE—WAS EXECUTIVE OFFICER FOR COOLIDGE

(By Edward T. Martin)

Scuttlebutt is the sailor's term for a rumor and the latest scuttlebutt seeping around first naval district echoes the warning to "stand by for a tight ship."

Last concerned, perhaps, is the humble seaman second class whose major problem is surviving until the next pay call.

But whether a man rates extra embellishments on his cap visor or is down the scale where the left sleeves are worn bare above the elbow, first naval district personnel have a new skipper who shows all the earmarks of being firm but fair.

In traditional Navy pomp, Rear Adm. Leo H. Thebaud, standing on the deck of the frigate *Constitution* moored at the Boston Naval Shipyard, relieved Rear Adm. Morton L. Deyo from his duties as commandant, under a roaring hot sun Friday morning.

Admiral Deyo goes into retirement with a promotion in rank due to his long years of service.

For 40 seconds, while flags were being changed abroad the *Constitution*, the first naval district was without a boss man.

And as the orderly ranks of sailors in their summer whites stood stiffly at attention while the out-going skipper was properly saluted and the new chief "piped over the side," many a speculative eye wondered what the incoming admiral would be like.

HIGH PRAISE

A change of command, especially in the tradition-bound Navy harbors all sorts of speculation and sacred password policy is bantered about from porthole to porthole, wherever two or more sailors congregate.

"D'ja get a look at the new commandant; tough, isn't he," one sailor decided prematurely, as he broke ranks after the ceremony.

He was passing judgment on looks alone. The new admiral, who comes to New England from the post of inspector general of the Navy, has a firm jaw and a determined pair of eyes. But his sharp-chiseled features conceal a broad sense of humor a quick wit.

A more unusual note—he has a high regard for "the reserves."

"My immediate intention," he admitted as he sat self-consciously in a land-locked leather-bound chair in his air-conditioned office at district headquarters in the former Fargo building, following the ceremonies, "is to devote time and attention to the reserves.

"No one can capably estimate the tremendous value the Reserve officers and enlisted men have been to the Navy in the last two wars."

This, coming from a "regular" who, before he was old enough to vote, had made the Navy his career, is a statement of no small significance.

The new admiral is a stock pile of frank contentions. He does no hedging and when a query is put to him, he'll churn it around in his mind briefly, then answer in a clear, concise manner.

The 59-year-old admiral, who admits he never could get used to duty ashore, says he looks forward to administering the affairs of the First Naval District.

"No other district," he maintains, "from the view I had as Inspector General, is in better shape than this one. It's a tribute to Admiral Deyo's hard work and the quality of the men who served under him."

Traces of coal-black hair still assert themselves around the admiral's eyebrows and in the thinning strands along his scalp. From the healthy coat of tan, it's evident he wears a hat only when naval custom requires.

"Off-duty I walk a lot," he told us. "And when I walk I don't bother sporting a headpiece."

The subject of hats surreptitiously drifted into a discussion of "brass hats" and "the caste system." About these, the admiral had this to say:

"It's history repeating itself. I remember coming ashore as a lieutenant, after the first World War and running into the same attitude. I was with a couple of friends and we were standing in Times Square at the time. One of the group asked a police officer where we could catch a taxicab to take us uptown. He told us, but added 'navy brass, huh? When are you guys going to get out of uniform and go to work?'

"Aside from a few malcontents, and others who probably were irked by some officers who didn't handle the responsibility of leadership properly, I believe a lot of the trouble is stimulated by those who don't wish well for the country and are pleased to have ammunition for forcing disparaging and discouraging remarks against its leaders."

Admiral Thebaud is the twenty-fourth commandant to hold the post of head of this district. He comes into "Cal Coolidge country" with another contribution to the legend of that silent man.

"I was executive officer of the Presidential yacht, U. S. S. *Mayflower*, during part of 1928 and 1929, the last months that Mr. Coolidge served in the White House and the first part of the Presidency of Herbert Hoover.

"Neither were sailors, least of all Coolidge. About the only times he took a yacht ride were to escape from Washington. Once in a while, for reasons of protocol, he'd come aboard with a dozen dignitaries and guests for a short ride down the Potomac. On one such ride, the steward came forward to our quarters to announce that dinner was being served and that the President was sound asleep on his couch. All of us were reluctant to wake him and finally we inveigled the Presidential physician to rouse him from his slumber.

"He awoke very annoyed. Coolidge was like that. I suspect he was bored to extinction with entertaining. He seldom said a word to anyone except a grunting 'hello' and

'goodby.' His wife was the opposite, perfectly charming."

Despite his proximity to the 60 mark, the admiral appears in trim physical condition. The reason for this, he gives, is his chief recreation, swimming. This comes as startling revelation to thousands who believed that Navy admirals were incapable of navigation through water and preferred to "go down with their ships" rather than be exposed as nonswimmers.

"That's an old-time fallacy," he quips, "probably stemming from the fact that early admirals were too fat to learn to swim."

The admiral was graduated from Annapolis in 1913 and was aboard the *Wyoming* during the occupation of Vera Cruz the following year. Except for a brief period, when he transferred for torpedo instruction, he was attached to the U. S. S. *Wyoming* until April of 1917, when he was given command of the destroyer *Paul Jones*.

GALLANT MANNER

He earned the Navy Cross as "CO" of the *Paul Jones*. The destroyer was acting as escort to troop and merchant convoys out of Hampton Roads, Va., and also patroling against enemy subs. On the night of June 30, 1918, the U. S. S. *Henderson*, while under convoy, took fire. It became necessary to transfer troop passengers to another vessel.

"The *Paul Jones*," the citation reads, "transferred the troops in a skillful and gallant manner."

His military versatility is expansive. In the early twenties he was instructor in the department of seamanship at the Naval Academy. He commanded the destroyer *Paulding* during the second Nicaraguan campaign and was executive officer aboard the presidential yacht *Mayflower* before returning to the Academy as an executive member.

After another interim of sea duty, the admiral became attached to Naval Intelligence and assigned service to the American Embassy in Paris, and at Madrid, as assistant naval attaché. He also was assigned for a time at Lisbon, Portugal. He's an expert at French and a qualified interpreter.

When he came back to the United States in 1935 he was given another destroyer command and then returned to the executive section of the Academy.

With war guns booming once more across Europe, Admiral Thebaud, in the summer of 1940, was made commander of destroyer squadrons and later assigned with Task Force 24. He participated in the Battle of the Atlantic.

His next action, after he took command of the war-famous U. S. S. *Boise*, in early 1943, earned him the Legion of Merit, with Gold Star and Oak Leaf Cluster. The *Boise* bombarded shore positions in the Sicily assault and supported the landing and initial advance of Army troops.

Then it sailed over to aid the amphibious assault on the west coast of Italy. Admiral Thebaud guided the *Boise* through enemy mined waters, the citation explains, under heavy artillery fire and aerial attack, effectively assisting in the maintenance of beachheads against determined counter attacks. The *Boise* likewise bolstered the landings of the Seventh Army behind enemy lines in Sicily.

The shooting war wasn't over for him, even after he returned to Washington, to the Bureau of Naval Personnel. This proved merely a slight breather before he was off again, this time to the Pacific, where, in the fall of 1943, he became commander of Cruiser Division 10. And won another gold star.

As cruiser commander and also head of a support unit to a fast carrier task group, he took part in the amphibious assault in the Marianas and Bonin Islands, and slugged it out with the Japanese in the Battle of the Philippine Sea.

Under his command, the planes attached to his vessels rendered invaluable service in rescuing carrier pilots and air crewmen forced down in enemy territory.

MANY DECORATIONS

The Navy called him back to Washington a year later to make him Assistant Chief of Staff to the Commander in Chief, United States Fleet, as well as Assistant Chief of Staff (Intelligence) and Director of Naval Intelligence.

When the war ended, he returned to an old post in Paris, this time as naval attaché and naval attaché for air at the American Embassy there and in Brussels, Belgium. The Navy made him deputy general in September of 1946, a senior member of the Naval Review and Clemency Board in 1947, and Naval Inspector General 2 months later.

His blue serge would sport more varieties of color than confetti if he wore the ribbons he's entitled to hook to his chest. What's more, sheer weight along would give him a sharp list to port.

In addition to the Navy Cross, the Legion of Merit with two Gold Stars, Oak Leaf Cluster, Combat Distinguishing Device, and Commendation Ribbon, he rates the Mexican Service Medal, the Victory Medal, Destroyer Clasp, the Second Nicaraguan Campaign Medal, the American Defense Service Medal, Fleet Clasp, the European-African-Middle Eastern Area Campaign Medal, the Asiatic-Pacific Area Campaign Medal, the American Area Campaign Medal, the Philippine Liberation Ribbon, and the World War II Victory Medal.

For added luster, he has the Legion d'-Honneur, rank of commander from the Government of France, and the Order of the British Empire, honorary commander (military division), from the Government of Great Britain.

OLD SEADOG

He's married to the former Eleanor Laurie McCawley, of Haverford, Pa. The Thebauds have a grown daughter, Diana Maris.

Asked how he enjoyed being assigned duties ashore, he chuckled first before he replied:

"I joined the Navy to go to sea. But, remember, I'm getting on in years. You can call me an old sailor, or, as you prefer, an old seadog. Actually I have less than 3 years to go before being put to pasture.

"The Navy is sending a lot of young admirals to sea, which is a good thing. They'll have the experience if, God forbid, another war happens."

Meanwhile, whenever there is time from official duties to enjoy "liberty ashore" the admiral will find his Boston residence at the commandant's quarters in the naval shipyard better situated geographically than Washington, for visiting his partial residence at Murray Bay in northern Quebec.

He might even, once cooler weather returns to the Hub, make use of the punching bag Admiral Deyo used to manipulate to keep in trim. That's provided Admiral Deyo didn't take it with him into retirement.

H. R. 4403

EXTENSION OF REMARKS
OF
HON. J. HARDIN PETERSON
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. PETERSON. Mr. Speaker, with reference to the bill, H. R. 4403, the question has been asked me by Members as to whether it would apply to the TVA or the areas which are administered by the TVA. In order that there may be no question, I am making this statement as chairman of the committee which is handling the legislation. H. R. 4403 does not and is not intended to cover the TVA or areas under the Tennessee Valley Authority.

Is Wire-Tapping Legal?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. MULTER. Mr. Speaker, I direct the attention of my colleagues to the following article entitled "Is Wire-Tapping Legal?" written by E. A. Harris, which appeared in the New Republic of August 1, 1949:

IS WIRE-TAPPING LEGAL?

(By E. A. Harris)

Wire-tapping has flourished in the United States ever since a telephone lineman, half a century ago, joined the New York Police Department and demonstrated the gentle art of listening to the conversations of suspected criminals. The telephone company, from a sense of public duty, cooperated fully with the police until 1916, when the public caught on to the covert practice and raised such a howl that the phone company withdrew its police guidance. By this time, however, the Federal Government had moved into the lush new field of eavesdropping, initially in its search for aliens. Despite doubtful legal grounds and debatable ethics, it has been going strong ever since.

Before hastening to condemn Attorney General Tom C. Clark, Director J. Edgar Hoover of the Federal Bureau of Investigation, and the intelligence officers of the armed services who also employ wire-tapping, listen to their case. For many years they have sought, unsuccessfully, clarification of the law on the subject. They have been in the forefront of the fight for legislation that would not only legalize Federal wire-tapping in limited security inquiries, but would expressly forbid its use otherwise, in order to guard against abuses.

Moreover, for 15 years, Attorney Generals have interpreted the Communications Act of 1934 as no barrier to wire-tapping by Federal agents, provided the information is not made public or divulged to anyone outside of the proper Government authorities. It is pointed out further that Franklin D. Roosevelt, shortly before the United States entered the last war, personally authorized Federal wire-tapping in cases of espionage, sabotage, kidnaping and extortion. It is undeniable that use of the device, however reprehensible, has assisted the FBI in solving crimes, even though the evidence thus obtained is inadmissible in Federal courts.

Aside from legal questions, the basic issue revolves around the danger to a free society inherent in any use of wire-tapping. Is it justified in peacetime under any circumstances? In an effective democracy, can the tactics and methods of a police state be licensed without running the risk of polluting the very roots of that democracy? Can such methods be adequately restricted to limited security cases?

President Roosevelt, in authorizing its use, was careful to point out that the problem of balancing the need for law-enforcement agents with the need for protection of citizens against abuse of such power raised "the

most delicate problem in the field of democratic statesmanship." The Federal Government has no statute governing the use of wire-tapping, but even New York State, which took the lead among the Commonwealths in applying a policy of supervised wire-tapping for crime detection has found the State statute in large measure abused or ignored.

The constitution adopted by New York in 1938 set forth safeguards, under the bill of rights provision for searches and seizures, against "unreasonable" interception of telephone and telegraph communications. The legislature later provided that wire-tapping could be indulged in by law-enforcement officers only upon issuance of ex-parte orders by the courts or by the district attorney or high-ranking police officials.

But a study prepared recently by Margaret L. Rosenzweig for the New York State Bar Association concluded that "the right to be secure against unreasonable interceptions conferred by the New York Constitution and statutes is a hollow right in the present status of the law."

At hearings before the New York County Criminal Courts Bar Committee last autumn, Special Sessions Justice Frank Oliver testified that delegates to the constitutional convention in Albany had believed the requirement of a court order for wire tapping would protect New Yorkers against abuse. "No one had imagined," he said, "that such orders would be issued on trivial grounds or in cases involving only suspicion of a misdemeanor or offense."

He went on:

"Today, however, a man's home is not his castle in New York. It is just an uncovered garbage can for the police to pick over. * * * The mere mention of a warrant breaks judicial ribs with laughter. If you want to see a policeman roll on the floor, just mention the search and seizure provisions of the [State] constitution."

If this has been the wire-tapping experience of New York State, where it is governed by statute, what is happening on the national front in this incredible era of suspicion and distrust? Since wire tapping is not authorized under any Federal law, it is up to the Attorney General alone to determine whether telephone tapping by Federal agents shall be permitted.

Tom Clark is as unhappy about this clouded situation as anyone else. Early this year he requested the Senate Judiciary Committee to act on legislation to legalize wire-tapping in specified security cases, and to make such evidence admissible in Federal courts. It was the first attempt by an Attorney General in 7 years to legalize tapping, Congress having refused to pass similar administration bills in 1940, 1941, and 1942. When protests poured in, Clark suddenly withdrew his request, leaving the situation as moot as ever. There is good reason to believe that Clark's backward flip, if not ordered by the White House, was at least approved by the President.

Abandonment of the proposal, however, means only that evidence obtained by the FBI through wire-tapping will continue to be inadmissible in court trials. Your phone may still be tapped, with the advance approval of the Attorney General, if any of your friends or casual acquaintances are suspected of having any information relating to espionage or sabotage. It is certainly conceivable that the telephones of thousands of innocent citizens may be tapped for hours, days, or weeks as the result of erroneous and sometimes anonymous spy tips to security agents.

Two questions recur in the controversy over wire-tapping: (1) Is it being carried on illegally by the Federal Government? (2) Is it wise? Do the ends justify the means?

There is, of course, no way of telling just how effective wire-tapping has been to the Justice Department in cracking security cases, precisely because information gained from the practice is inadmissible in Federal courts. By the same token, no one outside of the top Government hierarchy knows how many telephones throughout the Nation are being tapped. The police state may be encroaching, but by its very nature it cannot be dissected and evaluated.

Therein, perhaps, lies the great danger. Granting that the end purposes of the Justice Department are highly commendable, who can guarantee that the head of the Department always will be an official of flawless judgment and character? What would this instrument for crime detection become in the hands of ruthless and reactionary officeholders? Once an invasion of privacy is accepted, who can say with assurance that it will not burgeon, through abuses and excesses, into a political weapon against liberals or conservatives, depending upon the party in power?

And if it is aimed chiefly at Communists or their followers and sympathizers, the suspicious characters, viewed through the eyes of some future A. Mitchell Palmer, become numberless. Since advocates of public housing have been denounced as Communist dupes, Senator TAFT might be suspect. Proponents of rent control, health insurance, minimum wages, civil rights, public utilities, and river-valley developments, not to mention credit restrictions, would all be fair game for any free-enterprise super-patriot in Clark's place, for such measures have been termed communistic.

FBI Director J. Edgar Hoover testified before a House Judiciary Subcommittee in 1942 that he feared abuses by the great bodies of new and inexperienced employees of the Federal Government if wire tapping was not strictly controlled. It was abuse of the wire-tapping authority, he asserted, that had prompted public reaction against the practice. And Justice Hughes called wire tapping an intolerable "dirty business."

When Federal officials speak of authority, they are hard put to cite any specific power to indulge in wire-tapping, except the tenuous approval granted them by President Roosevelt. The approach of the Government is distinctly negative—that tapping is not expressly forbidden by the Constitution or by Federal statute. This seems tantamount to saying that the founding fathers, with their Bill of Rights, did not foresee and therefore did not disapprove of poison gas, germ warfare, and atom bombs.

In the absence of any specific wire-tapping prohibition in the Constitution, resort was made, in the case of Olmstead versus United States, to the fourth amendment, barring unreasonable search and seizure. Here the Supreme Court ruled, 5 to 4, that the guaranty against unreasonable search did not ban wire-tapping, since there had been no actual house entry and no physical seizure. The restricted legal point at issue did not embrace the Court's judgment on wire-tapping as a method of obtaining evidence, but even so Justice Brandeis was disturbed by its implications. In his dissent, he wrote: "Can it be that the Constitution affords no protection against such invasions of individual security?" As to the end justifying the means, he wrote: "Experience should teach us to be most on our guard to protect liberty when the Government's purposes are beneficent. Men born to freedom are naturally alert to repel invasion of their liberty by evil-minded rulers. The greatest dangers to liberty lurk in insidious encroachment by men of zeal, well-meaning but without understanding."

Government lawyers themselves have acknowledged from time to time that the legality of Federal wire-tapping is questionable. Attorney General Francis Biddle, in February 1942, unsuccessfully sought legislation authorizing wire-tapping in certain security cases on the plea that it would "clarify a doubtful field." At the same congressional hearings, James L. Fly, then Chairman of the Federal Communications Commission, testified that in his opinion the Communications Act of 1934 made all wire-tapping unlawful.

That act clearly provides that "no person, not being authorized by the sender, shall intercept any communication and divulge or publish the existence, contents, substance * * * or meaning of such intercepted communication to any person." In 1937 the Supreme Court held, in the case of *Nardone* v. *United States*, that the prohibition in the act was applicable to Federal agents and that recordings obtained by wire tapping could not be submitted as evidence in Federal courts.

Despite the wording of the Communications Act and the ruling in the Nardone case, the Justice Department for many years has maintained that the act does not bar wire tapping completely, and FBI agents as well as Military Intelligence officers have continued to employ the eavesdropping device.

Convenient interpretations of the Communications Act have been made by the Attorney General's office. When Oscar Cox was Assistant Solicitor General, he told a House committee, on March 24, 1942, that "the question of divulging is whether it is divulged to an arm of the Government or to the public generally." But the act itself says nothing of the kind; one can read such latitude into it only by the most gymnastic stretching of the imagination.

As the Justice Department sees it, then, the act does not bar a report by an agent to his superior on the context or meaning of tapped telephone conversations. The agent is not "divulging" the information.

The Department insists that this is perfectly legal and proper. For authority it cites the uniform opinions of various Attorneys General. If the Constitution and the Communications Act are being violated by Federal wire-tapping practices, presumably criminal proceedings would have to be initiated by the Justice Department against the Justice Department.

Secretary Brannan Discusses Problems of Dairy Farmer—Hoover Commission Shares His View—Secretary Backs Cooperatives

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. BIEMILLER. Mr. Speaker, on Sunday, July 31, Hon. Charles Brannan, the Secretary of Agriculture, addressed a crowd of over 10,000 people in Juneau, Wis. The meeting was sponsored by the farmers' cooperatives of Dodge County and drew attendance from several Midwestern States. Secretary Brannan's analysis of the problems dairy farmers are facing is most illuminating, and under leave to extend my remarks, I am inserting it in the RECORD. I commend it to the attention of my colleagues, particularly those coming from dairy States:

TOWARD A PROSPEROUS DAIRY-LAND

It is good to have this opportunity to talk with you about the future of dairy-land agriculture.

This is not just a matter of income to you dairy farmers. It is not, as cynics would put it, a question merely of "who gets what" in

the rough-and-tumble of business. The future of dairy-land agriculture is the future of many thousands of families; it is the future of millions of human beings, each endowed by their Creator with inalienable rights and with potentialities for enhancing the fundamental values of human life. The future of dairy-land agriculture is in no small way related to the health and welfare of the millions near and far who are dependent for life sustenance upon the land and the people of dairy-land—upon you, your ability, your determination, your opportunity, and your particular portion of the good earth.

You, in your mind, and I in mine know the ideals and real values we seek. Even though we may not succeed in stating them to our own satisfaction, they are a part of us—a driving force prodding us forward in our effort to find the ways and means of achieving our basic purposes.

The ways and means are never easy to find. They are a constant challenge to our ingenuity. Proposed ways and means are constantly subject to sharp examination and controversy, as they should be. But the strength of our purpose is the guaranty that we shall find the ways and means through which to unite our efforts and make progress in the common cause.

Fortunately, many people are agreed upon certain foundation principles upon which we can build.

As a starting point for our discussion of ways and means, I want to state two related beliefs which I hold very strongly and which I believe provide a basis for common understanding.

The first is this: I believe in the farmer cooperative.

I believe in the principle of self-help, which the cooperative embodies.

I believe the organized cooperation of farmers is essential to the maintenance of business competition, for the farmer meets concentrated economic power coming and going—when he buys and when he sells.

To be even more specific, I believe in the dairy co-op, and to the full extent of my power I shall work to keep the rules fair and the opportunities open for dairy cooperatives.

The related belief is this: I believe that dairy farmers should have price support which is just as positive and just as high in relation to any given standard as that enjoyed by any other farmers in the country. I believe this is necessary not only in the interests of the dairy farmer and his family but also in the interest of all our people.

Here in Wisconsin, the milk, cream, and other dairy products sold by farmers account for more than half of all the farm income. And in the Nation as a whole, the farm dairy enterprise last year brought in 14½ percent of all farm income. Farm dairy production is consistently at or near the very top of the list of commodities on which American farmers depend for cash income. Thus, it is as plain as anything can be that we will not have an adequate price support system until milk is given the status of a basic agricultural commodity in the price support system. We have temporized and dilly-dallied long enough, giving lip service to the need for action but not meeting the issues involved.

The difficulty is in getting agreement on the methods for doing the job—the methods of treating milk as a basic farm commodity.

I personally believe that a combination of methods is required. The method I have recommended which has received most attention is the production payment. Because there is so much controversy about this, I am glad to have this opportunity to set the record straight.

I ask you to make a mental note of the points I am about to make because I want to refer to them again in a particular way. I am going to try a little experiment on you.

PRODUCTION NEEDED, NOT RESTRICTION

Point No. 1 is a bit of background about nonstorable commodities.

"The nonstorables—products which are either highly perishable or which can be stored only at heavy expense—include fruits, vegetables, meat animals, milk, butterfat, poultry, and eggs. Production of these commodities is geared largely to domestic demand, and this demand fluctuates with employment, wages, and other factors which change mass purchasing power. We can hope to increase per capita consumption of all or most of these products in a healthy economic climate.

"When it is necessary to apply supports to any of these nonstorable commodities, I recommend that we rely mainly upon production payments.

"The term 'production payment' means exactly what it says—a payment to the farmer to go on producing to meet genuine consumer need, rather than restricting output short of that need.

"Under this system the farmer would be paid in cash the difference between the support standard for commodities which he produced and the average selling price for those commodities in the market place. Because the payment would go directly to the farmer, it would be an efficient support operation.

"Another big advantage is that the system would induce efficient production and marketing, because any farmer who could exceed the average market price by quality of product or good bargaining would benefit to the extent that his selling price exceeded the average market price." (Remember that the production payment would not cover the difference between the support and each individual's selling price but rather the difference between the support and the average selling price. Nobody would have to check the individual's selling price.)

"A third advantage of this system is that it would allow farm income to remain at a high enough level to sustain abundant production while retail prices sought their supply and demand level in the market place. This level is bound to be reasonable for consumers because of the larger supplies brought out."

So much for that background. Now point 2:

"It is obvious, of course, that the use of production payments must be qualified in such a manner as to avoid extremely depressed prices in the market place or a wasteful use of soil resources." (In other words there is no intention of pushing prices below the supply and demand level.)

Point 3: "Under the proposed program with regard to milk and its products, we would continue full use of present marketing agreements and orders, extend those programs as and when producers and handlers desire."

MORE MILK PRODUCTS AVAILABLE

And point 4: "Continue to use purchases of dairy products as a price support method wherever this method would be most economical and otherwise consistent with the public interest. We would not, however, make purchases for which we could not find acceptable outlets. We would use the purchase method mainly to relieve spot surpluses and seasonal problems which could be met most efficiently in this way. Whenever any large-scale operation becomes necessary, we should use the production payment method. As a rule, this could cost the Government about the same amount as would purchases and would make more milk and milk products available to consumers at lower prices than would otherwise be the case. It would also call for a greater consumption of our grain and forage production."

Point 5: "The payment method could be used, if Congress so decided, not merely to support prices but directly to encourage greater production and consumption of milk.

"Let me also point out that this is a price support recommendation—not a consumer subsidy proposal. I have merely recommended those methods of supporting farm prices which will do most to lick the surplus problem by encouraging consumption. There is a considerable difference between (a) subsidizing consumption with the hope that the benefit will trickle down to the farmer and (b) supporting farm prices in ways which will give consumers the most for their money. I am, of course, recommending the latter. The payment method for use on perishable commodities will enable us to go on producing and consuming somewhere past the level where straight dollar demand would temporarily stop us. That enables genuine demand and our real productive power to exert greater influence in our economy."

PRICE CUT IS REGIMENTATION

Point 6: "I state categorically * * * that the legislation I have recommended is less restrictive than any so far enacted by virtue of the fact that it offers more encouragement to the abundant consumption and production of farm products and, thereby, offers more protection against surpluses. This program would increase inducements for desirable adjustment without ordering them.

"Holding over farmers' heads the threat of a price cut is the worst kind of regimentation. And it offers them nothing in return for being starved into submission."

Point 7: "Why is it * * * that we are divided over an operating method * * *? I think it is mainly because many people have not yet realized there is a practical alternative calling for much less real interference with farmers' operations and which will permit all of our people to share in this country's great productive capacity.

" * * * there is an obvious advantage in this for the consuming public and for handlers, dealers, and others whose business depends largely on the volume of farm production and marketing."

Point 8: "This legislation is based on the belief that farm returns have already declined about as far, in relation to industrial and labor returns, as can be permitted without serious consequences for farmers and for the general public." (Note that I said in relation to industrial and labor returns. If industrial prices and labor rates decline, the farm price support would also decline.)

Now let me pause and remind you of something. When I started listing these points, I told you I was trying an experiment. What I have just done was to read excerpts from the testimony I have given before the congressional committees on agriculture since April 7. I hope it sounded familiar to at least some of you. I am sure it did not sound like what some people have been telling you I said.

Some people have been extremely busy interpreting what I said in their own way, but they haven't suggested that you study my recommendations for yourself. They much prefer that you let them do your thinking for you.

HOOVER COMMISSION RECOMMENDATION

So far as I know they have been conveniently silent on a statement that came from the agricultural committee of the Hoover Commission—the Commission on Reorganization of the Executive Branch of the Government. Here is what that group said:

"Free market for perishables.—The methods for supporting the price of perishable commodities, such as potatoes, put a double burden on the consumer. He is not only required to pay a high price for the product which he consumes but he also pays, through

taxes, the cost of carrying on the price-support program. Under a plan which would permit a free market, greater quantities would be consumed as food, during periods of high production, thus reducing the quantities to be destroyed or diverted to other uses. While the cost of price support might be greater under this plan, the net cost to the national economy would be less. The committee, therefore, recommends that consideration be given to a plan which would permit a free market, for perishable products, with the difference in price made up to the producer in a supplemental payment."

That ends the quotation from the agricultural committee serving the Hoover Commission.

Fortunately, this committee has escaped the criticism which has been leveled at my recommendation—charges of working toward regimentation of farmers, destruction of dairy cooperatives, destruction of milk marketing agreements and orders, fooling the taxpayer, promoting inefficiency and high cost, engaging in partisan political activity, and so on.

I do not mention the recommendation of that committee in an effort to back up my own views but merely to remind you that in the heat of controversy there is danger of overlooking facts and inconvenient opinions.

The reason I am talking to you about this whole matter is that I hope you will think your way through the controversy and do what you believe to be necessary for the future of dairyland agriculture and of the public.

What is the right thing to do? What is right from the standpoint of your customers and fellow citizens—the people who need in its various forms the milk you produce? What is right from the standpoint of your own future?

HOUSE BILL SHORTCOMINGS

The House of Representatives has passed a bill which would postpone settlement of current issues by continuing the present price-support program.

Let's take a look at what this means.

First, it means continuing the present parity formula, which is far out of date and under which the parity prices of milk and milk products are so unrealistic that they have little meaning. According to this formula, milk at wholesale is still above parity and butterfat is almost at parity.

Milk and milk-product prices have come down sharply during the last year, while prices of things you have to buy have stayed high or have even gone up. For example, the House Committee on Agriculture recently pointed out that between March of 1948 and March of 1949 milk cans went up in price by 9 percent, gasoline went up 2 percent, and tractors went up 17 percent.

United States farmers are getting about one-fourth less for their milk at wholesale than they were a year ago and butterfat is down 28 percent on the average. Here in Wisconsin milk is averaging about a third lower and butterfat a fourth lower than a year ago.

The purchasing power of farm dairy products at present prices is already quite a bit below the average of the last 10 years, which included years of low prices and controlled prices, as well as a short period of high prices. Yet the parity formula would indicate, as some big-business interests say, that you are getting more than you are entitled to.

PARITY FORMULA WRONG

There's something wrong with this picture, and one thing that's wrong is the parity formula.

Under the present formula, 90 percent of parity is $3.53 per hundredweight. Under the revised formula in the Agricultural Act of 1948, 90 percent would be $3.68, and there is no guaranty that support would be that high—that's the top limit.

But to keep the buying power of milk from going below the average of the last 10 years, the national average support price would have to be $4.22. I maintain that the public interest requires us to keep the purchasing power of the dairy farmer's milk from going below that average. From the farmer's standpoint, such level for milk is necessary to achieve and maintain balance with grain prices.

Perhaps I am wrong about it. But I am still waiting to hear a logical argument on the other side. At any rate, the parity revisions recommended this spring by Wisconsin's Charley Holman, of the National Cooperative Milk Producers Federation, indicate that the support level I recommended is no more than fair from your standpoint. However, the old formula is still in effect, and that's only one problem.

If there is anything that we in agriculture should have learned from the recent war, it was the fact that the American people have a tremendous capacity for milk and dairy products.

And if there is anything we should have learned from our prewar experience, it is the fact that we need a means of getting more dairy products to the consumer. We never did have a surplus in relation to people's genuine demand. We had a surplus because people had to deny themselves food needed for health.

We will not serve the needs of either the consumer or the dairy farmer by taking great quantities of dairy products off the market, keeping them away from consumers. As I said before, I would retain the purchase and storage method as one price-support mechanism. There are times and places for its use. We can even put first reliance on it. But we must not put our main reliance upon it.

It seems very strange to me that those who want to keep the Government out of business insist in the same breath that the Government must be the biggest of all middlemen in the dairy-product business. One witness before a congressional committee recently said, in this connection, "I think I understand what these people are talking about. They want a market support price because in that process everybody along the line gets a slice of the Government's check." He was talking in favor of delivering the price support directly to the farmer, as we would do if we had production payments.

PRODUCTION PAYMENT PROGRAM NEEDED

Under the payment method, the farmer is sure of getting the benefit of price support that the law intends for him to have. There is no question as to whether a market price will be reflected back to the farmer.

It also seems strange to me when I hear that we must use the Government purchase method in order to prevent production control and (that old overworked epithet) "regimentation." To my simple way of thinking, the best assurance against the need for production control is greater consumption. How does the Government purchase method increase consumption? Are we supposed to throw away what the Government buys so that there will be room to store more of what we produce? Are we supposed to give it away? If so, where is the food-stamp plan to make it possible? Nobody seems to be pushing very hard for that. I can tell you one thing. If we are to support perishables, including your milk, and do it effectively, we must have either a food stamp plan or a production payment program. I consider the payment method to be more efficient, more economical, and more useful to our economy. The same amount of money required for food stamps, if used for production payments, would go farther toward increasing consumption and maintaining farm income.

It is claimed that purchase and storage programs don't cost much money. But I can assure you that if this has been true in the past, it was due to two reasons: First, they didn't provide much price support; and second, there have been Government agencies in the business of giving away farm surpluses. For example, the Federal Surplus Commodities Corporation bought nearly all of the butter sold by the Dairy Products Marketing Association, the DPMA. The fact that this Federal Corporation paid $33,500,000 for the butter was a rather incidental fact brought about by administrative determination. It came out of the taxpayers' pocket, and as far as the taxpayer is concerned it isn't particularly important whether the cost was charged to price support or relief.

PURCHASE METHOD BETTER?

Another strange claim for the Government purchase method is that it helps dairy co-ops in their effort to bargain for good prices and markets. How does it increase the bargaining and other competition for the Government to set a price at the top of the market? The Government purchase price is the market price. There's nowhere else to go.

Where is the incentive for efficiency and better bargaining that is claimed for the purchase method over the payment method?

This year the Department of Agriculture announced that, instead of buying butter and dried milk only at major centers, it would buy on an f. o. b. shipping point basis One reason for this decision was to enable local co-ops and other small businesses to assemble carload lots and sell direct to the Government. Relatively few have done so. The co-op in its function as handler needs a large volume of business in regular commecial channels. It needs to keep its trucks busy carrying full loads to keep down costs per unit. Too often, when a purchase program is in effect, sales to the Government substitute for the co-op's regular commercial business. This is not an adequate substitute.

There is danger that over-use of the purchase method could lead to less competition, less opportunity or incentive for the small co-op and other small business, more Government in the dairy business, and a bigger share of less business in the hands of big business.

With a production payment for farmers to go along with the purchase method and the marketing agreements and orders, we can stir up a very satisfying interest in competition and your products will warm the hearts of your customers instead of the floors of the cold storage warehouses.

Your co-ops will be able to do the job you want them to do instead of becoming a way-station between you and the Government buyer.

PHONY ATTACKS ON CO-OPS

As I said before, I think the cooperative is an important institution. Other people must think so too. Otherwise, they wouldn't go to the trouble of circulating such vicious propaganda, including these phony bucks which illegally buck the co-op.

It cost a lot of money to print the phony money. Somebody thought it was worth the money to them. It was not spent for the amusement of the public. It was spent to convince the public that cooperatives are against the public interest and to throw fear or discouragement into present and prospective co-op members.

I am sure they have little hope for success here in Wisconsin. This picnic is a demonstration of your strength and enthusiasm without even being intended that way. You have shown in many ways that you value your cooperatives and intend to keep them. But I hope you will not take them for granted or become complacent about them.

For the most part, I assume, you consider them a part of your everyday lives, a business tool, and do not necessarily think very often of their broader significance. How-

ever, I hope you will not forget that many other farm people who need the help of the cooperative way have not yet developed cooperation to the extent that you have. Your example and your continued success are important to many farm people who are unknown to you and who may live far away.

DAIRY MONOPOLY STRONG

Your co-ops are important also to the general public because they involve the marketing of dairy products. In spite of the development of dairy cooperatives the dairy industry is one of the most highly concentrated and tightly held of all industries. Before the war the three largest firms in this field controlled a fifth of all the butter business; the three largest firms dealing in condensed and evaporated milk had two-fifths of the business; the three largest firms in the cheese business controlled more than three-fifths of the business—in fact one firm had a third of the cheese business. We do not have recent figures, but we have no reason to believe that economic control has become any less concentrated in recent years.

The farmer and the consumer both need the competitive force that can be supplied by alert and vigorous cooperatives—competitive force that helps to set fair standards of price and quality—competitive force that leads to economic progress and better standards of living.

As we look to the future of dairyland agriculture, let us continue to improve our cooperatives and make them serve our needs. They need the active interest of each member—interest based on the farmer's determination to improve the marketing of his own product. Let us also continue to fight for a price support system which recognizes the dairy farmer's product as a basic agricultural commodity.

COOPERATIVES CAN WIN

These efforts in themselves will not automatically bring better roads, hospitals, telephone and electric service; nor will they substitute for scientific research and its practical application, solve the problems of soil conservation, or guarantee adequate farm credit. These efforts will not in themselves assure opportunity for our young people. All this we understand. But this, too, we know: More of these other problems can be separated from the income problem. A fair and stable farm income is a basic need, the firm foundation we must have for continued progress in our way of life.

To build that firm foundation, we need the reinforcement of strong and vigorous cooperatives and a fair price-support system.

With them, we can build toward a prosperous dairyland and all that that means toward a strong and prosperous America.

Address of Admiral W. H. P. Blandy

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. RIVERS. Mr. Speaker, one of the outstanding leaders of our time, a leader not only in naval warfare but of modern warfare, is Admiral W. H. P. Blandy, United States Navy, commander in chief, Atlantic Fleet. Under leave to extend my remarks in the Appendix of the RECORD, I am pleased to insert therein the address made by Admiral Blandy on July 28, 1949, before the soldiers and sailors reunion at Salem, Ill.:

I am deeply honored by the invitation extended to me by your able representative from this district, Congressman VURSELL, to address this sixty-sixth reunion of soldiers and sailors of southern Illinois. As a sailor myself, I feel at ease in such a meeting. But having spent the past 40 years in the Navy, I have lived much of my life at sea, along the sea coasts, or in foreign waters and lands. I have always regretted that such a life has not afforded me the opportunity to acquaint myself more intimately with the interior of our country. I know your State best through my acquaintance with your men, who have always constituted a considerable portion of the Navy's personnel. I can assure you that the men from this section whom I have known have universally upheld your tradition of producing good sound citizens.

I think that this annual reunion of you veterans is a particularly splendid idea. Aside from the opportunity which it affords to you of renewing old acquaintances, swapping yarns of your experiences, and in general reviewing the past, you have here the opportunity of collectively taking stock of the present. Certainly there can be no single group who are more inherently interested in the welfare of the Nation than the American veterans. You have given to your country the ultimate of service—her defense against her enemies in time of war. You most certainly are entitled to pause from time to time and consider the question, "How goes it now with my Nation and her defenses?"

This country was founded in the belief that the dignity and freedom of the individual take precedence over all other considerations. As a consequence, an atmosphere was created here in which men's ideas and enterprises were granted full play. By this system, the ablest individuals in any walk of life rise naturally to the top. Once there, the free play of their superior talents, in bringing rewards to them, benefits us all. The result has been the rapid development of our natural resources, our high standard of living, and the phenominal growth of this country from the small struggling 13 Colonies of 1775 to the most powerful single Nation in the world—all in a remarkably short span of history.

However, this system of ours, in which the poor and oppressed peoples of the world were welcomed to this land to conquer a continent of wilderness and carve out for themselves unheard of abundance, with the freedom to live as they chose—a system which we have defended in five major wars—again stands in danger.

Only 4 years ago, we finished the task of turning back and destroying the forces of fascism which had enslaved Europe and parts of Asia, and had nearly engulfed the world. Since then many of the world's peoples, grievously stricken in that conflict, have faced the specter of communism—that philosophy of despair which feeds on human misery, while offering its victims empty promises of a millennium.

At the end of the last great global war the hearts of men everywhere held the hope that with the establishment of the United Nations a new era of international friendship and good will would begin. The consistent refusal of the Communist bloc of nations to cooperate in this establishment of world order and justice, and their persistent suspicious and belligerent attitude toward the democratic nations of the world are clear indications of the great gulf which separates them from us. Not only do our systems of government and our ways of living differ, but they wish to restrict all contact between their people and ours to a minimum. Perhaps their distrust is based upon the extremely low regard of free people for the communistic doctrine. Perhaps they fear their system could not long survive the unfavorable comparisons with the rest of the world which free intercourse between nations would impress upon those peoples shackled by the chains of communism.

In any event, we are faced today with the stark reality of a world divided over fundamental issues into two opposing forces. A tremendous area and vast numbers of the world's peoples are under Communist control. Through pressure on smaller states, and the activity of party organizations in every state, the Communists are seeking constantly to extend their rulership.

To allow the slavery of communism to spread unchecked over the world is absolutely unthinkable to free men. Our Nation's leaders have clearly recognized the dangers in Europe. Through the Marshall plan of economic aid, and through military assistance to threatened States, we have narrowly averted and checked the disastrous extension of communism which has threatened by devious measures short of war to grasp and strangle all of Europe. Now the line between eastern communism and western democracy has been sharply drawn, and we have morally pledged ourselves to the support of the western democracies who have alined themselves with us in the common struggle to preserve decent human rights. There could be no other choice. The North Atlantic Pact, overwhelmingly ratified by the United States Senate last week, represents a formalizing of our common determination.

In such a situation, where two diverse ideologies are so definitely opposed, the ever-present danger of armed conflict must be recognized. The United States has never advocated war as a means of solving international differences, and it most certainly will not in the future strike the first blow, without grievous provocation. Unfortunately, the history of totalitarian states indicates no such peaceful traditions. The dictator does not require popular sentiment for a war before plunging his country into one. If he feels the need for popular backing, he builds up support for war through the medium of his rigidly controlled propaganda agencies. Dissenters can be purged to the degree necessary to quiet dissension. But what the dictator will usually require before starting a war is the conviction that he can win.

It follows, therefore, that until such time as international machinery backed by an international police force is perfected to prevent wars, the best deterrent to a would-be aggressor is sufficient military strength in the hands of peace-loving nations to insure his defeat. The democracies of the world must keep themselves strong enough to render an act of aggression against them absolutely foolhardy. The Atlantic Pact is not enough by itself; it must be implemented by force.

The greatest share of the free world's burden of maintaining a strong military establishment today must necessarily rest upon the United States. During the past war the European democracies suffered fearful destruction of property and industry which this Nation was spared. Until their economy again reaches a sound, healthy condition and their industrial production is restored, only the United States can afford armed forces of such magnitude as to discourage aggression. The cost of adequate armament is heavy and onerous—as I can appreciate as well as the next fellow when I pay my income tax. But, regardless of the cost, we simply cannot afford not to have armed forces adequate to the threat. At the same time we must insure that our national-defense dollars are so spent as to provide the maximum protection to the Nation, and that our requirements are held to those absolutely necessary. While sacrifices in luxuries may become necessary to provide for defense, a

military budget which overtaxes our national economy to the point of inviting economic collapse would defeat its own purpose.

To insure the maximum security to the Nation, her armed services are now organized as a unified team of land, sea, and air forces. Each member of the team predicates its planning on a common strategic concept for the conduct of the war against our most probable enemy. Each service then bases its requirements upon the part it must play in the over-all agreed plan of action. The resulting military budget should represent the minimum needs for each service based on the agreed strategy of the best military minds in the country and correlated with the political objectives to be attained by the winning of a war.

The peacetime military establishment thus arrived at will be able initially to meet and cope with only the most immediate and pressing emergencies in the event of hostilities, since it is manifestly impossible to maintain in peace the tremendous military forces required to prosecute a full-scale war. However, our peacetime forces must be so constituted as to permit rapid and orderly expansion when an emergency arises. This means that we must maintain a large and well-trained reserve of men in each service, and keep our plans up to date for their immediate utilization upon mobilization.

Having thus provided for the contingency of present-day defense, we must devote a generous measure of effort to research and development of new weapons for wars of the future. We must also have adequate and up-to-date plans for rapidly mobilizing industry. There must be closer liaison than in any previous period of peace, between our armed service officers and our scientists and manufacturers.

There must also be plans for the speedy marshalling of our resources of manpower. We should lose no time in organizing our civil defense, in preparation for direct attack against the United States, including attack with atomic bombs, while we still have a breathing spell before a possible enemy nation acquires atomic bombs and the long-range planes for a world-wide delivery service. The civil defense organization must educate our people to the real dangers of the atom bomb, and the limits of those dangers, so that intelligent action in the actual emergency may take the place of hysteria and chaos.

There are certain extremists today who preach the gospel that air power and the atomic bomb have rendered armies and navies obsolete. These people would have us believe that we need only maintain a large number of long-range bombers, and a stock pile of atomic bombs, to effectively maintain peace, or win a quick and painless victory if war comes.

I most certainly cannot subscribe to such thinking, nor are such extremists' views shared by the Joint Chiefs of Staff. Certainly we must have an Air Force which can assuredly wrest air supremacy from the enemy. This means that we must have the best Air Force in the world. But we cannot gamble that bombing alone will defeat an enemy. We must be prepared to defeat him eventually in his own waters as well as in his skies; and physically conquer and occupy at least certain strategic areas of his territory. For the foreseeable future, I still see the ultimate defeat of the enemy brought about by the Army's foot soldier.

The Navy's part in any strategic concept of war remains clear—to control the seas for the movement of our own shipping and to deny the use of the seas to the enemy. Certainly we shall never adopt a concept of war which invites the enemy to come to our shores to fight. We must take the war to the enemy; and for a very long time to come the vast majority of men, and their equipment and supplies, going overseas in war can only be transported by water-borne ships. We shall also undoubtedly have to supply our allies with weapons, food, and fuel by sea, as we did in the last war. Moreover, rich as this country is in raw materials, it is by no means self-sufficient in a number of critical commodities which must be brought in over the salt-water highways.

To fulfill its function of control of the seas the Navy needs many things. We must have striking task forces built around aircraft carriers to maintain such control of the skies as is necessary to control the seas wherever we need to go. As in the war against Japan, we shall undoubtedly be required to seek out the enemy in his home waters and harbors, especially his submarine bases, and defeat all of the aircraft he can muster to meet our surprise attacks or to operate against our shipping.

We must have overseas bases and the means of taking those bases from the enemy. Our naval amphibious forces and fleet marine forces are trained and equipped for this purpose. We must have long-range reconnaissance planes to scout the vast wastes of the ocean to detect the enemy subs at sea and provide forces to intercept and destroy the enemy wherever found. We must undertake mining of the enemy's coastal waters and at the same time keep our own harbors and their approaches free of mines. Our submarines must contribute to the constant harassment and destruction of enemy shipping. And perhaps most important of all, we must be prepared to wage successful antisubmarine warfare. The submarine is a formidable weapon, as the Germans so conclusively demonstrated in the past two wars, and as our own submarines so forcibly proved to the Japanese in World War II. Nevertheless the submarine threat to control of the seas can and must be successfully combated. I feel confident that we can handle the threat posed by present-day submarines, and that further research and training will provide the equipment and techniques to counter the submarine of the future.

I wish to sound a note of optimism today with respect to the progress being made toward unification of the armed services. Unfortunately, but understandably, so much has been said and written about the inevitable disagreements that have arisen among the armed services, that the far greater areas of agreement that have been reached have been largely overlooked. As Commander in Chief of the Atlantic command, a unified command established by the Joint Chiefs of Staff, I have had considerable experience in the past year and a half in the planning of joint combat operations and the planning and execution of joint training exercises, involving elements of all three services. Here at the planning and operating level, all differences of opinion have been amicably settled to the complete satisfaction of all concerned.

In the larger field of over-all war strategy, honest differences of opinion are bound to arise. These differences must be reconciled through patience and understanding. Not much good, and perhaps a great deal of harm, can be done by a forced agreement to a wrong decision.

The problem of how best to provide for the defense of the Nation is complex and difficult. Tough problems take time to solve. The National Security Act of 1947, and the recent modifications thereto, provide a framework in which the component parts of the armed services can be quilted together with patience and understanding to achieve true unity of effort. Joint schools such as the National War College and the Armed Forces Staff College, and joint training exercises of the operating forces, are providing the Nation with officers educated in the capabilities and limitations of each service. With knowledge comes the understanding which is essential to the solution to our joint problems.

In our efforts to achieve unity, we must, for the good of the Nation, preserve the integrity and identity of the various branches of the armed services. The inspiration that comes to men in battle from their uniforms and insignia, and the traditions of their respective branches of the service acquired in previous wars, is not a thing to be lightly cast aside. Wars will always be fought by men—men who instinctively feel fear—and the most unified fighting man in the world, in whatever color uniform you might choose to put him, will not sustain his trust during the crucial hour of battle unless he has that spark which is kindled by patriotism and tradition to see him through.

To my mind, our national course is clear. As a Nation we must cooperate with the rest of the world to strengthen the United Nations and strive for international cooperation and understanding, to the end that war as a means of settling international differences may some day be eliminated. But until the day comes when true international harmony is achieved, we must recognize and resolutely face the dangers which arise to threaten our way of life and our national existence. Today the threat is communism. We must counter that threat with determined economic and military support to those nations who share our belief in the fundamental rights and dignity of man, and back up that support with military power, to deter war if possible, and to assure victory if war comes. Because such a program is costly, we must weld the armed services into a hard-hitting, effective team, with common over-all objectives, and minimum duplication of effort.

I enjoin especially those of you who have fought your country's battles—but also all other members of my audience—to keep up your interest in our international affairs, and in the national defense. We who are more directly connected with such matters must have the approval and support of all the citizens, if we are to discharge our duties wisely and efficiently. So long as we have this support, and so long as Americans cherish the freedom so hardly won and so successfully defended in the past, I have no fears for the security of our Nation, against either external or internal enemies.

Three Basic Securities

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. DOYLE. Mr. Speaker, the following editorial appeared in the Long Beach Independent daily newspaper—in my home city—Los Angeles County, Calif., on Friday morning, July 29, 1949. I feel its analysis is especially pertinent and material to the thinking of all Members of Congress, particularly at this time. I am pleased to present it to you, my colleagues, for your consideration:

THREE BASIC SECURITIES

There are, in our opinion, three basic social securities that should be provided before we can say our system is a success. Those are protections against (1) poverty in old age, (2) catastrophic illness within a family, and (3) loss of income because of there being no work available for the family provider. The die-hard reactionary will

say this is socialism. The chronic do-gooder will say it is only a part of real security. But the sincere seeker for truth will admit these three are the important dangers over which the individual has little control.

Each of these securities is recognized and provided for by many large companies for their employees. The old-age pensions and health insurance is a part of insurance plans of oil companies, insurance, and many other companies. The job security is not as certain, but the older employees have little to worry about in these concerns. Funds are contributed by both employees and employers. In many concerns the security funds are jointly managed by representatives of each.

It is strange that from these workers and employers much of the opposition is found to a national plan to give all people the same security. If it is good for a few million people in great industries, why is it not good for all the people? It is argued it would be too costly to provide for all the people. But here we find part of the people provided these securities paid for by all the people. Were it not for the prices paid for products of these industries, money would not be available for the workers' security plans.

A start has been made for old-age pensions with the Federal social-security old-age retirement fund. This fund does not cover all the people and its benefits are inadequate for retirement without other income. Since 70 percent of all incomes are less than $3,000 a year, it is apparent not much security can be built from such a salary. The result is someone is already taking care of the old people. It is either a State pension, relatives, or a poor house. It is doubtful if an over-all pension would cost any more than is now being spent. It is probable it would cost less if efficiently administered.

The British socialized medical plan has been a costly and, by our standards, a bad experiment. But it will not be discontinued by the British people. Bad as it is, the people want it. Unless we do something here we will have the same plan forced upon us. Such a plan would change our entire medical system. In Britain, people get very poor care because the hypochondriacs have crowded the doctors' offices. The incentive for building a practice has been lost. In our opinion, the people over here would not like socialized medicine as it is practiced in Britain.

But our people do want protection against high doctor and hospital bills. The Government is going to give them that protection in one form or another. Unless doctors and all those who preach free enterprise provide a system that will work, the Ewing or some such plan will be invoked. It is a challenge to insurance companies and medical associations.

We again offer our suggestion that a deductible medical insurance plan would work. Such a plan would require a family to pay the first $50 or $100 a year for medical or hospital costs. The insurance would take care of all costs above that. Such a plan would keep the people from running to the doctor with every ache or pain. But it would protect them from catastrophes beyond their control.

Our last basic security is protection when unemployed. Our present system is a good system. It has many faults but these can be corrected by sound administration. But the need for unemployment insurance may become small if five million over-age workers were retired on adequate pensions.

We have no doubt alienated some of our readers who oppose any social securities. We will not have pleased labor leaders who would confine such securities to paying members of the union. But we believe the great majority of the people agree that these are three basic securities a free-enterprise system should provide.—L. A. C.

Only One Choice Is the Right One

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very thought-provoking editorial titled "Only One Choice Is the Right One," which appeared in the July 28, 1949, issue of the Worcester (Mass.) Evening Gazette. The editorial follows:

ONLY ONE CHOICE IS THE RIGHT ONE

There is a growing body of authoritative opinion which holds that only three possibilities face the economy of Europe: (1) Collapse, meaning sharply lowered standards of living and unemployment; (2) a perpetual program of aid from America, or (3) the conversion of Europe into one economy, one market, with either a single currency or a group of freely convertible currencies.

The latest to support this position was Edward Dickenson, a high official in ECA. His statements are a good indication that ECA itself has come around to the prevailing view. It is a difficult view to refute.

Assume there are but these three choices. The first two are obviously both undesirable. That leaves the third. As things are now, each European country operates as an economic unit; this means that Europe cannot develop the kind of specialization in manufacture that we have in the United States, nor can it find the mass markets that alone justify and lead to mass production, with its lowered costs. As it is now, you can buy a Norwegian-made refrigerator in Sweden and a Swedish-made one in Norway, but you have difficulty buying a Swedish one in Sweden or a Norwegian one in Norway. Europe's economy becomes more irrational all the time, and to a degree American aid is subsidizing the irrationality.

What, then, are the objections to the one obvious solution? They are complex, but very real to the people affected. If all currencies were made convertible, Britain's dollar position would be, at first, affected seriously for the worse, which would mean less imports and more austerity. Likewise, a whole host of present inefficient manufacturers in Europe (and the labor unions in their plants) would suffer from the competition offered by removal of all trade barriers. Workers whose families for generations have engaged in one line of endeavor might suddenly find their livelihoods destroyed, because the products could be made more efficiently elsewhere.

But, you will notice, all those are temporary evils. In a relatively short time the vast increase in productivity, and opening of new job opportunities with an expanding economy, would raise the total standard of living of Europe astonishingly. That is demonstrated in history by the experience of the United States before and after the signing of the Constitution. Some people were hurt by the elimination of trade barriers between the States; but in almost no time, everyone began to gain.

Europe, it begins to appear, will soon have to make its choice. There is admittedly no serious proposal among European governments now for economic unification, but these same governments are beginning to see that after American aid stops they are likely to be in real trouble. Now, of course, is the time for unity, and the machinery—the European Marshall plan organization—is there. Another war would probably do the job—if there is any Europe left. It is deplorable that the European statesmen, who realize as well as anyone the basic problem, seem always to be waiting for a propitious moment that never arrives.

Communism's Two Faces

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. MULTER. Mr. Speaker, the following article which appeared in the magazine This Week, which was a part of the New York Herald Tribune July 31, 1949, will prove of considerable interest to our colleagues:

COMMUNISM'S TWO FACES

(While one smiles and talks of peace, the other breathes fire. A Czech who fled for his life tells how other nations can avoid his country's blunder.)

(By Ivo Duchacek, member of the Czech Parliament when the Communists seized power, is now teaching in the United States. His "Strategy of Communist Infiltration" was published this month by the Yale Institute of International Studies)

After the Communist putsch in Czechoslovakia, I was obliged to crawl and then to run for my life. I had neither time nor thought to make a political appraisal of what had just happened. But the stark facts stood out sharply in my mind.

In May 1945, after 6 years of exile from nazism, I had returned to my native Czechoslovakia as a liaison officer with General Patton's Third Army. I was 32. The same year, I was elected a member of the Czech Parliament and chairman of its foreign relations committee.

In my maiden speech, I expressed the hope that because Czechoslovakia was the only Allied territory where American and Russian armies met, this would represent a symbolic confirmation of Jan Masaryk's statement—which he subsequently denied—that Czechoslovakia might become a bridge of understanding between the West and the East. Later, addressing the Catholic Youth of Prague, I said that the Christian ideal of human fraternity might actually be able to harmonize the western conception of individual freedom with the eastern idea of economic equality.

"I WAS A WANTED MAN"

Three years afterward, I had to hide myself in my native country like a criminal. I was wanted for democracy.

What shattered my hopes of 1945 that we could get along with the Soviets? What was the basic error?

These questions have been with me ever since my escape. But they are not in my mind only. I was asked them this spring when lecturing at Yale. I heard them again this summer when I discussed European ideologies with 70 young men and women at city college.

Nobody likes to accept the idea that we cannot get along with our fellow men if we try hard enough. The questions asked by American students have been inspired by their deep desire for peaceful cooperation and by their good faith. I felt precisely the same in May 1945, when I returned to Czechoslovakia which was to be governed for the first time by a coalition of Communists and democrats. But now I know our good faith was not reciprocated. It was exploited by Soviet communism. We committed a very costly

error which others should be spared from committing.

When I look back at my own practical experience in Czechoslovakia where cooperation with the Communists was tried on both national and international levels, I realize that the basic mistake was our wishful thinking that communism had fundamentally changed under the influence of its 25-year experience and under the impact of World War II.

But Soviet communism has not changed at all. It has improved its tactics without changing the basic aims. Double-faced, like the old Roman deity of Janus, communism shows us alternatively a reassuring smile and threatening teeth. The slogans of peace accompany a febrile preparation for class warfare; appeals to base instincts are covered by the slogans of Marxist materialism; the slogans stressing the liberation of toiling classes go hand-in-hand with the most barbaric suppression of all liberties.

This double aspect is found in the double membership of the Communist Party—one open, the other secret. Some members are allowed to acknowledge party membership and work openly toward their aims. They are the personification of the slogan of the Communist manifesto of 1848: "Let the governing classes tremble before the Communist revolution."

The second group of highly trained Communists remains silent. The world is not supposed to tremble before them but to know so little of the danger as to let them climb to the highest positions in democratic society. They are secret members, belonging to the secret "cells."

CELL MEMBERS LEAD DOUBLE LIVES

According to the report made by the Canadian Royal Commission on espionage, this technique of secret membership is "calculated to develop the psychology of a double life and double standards. The secret adherent of the Communist Party is encouraged never to be honest or frank—outside the secret 'cell' meetings—about his real political attitudes and views." Double membership, double life, double standard of honor, double standard of morality. This is how communism developed the motto "The end justifies every means" into an institution.

I remember the first clash between this Communist double standard and my belief that truth must prevail whatever the consequences. Shortly after the National Front Government was formed I drove through the American and Soviet lines of demarcation to meet Minister of Information Václav Kopecky, a Communist. The report I gave him about conditions in areas liberated by the Americans brought forth an outburst.

"Your Americans," he blustered, "are robbing and raping wherever they go. And some dirty reactionaries dare to shift the blame on the glorious Red Army without whose help Prague would still live under Nazi oppression."

THE CHARGE WAS FALSE

Upon my return to the United States zone—with the aid of Czech police and hospital authorities—I investigated Kopecky's accusation of United States troops. The charges, I found, were false. I immediately sent a detailed report to Prague. But the Communist Minister paid no attention to it.

Obviously, atrocity stories about United States forces were being circulated to divert civilian attention from the behavior of the Red army. In the areas liberated by the Russians, the official record of rapes and other violence committed by Red troops was steadily growing.

Stalin was even reported to have apologized to an official Czech delegation in Moscow: "The joy of the Red army over the victory assumed, here and there, a rather violent character. It is regretted. Our soldiers are like children—good-hearted, as only Slavs can be, but sometimes cruel when they get out of control."

"SICK CHILDREN"

In other spheres, this "children" story was told, too. When the Communists were criticized because, in their coalition with other parties, they had the tendency to take a lion's share, Communist apologists declared:

"This is only a childhood sickness—the mumps of our comrades. For 20 years, they were the underdogs. It meant street demonstrations, strikes, prison. They cannot mature into partners of a coalition government overnight. They need time before they can learn tolerance and fair play."

They were given time—and in 3 years the eager children had turned Czechoslovakia into a totalitarian Communist state. Not till it was too late did Czechoslovak democrats realize that they had been faced with two Communist parties instead of one.

While Czech democratic leaders were conferring with part of the Communist hierarchy on possible solutions to the 1948 government crisis, the rest of the Communist leadership was concentrating on mobilization and illegal distribution of weapons. The democratic leaders left the conference room to find the streets of Prague packed with Red militia, police shock troops and representatives of action committees.

Still today, Communist assurances of peaceful aims continue to be accepted west of the iron curtain.

The reason so many Communist assurances were and are still being accepted at their face value lies in human nature, which tends to disregard disturbing deeds or words in favor of reassuring promises—especially after years of struggle and anxiety.

Thus, when the Comintern was disbanded in 1943, the Communist tactical slogans were happily swallowed by so many of us in Europe and America—"A different path to socialism * * * better democracy * * * cooperation of different ideologies and systems on national and international levels * * *." These slogans helped to create the impression that Communism had severed itself from its own revolutionary, aggressive, and intolerant past.

HOPE FOR PEACE

Harry Hopkins remarked, "This is the dawn of the day we have all been praying for * * * we shall live with them peacefully and get along with them for as far into the future as any of us can imagine."

French Communist leader Thorez, who deserted from the French Army because of the Soviet treaty with the Nazis, became a ministerial colleague of General de Gaulle. Italian Communist leader Palmiro Togliatti shared governmental responsibility with Christian Democratic leader de Gasperi. And Czech Communist Klement Gottwald became Vice Premier alongside Monsignore Jan Sramek, the Catholic leader, both in the cabinet of a Social-Democrat Premier.

The wishful thinking of 1945 seemed to be confirmed by events—or by the lack of events. The very fact that the Communists at a given moment and in a given situation did not behave quite as we had feared they might led us to believe that Moscow and communism had changed after all.

In February 1948, when the Communists in a different international situation seized power under Soviet Deputy Foreign Minister V. A. Zorin, our mistake became evident—Communists may postpone from time to time the realization of their aims with the view to the temporary needs of the Soviet foreign or economic policy. But the aims never change.

"WILL I HANG?"

Two months before the putsch I spoke with my deputy, vice chairman of the foreign relations committee Vilém Novy. He was also editor in chief of the Communist national daily Rudé Právo.

"If you win the majority at the coming elections as you seem to claim," I said, "what will become of the non-Communists? Will you hang me, for instance?"

"Oh, no," Novy assured be with a smile. "The victorious proletariat never takes revenge. Only reactionaries like you hang their beaten adversaries. Besides, we want to reach socialism by the path of democratic legality. We are not thinking of our victory alone. We want to be an example for France and Italy."

Two months later, however, the Communist Party of Czechoslovakia, including Comrade Novy, seized power following the pattern set down in other eastern countries. Vilém Novy succeeded me as chairman of the foreign relations committee. The first wave of terroristic arrests, carried out by the "victorious proletariat which never takes revenge," began. I did not wait for the second wave, I escaped to the United States zone of Germany.

I had learned my lesson. I saw clearly the dual nature of the Communist Party. It was like an iceberg—dazzling, deceiving above water; a hulking, jagged menace below.

I did not rely on Comrade Novy's promise that I would not be hanged.

I was probably right in guessing that what he really meant was that I would not be hanged—only shot.

Displaced Persons Bill

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. GORDON. Mr. Speaker, some months ago we passed the displaced persons bill, H. R. 4567, which is now pending before the Committee on the Judiciary of the Senate.

Today I addressed a letter to the chairman of this committee, the Honorable PAT MCCARRAN, urging him to bring about early and favorable consideration of this measure and under unanimous consent I insert a copy of it in the RECORD:

AUGUST 2, 1949.

Hon. PAT MCCARRAN,
Chairman, Committee on the Judiciary,
United States Senate,
Washington, D. C.

MY DEAR MR. CHAIRMAN: I have received much correspondence from all over the United States from persons who are deeply interested in the passage of H. R. 4567, which passed the House of Representatives a few months ago, and is now before the committee you so ably administer.

Time is racing away and the many displaced persons who are eligible for entrance into this country certainly would like to see the light of day and the promise fulfilled of a happier and better life. Their present situation, as you know, was not brought about by any act of their own, but are victims of persecution. And from a humanitarian standpoint, I am of the profound and sincere belief, in which I am sure you must concur, that action should be taken on this measure with the least possible delay.

Additionally, this was one of the promises in our party platform and it is expected by the people that we live up to our pledges, as you and I are bound, for its success.

The city of Chicago is one of our biggest metropolitan areas, where over 600,000 Poles reside; my district alone is 60 percent Polish, which will give you an idea of the pressure that comes upon me, urging a direct appeal to you to send this bill to the Senate for attention. Therefore, it is my earnest hope that you will give these views of mine sympathetic consideration, with the ultimate accomplishment toward favorable action.

Please accept my personal regards, I remain

Cordially and sincerely yours,

THOMAS S. GORDON.

A Strange and Impossible Bill

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1949

Mr. VORYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's Washington Post:

TODAY AND TOMORROW
(By Walter Lippmann)

A STRANGE AND IMPOSSIBLE BILL

Had Mr. Acheson brought in a bill to carry out the military-aid program which he and General Bradley had described, everything would be much simpler. But the bill goes far beyond the program. It is not merely a bill to implement the Atlantic Pact and to fulfill our known and recognized commitments to certain countries outside the pact. The bill is all that. But in addition to all that it is a general license to intervene and to commit the United States all over the globe, as, when, and how the President and his appointees decide secretly that they deem it desirable to intervene.

It is disquieting that these extraordinary powers should have been attached as a rider to—one could fairly say as a joker in—the authorizations which are needed to carry out the declared program. It is remarkable, to say the least, that Mr. Acheson did not explain them, or even mention them, in his formal statement to the committee, and that in the State Department booklet they are referred to only obscurely and indirectly. Yet if they were enacted into law, the Congress would invest the President with unlimited power to make new commitments which Congress would have to support but could not control.

Under section 3 of this strange bill, the President is authorized, upon the request of any nation to furnish assistance to such nation through grant, or payment in cash, or through any other means and upon such other terms as he deems appropriate, whenever he deems that the furnishing of such assistance will further the policies and the purposes of this act as set forth in section 2.

The grandeur and magnificence of this grant of authority is spelled out in section 13, near the end of the bill. There we learn that the term "nation" shall mean any foreign government or country or group thereof; or any representatives or group of the people, however constituted, designated as a nation by the President for the purposes of this act.

So under this bill as written, the President can arm anybody. He can arm not merely the Atlantic allies, not merely Greece and Turkey and the Philippines, not merely recognized governments, but even groups, committees, factions, individuals. He can conclude military agreements with any representatives * * * however constituted which he decides to designate as a nation.

He can do all this without further consultation of Congress as and when he decides that it is in the national interest of the United States to arm somebody. He is the sole judge of what is the national interest of the United States. And every 6 months he must report to Congress expenditures and activities authorized under this act, but he need not report information the disclosure of which he deems incompatible with the security of the United States.

Can anyone pretend that these powers are needed for, or have anything to do with, the program for western Europe which Mr. Acheson and General Bradley outlined? Under this bill, to be sure, that program can and would be inaugurated. But all sorts of other programs, which have not been described, could also, and most probably would, be inaugurated.

It is difficult to believe that the authors of the bill did not know this and did not intend it. That they did not hope to make the western Europe military-aid program, which has sustantial support, the vehicle for other policies which—if they were candidly presented for debate—would not command general support.

It is not clever to be too clever and, therefore, if the avowed program of military aid is to be enacted, this bill had better be abandoned, and a new bill written which says what it means and means what it says.

The administration ought never to have offered this bill. Had it consulted the leaders of Congress it would never have offered this bill. It could not defend this bill successfully if it were brought to debate.

Indeed, the administration ought not to want a bill which, because it grants such unlimited and undefined powers, would only expose the Government to unlimited and undefined pressure from every quarter of the globe. This bill is an invitation to everyone who says he is anti-Communist to apply for arms and for money. Were this bill made the law, the State Department and the Pentagon would be put in the position of having to say "Yes" or "No" to requests for arms from all the countries, and from factions within them, where men are intriguing and contending for power.

Under this bill our ambassadors and our military attachés all over Asia, the Middle East, and Latin America would find themselves pressed, cajoled, and beseeched to urge Washington to supply arms or money for arms. The State Department and the Chiefs of Staff would in turn be under perpetual pressure from our missions abroad, most of them—as we know from experience—the impassioned advocates of the Government, or the impassioned opponents of the Government, to which they happen to be accredited.

Before long, military aid would have become a diplomatic slush fund and a military pork barrel. As arms were doled out to governments, or their opponents, our honor and interest would be engaged. Then it would be well nigh impossible to disengage ourselves again. For once we started arming a government or a group, we should be committed to that government or group, and we could not decently withdraw our support.

Therefore, the commitments should never be made, as they could be under this bill, casually, secretly, and without full public debate. It should be stated plainly in the law that arms will be supplied to countries named in the law, and to no one else without specific authorization from the Congress of the United States.

Consolidation of Bureau of Reclamation and the Civil Functions of the Army Engineers

EXTENSION OF REMARKS
OF
HON. CECIL F. WHITE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1949

Mr. WHITE of California. Mr. Speaker, on June 30 I introduced a bill on a matter that is probably one of the most important subjects this session of Congress will face. The bill to which I refer, H. R. 5469, is a bill to carry out the recommendations of the Commission on Organization of the Executive Branch of the Government relating to flood control, river and harbor improvement, irrigation, and the production of power. In the simplest terms H. R. 5469 is a bill to consolidate the Bureau of Reclamation and the civil functions of the Army engineers.

This bill follows exactly the recommendation of the Hoover Commission and, if enacted into law, will save the people millions of dollars now being wasted because of the foolish and useless competition of these two agencies.

I am sure that every Member of the House is receiving, as I am, many, many letters from his constituents, demanding that the recommendations of the Hoover Commission be enacted into law. Here is our opportunity to take action on one of the most important recommendations of the Hoover Commission.

The following excerpt from an article in the Christian Science Monitor of June 27 presents some telling arguments as to why we should take affirmative action on the consolidation of these two agencies:

TWO UNITED STATES AGENCIES VIE FOR RIVER-DEVELOPMENT FUNDS; KINGS RIVER CITED IN EXPOSE OF WASTE

KINGS RIVER CASE

The Kings. This is a little river that flows down from the Sierra Nevadas into the blooming San Joaquin Valley. The San Joaquin was a desert once and irrigation is life itself to this fertile region and its society.

Every drop of Kings water should be used. As early as 1937, both the Engineer Corps and the Bureau of Reclamation surveyed the Kings River region. The corps was extending its original field, navigation, into irrigation as well.

President Roosevelt, in 1939, became concerned over the growing conflict. He asked both agencies to clear their Kings River plans with the National Resources Planning Board.

The Commission says the Army engineers often have bypassed the President and gone straight to Congress with their problems. This is because they do rivers and harbors work—the traditional congressional pork barrel.

BOARD BYPASSED

The engineers bypassed the planning board in this case. As a result, two conflicting plans were presented to Congress in 1940. Each provided a reservoir at Pine Flat.

Then a 7-year struggle for the project began. The dry San Joaquin needed the water

immediately but it had to wait during 7 years of interagency conflict.

There are significant differences between reclamation and Army engineer policy on irrigation projects. The Bureau acts from political motives as well as technical. It does not allow big landowners to profit greatly from its projects; this benefit is limited to 160-acre units—or double in California to allow for joint family ownership. Again, corps projects often are given to local officials to run. Bureau projects are tightly watched.

The engineers viewed Kings as primarily a flood-control project. Reclamation looked on it as a vital part of the immense Central Valley irrigation project.

WIDE ARGUMENTS

There were arguments over power development, over allocation of costs. Engineer projects usually are cheaper to the beneficiaries as much of reclamation water benefits ultimately is paid for by the farmer getting them.

The Kings River region was the center of a raging controversy among the prospective water users over which plan was most attractive by cost, disregarding ultimate repayment.

President Roosevelt stepped in and decided that Kings was predominantly an irrigation project. So he said that the Bureau of Reclamation should build it.

But the engineers always have used their power with Congress—perhaps it would be more accurate to say friends of the engineers—to ignore Presidential wishes, although the President is Commander in Chief of the armed forces.

At this time they went ahead, less than 2 months later, to testify for building the Kings project under flood-control law. By then, most local interests backed the engineers.

GIVEN TO ENGINEERS

Following a time-consuming legislative pressure conflict, the project was handed to the engineers in 1945. The President still favored construction by the Bureau of Reclamation.

Work is well along now. Kings River water will be prepared by a flood-control and navigation agency for a primary irrigation job.

The Hoover task force found this a classic case of the waste of conflict. Seven years were lost. It doubts if most economical use is being made of the water, even now. It will cost "more than it should," it reports.

Mr. Speaker, the bill I have introduced, H. R. 5469, will remedy the situation described in the foregoing news article, and will save the taxpayers of this Nation millions and millions of dollars. I hope the Congress will see fit to act promptly on this bill.

Unfair to Judges

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. MACY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of July 18, 1949:

UNFAIR TO JUDGES

Representative KEATING is offering a bill to prohibit members of the Supreme Court from testifying as character witnesses before other tribunals, as if it were an essential check upon the discretion of those judges. In some measure that view may be valid, but we suspect that the chief value of such a measure would lie in the protection it would give against unreasonable demands upon judges. At present they have no alternative to testifying before trial courts if they are subpenaed. Our inquiries suggest that judges as a group are extremely reluctant to go on the witness stand because it takes them out of their role as impartial agents of justice. Probably a great majority of them would welcome a law relieving them of this necessity.

Any accused person who calls upon a friend on the bench to testify in his behalf puts the judge in question on the spot. The judge cannot refuse without seeming cruel and unfaithful to his friend, and he cannot accept the bid for his help without embarrassment to himself and to the judicial system as a whole. A law of the type Congressman KEATING suggests would relieve Supreme Court justices of this dilemma as well as of the duty of responding to subpenas as character witnesses, while leaving them free to testify if they have knowledge of facts bearing upon the case.

But why should Mr. KEATING confine his bill to Supreme Court justices? Until Justices Frankfurter and Reed testified in behalf of Alger Hiss no member of the Supreme bench had been called as a character witness within the memory of a man. On the contrary, judges in the lower Federal courts are often embarrassed by being asked or subpenaed to express their views as to the reputation of some friend or acquaintance who has been charged with a criminal offense. Certainly if the practice is to be stopped, it should be stopped in the Federal district courts and the courts of appeals as well as in the Supreme Court. If the bill should be thus amended, it would not be surprising to see many judges indorse it.

Soviet Tops Czars in Forced Labor

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. MULTER. Mr. Speaker, I am presenting herewith an article written by Michael L. Hoffman which appeared in the New York Times of July 28, 1949, containing further evidence of Soviet suppression of freedom:

SOVIET TOPS CZARS IN FORCED LABOR—CAMPS HELD 32,000 IN 1912, AS COMPARED TO 10,000,000 NOW CITED IN DATA OF BRITISH

(By Michael L. Hoffman)

GENEVA, July 27.—The Soviet forced-labor system is far more highly developed than anything known under the Czars, if data in the hands of the British and United States Governments can be relied upon.

The British recently laid before the Economic and Social Council of the United Nations the text of the Russian forced-labor code, as published in the Soviet Union in 1941. The code contains a complete system for exploitation of the labor of political opponents of the regime to further the development of Soviet economy.

According to the British, there are at least 10,000,000 in Soviet labor camps, areas of exile, or prison factories or condemned to "corrective" labor at their usual places of employment. This would be about 10 percent of the Soviet Union's total labor force.

According to the book Prisons in Capitalist Countries, by Andrei Y. Vishinsky, now Soviet Foreign Minister, published in 1937, forced labor in twentieth-century Czarist Russia reached a maximum of 32,000 persons in 1912. Forced labor was a very old institution in Russia. Prior to the abolition of serfdom in 1861, what would be called today forced labor probably affected large segments of the population.

UNFAVORABLE COMPARISON

Nevertheless, a comparison between modern Communist and Czarist systems seems rather unfavorable to the Communists. According to statistics cited in Mr. Vishinsky's book, the number of forced laborers grew from under 5,000 in the early 1900's to 5,790 in 1906, 7,779 in 1907, 12,591 in 1908, 22,649 in 1909, 28,060 in 1910, and 32,000 in 1912 and fell to 25,352 in 1914.

In their study of forced labor in Russia, published 1947, David J. Dallin and Boris Nicolaivsky estimate that during the 1914–17 war forced labor outside the armies rose to about 50,000. This would be about one-tenth of 1 percent of the working population.

The Soviet system is more comprehensive in other ways. While most of forced laborers under the Czarist regime were ordinary criminals, most under the Soviet Government are political offenders. Indeed, ordinary criminals receive preferred status by being chosen as supervisors of labor camps in preference to those held there for political reasons.

Furthermore, forced labor, usually at the worker's ordinary place of employment, is required in the Soviet Union from workers guilty of violations of factory discipline. The principal crime here is absenteeism. A Russian worker is guilty of absenteeism if he loses more than 20 minutes' working time by late arrival, leaving early, or overstaying mealtimes, or if he commits any of these offenses three times in 1 month or four times in two consecutive months, even if the loss of time in each case is less than 20 minutes.

HELD MEANS OF REHABILITATION

The czars never had such a detailed code governing the administration of detention places and rights of condemned persons. Nor did the czarist regimes cover the forced-labor system with a gloss of deterministic psychology, which enables some Communist apologists to describe the entire set-up as a progressive means of reeducating criminals to live in society by the therapy of directed socially useful work.

The one element that the prerevolutionary and postrevolutionary systems appear to have in common is the emphasis on forced labor as a useful productive resource in the hands of the state. The czars, like the Communists, used forced labor for economic development projects in regions where men would not voluntarily work and for those projects for which free labor would prove too expensive.

SOVIET EVASION CHARGED

LONDON, July 27.—Hector McNeil, Secretary of State for Foreign Affairs, said in the House of Commons today that the Soviet Government had consistently evaded attempts to get the United Nations to investigate forced labor.

It is probably true, he added, that "regrettable conclusions" will continue to be drawn from the refusal of the Soviet delegation in the Economic and Social Council to accept a resolution providing for an inquiry on the spot that would satisfy "dispassionate people."

The Daily Worker alleged today that the Foreign Office had made at least three deliberate mistranslations in its English version of the Russian corrective labor (or prison)

code, which the Foreign Office termed a forced-labor code.

An article in the Communist paper said the Foreign Office had twisted an article in the code to suggest that armed guards drawn from the worst "criminal elements" had power to shoot persons detained on "political" charges. It asserted the Russian text made no distinction between political and nonpolitical prisoners. It would be more accurate, the paper said, to describe the guards as being drawn from workers convicted of less serious offenses.

Second, the paper said, the Foreign Office version spoke of "solitary confinement cells for persons under investigation." The words "solitary confine cells" were invented, the Daily Worker asserted, contending that the Russian text was "isolators," which meant a remand prison.

Third, the paper said, the Foreign Office mistranslated "compulsory labor" as "forced labor."

Mr. Hoover To Speak

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 22, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregonian for July 28, 1949:

MR. HOOVER TO SPEAK

The news dispatches bring word that Herbert Hoover will deliver a major address on Stanford University campus on his seventy-fifth birthday, August 10. Speechmaking on his birthday might, with benefit to the Nation, come to be a custom of our only living ex-President. Last year he spoke at his birthplace in Iowa on August 10. This year, he is rather fresh from his work as head of a commission on governmental reorganization which produced an exhaustive and extremely important report. His Stanford address, it is presumed, will deal much with the Nation's economy and its need for retrenchment.

Mr. Hoover, since leaving the White House, has come to inject into his public addresses more of the humor and whimsicality that punctuate his private conversations. In the two campaigns for the Presidency his speeches dealt rather too soberly with complex subjects, statistics and matter-of-fact issues. He has got rid, to great extent, of what the people looked upon as intellectual aloofness. He has humanized addresses with epigrams and amusing anecdotes.

For nearly 2 years after his crushing defeat for reelection Mr. Hoover fished or traveled and had nothing publicly to say about politics. In later years he has delivered upwards of 50 broadcast addresses, given hundreds of talks to small groups, and written several articles for national magazines.

Upon his immediate return to the public forum he was a fervent critic of New Deal policies; prior to Pearl Harbor he frequently opposed our foreign policy, but after that event acknowledged that differences of view in this country may have led to our involvement in the war. He thereupon urged all-out support of President Roosevelt and advocated giving him dictatorial economic power during the war period.

Herbert Hoover has been almost constantly engaged in either official or unofficial public service for 35 years. He accumulated a fortune as an engineer, at one time supervising engineering phases of enterprises in various countries that employed a total of 160,000 men. He never made personal use of any moneys paid to him from the Public Treasury.

Mr. Hoover was in London in 1914 to promote European exhibits at the San Francisco Exposition. World War I caught him there and he was drawn into the work of repatriating Americans from Europe, then into organization of French and Belgian war relief. His efficiency therein caused President Wilson to name him United States Food Administrator after this country was drawn into the conflict. After the armistice he became Director General of European Rehabilitation and Relief and directed activities covering 23 countries. Thereafter he was named Secretary of Commerce by President Harding and remained in that office 8 years. From that post he went to the White House in 1929. In his election the solid South was broken by the Republicans for the first time since reconstruction days. During his tenure of the Presidency an economic collapse in Europe spread to this country, and produced the great depression. A distressed people, looking for somebody to punish for their misery, picked out President Hoover. The 1932 election was a complete reversal of the GOP triumph of 1928.

President Truman, unlike President Roosevelt, has turned to Herbert Hoover for advice and assistance on economic problems. The ex-President visited the White House in June 1945 for the first time since he left it as a tenant. It was at the invitation of Mr. Truman to confer on world food problems. Since then Mr. Hoover headed the administration-sponsored commission which produced the aforementioned stupendous report on governmental reorganization.

Since his retirement from elective office Mr. Hoover has maintained a cheerful reserve under taunts based on political campaign remarks attributed to him. He has never dignified with denial the purely apocryphal "chicken in every pot." He did once refer to the jibes about his "grass will grow in the streets" remarks. The prediction, he pointed out, was contingent on the carrying out of the Roosevelt tariff reduction pledge. Instead of reducing the tariff, said Mr. Hoover, the Roosevelt administration in effect raised the tariff by depreciating the dollar. For it required, after dollar devaluation, more dollars to buy imports than it formerly did, which is exactly what happens when the tariff is increased.

Mr. Hoover's forthcoming address will be broadcast by radio. If, as presumed, it deals intimately with economy and governmental reorganization it should be of special value in a currently disturbing situation. But Mr. Hoover has a vast fund of experience to draw on for our entertainment and enlightenment upon other subjects.

The Fate of Freedom Lies With America

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1949

Mr. COUDERT. Mr. Speaker, under permission to extend my remarks, I include an article by Harry Schlacht, which recently appeared in the Hearst newspapers:

THE FATE OF FREEDOM LIES WITH AMERICA
(By Harry H. Schlacht)

Not since the days of barbarian invasion has Christian civilization faced such a menace as through the ruthless advance of communism. These are times that try men's souls. Nations that have experienced the brutality of Nazi oppression are now experiencing the cruelty and horror of Soviet nightmare. Their fate will be our fate, unless America wakes up—and now. Our dauntless manhood—in one generation—has bled and died twice on foreign battlefields. Our sons and daughters have fought to destroy the roots of the insatiable ambitions of fiendish monsters who sought to enslave humanity. Our democratic way of life is threatened by Communist concepts.

Russia has the largest army. Russia has the largest air force. She challenges our physical courage. She challenges our moral fortitude. She challenges our military power. She challenges our religious beliefs.

Americans must realize that the iconoclasm, the nihilism, and the moral degradation which communism symbolizes are the negation of God.

Americans must realize that everything we hold priceless and sacred is at stake.

Our blessed Republic is not only to be enjoyed but also to be preserved.

We must all give our all to protect our system of representative government, of free enterprise, of religious freedom.

We shall not permit the Red leaders in Moscow to weave a crown of thorns for our brow.

We shall not permit these power-hungry men to poison us with the fumes of atheism and anarchy.

We shall protect and preserve our glorious heritage of democratic ideals from communistic pottage brewed in the cauldrons of tyranny.

Any man or woman who is not loyal to our country ought to be banished from our native paradise.

Our country was not conceived by weaklings or cowards but by men and women of destiny—fearless and strong—who were prepared to die for freedom rather than live in slavery.

A panorama of American history flashes before our eyes. We can see the settlers as they cut a clearing in the trackless forest. We can see the pioneer and his family in the old covered wagon with the tongue pointed west. We can see the American ship of the desert freighted with the hopes and dreams and ambitions that made America great.

There was an empire in the brain of every pioneer.

We can see them build their homes and houses of prayer. We can see them kneel in simple worship there. We can hear the drums of war beat. We can see them seize their arms and rise to their feet the enemies of liberty to meet.

That spark of liberty is still alive. That spark of liberty will be fanned so that civilization will survive. The fate of freedom lies with America. Let us sound the clarion call for national defense. Let us summon every true American to fight for national defense. There is little time left. There is no time for timidity.

Russia does not maintain a mighty machine for defense, for no one threatens her.

Russia maintains this mighty armada for aggression and conquest. While our lawmakers talk, ponder, and debate our national security, Russia is relentlessly weaving her web of intrigue and violence wherever she can obtain a foothold. In our own blessed land we are faced with the most atrocious and stupendous treason the world ever saw kindled. And we stand idly by, waiting for what?

Russia will attack us when she thinks we are weak. Russia will never attack us if we are strong. To be free we must be strong. Preparedness is not a war policy. Preparedness is an insurance policy for peace. If we fail to do this, America, history will one day record of this last stronghold

of humanity that America was once the land of the free. Forbid this, Almighty God.

Looking backward through the years, and through the midst of tears, we can see the colonists start out from England on a stormy day in December in the year 1606. We can see a tiny fleet of three small vessels, 4 months later forging its way against the lashing sea and biting wind into the mouth of the historic James River. We can see passengers on these ships. They are lean, haggard, hungry, and seaworn. We can see Capt. John Smith, on the little ship *Discovery*. We can see him standing there with purpose in his heart, with determination written on his face, with high hope swelling in his bosom: A hope to lead his suffering people from the land of tyranny and oppression into a country of moral and religious freedom, where the sunlight of heaven shines over all with the same compassion of love, equality, and justice.

"Breathes there a man, with soul so dead,
Who never to himself hath said,
This is my own, my native land!"

America united is America invincible.
A prepared America is a peaceful America.

Amendment of Natural Gas Act

EXTENSION OF REMARKS
OF

HON. ROBERT CROSSER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. CROSSER. Mr. Speaker, the legislation proposed in H. R. 1758 to exempt from Federal regulation sales of natural gas by producers and gatherers at arm's length to purchasing natural-gas companies for transportation and subsequent sale in interstate commerce, would create a serious gap in State and Federal regulation of gas-utility service, and would be a matter of grave consequence to the public.

The drive to amend the Natural Gas Act in this fashion is fostered by the big oil companies who demand freedom from Federal regulation, knowing full well that under the Constitution their interstate sales in the gas fields cannot be regulated by the States. These companies desire Congress to grant them the right of unlimited profits though they are participants in rendering a public-utility service.

On the other side of the scale are the more than 40,000,000 people of the Nation who now receive natural-gas utility service. It is essential that their rights be protected and that no legislation be enacted which would result in unreasonable prices for this necessary utility service.

It will be our aim in this report to analyze the effect of the proposed legislation upon the public interest and to show why we should be opposed to its enactment.

THE ORIGINAL INTENT OF CONGRESS

The majority contends that it was the intent of Congress when it enacted the Natural Gas Act in 1938 to exclude arm's-length sales of natural gas by independent producers and gatherers to interstate pipe-line companies from regulation. They urge that the exclusory clause in section 1 (b) of the act, reading "but shall not apply * * * to the production or gathering of natural gas," was broad enough to provide for such exemption.

This clause has been interpreted by the Courts—*Canadian River Gas Company* v. *Federal Power Commission*, (324 U. S. 581)—as relating to the physical activity of production and gathering. This would include the acquisition of lease-holds, exploration work, drilling of wells, well spacing, oil-gas ratios, allowable production, location of gathering system, waste of gas, the correlative rights of landowners and royalty interests, and related activities. Most of these activities are subject to regulation by the States for they are intrastate functions. The record shows that the Federal Power Commission has never asserted that it had any jurisdiction whatsoever respecting the physical activities of production and gathering. There is no intention on the part of those of us who oppose this bill to change this situation in any way. The bill would not serve to clarify or strengthen the present exemption from the act of the physical activity of production and gathering, nor is such legislation necessary.

The courts have specifically held that the exemption provided by the exclusory clause does not include sales in interstate commerce. The Court of Appeals for the Fifth Circuit in the Interstate case—*Interstate Natural Gas Co., Inc.*, v. *Federal Power Commission*, (156 F. 2d 949); see also *Interstate Natural Gas Company, Inc.* v. *Federal Power Commission*, (331 U. S. 682); *Peoples Natural Gas Co.* v. *Federal Power Commission*, (127 F. 2d 153, cert. den. 317 U. S. 700)—said:

We think that petitioner's difficulty in construction and interpretation arises out of the fact that, treating unlike things as alike, it tries to read the exception with respect to production or gathering as an exception with respect to sales. There is no warrant in the act for so doing.

This interpretation clearly follows the views of the House Committee on Interstate and Foreign Commerce in reporting the bill which became the National Gas Act of 1938—House Report No. 709, H. R. 6586, Seventy-fifth Congress, first session. We then said:

The States have, of course, for many years regulated sales of natural gas to consumers in intrastate transactions. The States have also been able to regulate sales to consumers even though such sales are in interstate commerce, such sales being considered local in character and in the absence of congressional prohibition subject to State regulation. (See *Pennsylvania Gas Co.* v. *Public Service Commission* (1920), 252 U. S. 23.) There is no intention in enacting the present legislation to disturb the States in their exercise of such jurisdiction. However, in the case of sales for resale or so-called wholesale sales, in interstate commerce (for example, sales by producing companies to distributing companies) the legal situation is different. Such transactions have been considered to be not local in character, and, even in the absence of congressional action, not subject to State regulation (see *Missouri* v. *Kansas Gas Co.* (1924), 265 U. S. 298, and *Public Utilities Commission* v. *Attleboro Steam & Electric Co.* (1927, 273 U. S. 83). The basic purpose of the present legislation is to occupy this field in which the Supreme Court has held that the States may not act.

It is clear that in 1938 Congress intended to subject to regulation all sales in interstate commerce for resale which were beyond the reach of the States and thus to close the gap in regulation. As stated by Representative WOLVERTON during the 1937 debate—CONGRESSIONAL RECORD, volume 81, part 6, page 6723—on the bill which became the Natural Gas Act:

It is, therefore, the purpose of this legislation to close the gap now existing between Federal and State regulation and control and confer upon the Federal Power Commission the right, duty, and authority to exercise such regulatory power in fixing a fair and reasonable rate for gas that is a part of interstate commerce. It seeks to give similar power to regulate and control interstate commerce in gas as now exists in State regulatory bodies with respect to transactions entirely within the States.

Representative WOLVERTON had previously pointed out that jurisdiction over such rates, coming within the field of interstate commerce, "is denied entirely to the State regulatory bodies and lodged completely in the Federal Congress."

NONEXERCISE OF REGULATORY POWER BY COMMISSION

The supporters of the bill lay stress upon past administrative practices and actions of the Federal Power Commission as supporting their opinion that clarifying legislation is necessary to end the confusion and uncertainty which is alleged to prevail in the minds of independent producers and gatherers.

The supporters of the bill cite the Columbian Fuel Corporation decision by the Commission in 1940 (2 F. P. C. 200), as indicating that sales of natural gas as an incident to and immediately upon completion of production and gathering were not intended by Congress to be subject to regulation. Not only was that opinion not unanimous, but the majority was not certain that the question of jurisdiction had been finally decided for it said:

Further experience with the administration of the Natural Gas Act may reveal that the initial sales of large quantities of natural gas which eventually flows in interstate commerce are by producing or gathering companies, which, through affiliation, field agreement, or dominant position in the field, are able to maintain an unreasonable price despite the appearance of competition. Under such circumstances, the Commission will decide whether it can assume jurisdiction over arbitrary field prices under the present act or should report the facts to Congress with recommendations for such broadening of the act and provision of additional machinery as may appear necessary to close this gap in effective regulation of the natural-gas industry.

The supporters of the bill cite the action of the Commission in recommending in June 1947 enactment of legislation which would have exempted these producer sales; its adoption of order No. 139 in August of that year, and the subsequent realinement of Commission membership whereby the majority of the Commission now opposes the exemption of such sales, as a basis for Congress resolving the differences in favor of the

proponents of the bill. But the courts have spoken. The Commission's authority is not in question, although some have not accepted the question as decided and seek to have legislation expressly enacted for the purpose of nullifying the interpretation of the act by the Supreme Court in the Interstate case.

Great stress has been laid upon the fact that during the 11 years since enactment of the Natural Gas Act the Commission has not subjected independent producers and gatherers to regulation with respect to their arm's-length sales of natural gas and that, in spite of this, all has gone well with the Commission's efforts to protect the rate payers so far. But this is a specious argument that completely ignores the significant change which the record shows has taken place in the natural gas situation within the last 2 years.

Back in 1947 during the consideration of amendments to the Natural Gas Act all the information bearing on the subject was not available as it is today. The Federal Power Commission's reports on its Natural Gas Investigation—FPC Docket No. G–580—were not available. In fact the Commission repeatedly urged that no legislation be enacted until it had reported to Congress the results of that investigation. When the Priest bill, H. R. 4099, was finally proposed as a substitute for the more drastic Moore-Rizley bill, H. R. 4051, many believed that the results and recommendations of the investigation would support the conclusion that competition among producers in the future, as it had in the past, would maintain field prices at reasonable levels. It was that same belief that persuaded the majority of the Commission to adopt order No. 139.

When the Commission's G–580 reports were received by Congress early in 1948, there appeared a division among the Commissioners. Commissioners Draper and Olds held that jurisdiction over sales by producers should be retained by the Commission. Commissioners Smith and Wimberly took the position that such jurisdiction did not exist and in fact was unnecessary. These respective positions were maintained before the Senate Interstate and Foreign Commerce Committee in February 1948 and have continued to the present.

Congress has before it, in both the House and Senate, a comprehensive record consisting of reports and testimony on proposed amendments to the Natural Gas Act. There is available in considerable detail currrent statistics and information on the natural-gas industry and future trends. The record shows that under present conditions in the industry large producers are in such a dominant position and are so powerful as to require the exercise of jurisdiction over producer sales if the public interest is to be properly protected. For that reason, we do not consider it necessary to dwell further on past history of the legislative intent or the administrative actions of the Federal Power Commission. At this point it matters little who was right and who was wrong in interpreting the Natural Gas Act.

The real issue for Congress to decide is whether or not regulation of the sales of natural gas by producers to purchasers for transportation and sale in interstate commerce for ultimate public consumption is in the public interest. The issue is of vast importance as a matter of principle.

PROTECTION OF CONSUMERS

The plain intent of the Natural Gas Act is to protect consumers of natural gas from exploitation at the hands of the natural-gas companies. This was the conclusion of the United States Supreme Court in passing upon a case in which the legislative history of the act had been fully presented by the Hope Natural Gas Co. and the Federal Power Commission—*Federal Power Commission* v. *Hope Natural Gas Company* (320 U. S. 591).

Congress itself had made its position clear when it declared in unambiguous language in section 1 (a) of the act "that the business of transporting and selling natural gas for ultimate distribution to the public is affected with the public interest, and that Federal regulation in matters relating to the transportation of natural gas and the sale thereof in interstate and foreign commerce is necessary in the public interest."

It would be contrary to the expressed purpose of the act to exempt one class of interstate sales from regulation, thus destroying the regulatory safeguards enacted by the Seventy-fifth Congress for the protection of consumers of natural gas. For, as emphasized by the United States Supreme Court in its unanimous opinion in the Interstate case, supra, the power to regulate this class of interstate sales is indispensable to the purpose of the Natural Gas Act and for the protection of the public. In that opinion, referring to wholesale sales in interstate commerce at the conclusion of production and gathering, the Court said:

> It cannot be doubted that their regulation is predominantly a matter of national, as contrasted with local, concern * * *. Unreasonable charges exacted at this stage of the interstate movement become perpetuated in large part in fixed items of cost which must be covered by rates charged subsequent purchasers of gas, including the ultimate consumers. It was to avoid such situations that the Natural Gas Act was passed.

The contention of the majority that the company involved was, in terms of other transportation and sales, a natural-gas company, is irrelevant to the issue. The language of the Supreme Court runs to a principle of general applicability. Whether the wholesale marketing in interstate commerce at the conclusion of production and gathering was by a corporation which was only a producer and gatherer or by a producer and gatherer which was also a pipe-line company, the regulation of that sale would be "predominantly a matter of national, as contrasted with local, concern" and "unreasonable charges exacted at this stage of the interstate movement" would inevitably "become perpetuated in large part in fixed items of costs which must be covered by rates charged subsequent purchasers of gas, including the ultimate consumers."

The proposed legislation would sacrifice this very important regulatory principle to the demands of the oil industry for unrestricted profits on their sale of a limited natural resource in interstate commerce to utility markets. If a majority of Congress is willing to turn loose for exploitation wholesale quantities of natural gas by independent producers who by 1952 will control at least 70 percent of the total supply of interstate pipe lines, they should not hesitate to grant the same exemption from regulation to the interstate pipe-line companies and their affiliated producing companies which will control only 30 percent of the total.

But, as the record before this committee so clearly shows, the latter is reserved for another day, because the proponents admit that the Congress would not swallow in one gulp the whole legislative program of the oil and gas industry. Instead, the program in the Eighty-first Congress calls for amending the Natural Gas Act in piecemeal fashion, with the oil industry's proposal obtaining the inside track.

These legislative proposals are in direct conflict with the purposes of the Natural Gas Act. If this important regulatory principle is sacrificed, it will reduce the ostensible protection which the remaining regulation offers the consuming public to what is little better than a fraud.

PROTECTION OF CONSUMERS AGAINST MONOPOLY PRICES MUST NOT BE IMPAIRED

The evidence of concentration of ownership of the country's gas reserves in the hands of a few oil and gas companies emphasizes the importance of preserving the full regulatory controls set up in the Natural Gas Act. For, if the prices charged by large independent producers are freed from regulation by enactment of the proposed amendments to the Natural Gas Act, such concentration of control as the record reveals will lead inevitably to monopoly prices for the gas supplies required by expanding interstate pipe lines.

The greater portion of the Nation's gas reserves—86 percent—is controlled by the so-called independent producer and by 1952 such producers will be supplying at least 70 percent of interstate pipeline gas. In that year, however, more than two-thirds of this independent gas supply will come from 35 of the 2,300 producers making sales to interstate pipe lines. In 1947 10 producers sold approximately one-half of all the gas supplied to such pipe lines by the five Southwestern States of Texas, Louisiana, Kansas, Arkansas, and Oklahoma, in which 85 percent of the gas reserves are located.

These figures reflect the concentration of ownership of natural-gas acreage. Thus, more than three-quarters of the acreage in the great Panandle and Hugoton fields of Texas, Oklahoma, and Kansas, representing one-quarter of the country's entire reserves of natural gas, is controlled by 25 companies, while 10 of these companies control three-fifths of the acreage. Taking the country as a whole, 33 oil companies held in lease or fee five-eighths of the total oil and

gas acreage, with more than half the acreage in the hands of 20 companies.

In the face of this situation, it is clear that the majority can place no dependence upon free competition among producers to assure reasonable prices. In fact, the proponents of this legislation have failed to establish the existence of such competition, for the evidence reveals that the effective competition today is between buyers seeking natural-gas supplies from producers rather than between producers seeking a market. For example, Mr. B. A. Hardey, an independent oil and gas operator, under examination by Representative HALE—House hearings on H. R. 79 and H. R. 1758, Eighty-first Congress, first session, page 51—testified that there is active competition between competing pipe-line companies to get the gas "and sometimes the prices on individual contracts are boosted up as a result of that competition."

Similar testimony is to be found in the record of the Senate committee hearings on S. 1498. A forceful statement of how competition between buyers is bidding up the field price of gas in the Carthage, Tex., field is found in the testimony of Mr. E. Buddrus, president of Panhandle Eastern Pipe Line Co., in the House hearings on H. R. 2185 (p. 270), during the first session of the Eightieth Congress.

If the pipe line company finds that it is being held up for too high a price, it cannot, for example, move its line from the Gulf Coast fields of Texas and Louisiana, to the fields of Kansas, Oklahoma or Wyoming, but is forced to continue to buy gas in the general area where it first secured its gas supply. It cannot go shopping around elsewhere for cheaper gas. The freedom of purchasing from many competing dealers available to purchasers of coal or oil, for example, is very much restricted if not completely absent in the case of natural gas companies.

Consumers at one end of the pipe line are wholly dependent for their gas supply on producers at the other end of the line, perhaps a thousand or more miles away. Because of that relationship and the tying-down of a pipe-line company to a particular supply area, competitive forces are weak and monopoly forces strong, thus governmental regulation is required for protection of the public.

Since the dominant position of a few large producers in the ownership of gas reserves enables them to charge what the "traffic will bear," regulation of the subsequent transportation and sale by the Federal and State commissions would be rendered wholly ineffective if the bill is enacted. The monopoly prices which producers would be able to charge under such conditions would result in fantastic profits from the sale of a limited natural resource. The insatiable desire for higher and higher profits, in fact, provides the mainspring for these efforts of the oil and gas industry to avoid or destroy governmental regulation which would in any way limit such profits.

RECORD REVEALS SHARP INCREASE IN FIELD PRICES

The record shows that the field prices which prevailed during the years 1939–47 were, in general, determined when there was actual competition among producers and that they closely approximated the reasonable cost level which the Commission has determined in rate cases for gas produced by interstate pipe lines from their own reserves. During that period the prices paid independent producers in the Southwestern area remained remarkably stable. Since 1947, however, the rapidly expanding pipe-line market has given those who dominate the country's gas reserves their opportunity and field prices have increased at a rapid rate.

An excellent portrayal of this changed situation is found in the comments of E. DeGroiyer, a leading geologist and director of Republic Natural Gas Co., a large independent producer, who said in November 1948:

> Gas, which only a few short years ago, could not be sold at the wells for 1 cent a thousand cubic feet, is now bringing prices as high as 8 to 15 cents a thousand cubic feet. What other industry has enjoyed such price increases for its product with an ever-increasing demand which should at least assure maintenance of existing price levels for years to come?

This general view of the rapid upward trend of natural gas field prices was described by Mr. E. Buddrus in the hearing on H. R. 2185 before this committee in April 1947. He said that up to the last few years before the war there was a normal demand for natural gas and the pipe-line boys were buying it for 3, 4, or maybe 5 cents. He continued:

> Since that time the expansion program has been going on and that price is going from 5 to 6, to 7 or 8 cents at the mouth of the well.[1]

Similarly, Mr. O. C. Bailey, chairman of the Arkansas Oil and Gas Commission, testified in the hearings on the present bill that, since the long distance pipe lines have come in and have been bidding for gas, the price of sweet gas has increased to around 8 cents at the wellhead.

Testimony before the Senate committee considering S. 1498, Eighty-first Congress, is to the effect that the price of gas at the wellhead would continue to increase. Thus, Jeff A. Robertson, chairman of the Kansas Corporation Commission testified:

> The cost of gas is steadily rising. I am familiar with asking prices at the wellhead of 10, 11, and 12 cents per thousand cubic feet by various producers.

The prices named in recent contracts for purchase of gas reflect these large increases in field prices. Current prices are more than twice the average wellmouth price of 1947. But there is evidence that prices will not stop there for these same contracts contain escalator clauses providing for automatic price increases in the future. They also contain renegotiation clauses which require the pipe-line company to pay the current field price, but not less than the contract price after a period of years has elapsed. Furthermore, many of the new contracts contain so-called favored-nation clauses requiring an increase in the contract price should the pipe line company pay a higher price to another producer, or some other purchaser within the same district offer a higher price for gas.

These clauses in gas purchase contracts are of recent origin. They point to higher field prices in the future which can only mean higher costs for natural gas all along the line to the ultimate consumer.

The recent sharp upward trend in field prices serves to emphasize the need for regulation of interstate sales by independent producers. In view of this new situation no significance should be attached to the fact that the Commission has not hitherto found it necessary to exercise jurisdiction over such sales.

INCREASED COST OF GAS TO CONSUMER WILL RESULT FROM LEGISLATION

We believe that enactment of the proposed legislation would over the years seriously affect the cost of gas to the consumer. The producers clearly evince the desire to bring the field price of gas to a level where this cost, plus the cost of transportation, would approach the price of other fuels on an equivalent heat-value basis at the market end of the pipe line.

The record shows that if the gas consumers had been charged in 1947 on a comparative heating value basis with oil they would have paid an additional one-half billion dollars for natural gas. A five-cent increase in the average price of gas purchased from independent producers on the basis of 1947 consumption would have amounted to $65,000,000. On the basis of estimated purchases in 1952 the increase would be $132,500,000, annually, as such purchases will double during this five-year period.

Specific evidence is available that increases in field prices will increase the cost of gas to the consumer. During the last two years the Oklahoma Corporation Commission and the Kansas Corporation Commission have entered orders fixing the minimum wellhead prices of 7 and 8 cents, respectively, per thousand cubic feet for natural gas taken from the Hugoton field. Several interstate pipe line companies would have their cost of purchased gas increased twofold by this action.

The pipe-line companies are contesting the actions of the two State commissions in the courts on constitutional and other grounds. They are contending, among other things, that the orders will force an increase in the price of gas to the consumers in the two producing States, as well as in other States. As expressed by one company, in its protest and petition to intervene:

> The action of the (Kansas Commission) * * * would automatically force an increase in the price of gas to the ultimate consumer in Kansas, and in other States.

The order of the Kansas Commission has already resulted in an increase in rates to the Nebraska industrial customers of one pipe-line company. The increase in the price of gas in the Hugoton field by the two State commissions will add an additional $8,000,000 a year to the cost of gas to these pipe line companies. The gas companies claim that

[1] House hearings on H. R. 2185, 80th Cong., 1st sess., p. 264.

these increases would be passed on to the consumers.

Thus it is clear that these field prices are matters of national rather than local interest, requiring Federal regulation to protect millions of consumers in the States dependent upon large imports of gas for the maintenance of this essential utility service.

The majority, apparently recognizing that the price increase possibility cannot be ignored, cite the fact that the average price paid by interstate pipe lines to indepedent producers in the southwestern producing States is about 4.6 cents per thousand cubic feet, while the domestic consumer in the District of Columbia now pays about $1.51 per thousand cubic feet, implying that the field price is only a minor factor in the cost of gas to the ultimate consumer. The comparison is not representative. For, when all utility sales of natural gas are considered, the field price represents a significant portion of the 34-cent average cost of gas to the ultimate consumer. In fact the field prices being currently asked in the Southwest would represent more than 25 percent of that figure and approximately 50 percent of the combined average price charged utility industrial customers.

The majority speaks of vague fears having been expressed that sometime in the future a situation might conceivably arise when it would be desirable for the Commission to exercise this authority and indicates that the situation could be met at that time by appropriate action by Congress.

But the record is clear that the time for action is now at hand. The current field price situation demands regulatory attention. Requests for rate increases by pipe-line companies because of the increased cost of gas in the field are inevitable. The sponsors of the legislation readily admit their interest in higher field prices. During hearings on S. 1498, introduced by Senator KERR as the companion bill of H. R. 1758, Commissioner Olds stated, in part:

> Turning now to the trend in field prices, I believe the chief proponents of S. 1498 are interested in higher field prices of natural gas.

Senator KERR interjected at this point with the remark:

> That will be admitted. (Hearings on S. 1498, a bill to amend the Natural Gas Act, 81st Cong., 1st sess., galley page 93VM.)

Surely it would be folly for Congress to enact this legislation exempting these sales from regulation and then turn around and pass new legislation which would give the Commission the same jurisdiction it now has.

SMALL PRODUCERS COULD BE EXEMPTED WITHOUT SACRIFICE OF PUBLIC INTEREST

The Federal Power Commission, in its report on H. R. 1758, indicated that no occasion would ever arise to regulate the small producer. At the hearings a representative of the Commission stated that by rule or statute or otherwise it would be feasible to fix a maximum amount of sales in interstate commerce before jurisdiction would attach. This would relieve the small independent producer of all regulatory requirements. The fact that a relatively few major oil and gas companies control the greater portion of the country's gas reserves and make most of the sales of natural gas to interstate pipe lines suggests that such exemption of small producers would not adversely affect the public interest.

Subsequent to the hearings, at the request of the chairman of this committee, language was drafted which would exempt from Federal regulation small producers and gatherers whose total annual sales in interstate commerce are less than 2,000,000,000 cubic feet and the Commission reported favorably thereon. We attach the draft of this language as exhibit A to this report.

It appears that the language proposed in exhibit A would exempt from regulation 97 percent, or approximately 2,230 of the 2,300 producers and gatherers of natural gas making sales to interstate pipe-line companies and yet would leave subject to regulation more than 70 percent of the gas sold by so-called independent producers to natural-gas companies. Further, it appears that such classification would be constitutional as similar classifications and exemptions have been upheld under the rule laid down by the United State Supreme Court in *Wilson* v. *Neb.* (243 U. S. 332).

We are convinced that the enactment of this proposed language in lieu of the bill reported by the majority would make certain that dominant producing interests, primarily the major oil companies of the Nation, would not be able to assert their monopolistic position in the control of gas reserves to the detriment of the public interest. At the same time it would relieve from regulation the little well owners for whom Speaker RAYBURN evinced concern in opposing the enactment of H. R. 4051—Moore-Rizley bill—in the Eightieth Congress, when he indicated a desire to vote for that part of the bill that will really give relief to these little well owners and take them out of interstate commerce.

CONCLUSION

The bill recommended by the majority would nullify the Federal Power Commission's authority with respect to field sales of natural gas in interstate commerce by producers and gatherers, thus eliminating regulation which the Congress and the courts have recognized as essential for the protection of consumers from exploitation. The bill is one segment of the over-all plan of the oil and gas industry, embodied in the Moore-Rizley bill of the Eightieth Congress, designed to destroy effective Federal regulation of interstate commerce in natural gas.

The bill, by freezing a large segment of the industry from regulation, would benefit primarily a few large corporations which, because of their monopolistic control of gas reserves in the Southwestern States, would have almost unfettered power to fix the price of gas entering interstate transmission lines.

As the price of gas entering the pipe lines is a determinative factor in the price at the market end of the line, the bill, if enacted, would destroy protection which the act affords the consumer.

The rapid increase in field prices of natural gas, which can be expected to continue and which competition is unable to control, requires the continuation of the power to regulate interstate sales of natural gas by independent producers and gatherers.

There is no doubt that, over the years, enactment of the bill would increase the cost of gas to the ultimate consumer by many millions of dollars. It is likewise indisputable that the objective of the proponents is higher prices. It is unquestionably for this reason that the cities which originally were numbered among the most vigorous supporters of the bill which became the Natural Gas Act are now, through the National Institute of Municipal Law Officers, opposed to this bill.

Natural gas is a wonderful resource of nature which has come into great demand since World War II. It was given to us by our Creator for the benefit of all of our citizens. We must not permit its great value, created in large measure by the demand of the people themselves, to be appropriated by monopolies through inflated profits. Reason and justice require that the sales of natural gas to interstate pipe lines for ultimate public consumption be subject to Federal regulation in order to assure that independent producers and gatherers ask no more than reasonable prices to meet their legitimate costs, including the market rate of interest upon the capital prudently invested in plant and equipment. In the supplying of natural gas to a utility market these producers and gatherers are not entitled to exact "what the traffic will bear," for the consuming public is itself entitled to the benefits which this great natural resource offers after paying the reasonable costs of labor and capital required to make it available for use.

For all of the reasons herein set forth we recommend that H. R. 1758 be rejected by the vote of the House and be not enacted into law, and further recommend that any amendment relating to the authority of the Federal Power Commission over sales in interstate commerce by producers and gatherers of natural gas shall be in accordance with the amendment proposed in the draft attached hereto as exhibit A.

By such action the Congress can dispose of the differences that now exist and at the same time assure the consumers of natural gas protection against unreasonable rates.

EXHIBIT A

AMENDMENT TO H. R. 1758, EIGHTY-FIRST CONGRESS

On page 1, line 1, strike out all after the enacting clause and insert the following: "That subsection (b) of section 1 of the Natural Gas Act, approved June 21, 1938, is hereby amended by eliminating the period at the end thereof and adding the following: 'or to any sale of natural gas in interstate commerce at or prior to the conclusion of production or gathering by a person whose total sales of natural gas in interstate commerce individually or in the aggregate with affiliated producers and gatherers do not exceed on an annual basis 2,000,000,000 cubic feet computed at 14.65 pounds per square inch absolute at 60° Farenheit provided such person is neither a natural-gas company by reason of other activities nor affiliated with a natural-gas company'."

Address by Hon. Gerald R. Ford, Jr., of Michigan, Before Convention of Reserve Officers' Association

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech I delivered at the Reserve Officers' Association convention at Grand Rapids, Mich., July 27, 1949:

Mr. Hanna, Governor Williams, General Vaughn, distinguished guests, and fellow members of the Reserve Officers' Association, as the Representative in Congress from this district in Michigan I welcome you to our great community on behalf of the citizens of the city of Grand Rapids. We are delighted to have you with us as our guests. We know your visit will be enjoyable. Further, I am certain the work of the delegates on the business agenda will be successful. In passing, let me compliment and congratulate Major Hanna, his working staff and the members of the Grand Rapids R. O. A. chapter for their unselfish and untiring efforts in preparing for this convention. They deserve our most enthusiastic commendation.

Grand Rapids, your host, is well known throughout this country and even worldwide as the convention crossroads of America, the gateway to the playground of America, and as the furniture capital of the world. We are rightfully proud of these titles that have been bestowed upon us, and our citizens will do their utmost to live up to our reputation.

My good and able friend Frank Whitwam, manager of the convention bureau, will effectively and graciously meet the convention's every need, just as he and his staff have done for countless other gatherings here in the past years. We have, as the convention crossroads of America, a reputation to maintain of cordiality and service, and I trust, when you leave, there will be a true desire to return.

Michigan is rightfully proud of its vast recreational resources. With all due deference to those who come from other regions where Nature's blessings are abundant, we Michiganders believe our recreational assets, both in the lower and upper peninsulas, are unsurpassed. Grand Rapids is the gateway to this vast playground area. After the serious business of this convention has been properly laid aside, please extend your stay by a trip to the multitude of surrounding lakes, or Lake Michigan, where the inducements for complete and utter relaxation are overwhelming.

As a long-time resident of Grand Rapids, and consequently one endowed with the belief that this city has an untouched worldwide reputation in the field of fine furniture, I must mention that we hold the title of the "Furniture Capital of the World." In one of your off moments, please visit the Furniture Museum and the various furniture exhibits by our manufacturers.

I would be unjust to those in Grand Rapids who are active in the Reserve training program, to pass along without commenting on what our Reserves here have done in the past and what they are doing now. This portion of Michigan is literally a reservists' paradise. The Naval Reserve unit in our new armory has a long-standing tradition of being one of the finest outfits in the country. In 1927, and again in 1928, the unit was awarded the top honors nationally for surface divisions. The same degree of excellency prevails today.

The National Guard unit, part of the One Hundred and Twenty-sixth Infantry, has always done a magnificent job both in peacetime and in war. The achievements, individually and as a unit, are indelibly written in the annals of history.

The Reserve units in the Grand Rapids area for the Air Force and Army are equally potent and effective. The details are better known to many of our distinguished guests so I will simply comment by reiterating that the Grand Rapids area is a reservists' home, therefore it is most appropriate that the ROA should hold its annual convention in such a community.

Seldom does a politician speak to such a large gathering in an atmosphere where he should have so many friends. To date, in my limited career in Congress I have already seen the difficulties in trying to please all points of view on any or all issues. It just cannot be done, so when a Representative makes a public appearance he is inevitably faced with those who are for or against. Consequently the atmosphere, at least among certain parties, can be anything but sweetness.

This occasion should be somewhat different from my point of view, for my voting record to date is in accord with what should be the attitude of most of those in the audience. I was one of the Members of the House who as a matter of record voted for the first military pay-raise bill during this session of Congress. This should cause no brickbats from those on active duty in the military service. Furthermore this military pay-raise bill was on the recommended legislative action list submitted by the ROA to the Eighty-first Congress, so my point of view on that legislation should cause no ill feeling between my fellow ROA'ers and myself.

I am able at this time to report good news along another line. The job is not fully completed, but no hitches or road blocks should develop before Congress adjourns. Most of you are acquainted with the fact that the Eightieth Congress enacted Public Law 810, better known as the Reserve Retirement Act. This legislation was long overdue as the needed incentive for the building up of our Reserve components of the armed services.

As is the case with most new legislation, it takes time to work out and solve administrative difficulties. Public Law 810 was no exception. First, the Comptroller General interpreted the law to hold that June 29, 1948, was the operative date for the beginning of a year of satisfactory service for retirement purposes. It is doubted by many that this was Congress' intention, but right or wrong that was the controlling legal interpretation.

As a result, however, all branches of the armed services found themselves totally unprepared to supply the necessary correspondence courses and other material to reservists on time so the requisite 50 points could be earned during the first year of the law's operation. The records show—and I am not criticizing the Army, Navy, or air services—that those reservists who depended on correspondence courses and the like, rather than on regular drill periods, could not possibly earn the essential points the first year.

Early during this session of the Eighty-first Congress this situation was called to my attention and as a result I introduced H. R. 3039, which changed the starting date for Public Law 810 to July 1, 1949. Subsequently, Senator JOHNSTON of South Carolina introduced an identical bill in the Senate. The legislative wheels moved slowly but I am pleased to report that the House of Representatives on July 18 approved a bill identical to H. R. 3039. Progress is now apparent in the Senate and I am confident that before we adjourn this greatly needed legislation will be on the statute books. The enactment of this law will reinvigorate the Reserve program, which had suffered a severe blow after such high hopes had been raised by the action of the Eightieth Congress.

After the last war I became a member of the RONS (Reserve Officers' Naval Service). We had a limited group that met regularly to discuss naval problems in a strictly one-service atmosphere. At the same time the local chapter of the ROA was accomplishing its mission in much the same climate. In view of the Military Unification Act of 1947 this appeared to be a paradoxical situation, even on the local level. Apparently, the same was evident to the national officials in both ROA and RONS, for in 1948 the two became unified with one common objective or mission, namely, the over-all national security of the United States by means of an adequate military establishment.

The delicate problem of unifying the RONS and ROA on the national and local levels was no less complicated, in a smaller way, than the difficulties confronting those in the various branches of the regular Military Establishment. However, the job was done by the Reserve officers, and as a result our military forces are strongly bulwarked by a vast and cohesive force of civilian reservists who know and understand military problems because of past experiences in World War II. I respectfully submit that the singleness of purpose now existent within the ROA should be an example to the Regulars in the National Military Establishment.

Let me review briefly my own reaction to the unification problem and because of recent personal experiences perhaps I can clarify a point or two. In December 1945, while still on active duty with the Navy, I heard the first news about unification. My question was, "Why?" The reaction was natural, for I had seen all branches of the service operate most effectively in the Pacific war. In practically all instances the military successes against the Japanese resulted from teamwork of the finest sort. I wondered why the plan, which had such phenomenal success against a wily opponent with all the geographical benefits on his side, was to be junked.

Upon my retirement to civilian life early in 1946, my thinking on the question of unification undoubtedly followed that of many Reservists. The law enacted in July 1947, appeared to have considerable merit, particularly under the able leadership of the late Secretary of Defense James Forrestal. The news of the Key West agreement further strengthened my belief in the new set-up. The assignment of missions to each branch of the service at the Key West meeting of the Joint Chiefs of Staff was a blue point for our future national security. It is my understanding that this has now been supplemented by the subsequent Newport agreement.

From all indications there are still some unsettled problems within the National Military Establishment, although one or two have been decided in recent weeks. At this time, before such a distinguished and well-informed group of experts, I make no comment on the raging controversy over the cancellation of the Navy's supercarrier. Reference is only made to point out the new question which has arisen, namely, what is to be the function under present law or proposed law, of the Joint Chiefs of Staff and the Secretary of National Defense?

Certainly all here are, or should be, familiar with the Tydings bill in the Senate and the modified bill on the same subject which recently passed the House. At the moment the issue is being threshed out in conference.

I am no seer so will not predict the outcome but, as is inevitable, I assume a compromise will result incorporating the necessary procurement and fiscal reforms but

denying in part the requested revisions in the Chief of Staff set-up.

Perhaps during the course of this convention the delegates will consider the advisability of approving or disapproving some of the principles of the Tydings bill. Because there are many sound-thinking people on both sides of this issue, I recommend caution and deliberate thinking. Do not get swept off your feet by generalized and superficial statements which allege that over $1,000,000,000 can be saved by the adoption of the Tydings bill intact. The House Committee on Armed Services and the House itself have gone on record for the proposed procurement budgeting and fiscal reforms. The field of dispute is thereby restricted.

Chairman VINSON, chairman of the House committee, according to reports, is "from Missouri" and consequently wants to know the need for further concentration of authority in our military set-up. Many well-informed citizens, both the military and civilians, ask in good faith, why must we go beyond the Unification Act of 1947 plus the bill recently approved by the House. I only ask that each of you give this important question your best attention and judgment. Your opinions both in the various branches of the service and in the ROA can and will be helpful to Congress. We, as citizens of this great Nation, should not compromise on the issue whether or not the United States should have the best in military strength within the limitations of our economy. The differences of opinion as to the method and means by which that pinnacle can be reached will be resolved by the wisdom of those in Congress on the legislative level, by our able military leaders who have the know-how and experience acquired on the field of battle and by the American citizens whose fundamental good sense somehow invariably clears the mist and straightens the course. This is a tried and true method under a Republic and in conformity with our democratic ideals.

In closing let me repeat again, Grand Rapids and western Michigan welcomes you and hopes that you have a most successful convention.

Letter and Memorandum on Communist Activity in Russia in 1919–20

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting a copy of a letter dated October 27, 1919, from Under Secretary of State Robert Lansing to my late grandfather, Senator Henry Cabot Lodge, of Massachusetts, and a copy of a memorandum dated March 20, 1920, from D. C. Poole, Chief of the Division of Russian Affairs of the State Department, to the Under Secretary of State, photolith copies of which were sent to me by Mr. Alfred Kohlberg, vice president of the American China Policy Association, Inc.

I am inserting these letters because it seems to me most interesting to note that almost 30 years ago the world-wide problem which we are faced with was very much in existence and the State Department was aware of this menace. This letter and the study that accompanied it and which was printed as a public document abundantly demonstrate that while the Communist menace has gathered resourcefulness, momentum, and strength it has not deviated from its original purpose. Let us, therefore, not be misled by any temporary tactical appearances. Let us instead be guided by Abraham Lincoln's admonition to hope for the best but prepare for the worst.

OCTOBER 27, 1919.

Hon. HENRY CABOT LODGE,
Chairman, Committee on Foreign Relations, United States Senate.

SIR: I have the honor to send you herewith, for the information of the Committee on Foreign Relations of the Senate, a memorandum on certain aspects of the Bolshevist movement in Russia.

The memorandum has been prepared from original sources by the Division of Russian Affairs of the Department of State. As you will see, the statements are based almost entirely on translations from Bolshevist newspapers. These include the official organs of the All-Russian Central Executive Committee of Soviets, of local Soviet committees, and of the Russian Communist Party (Bolsheviks). The Bolsheviks' own statements are supplemented by the reports of American representatives.

The appendix contains the full text of representative Bolshevist documents. The text of other documents, such as the constitution of the so-called Soviet Republic, will be found in the published hearings on Bolshevist propaganda before the Committee on the Judiciary of the Senate, and for that reason are not reproduced here.

Since the overthrow of the autocracy in March 1917, the Department of State has studied developments in Russia with the sympathy which America has traditionally shown toward all movements for political and social betterment. The study which has been made of the Bolshevist movement, some of the results of which are furnished herewith, show conclusively that the purpose of the Bolsheviks is to subvert the existing principles of government and society the world over, including those countries in which democratic institutions are already established. They have built up a political machine which, by the concentration of power in the hands of a few and the ruthlessness of its methods, suggests the Asiatic despotism of the early Tsars. The results of their exercise of power, as shown by the documents presented in the accompanying memorandum, have been demoralization, civil war, and economic collapse. I commend to your careful consideration the detailed information which the memorandum contains.

I am addressing a similar letter to the chairman of the Committee on Foreign Affairs of the House of Representatives.

I have the honor to be, sir, your obedient servant,

ROBERT LANSING.

MARCH 20, 1920.

MEMORANDUM FOR THE UNDER SECRETARY OF STATE

SIR: I have the honor to submit herewith a memorandum prepared in the Division of Russian Affairs on the subject of the so-called Bolshevist or Communist Party in Russia and its relations to the Russian Soviets and to the Third International. The material presented is from original sources including the utterances of the Bolsheviks themselves, extracts from their party organs, and extracts from the official press and wireless messages of the Soviets and the publications of the Third International. A knowledge of the facts which the memorandum discloses is essential to an understanding of the Russian situation, especially in its international bearings, and I believe that it would be in the public interest to publish the memorandum and distribute it as widely as practicable.

The memorandum shows that the Russian Communist Party is a highly centralized and disciplined party, membership in which is carefully restricted. It dominates the Soviets, especially the central Soviet institutions, such as the Central Executive Committee and the All-Russian Congress of Soviets. The leaders of the party occupy the highest official positions in Soviet institutions, both civil and military. The party, as such, performs administrative functions. Its press is closely asscciated with the official Soviet press.

The Communist Party is a member of the Third or Communist International, having in fact organized it, and the leaders in the party are also the chief executive officers of this world revolutionary bureau. The leaders of the Third International are also officials of the Soviet institutions. The propaganda literature of the international is printed in the Soviet printing establishments and included in the official organs of the Soviets.

The interrelation of the Bolsheviks, the Russian Soviets, and the Third International is such, in fact, that while the three may be distinguished theoretically, in practice they represent a single movement, backed by the administrative machinery and the resources of Soviet Russia. This is important, especially from an international viewpoint, because the aim of the Communist or Bolshevist Party is world-wide revolution and the purpose of the Third International is to propagate revolution and communism throughout the world.

Therefore, while the Soviet institutions, as such, may agree to abstain from subversive propaganda abroad, neither the Russian Communist Party nor the Third International would be bound thereby.

Very respectfully,

D. C. POOLE,
Chief, Division of Russian Affairs.

Re Judges as Character Witnesses

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. MACY. Mr. Speaker, to emphasize another phase of the recent Hiss trial, upon which I made previous comment on the floor of the House, I ask unanimous consent to have printed in the RECORD copy of a letter addressed to the American Bar Association under date of June 23, 1949, by the distinguished New York lawyer, Hiram C. Todd. A member of the American, New York State, and City Bar Associations, Mr. Todd has held high Federal and State office in the legal field and has successfully undertaken investigations of importance in both these jurisdictions during a long career at the bar. His letter follows:

BALDWIN, TODD & LEFFERTS,
COUNSELLORS AT LAW,
New York, June 23, 1949.

HENRY S. DRINKER, Esq.,
Chairman, Committee on Professional Ethics and Grievances, American Bar Association, Philadelphia, Pa.

DEAR MR. DRINKER: Shocked by the action of two Justices of the Supreme Court in

testifying as character witnesses for Alger Hiss, I am moved to write you this letter.

For a long time, I have felt that there should be a canon of judicial ethics against judges testifying as character witnesses. I think that such a canon should be general in its terms, but if not general then it certainly should be provided that a judge should not testify as a character witness in any case that might come before the court of which he is a member.

My opinion in regard to this matter has been formed not only on the ground that judges owe a special duty to maintaining high ethical standards in our courts, but because, in my experiences as a public prosecutor, I have seen judges improperly use the great influence of their judicial offices in giving testimony as character witnesses in criminal cases in parts of their own courts.

About 20 years ago when, as a Special Assistant Attorney General of the United States, I was prosecuting Gaston Means and Thomas B. Felder, the late former Judge Martin T. Manton, who was then the presiding judge of our circuit court of appeals, gave character testimony as to Felder in the United States District Court sitting in the same building which then housed the United States Circuit Court of Appeals. Means and Felder having been convicted, they appealed to the Circuit Court of Appeals, and when their case was reached on the calendar Judge Manton was presiding, and it became necessary for me to call his attention to the fact that he had acted as a character witness for Felder, before he excused himself and left the bench.

During the prosecution of certain public officers of Kings County, New York, about thirteen years ago, arising out of what was known as the Luckman-Drukman murder case, a then Justice of the Supreme Court testified as a character witness for one of the defendants. Later, a motion was made in behalf of that particular defendant before the said justice concerning some procedural question regarding a subsequent trial of the same case, and although I called the justice's attention to the fact that he had testified as a character witness in the earlier trial of the said defendant, he still persisted in sitting and hearing the motion. In order to relieve this situation, it became necessary for me to apply to the Appellate Division of the Supreme Court for a writ of prohibition against said justice deciding the motion. Shortly after the justice learned of the application to the Appellate Division, he referred the motion to another Justice of the Court. As I dictate this letter I do not recall the name of the justice or of the defendant, but if you would like to have that data I shall be glad to look it up in my old records.

On both of the above-mentioned occasions, numerous lawyers and judges of high standing expressed to me their surprise and disgust that judges should so misuse the great influence of their judicial offices. I mention these expressions of opinion so you may know that my position in regard to this question is not unique in this jurisdiction.

I shall be obliged if you will bring this letter to the attention of the Committee on Professional Ethics of the American Bar Association in support of the suggestion that an appropriate canon be added to the Judicial Code of Ethics.

Faithfully yours,

HIRAM C. TODD.

Steel Facts

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 3 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Steel Facts," published in the New York Daily Mirror of July 27, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STEEL FACTS

On the statute books is a good law governing labor relations. President Truman dislikes the law, which is strictly a personal peccadillo, as the President of the United States is bound to execute and enforce every law.

When the question of a fourth-round pay rise in the steel industry developed into a possible strike, the President suddenly needed facts—hand-made, built to order facts.

Steel, like all big American industries, keeps careful records of itself. The Department of Labor, the Department of Commerce, the Treasury Department, the Social Security Administration, the American Iron and Steel Institute, the CIO, and numerous other public and private organizations keep the facts of the steel industry up to date.

However, President Truman needed more facts. So he appointed a fact-finding commission, consisting of three men:

1. Sam Rosenman, lawyer, speech writer for Presidents Roosevelt and Truman, fat, jolly, friendly (principally to the New Deal and the New Dealers). In recent years, he has been hired as counsel by some capitalist companies who need his particular expertness, among them a small steel company in Detroit. He has never given any evidence of familiarity with the basic industry of the country.

2. Carroll R. Daugherty, professor of business economics, school of commerce, Northwestern University. He is supposed to be an expert on industrial management and industrial relations. His fame is due to a book, Labor Problems in American Industry, published in 1941 and reprinted in 1948. This is used as a text in many colleges. His theme is:

"In 1929, the year of our greatest prosperity, the workers as individuals had experienced over a period of 20 years little if any improvement in their economic position relative to the positions of members of other economic classes. Their relative well-being declined severely during the depression, but by 1939, under Government encouragement, gave promise of recovering to the 1929 position and of exceeding it, perhaps, in later years."

From this it can be seen that he prefers Government encouragement to private enterprise. By encouragement he means control, and if you were to read the book you would have to reach the conclusion that if he believes today what he wrote in the book, he would vote for a fourth, a fifth, and even a sixth round without requiring any additional facts.

3. David L. Cole, a New Jersey lawyer, who has made a specialty of industrial arbitration cases, which is a new kind of law business, rising out of all the intricate problems created by the Wagner Act and the Taft-Hartley Act. Cole has a good and a bad reputation, depending upon whom you talk to and who thinks he got a good or a raw deal. There is no evidence that Cole is a steel expert.

So, what it looks like is that the President set up a board that is about as far away from specialized knowledge as possible, but which is also loaded, at least two to one, in favor of the CIO.

Maybe we shall prove to be wrong. But what is really needed is to have some sound minds work on the problem of whether the United States needs a further inflation—for that is what the fourth round is bound to be.

Robert Nathan's eternal formula—that wages can be raised without raising prices—is an absurdity. This lopsided theory must be curbed.

Radio Service for Outlying Areas

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO

IN THE SENATE OF THE UNITED STATES

Wednesday, August 3 (legislative day of Thursday, June 2), 1949

Mr. JOHNSON of Colorado. Mr. President, the superpower lobby pretending to be interested in serving outlying areas better have been demanding that their power be increased from 50,000 watts to 750,000 watts. To demonstrate and emphasize how wrong they are, I ask permission to insert in the Appendix of the CONGRESSIONAL RECORD a telegram received by me from radio station WTCM, Traverse City, Mich. It is not the distant powerful station that solves local problems; it is the local station that meets the local challenge for quick help.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

TRAVERSE CITY, MICH., *July 27, 1949.*

Senator EDWIN C. JOHNSON:

Your requested supporting data as to the need for local radio stations rather than few clear-channels outlets. Note the following and Traverse City now has an influx of 30,000 cherry pickers, 40,000 resorters, making a normal 20,000 population swell to more than 90,000 consisting of Negroes, Mexicans, Jamaicans, as well as resorters from every part of the country. The cherry crop is at its peak. These people bring many problems with them and every year our station has the opportunity of distinguishing itself. This year, event took place last night and I wanted you to know about it and would also like to clear channel voice inform us how they would handle this matter. Monday afternoon a Mexican cherry picker took a small dog to a veterinarian, stated that it had acted queerly, and had bitten a small child. He left the dog, wrote his name down, and vanished. During the night the dog died of rabies. In all this seething activity the

local county health officer gave us the job of locating one small child, name unknown. The child had been bitten by a dog, we didn't know in what neighborhood nor even the day. We dropped all programing and made a number of announcements in an attempt to locate the child, interspersed with information of importance as to the effects of rabies in human beings so as to get everyone cooperating in our search. The health department informed us that death would probably result if the child were not located quickly. Two hours later we had the child in the hospital receiving medical care directly as a result of the plea on WTCM. Also in the same 2 hours we turned up three other children that had been bitten in the same neighborhood by the same dog. We located the owner of the dog. Several of the bitten children already were showing symptoms of rabies. One of them had a high fever when located. What could WJR or WGN, with 750-watt power, do about this?

LES BIEDERMAN,
Paul Bunyan Network, WTCM.

Lessons of the League of Nations

EXTENSION OF REMARKS
OF
HON. ARTHUR H. VANDENBERG
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, August 3 (legislative day of Thursday, June 2), 1949

Mr. VANDENBERG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written to the New York Times by the distinguished Senator from Massachusetts [Mr. LODGE] dealing with some highly significant implications in the famous historical battle over the League of Nations. I think the letter is well worthy of a place in the record of history, so I make the request for its insertion in the Appendix.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LESSONS OF THE LEAGUE—PRESENT FOREIGN POLICY SAID TO CONFIRM RESERVATIONS MERITS

To the EDITOR OF THE NEW YORK TIMES:

Your editorial of July 24 recited a record of achievement on the part of the New York Times of which you have every right to be proud. I feel impelled, however, to question your assertion that about three decades ago the Senate threw away some of the hope of peace by refusing to accept the League of Nations.

It was not the Senate alone which threw away some of the hope of peace. And it was the Senate reservations which, to a significant extent, blazed the trail which we who have come after have, albeit unconsciously, carefully followed.

Now that we have ratified the Atlantic Pact and are embarking on a program of military assistance to Europe it is appropriate to review the past and see how much we have profited by the teachings of those who went before us.

LINK TO VERSAILLES TREATY

A brief backward glance will show what some of these reservations were and how almost instinctively we have followed them in our conduct of foreign relations.

1. The first lesson which the League of Nations debate has evidently taught us is that it was a great mistake to tie the League of Nations covenant to the Versailles Treaty. This meant that the League of Nations covenant never had a chance to be considered on its own merits. It had to suffer continuously from the imperfections of the Treaty, which imperfections were conceded by practically everyone.

This is the first mistake which we of this generation have avoided. The Charter of the United Nations was presented as a separate proposal and emphatically approved on its own merits. This undoubtedly would not have been the case had it been incorporated into a general peace treaty which, if the past is any guide, would have been full of injustices of all kinds.

2. A second issue which arose during the League of Nations debate, and which has been very helpful to us who have come after was the insistence of the Senate that the United States should retain the right to determine what are and what are not domestic issues. When you read the Mackinac Declaration, the Vandenberg-White resolution, the Connally resolution, together with the debates in the House and Senate, it becomes abundantly clear that there is no responsible body of opinion either here or abroad which now suggests depriving the United States or any other country of its right to determine what is or is not a domestic question.

3. A third issue which was fundamental in the League of Nations discussion occurred on the question of the United States having equality of voting with the other nations who were members of the League.

CHARTER VOTING PROVISIONS

In the United Nations Charter, it is implicit and fundamental that no one any longer seriously entertains the thought that the great nations would ever put themselves in the position where small nations, through equal voting, would be able to control their destinies. The proposal in the League of Nations Covenant that small and large states have equal voting appears as an evident absurdity.

4. Perhaps the most difficult of all the issues raised by the League of Nations was that raised by article 10, which committed the United States to preserve the territorial integrity and political independence of members of the League. To this article the Senate at that time added the reservation that military action taken in conformity with the article should be by act or joint resolution of Congress. In other words, it was not even contended that the United States should never seek to preserve the territorial integrity of another country. The reservation was so mild that it merely stated that in any particular case which might arise Congress would have to act.

Look at the situation today. All the steps which have been taken since the end of World War II which relate to issues of peace and war specifically and categorically reserve the principle of national sovereignty and the principle of constitutional process. No responsible man suggests that Congress should be deprived of one of the greatest, most far-reaching, and most fundamental constitutional processes, which is the power to declare war.

REGARD FOR SOVEREIGNTY

In the Atlantic Pact which we have recently ratified, specific statement is made that its provisions shall be carried out by the parties in accordance with their respective constitutional processes. So far as I know, no objection was made to the insertion of these words and I do not recall any objection being made on the floor of the Senate to their being in the text. Yet—strange to relate—it was this simple insistence on that power which caused so much disagreement in connection with article 10.

Furthermore, the North Atlantic Pact obviously and patently omits any thought that we shall guarantee the territorial integrity of any country.

It is both sad and encouraging to look back at the past. It is sad when you realize that on March 19, 1920, 24 of the President's followers voted against ratification of the treaty with reservations. If they had voted for ratification we would have become members of the League.

As Dorothy Thompson has well said, "the interesting thing about the whole controversy is that the modifications demanded by the Senate, chief among which were those applying to sanctions, were not unacceptable to the Allied Powers. Actually, the interpretation of the covenant desired by the Senators was internationally accepted and is probably the sense of the questionable paragraph from the beginning. The President, wished to force his will upon the Senate rather than take nine-tenths of a loaf, got in the end no loaf at all."

I say it is sad that the President's followers did not see the issue clearly. But it is immensely encouraging that we who have come after have seen the issue clearly and have shown by our action that those who sought to attach reservations to the League of Nations Covenant were right—inasmuch as their reservations, which were the object of such unbridled denunciation in the past, are accepted without so much as an argument by virtually all students of the problem today.

In all truth the men who sought to attach reservations to the League of Nations Covenant are proven now in many important respects to have been ahead of their time.

HENRY CABOT LODGE, Jr.
WASHINGTON, *July 25, 1949.*

Public Power Success Story in Southwest Washington

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. MACK of Washington. Mr. Speaker, under leave to extend my remarks, I wish to invite the attention of Members to the remarkable growth and attendant financial success of the public utility districts of southwest Washington.

The district which I have the honor to represent consists of nine counties in southwest Washington: Mason, Grays Harbor, Thurston, Pacific, Lewis, Wahkiakum, Cowlitz, Clark, and Skamania. Only Thurston County does not have an operating public utility district at present, but it is expected that they will soon complete negotiations for the properties of the Puget Sound Power & Light Co. since that company has indicated a desire to sell all its properties.

Eight public utility districts in my district, as well as Klickitat and Benton County Public Utility Districts east of my district, have banded themselves together as the Southwest Washington

Public Utility Commissioners Association which meets the first Sunday of each month for the purpose of exchanging information on policy problems.

These districts are also members of the Northwest Public Power Association which is the industry or trade association of all public and cooperative electric systems covering the States of Idaho, Montana, Oregon, and Washington. The purpose of the Northwest Public Power Association is to promote better organizational and operative methods with a view to assisting its member public and cooperative electric distribution systems in achieving the most businesslike management and to provide most efficient service.

In 7 years the electric rates in southwest Washington have been reduced 66 percent. The people now enjoy rates which are only one-third of the former rates. My people now use three times as much power without any increase in their monthly bills. New rural lines have been extended through the forests and hills, which makes for costly construction, to thousands of remote farms. Rural electrification is well over 95 percent. And in addition the people have paid off $5,672,659.67 of the indebtedness. When the entire bonded debt is paid off in 15 or 20 years, the people will benefit by further sharp reductions in rates.

In order that Members of Congress might have some of the background facts behind this record of achievement, I am including an article by Gus Norwood, executive secretary of the Northwest Public Power Association at Vancouver.

Mr. Norwood, incidentally, is a graduate of the United States Naval Academy at Annapolis, Md. During the war he served as chief engineer of various naval vessels, including the battle cruiser U. S. S. *Alaska*. In 1947 he took his degree as a master of public administration at Harvard University where he prepared several excellent papers on the Federal power policy, capital budgeting in the Federal power program, and coordination problems in the Federal power program.

PUBLIC POWER SUCCESS STORY IN SOUTHWEST WASHINGTON

(By Gus Norwood)

The 10 public-utility districts of southwest Washington have been in the electric business an average of 6.7 years as of December 81, 1948. During that period they were able to reduce the residential rate per kilowatt-hour from 4 cents to 1.36 cents, a total reduction of 66 percent. Consumption of energy in the average home increased from 1,300 to 3,900 kilowatts per year or exactly three times. Yet the average monthly bill per home has remained the same. After deducting allowances for depreciation the plant value of the electric systems owned by the 10 districts as of the end of 1948 amounted to $27,892,506.98, of which $5,672,659.67 has been amortized. This later figure represents the equity of the people in terms of debt-free ownership.

Taxes during 1948 amounted to $418,594.93 as against 1947 taxes of $326,337.04.

The history and background of this record of achievement goes back 56 years to 1893 when the town of Tacoma established its municipally owned electric system and embarked upon the program of building four hydroelectric projects on the Skykomish and Nisqually Rivers. For over half this 56-year period the residential rates for electricity in Tacoma have been the very lowest in the Nation. By 1900 Centralia and Ellensburg were operating municipal electric systems. The great Seattle City light system started in 1902 and now includes an investment of almost $100,000,000 chiefly in the Skagit River projects. As of December 31, 1948, Tacoma has established an equity of the people or paid-up ownership of $28,289,-967.48 and Seattle $26,789,754.71.

The low rates and the remarkable financial record of Seattle and Tacoma have served as a stimulus to the people of the entire State of Washington. Thus it was that the people in 1930, under the leadership of the Washington State Grange enacted initiative No. 1, the public utility district law. Under this law 30 of the 39 counties by further vote of the people created public utility districts. Each public utility district has three commissioners also elected by vote of the people for 6-year terms. Of the 30 organized county public utility districts, 20 are operating electric systems and five operate domestic water systems.

One of the motivating forces behind the public utility district movement was the desire for rural electrification. Thus the 1930 public utility law predates the Rural Electrification Administration. However, many public utility districts are borrowers of REA. The 1930 public utility dictrict law also predates the building of Bonneville and Grand Coulee Dams and the passage of the Bonneville Act of 1937. Every public utility district now purchases all or most of its energy from the Federal Columbia River power system.

The chief influence of the Federal power program has been in making power available, and making it available not at the dams, but at the county load centers by means of the Pacific Northwest transmission grid.

It is a common fallacy on the part of people both in the Northwest and in the rest of the Nation to attribute the low electric retail rates to the low-cost wholesale power rates made possible by water power. The wholesale rate or cost of power is only 20 to 40 percent of the price which the ultimate consumer pays, and therefore the low-cost wholesale power can account for only from one-fifth to two-fifths of the total picture. Three other factors explain most of the difference between the 1.36 cents per kilowatt-hour paid in southwest Washington and the 3 paid on a national average. (If the public systems were deleted from the national average, of course the remaining average would be much greater than 3 cents per kilowatt-hour.)

The chief factor is the cost of money. PUD's pay the usual 2.5 to 4 percent interest rate on money, while private companies pay not only a similar interest rate on their bonds, but likewise 5 to 25 percent on stocks.

Secondly, the making of profit by private companies necessitates the payment of Federal income tax. Since the PUD's make no profit, they pay no Federal income tax. As mentioned before, however, they pay all other taxes, and since they pay on the basis not of 20 to 40 percent assessed valuations, but on gross income, they pay more in local taxes than is required of railroads or was required of the former privately owned electric systems.

These two factors alone enable the PUD's to effect some rate cuts. The third factor then comes into play. As rates are cut, usage of energy goes up.

The bane of the electric industry has been the curse of low per customer consumption. The poles going down the road represent fixed investment which must be paid for regardless of whether the customers use 500 kilowatt-hours or 10,000 kilowatt-hours per year. As increased usage is stimulated by low rates, the cost of distributing each kilowatt-hour drops, not 5 or 10 percent, but 50 to 80 percent. This distributing cost per kilowatt-hour is the volatile factor in the electric business. As each customer, in effect, shifts from being a retail consumer to the status of a small wholesale consumer, many economies come into play.

Many other factors might be mentioned. The honest bookkeeping, the motivation of public service and responsiveness to local control constitute innovations of the first order in the electric utility business.

It should be emphasized that not a single commissioner or manager of these public utility districts is a socialist. Politically this area votes predominantly Republican, although commissioners are elected on a nonpartisan basis. By and large the commissioners are active or retired farmers or businessmen. They are just average Americans with more than average devotion to public service. And they have done a magnificent job in serving the 300,000 people of these 10 counties.

No private distribution companies remain in the area. The former 26 companies have been integrated into 10 efficient systems. Rates are now or are rapidly tending toward county-wide rates. Dilapidated 2,400-volt lines are being replaced by modern 12,500-volt systems augmented by 66,000-volt subtransmission systems. Service standards are already vastly improved although the job of rehabilitation and expansion will require another 5 to 10 years.

Each year the 10 districts through their associations issue a leaflet covering the operating record of the previous year. The following comments and operating table are taken from this leaflet:

TEN SUCCESS STORIES

Elimination of political interference at local elections is one of the happy byproducts resulting from the purchase of all private electric systems by the Grays Harbor Public Utility District. The public-utility district has paid off half its debt and has refunded its bonds at 2 percent interest.

In 2½ years the electric users of the Benton County Public Utility District have saved over $50,000 in lower rates, have built up $200,000 of ownership, while paying 60 percent more taxes to school districts and other local government.

Lower rates and abundant public power through the Public Utility District of Cowlitz County have brought new industries, thereby creating new taxable wealth and greater pay rolls.

Neglected and run-down 2,400-volt lines are being replaced by modern 12,000-volt lines by the Clark County Public Utility District. The 1948 average residential rate of 1.23 cents per kilowatt-hour is the lowest of any public-utility district in southwest Washington.

Over 800 rural consumers were hooked up in 1948 by Klickitat County Public Utility District and 250 more will get electricity for the first time in 1949. This will bring rural service over the 90-percent mark.

Low-cost power has tripled the use of electricity in the area served by Public Utility District No. 3, of Mason County, making possible real electrical living.

Rates have been cut 73 percent by Pacific County Public Utility District, in addition to paying off over 60 percent of the system.

The integration of eight small utilities into one efficient system is the accomplishment of the Public Utility District of Lewis County, while also bringing service to rural areas once declared not feasible to serve.

Within sight of Bonneville Dam many people were still burning kerosene lamps until Skamania County Public Utility District came to their rescue. Now the people enjoy the full advantages of this great hydroelectric project in their front yard.

Another rural county enjoys big-city rates through the Wahkiakum County Public Utility District. When the last seven families are connected, this county will enjoy 100-percent electrification.

Operating record of these public utility districts speaks for itself

Public utility district (county)	Year operations started	Residential and rural: Rates and use				Taxes paid in 1948 (pay-roll taxes not included)	Number of consumers Dec. 31, 1948	Plant value after deducting depreciation	Equity of the people (debt-free ownership)
		Average rates cents per kilowatt-hour		Average annual use kilowatt-hour per home					
		Before public utility districts	1948	Before public utility districts	1948				
Benton	1946	2.0	1.35	2,470	5,080	$32,842.17	5,318	$2,054,109.13	$140,342.66
Clark	1942	1.75	1.233	2,450	4,443	63,628.00	28,375	6,958,974.00	418,472.00
Cowlitz	1939	2.65	1.36	1,330	4,023	140,456.30	17,691	8,957,293.18	1,558,559.54
Grays Harbor	1940	4.58	1.35	929	3,210	92,276.33	17,143	4,359,801.03	1,993,489.48

Mountain Educators

EXTENSION OF REMARKS
OF

HON. HAMILTON C. JONES

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. JONES of North Carolina. Mr. Speaker, in going through the mountains of my district, the Tenth Congressional District of North Carolina, and other areas in the mountain section of our State, I have always wondered how the people in the remote mountain sections received early educational training.

Until later years, much of the country was comparatively inacessible and during the winter months presented many obstacles in the way of providing education for the very fine Americans who live in the mountain sections of North Carolina and other Southern States. It was a hard and laborious process, but due to the insatiable desire to educate their own people, many educational leaders were developed who overcame the difficulties of the situation and provided for the people of the mountains an intelligent and wholesome education. These educational pioneers came mostly from people who were raised in the mountains and appreciated the need for educational improvements in order that the mountain youth could be given a primary education sufficient to develop their natural intelligence, diligence, and good old hard sense.

One of the greatest of these leaders and the most determined to help his own people was Dr. B. B. Dougherty, who just closed 50 years of educational service to the mountain people which was crowned by his developing a great mountain school known as Appalachian State Teachers College at Boone, N. C.

Concerning Dr. Dougherty's great service in the field of education in western North Carolina, I quote from the Charlotte Observer of recent date an editorial which is a high tribute to his splendid and unselfish work:

The high tribute that was paid to Dr. B. B. Dougherty at Boone Thursday was a recognition of the man and his achievements through 50 years of service to education in North Carolina; but it was also a reminder of a sturdy old American virtue of which Blan Dougherty is the living symbol—self-reliance.

We hope devoutly that he is not the last representative of that virtue, as Brutus was "the last of all the Romans," but it has been receding so rapidly of late that few—far too few—Americans of this kept generation can say with Blan Dougherty, "I never spent a dollar that I didn't earn."

Some 22 years ago in a private conversation Blan Dougherty let drop that remark, "I never spent a dollar that I didn't earn." It was not a boast; he was not being dramatic; it was merely a casual statement of fact; because in that day every American was expected to earn what he spent, or else he didn't spend.

Those first dollars that he earned selling cabbage from the family farm went for his own education. He climbed over the ridges to Tennessee, he trekked down country to Wake Forest, and then back again to teach his own neighbor boys in a jerry-built shack heated only by a stove, where the pupils stuck corncobs in the knotholes to keep out the blasts of the frigid mountain winter.

And the young schoolmaster looked over his charges. "Here," he thought, "am I, teaching less than a score of children, with hundreds of thousands waiting and thirsting for knowledge. What can one teacher do for so many?"

Then came the vision: "I can teach only a score. A thousand teachers could teach a thousand score. Let's train teachers first; then we can reach the thousand score."

With an indomitable missionary zeal he went to work with a singleness of purpose from which he has not deviated from that day to this to train teachers for North Carolina children. The road was long and arduous, but he had a way of firing others with his own vision and with his zeal for achieving it.

In due time the shack with the corncobs in the knotholes gave way to the Watauga Academy; the academy in turn became the Appalachian State Normal School and finally the normal grew into a State teachers' college of the first rank.

Another family of outstanding service to the mountain people of North Carolina in the field of education was the Abernethy family which contributed much to the education and improvement of the mountain people and the development of the citizenship of western North Carolina along many lines and at the same time making educational contributions in furnishing many leaders in the State of North Carolina and in the South generally who devoted much time and effort to intelligent leadership of its people.

Among the most conspicuous in this group is the Reverend Arthur Talmage Abernethy, who followed in the steps of his illustrious father, Dr. Robert L. Abernethy, a native of Lincoln County, N. C., whose father was a direct descendent of Sir John Abernethy, the father of English surgery and founder of the London Hospital in England.

As a youth, Dr. Robert Abernethy was eager to learn. As there were no public schools in those days, young Abernethy secured such books as he could possibly find, on one occasion riding across three mountain counties to secure a book on arithmetic. Later as a traveling Methodist preacher, assigned to the mountain area, he observed the lack of educational opportunities for the numerous poor, but ambitious youths of this section and determined to establish a school among them.

Later on a plot of land donated to him by John Rutherford of Burke County, he started the famous Rutherford College in Burke County and issued notices over the section that "no boy or girl should be turned away for lack of financial means." Thus he established the first and only college in the South for the coeducation of boys and girls and the second one of that nature in the United States. Alfred University of New York was up to that time the only coeducational college in the country. This university conferred the honorary degrees of doctor of divinity and master of arts on Robert L. Abernethy. He educated approximately 10,000 boys and girls in a period of 40 years and half of these paid no tuition charge whatsoever. Some among this group developed into outstanding citizens of North Carolina.

The Reverend Arthur Talmage Abernethy, the son of Robert L. Abernethy, has been one of the outstanding speakers and educators in the State of North Carolina for many years and is now living at the place of his long and capable endeavors, Rutherford College, North Carolina.

Dr. Arthur Talmage Abernethy taught Latin in his father's school and became a member of the faculty at the tender age of 15 years and was the youngest college professor in America. He was

the recipient of an honor graduate scholarship from Johns Hopkins University and later received an honorary degree of master of arts from Duke University.

The State of North Carolina has looked upon Dr. Arthur Talmage Abernethy as one of its most brilliant teachers and educators and his long service in the field of education and religion, especially among his own mountain people, is an enduring monumeht to the splendid service he has rendered to the people of his native State and the South.

Other conspicuous leaders furnished by the Abernethy family, not only in North Carolina, but in the South, are the Honorable THOMAS G. ABERNETHY, who is now serving and has served for the last 7 years with great ability and talent in the United States House of Representatives as the Representative of the Fourth Congressional District of Mississippi; the late Honorable Charles L. Abernethy, Member of Congress from North Carolina, who served seven consecutive terms; the Honorable Max Abernethy, assistant secretary of state for North Carolina; and the Honorable James A. Abernethy, Jr., a former representative in the North Carolina Legislature, a wise legislator and a successful businessman.

The mountain people of the South should be and are grateful to families like the Doughertys, Abernethys, and others for their untiring and successful efforts to educate their own people.

What About the Home Front?

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. BURDICK. Mr. Speaker, we are about to appropriate another billion and a half dollars to start off the North Atlantic Pact—how much more it will cost no crystal gazer can foretell. While we are doing that, or before we do it, would not it be in order to see what is happening to our people. Here is the case of Francis Stacy, now 88, who has been an outstanding pioneer and public servant. He was section chief in the United States Census Bureau, secretary to John Lind, Congressman from Minnesota, and the writer of democratic platforms in Minnesota for years. He was publicity manager of Gov. John A. Johnson, of Minnesota. His letter speaks for itself:

WASHINGTON, D. C., *August 2, 1949.*

Mrs. W. DAVIS,
Social Worker, Board of Public Welfare, Washington, D. C.

DEAR MRS. DAVIS: Here is my brief monthly report:

1. Rent paid for 1 month.

2. Check, $60, received—which is $9 less than 1 year ago, $69, though cost of food has gone up and is about to go up further on account of sales tax.

3. Total withheld on account shortage of funds, November to August 1948 to August 1949 inclusive, $72.

Congratulating you and Superintendent Donald Gray on the retroactive feature of your salary raise, I am,

Respectfully,

FRANCIS N. STACY.

Importance of the Livestock Industry in United States

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, there is and has been a tendency to underestimate the importance of the livestock industry in our agricultural economy by legislation already passed as well as that now proposed for American agriculture. The following table prepared from figures released by the Bureau of Agricultural Economics of the United States Department of Agriculture shows the total value of marketings and local slaughter of meat animals in 1948:

Meat animals—total value of marketings and local slaughter (1948)

[In thousands of dollars]

State	Cattle	Calves	Hogs
Alabama	34,437	9,928	25,950
Arizona	45,728	9,491	1,354
Arkansas	38,862	14,436	31,737
California	238,416	35,703	34,984
Colorado	174,046	14,550	17,869
Connecticut	6,794	1,369	1,520
Delaware	1,925	689	1,144
Florida	22,261	6,920	16,627
Georgia	31,185	5,519	38,347
Idaho	46,770	6,372	12,737
Illinois	311,163	19,566	453,860
Indiana	119,492	20,038	333,888
Iowa	468,584	19,502	854,982
Kansas	279,806	11,337	71,675
Kentucky	117,518	12,484	61,700
Louisiana	27,612	15,604	22,035
Maine	5,737	1,736	1,128
Maryland	13,897	4,848	9,795
Massachusetts	9,207	1,334	3,197
Michigan	64,977	19,459	45,101
Minnesota	167,904	25,110	260,377
Mississippi	35,839	14,310	13,954
Missouri	230,782	31,747	254,563
Montana	104,828	6,191	8,669
Nebraska	323,938	10,034	185,643
Nevada	23,901	6,398	889
New Hampshire	3,384	624	419
New Jersey	8,976	3,181	6,044
New Mexico	72,017	14,226	2,816
New York	48,386	21,549	7,194
North Carolina	15,709	5,998	24,575
North Dakota	83,234	8,833	27,437
Ohio	107,473	16,812	225,525
Oklahoma	155,498	33,634	37,699
Oregon	44,587	5,630	12,474
Pennsylvania	69,984	15,965	31,664
Rhode Island	961	242	401
South Carolina	9,756	2,603	29,265
South Dakota	170,631	3,543	113,511
Texas	354,813	115,696	70,326
Tennessee	55,969	15,553	48,466
Utah	22,890	4,680	6,299
Vermont	10,692	2,491	708
Virginia	30,826	13,323	20,749
Washington	35,165	6,935	9,361
West Virginia	19,332	6,335	6,634
Wisconsin	113,028	43,923	136,306
Wyoming	69,184	5,640	4,830
United States	4,448,104	671,461	3,586,428

You will note that the cattle, veal, and hog receipts were over $8,700,000,000 in 1948. Add to this the nearly $3,000,000,000 poultry industry which includes over $1,800,000,000 for eggs; add to this the 1948 milk value of nearly $5,000,000,000; and you will have a total of nearly $17,000,000,000, which is more than 50 percent of the $31,000,000,000 national farm sales in 1948.

The so-called basic commodities or soil-depleting crops have had special-privilege legislation. The group including wheat, cotton, tobacco, rice, and peanuts do not represent 50 percent of the value of livestock products. Peanuts, for example, had a farm sale value of only $68,000,000 in 1941 and a value of over $245,000,000 in 1948. Rice had a farm sale value of only $182,000,000 in 1948. The total tobacco sale value, if the export subsidies are excluded, was less than three-fourths billion dollars. The United States needs less than 8,000,000 bales of cotton for consumption, and at $150 per bale the value is but $1,200,000,000. The wheat needed for United States consumption is 800,000,000 bushels, and at $2 per bushel would yield but $1,600,000,000. Legislatively we hear much about these crops, and wheat, of course, enjoys a place in our economy of far greater importance than the national farm income indicates. Being the staff of life and blending with other foods makes it in a class by itself.

One of the weaknesses of the Pace bill was that it would disrupt the poultry business and in turn by its chain reaction disrupt and jeopardize the whole livestock industry.

Instead of spending so much time and effort passing legislation to increase crops, and then pay export subsidies to get rid of them, it would be well to realize that we will evidently import a billion pounds of beef and veal in this fiscal year on a live-weight basis.

Hoover Commission Recommendations for Economy in Government

REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. TOLLEFSON. Mr. Speaker, the taxpayers of this Nation have for years been paying too much money to the Federal Government for the services it has rendered. This fact has been made abundantly clear by the Hoover Commission report. That report has pointed out the appalling growth of big government which has resulted in a confused and chaotic condition, where increased numbers of overlapping and duplicating boards, bureaus, and commissions know not what each other is doing. The seemingly confused activities on an anthill

are in reality less confusing than the activities on Capitol Hill. Countless thousands of Federal employees run hither and yon bent on assignments which in many cases cross, tangle, and duplicate each other. Federal spending, needless waste, and high taxes have driven the long-suffering public to demand relief. The Hoover Commission, created because of this demand, has pointed the way to some measure of relief through its recommendations.

The facts which the Commission has revealed are startling. In the last 20 years Federal employment has increased from 600,000 employees to more than 2,000,000 of them. Their salaries in 1930 amounted to about $1,000,000,000. Today they receive about $6,000,000,000 per year. And this figure does not include the military. In 1930 there were 300 Federal bureaus and commissions. Today there are 1,800. There are between 70 to 85 so-called independent agencies which theoretically are responsible to the President, but because of red tape and special functions involved in the legislation creating them some 37 agencies have an authority independent of their superior officers to such an extent that they have been known to defy the superiors.

The red tape is so involved in civil-service procedures that it can take up to 17 months to discharge an inefficient official. Think of it. So complicated are some Federal procedures that there are 23,000 employees who do nothing more than take care of the red tape. They just hire and fire and look after promotions. In the civil-service category that is about 1 personnel worker for every 78 employees. In some instances there is 1 for every 30. The ratio is 15 times greater than in private business. They cost the taxpayer $76,000,000 per year.

Waste and extravagance occur in the buying of supplies. The Government buys about $6,000,000,000 a year in supplies—about $1,000,000,000 of them being for the civilian departments, the rest for the military. In personal property alone the Government has about $27,000,000-000 worth somewhere, with no adequate catalog of it.

The Government makes about 3,000,-000 purchases of articles a year, each of which costs less than $10. It costs about $11 to unwind the red tape around each purchase, so that actually the Government spends $21 for a $10 item. The Hoover Commission believes that there could be a saving of $25,000,000 a year on these purchases through more efficient procedures.

Duplication of functions costs the taxpayer untold millions annually. The General Accounting Office reports that there are 29 Federal agencies engaged in lending money, 3 in insuring deposits, 34 in acquiring land, 16 in wildlife preservation, 12 in home and community planning, 28 in welfare matters, 14 in handling our Federal forests, 4 in bank examinations, and 65 in gathering statistics.

As an illustration of duplicating activity, it was pointed out that the Army engineers and the Bureau of Reclamation both made preliminary surveys on an Idaho power and reclamation project, each costing $250,000, when one survey would have been sufficient. Innumerable other illustrations exist.

The Government spends now more than $40,000,000,000 annually. The fiscal year's operation ending June 30, 1949, shows a deficit of $1,800,000,000. There is a possibility of a $5,000,000,000 deficit for the next fiscal year. The Government has operated in the red continuously since 1932, with the exception of the years 1947–48.

It is no wonder that the people of this Nation are concerned and demand relief. The Hoover Commission recommendations must be adopted and made effective through legislation. It is estimated that up to $3,000,000,000 annually may be saved in Federal expenditures if the recommendations are followed.

Relationship of Cattle and Hog Prices

EXTENSION OF REMARKS
OF

HON. REID F. MURRAY

OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 3, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, a few weeks ago some people, who should have had better information, were promoting a trial run plan on hogs and trying to make people believe that it would not materially affect beef and veal prices.

If anyone is in doubt about this, one look at the following table, compiled from figures released by the Bureau of Agricultural Economics, of the United States Department of Agriculture, will cause them to perish any such thought or conclusion:

Meat animals—Farm production and income—1948

State	Marketings			Price per 100 pounds		
	Cattle	Calves	Hogs	Cattle	Calves	Hogs
	Thousands	*Thousands*	*Thousands*			
Alabama	310	154	615	$18.10	$20.90	$21.20
Arizona	302	125	26	20.60	23.90	23.80
Arkansas	289	208	656	19.40	25.10	22.30
California	1,090	616	630	22.60	25.30	25.00
Colorado	817	187	298	23.70	23.80	23.50
Connecticut	39	63	27	18.80	20.70	23.40
Delaware	9	18	24	23.00	26.70	23.00
Florida	226	150	512	16.10	18.40	20.30
Georgia	266	110	927	18.60	20.60	21.70
Idaho	229	93	224	21.90	24.40	24.50
Illinois	1,335	429	7,472	24.60	26.20	23.40
Indiana	554	363	5,709	23.60	27.50	23.60
Iowa	1,983	351	5,135	24.70	23.60	22.80
Kansas	1,367	160	1,203	22.50	24.40	23.60
Kentucky	582	278	1,239	22.90	27.10	23.80
Louisiana	262	275	545	18.60	22.90	21.10
Maine	36	59	18	19.70	20.70	22.70
Maryland	66	120	201	23.10	27.30	23.80
Massachusetts	55	71	58	18.00	20.30	23.20
Michigan	338	430	840	21.60	28.10	23.20
Minnesota	823	656	4,260	21.50	25.40	22.80
Mississippi	336	222	316	17.90	22.60	21.60
Missouri	1,136	556	4,332	23.00	25.60	23.30
Montana	534	94	155	21.30	23.10	23.40
Nebraska	1,479	140	2,974	24.30	23.50	22.70
Nevada	109	86	17	23.30	24.80	23.80
New Hampshire	20	30	6	18.80	21.00	22.90
New Jersey	44	83	117	20.00	28.70	25.20
New Mexico	476	186	51	21.40	23.60	24.40
New York	262	700	131	19.40	27.10	23.50
North Carolina	116	163	506	18.00	23.00	22.70
North Dakota	459	161	469	20.50	23.60	21.90
Ohio	498	434	4,130	23.50	27.20	24.00
Oklahoma	928	411	696	20.70	23.60	23.40
Oregon	231	87	211	20.30	25.10	25.20
Pennsylvania	311	449	569	23.80	27.70	24.80
Rhode Island	6	12	7	18.00	20.20	23.20
South Carolina	79	57	597	19.00	22.50	22.10
South Dakota	859	60	1,875	22.80	23.70	22.50
Texas	2,535	1,397	1,339	20.20	22.40	22.80
Tennessee	353	320	960	19.30	24.40	23.10
Utah	115	69	119	22.20	24.60	23.90
Vermont	75	149	14	17.20	20.60	22.50
Virginia	161	253	430	22.90	27.40	23.00
Washington	174	112	162	22.00	25.60	25.50
West Virginia	98	136	125	22.90	27.40	23.10
Wisconsin	574	1,471	2,316	19.40	24.80	23.10
Wyoming	379	72	88	21.00	24.90	23.50
United States	23,325	12,826	61,833	22.20	24.40	23.10

You will note that the table shows that in numbers Wisconsin ranks third in the marketing of cattle and calves.

Why so many people in high places take the position they do is more than I can figure out. Maybe they think it is good politics, but my observation is that "no politics is the best politics" and that economics and politics do not mix too well, or too long. Prices are going down fast enough without anyone figuring out any new schemes to drive them down still farther and faster.

Anyone with any livestock marketing experience knows that there is now and has always been a direct relationship between cattle and hog prices, and they also know that all protein foods show a chain reaction. That is the reason why you will be disturbing beef, veal, hog,

and cheese prices when you disturb poultry and egg prices. Yet, many Members voted for the Pace bill which would do just that thing.

Deficit Financing—Necessity for Governmental Economy

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Wednesday, August 3 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "To Rescue United States From Red Ink: Curb Wild Spending," published in the Philadelphia Inquirer of August 2, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TO RESCUE UNITED STATES FROM RED INK—CURB WILD SPENDING

It may be that scholars of the future will record next Thursday as a significant date in American history—the day when the most powerful and prosperous Nation of the world resorted to deficit financing to pay its bills although it was at peace and economic activities were at a high level.

If anything can be expected to dramatize the urgent need for Governmental economy it is this plunge into red ink after 3 years in which the national debt was reduced from the peak of $269,000,000,000 to about $253,000,000,000.

There is little consolation in the fact that the first borrowing will involve the relatively small sum of $200,000,000 in new money. In the absence of any firm indication from either the Administration or Congress that the rate of spending will decrease in the months ahead it is a fair assumption that Thursday's transaction will be repeated again and again as the deficit continues to mount.

President Truman, who continues to advocate heavy spending as the solution of every problem from the economic recession to the development of backward areas of the world, clearly cannot be relied upon to provide the courageous leadership necessary to bring the budget into balance and to make possible at least token payments on the national debt.

In spite of the successive defeats of the so-called economy bloc in Congress, there is a growing recognition in both House and Senate of the dangers of our present course. This is reflected in the challenges to the Administration's requests for funds for such vital purposes as the National Military Establishment, the Marshall plan and the rearming of western Europe to the extent that would deter Soviet aggression.

Every dollar that can be spared from these and similar appropriations without endangering the effectiveness of the programs must be saved. But it is clear that this will not be sufficient to rescue the budget from the red ink.

If the sorry era which the Nation enters on Thursday is to be a brief one, it will be necessary to move forward with all possible speed toward reorganization of the Government, along the lines suggested by the Hoover Commission, in the interest of efficiency and economy. A Government living beyond its income cannot afford to waste a dollar either through unwise appropriations or padded pay rolls.

There is only one practical cure: Wild spending must be curbed.

Statement by Jackie Robinson Before House Un-American Activities Committee

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Wednesday, August 3 (legislative day of Thursday, June 2), 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a statement made by Jackie Robinson, the baseball star, before the House Committee on Un-American Activities, on July 18.

Mr. Robinson has presented in a clear and forthright manner the problems that beset so many Americans who, in Mr. Robinson's words, "are a little different from the majority—in their skin color or the way they worship their God, or the way they spell their names."

This statement comes not from self-seeking ardor, but rather from one who through personal attainment has done a great deal toward making our Nation a democracy in fact as well as in name.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

JACKIE ROBINSON'S STATEMENT TO HOUSE COMMITTEE

(Following is the text of a statement today by Jackie Robinson, Brooklyn Dodger baseball player, before the House Un-American Activities Committee:)

When the House Committee on Un-American Activities invited me to appear here today and express myself on the subject of your present interest, I answered that I would be glad to do so, although it isn't exactly pleasant to get involved in a political dispute when my field of earning a living is as far removed from politics as anybody can possibly imagine.

I am sure you know that I am a professional ballplayer. Baseball has been called the great American sport because all Americans get their kicks out of the game some way or other, no matter what their political or social connections may be. So it's customary, and I suppose pretty sensible, for ballplayers to keep out of partisan politics or any other kind of arguments and contests that may split their supporting public.

Of course it will be said, and it's certainly true, that the question of Communist activity in the United States isn't partisan politics. But it's also true that some of the policies of this committee have become political issues. And so, naturally, I've had a great many messages come to me by wire, phone, and letter, urging me not to show up at this hearing. And I ought to make it plain that not all of this urging came from Communist sympathizers. Of course, most of it did. But some came from people for whom I have a lot of respect and who are just as opposed to Communist methods as I am.

And so it isn't very pleasant for me to find myself in the middle of a public argument that has nothing to do with the standing of the Dodgers in the pennant race—or even the pay raise I am going to ask Mr. Branch Rickey for next year.

A SENSE OF RESPONSIBILITY

So you naturally ask, why did I stick my neck out by agreeing to be present, and why did I stand by my agreement in spite of advice to the contrary. It isn't easy to find the answer, but I guess it boils down to a sense of responsibility.

I don't pretend to be any expert on communism or any other kind of a political ism. Going to college at UCLA (the University of California at Los Angeles), helping to fight a war, with about 10,000,000 other fellows, trying to break into professional baseball and then trying to make good with the Dodgers, and trying to save some money for the time when my legs lose their spring—all this, together with my family life, has been enough to keep me busy without becoming an expert—except on base-stealing or something like that.

But you can put me down as an expert on being a colored American, with 30 years of experience at it. And just like any other colored person with sense enough to look around him and understand what he sees, I know that life in these United States can be mighty tough for people who are a little different from the majority—in their skin color, or the way they worship their God, or the way they spell their names.

I'm not fooled because I've had a chance open to very few Negro Americans. It's true that I've been the laboratory specimen in a great change in organized baseball. I'm proud that I've made good on my assignment to the point where other colored players will find it easier to enter the game and go to the top. But I'm very well aware that even this limited job isn't finished yet. There are only 3 major league clubs with only 7 colored players signed up, out of close to 400 major league players on 16 clubs.

SAYS PROGRESS GOES ON

But a start has been made, and progress goes on, and southern fans as well as northern fans are showing that they like the way things are working. And as long as the fans approve we're going to keep on making progress, until we go the rest of the way in wiping Jim Crow out of American sports.

We are doing this because the American fans are just beginning to understand that a sport, to be a real sport, has got to be contested on the basis of the best man or team winning—and that best has got nothing to do with how much brown or red or yellow tint is in a man's skin.

We're going to make progress in other American fields besides baseball if we can get rid of some of the misunderstanding and confusion that the public still suffers from. I know I have a great desire and I think that I have some responsibility for helping to clear up that confusion. As I see it there has been a terrific lot of misunderstanding on this subject of communism among Negroes in this country, and it's bound to hurt my people's cause unless it's cleared up.

The white public should start toward real understanding by appreciating that every single Negro who is worth his salt is going to resent any kind of slurs and discrimination because of his race, and he's going to use every bit of intelligence, such as he has, to stop it. This has got absolutely nothing to do with what Communists may or may not be trying to do.

And white people must realize that the more a Negro hates communism because it opposes democracy, the more he is going to hate any other influence that kills off democracy in this country—and that goes for racial

discrimination in the Army, and segregation on trains and busses, and job discrimination because of religious beliefs or color or place of birth.

"NOT FOOLING ANYONE"

And one other thing the American public ought to understand, if we are to make progress in this matter, is the fact that because it is a Communist who denounces injustice in the courts, police brutality and lynching, when it happens, doesn't change the truth of his charges. Just because Communists kick up a big fuss over racial discrimination when it suits their purposes, a lot of people try to pretend that the whole issue is a creation of Communist imagination.

But they are not fooling anyone with this kind of pretense, and talk about "Communists stirring up Negroes to protest" only makes present misunderstanding worse than ever. Negroes were stirred up long before there was a Communist Party, and they'll stay stirred up long after the party has disappeared—unless Jim Crow has disappeared by then as well.

I've been asked to express my views on Paul Robeson's statement in Paris to the effect that American Negroes would refuse to fight in any war against Russia because we love Russia so much. I haven't any comment to make, except that the statement, if Mr. Robeson actually made it, sounds very silly to me. But he has a right to his personal views, and if he wants to sound silly when he expresses them in public, that's his business and not mine. He's still a famous ex-athlete and a great singer and actor.

I understand that there are some few Negroes who are members of the Communist Party, and in event of war with Russia they would probably act just as any other Communists would. So would members of other minority and majority groups.

There are some colored pacifists, and they'd act just like pacifists of any color. And most Negroes, and Italians and Irish and Jews and Swedes and Slavs and other Americans, would act just as all these groups did in the last war. They'd do their best to help their country stay out of war; if unsuccessful they'd do their best to help their country win the war—against Russia or any other enemy that threatened us.

NOT AS ANY DEFENSE

This isn't said as any defense of the Negro's loyalty, because any loyalty that needs defense can't amount to much in the long run. And no one has ever questioned my race's loyalty except a few people who don't amount to very much.

What I'm trying to get across is that the American public is off on the wrong foot when it begins to think of radicalism in terms of any special minority group. It is thinking of this sort that gets people scared because one Negro, speaking to a Communist group in Paris, threatens an organized boycott by 15,000,000 members of his race.

I can't speak for any 15,000,000 people any more than any other one person can, but I know that I've got too much invested for my wife and child and myself in the future of this country, and I and other Americans of many races and faiths have too much invested in our country's welfare for any of us to throw it away because of a siren song sung in bass.

I am a religious man. Therefore I cherish America where I am free to worship as I please, a privilege which some countries do not give. And I suspect that 999 out of almost any thousand colored Americans you meet will tell you the same thing.

But that doesn't mean that we're going to stop fighting race discrimination in this country until we've got it licked. It means that we're going to fight it all the harder because our stake in the future is so big. We can win our fight without the Communists and we don't want their help.

A Modest Proposal From Britain's Socialists

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Chicago Tribune:

A MODEST PROPOSAL FROM BRITAIN'S SOCIALISTS

Britain's labor government has proposed that dollar assistance under the Marshall plan for the year ahead be increased from the $904,000,000 initially requested for Britain to one and one-half billion. This is more than a third of all funds likely to be parceled out under the plan and is about a quarter of a billion more than Britain was allotted from the American Treasury during the last year.

The first thing to be said is that the hiking of the hand-out sought by the English Socialists is a clear answer to enthusiastic American internationalists who have been whooping up the Marshall plan as a huge success. The theory of ECA was that after large first-year donations to the European beneficiary countries, recovery would get started and that it would then be possible to cut down subsequent assistance.

Obviously, this has not happened. Large drafts of dollar fuel pumped into the Socialist carburetor haven't succeeded in getting the British economic engine hitting on all cylinders. It's still sputtering and coughing.

This request from the British Socialists constitutes an appeal for American intervention on the side of the Labor Party in British domestic politics. A general election is coming along in England, and the Labor Party must face the voters on the demonstrated results of the Socialists' term in office. They have now had 4 years to make good on what they said they would do, and they have had constant support in carrying out their designs from the American taxpayers, who have never been consulted concerning their own desires.

The Socialist regime since 1945 has had the benefit of a most favorable settlement of Britain's lend-lease account of more than $31,000,000,000. The Socialists received a loan tantamount to a gift of $3,750,000,000. They were enabled to draw hundreds of millions in dollars from the World Bank. They have received or are in process of receiving a minimum of $2,143,000,000 last year and this year under the Marshall plan. Trade agreements have been drafted to their advantage and to American disadvantage, and the conditions of these gifts, loans, and concessions have been waived to free them of any semblance of reciprocal responsibility.

With all of this, they have not been able to make a go of things, and now come to the American people demanding that we shell out still larger donations so that socialism can win its election at our expense. The only thing that Attlee, Cripps, and their crowd have to offer the English people is their demonstrated success in tapping the American till. Labor hopes to win through a corruption of the British electorate quite as thorough as was ever accomplished by such New Deal masters of the art as Hague, Pendergast, Roosevelt, and Truman.

Copyright the Hoover Label

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, the administration's clever politicians are using the Hoover name to sell their political nostrums.

Like some of the old patent medicines which were guaranteed to cure all, the administration's proposals may at the moment exhilarate the customer but they do him no real good.

Proposed as a cure for waste and extravagance, in reality they are cleverly and shrewdly devised plans to build up political machines along the lines of the old Pendergast machine.

Fortunately, they are not fooling too many people, as is indicated by the following editorial from the Sturgis Journal of the 30th of July, last:

FISCAL FIASCO

Representative CLARE E. HOFFMAN of this district has criticized President Truman for the President's attitude toward the Hoover Commission report.

Says Representative HOFFMAN: "By his public statements and by the kind of reorganization proposals he has sent to Congress, the President has made it doubly clear that he intends to reorganize along the lines recommended by the Hoover Commission only insofar as such reorganization leaves the present tremendous bureaucracy intact."

Mr. Truman intends, according to HOFFMAN, to retain all present Government employees, because he has added 365 new employees to the Federal pay roll each day since the Hoover report was made public.

Mr. Truman has said that a large bureaucracy is needed to provide the services required of an increasing population. HOFFMAN says this cannot be true for these reasons:

1. While United States population was increasing 23 percent in the last 20 years, the number of Federal civilian employees jumped 268 percent. Number of sections, bureaus, and units increased 400 percent.

2. Peacetime Government expenses increased 1,000 percent from 1929 to 1948. During same period, each family's share of the national debt rose from $500 to $7,500. In 1939 each person paid $7 toward interest on the national debt. Today everyone is paying $37—and that's in interest alone.

As a syndicated columnist pointed out this week, the yearly payroll of the 2,100,000 Federal civilian employees is $5,650,000,000. There are about 49,000,000 United States taxpayers. Average income tax paid each year is $116. Question becomes: Is United States getting its money worth out of the Federal employees?

Indications that Federal fiscal and taxing policies are causing many people to wonder where the Truman path is leading come in every mail and conversation.

Herald Walters forwards this picture of Government translated on personal terms:

Your 1948 income was $4,600 (United States income, $46,000,000,000).

Your debts total $27,600 (United States debt, $276,000,000,000).

Your 1949 income will be $4,000 (United States estimated income, $40,000,000,000).

Would you plan to spend $4,200? (United States budget, $42,000,000,000.)

In addition, would you by any stretch of the imagination decide that over and above these commitments you would have the right to embark on long-term spending programs to cover:

1. A new house? (Public housing.)

2. More education? (Federal aid to education.)

3. More health insurance? (Socialized medicine.)

Or would you face the facts? Would you call your family together and tell them that your current bills were so great that everything you had would be wiped out unless substantial payments could be made?

This is not a fantastic fairy tale. It is the plain, unvarnished truth about the financial condition of this country of ours. The only fantastic thing about it is that many of the politicians and do-gooders in Washington seem blind to the stark reality of dollars and cents.

The downfall of every great country since the beginning of time has been caused by the financial unsoundness of government.

The same economic principles which apply to the conduct of individual lives and business also apply to our Government. We must stop kidding ourselves if we hope to survive as the No. 1 nation in the world.

Park Beigh supplies this writer with figures indicating the United States is within 7 percent of socialism:

Thirty-three percent of American income is paid out in taxes (11 percent are direct and 22 percent concealed).

Samples of way commodities are taxed: There are 53 separate taxes on a loaf of bread, 127 on a roast of beef, 154 on a bar of soap, 201 on a gallon of gasoline, 205 on a new car, and 502 on a pair of shoes.

Taxes take 33 percent of United States income. Socialized England pays 40 percent of its income to taxes. Thus the United States is within 7 percent of socialism.—R. E. H.

Mr. Farley's Forecast

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. BOYKIN. Mr. Speaker, under unanimous consent to extend my remarks, I include the following editorial from the Alabama Journal, Montgomery, Ala., of March 31, 1949:

MR. FARLEY'S FORECAST

James A. Farley while in Mobile this week declared that the 1950 elections will be crucial for Democrats as well as Republicans, because they will set the pattern for the Presidential election of 1952 and will determine whether a Democrat or a Republican shall occupy the White House as Truman's successor.

Mr. Farley feels that Truman's victory over Dewey last year was due largely to economic conditions, but farmers voted for Truman because of their fear that Dewey's election might result in reduction of Federal farm subsidies. The outcome of the next Presidential election in the Farley view, will be determined by the degree of prosperity or lack of it which the country will be enjoying in 1952. Hard times will mean defeat for the Democratic candidate. Good times will make an uphill road for Republicans that they probably cannot negotiate.

One of the most interesting comments made by the former Democratic chairman, and one of the most astute political strategists of modern times, was with regard to differences within the Democratic Party. He believes that by next election time the differences will be settled. "You will recall," he told the reporters, "that our party has survived many disagreements but the Democratic leadership of 1952 will depend on the outcome of the 1950 contests."

Such a close observer as Mr. Farley would not predict Democratic Party harmony unless he knew more than the average man about what is going on in party circles, and he would hardly predict harmony when he is in the heart of the South and knows intimately how the South feels about the vagaries to which the northern branch of the party has recently succumbed.

His prediction of harmony is therefore equivalent to saying that northern Democrats are going to come to their senses, and experience a change of heart. They are going to get back to the fundamentals upon which the party was founded and has stood for generations. They are going to give up their campaign to inflict mortal punishment upon the South. It is only thus that peace can come, and Mr. Farley probably senses it or, indeed, is well aware of it. Certainly there will be no peace and harmony as long as selfish and demagogic leaders continue their warfare on the oldest, most devoted, and most loyal friends of the Democratic Party to be found anywhere in the Nation.

It is encouraging to have a man of Mr. Farley's range of experience say that differences are going to be settled, for down this way we know there is only one possible way to settle them and that is to get back on the main road and abandon the rabbit trails of the Humphreys and Walter Whites.

The Importance of Retaining the United Nations Arms Embargo in the Near East

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. JAVITS. Mr. Speaker, tomorrow the United Nations Security Council meets to consider the final report of the distinguished American, Dr. Ralph Bunche, the Palestine mediator, who reports the military phase of the Arab-Jewish conflict to be over and recommends lifting the UN embargo on the entry of war materials into the Near East first imposed May 29, 1948. Within a few days of Dr. Bunche's report the radio and press reports extensive new Egyptian and Syrian military preparation and fulminations throughout the Arab world about a second round in the conflict. This morning we see the first sign of peace in the acceptance by Arab states of Israeli proposals to discuss resettlement of Arab refugees.

Mr. Speaker, I call on the Secretary of State to announce United States policy on the United Nations arms embargo and urge that the United States delegate to the Security Council should oppose a lifting of the embargo. The embargo should stand until peace, not armistice, exists in the Near East. While we consider arms for the defense of western Europe in the military aid program we should not divert arms to the stimulation of aggressive war in the Near East when real peace appears to be in sight.

Appended hereto are news reports and editorials bearing on this issue:

[From the New York Times of July 28, 1949]

BUNCHE ENDS TASK AS UN MEDIATOR—SAYS THE MILITARY PHASE OF THE PALESTINE CONFLICT IS OVER, IN REPORT TO SECURITY UNIT—CONCILIATION NOW IS JOB—HE ASKS THAT FUNCTIONS BE TRANSFERRED TO COMMISSION—PROPOSES A RESOLUTION

(By Thomas J. Hamilton)

LAKE SUCCESS, July 27.—Dr. Ralph J. Bunche, Acting United Nations Mediator for Palestine, reported to the Security Council today that "the military phase of the Palestine conflict is ended," and asked the Council to transfer his remaining functions to the Palestine Conciliation Commission.

"With the armistice agreements concluded there is no longer any useful function to be performed by the mediator," Dr. Bunche reported. "With the truce obsolete, the armistice agreements concluded, and the Palestine Conciliation Commission conducting peace negotiation, the mission of the mediator has been fulfilled.

"I am happy to have had this great opportunity to serve the United Nations and the cause of peace in Palestine and in this, my final report, wish to thank the Security Council for the indispensable support which it has given to me in my efforts to discharge the responsibilities entrusted to me."

CITES ARMISTICE PACTS

Dr. Bunche reminded the Council that armistice agreements had now been concluded between Isreal and Egypt, Lebanon, Jordan and Syria. The Israel-Jordan armistice covered the front held by Iraqi forces; the Egyptian-Israeli armistice covered the Saudi Arabian forces, and Yemen took no part in the conflict, he pointed out.

The Conciliation Commission, composed of the United States, France, and Turkey, was established by the General Assembly last December, and is now working in Lausanne to bring about a permanent settlement.

Dr. Bunche included in his report the text of a resolution under which the Security Council, after expressing the hope that the two sides would reach agreement promptly on a final settlement, would:

1. Declare that the armistice agreements render unnecessary the prolongation of the truce provided under the Security Council's resolution of July 15, 1948;

2. Reaffirm the cease-fire order contained in the July 15 resolution, which was based on Chapter VII of the United Nations Charter, and call on the governments concerned to observe an unconditional cease-fire;

3. Request the Conciliation Commission, with the assistance of Brig. Gen. William E. Riley, chief of the staff of the truce supervision organization, to undertake the observance of the cease-fire, and terminate the functions of the United Nations Mediator.

4. Request Secretary General Trygve Lie to continue in existence such of the truce supervision organization as the Conciliation Commission requested.

Legal authorities here expressed the preliminary opinion that the resolution suggested by Dr. Bunche would not continue the prohibition on the introduction of fighting material and war materials to either side.

This provision was contained in the resolution adopted by the Security Council on May 29 last year, calling for a 4-week truce, and was reaffirmed by the July 15 resolution.

Aubrey S. Eban, Israeli representative to the United Nations, said yesterday that Israel would ask the Security Council to continue some restrictions on shipment of arms to the Near East as a "sensitive area," and it is understood that the United States delegation is likely to support the request. The British Government has already announced that, in view of the fact that armistice agreements have been reached between Israel and all the Arab countries involved, it will resume shipments of arms to some Arab countries under previous treaty commitments.

BUNCHE WINS PRAISE

Dr. Bunche, who became acting mediator after the murder of Count Folke Bernadotte by terrorists in Jerusalem last September, has been widely praised for his success in bringing about the armistice agreements and some sources have expressed the hope that he would now help the Conciliation Commission bring about a permanent settlement.

No such request has been received from the Commission, but it is believed that the Security Council will take the opportunity when it meets next week to express its appreciation of his work. Dr. Bunche's services were recently recognized by President Truman, who offered him an appointment as Assistant Secretary of State, but he refused it and will resume his work as director of the United Nations Trusteeship Department.

Dr. Bunche pointed out that 10 members of the truce-supervision organization had been killed in Palestine and 20 wounded, and he added that "in some instances, as in the case of Count Bernadotte himself, had adequate protection been given, the deaths could have been avoided." The Security Council has not yet discussed a report from the Israeli Government explaining its failure to apprehend his murderers.

Dr. Bunche remarked that the United Nations appeared to be fully justified in holding the governments liable for the deaths—a reference to a recent decision by the International Court of Justice holding that the United Nations had the right to seek indemnities in such cases—and he added:

"Despite the casualties, however, bearing in mind the necessity for freedom of movement if truce supervision is to be effective, I firmly believe that the principle adhered to in Palestine by Count Bernadotte and by me after his death, has been sound.

"In the absence of any protective United Nations force, that principle has been to leave it to the discretion of the local authorities to determine how much or how little protection is needed by the United Nations personnel, since it is the responsibility of the local authorities to protect that personnel.

"Thus, neither Count Bernadotte nor I have ever asked any local authority for protection, nor did we ever refuse it when the local authority provided it."

The truce in Palestine took effect July 18 last year, and there was no serious fighting until the clash in the Negeb which began on October 14, 1948, Dr. Bunche said. He said that he and Count Bernadotte had both warned that the truce could not be maintained indefinitely without the probability of serious fighting, and that it was apparent a month beforehand that the truce-supervision organization would not be able to control the increasing violations unless the United Nations would take most severe measures against those guilty of violations.

A GUIDE TO THE COUNCIL

This limitation on the United Nations efforts to keep the peace has been apparent also in the Indonesian question, and Dr. Bunche gave the following summary as a guide to the Security Council in dealing with similar issues:

"The United Nations experience with the truce in Palestine indicated that an imposed truce could be effectively applied and supervised for a period of 4 or 5 months at the most, but should then be superseded by a further step toward permanent peace.

"Although the truce imposed by the Security Council on July 15, 1948, was of indefinite duration and included a permanent injunction against resort to force in the Palestine dispute, both sides came to regard the truce as a mere interruption of hostilities, a phase in the fighting, rather than a definite end to the armed conflict.

"In maintaining the status quo, the truce inevitably perpetuated some conditions which after a period of months became so intolerable as to induce one side or the other to undertake corrective measures even at the expense of openly defying the truce."

[From the New York Times of July 29, 1949]

A UN TRIUMPH

The final report of Dr. Ralph J. Bunche as acting United Nations mediator for Palestine marks the happy end of a dramatic chapter in the history of the Middle East.

While the problems of the eastern Mediterranean are still very far from settled, the great accomplishment—effected through the active intervention of the UN—is that, as the Bunche report states, "the military phase of the Palestine conflict is ended." Agreements have now been made between Israel and, in turn, Egypt (also covering Saudi Arabia), Lebanon, Jordan (also covering Iraq), and Syria. Each agreement, Dr. Bunche reports, "incorporates what amounts to a nonaggression pact between the parties, and provides for withdrawal and reduction of forces." We may expect that these agreements will be scrupulously observed, for, as Dr. Bunche points out, they have been negotiated at the governmental level and any breach of their terms would involve a most serious act of bad faith.

With the observation that his mission as mediator is now fulfilled, Dr. Bunche leaves the task of negotiating a permanent peace settlement to the UN's Conciliation Commission at Lausanne. In doing so, he suggests that the restrictive conditions of the Security Council truce, imposed on the warring parties a year ago, are no longer necessary. This would seem to mean that he favors removal of the ban then placed on shipment of war material to Israelis and Arabs. It might, however, be the better part of wisdom for the Security Council expressly to continue this restriction as a precautionary measure at least until a political settlement is finally agreed upon.

In any case, the situation which now exists and is signalized by the Bunche report reflects great honor on its author, his predecessor, the late Count Bernadotte, and their assistants. Dr. Bunche has performed magnificent work in his difficult and dangerous post. Those 10 members of the UN staff who died, and the 20 who were wounded, in the effort to bring peace to Palestine must not be forgotten. The rest of the UN personnel, who frequently risked their lives in the performance of their duty, deserve the highest praise. To the scoffers in Washington and elsewhere who say that the UN is helpless or useless or worse, the story of this phase of the Palestine problem should give pause, and food for thought.

[From the New York Times of August 2, 1949]

EGYPT, SYRIA MOVE TO EXPAND DEFENSE—DAMASCUS PASSES MOBILIZATION DECREE, APPROPRIATES MORE FUNDS FOR THE ARMY

(By Albion Ross)

BEIRUT, LEBANON, August 1.—A Syrian decree empowering the Ministry of Defense to requisition sections of the population for roadbuilding and other construction of importance to national defense, and last night's grant of the equivalent of $7,000,000 more to the army are regarded authoritatively as proof of the seriousness of the informal Egyptian-Syrian defense agreement.

Egypt has been able to make much larger investments in rearmament and appropriate larger sums for training larger and more efficient armed forces. Her Syrian partner had to use extraordinary measures, such as a labor mobilization decree that was put through the Damascus Cabinet last night.

Twenty-one million Syrian pounds, allotted additionally to the army, represents a considerable strain on the national economy. There is increasing evidence that the measures will result in relatively well-armed and trained Egyptian and Syrian forces and a close mutual defense agreement between the two nations, with Saudi Arabia as something of a silent partner.

It is reported here that the Foreign Offices of Lebanon and Syria have made contact with Egypt with regard to calling a meeting of the Arab League and that the new Egyptian Government has favored a delay, without taking any definite stand on the question of whether the meeting must be in Alexandria, as the previous government had insisted.

Iraq and Jordan, who 2 or 3 weeks ago apparently were eager for a meeting of the Arab League's Political Committee, appear to be showing only mild interest at the moment.

From the viewpoint of this part of the Arab world, the Egyptian and Syrian military efforts are calculated to stablize the defense of Arab interests in the Levant region. Both official spokesmen and the political-minded man-in-the-street here are convinced that Israel has a program of territorial expansion.

There Is No Santa Claus—You Pay the Bills

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include the following article, There Is No Santa Claus—You Pay the Bills, taken from the June issue of the New England Letter, circulated by the First National Bank of Boston:

THERE IS NO SANTA CLAUS—YOU PAY THE BILLS

The Government has no magic source of income but must depend upon tax revenue collected from all parts of the country. The total taxes paid by the people of all the States and Territories equal the aggregate amount of income of the United States Treasury except in case of deficit periods. Whenever the Government spends more than it collects in terms of revenue, it is reflected in a corresponding increase in the Federal debt, which in turn is a mortgage on future income and represents, therefore, deferred tax collections.

The staggering amount of funds collected by the Federal Government is supplied by every section of the country, and the amount so contributed ranges from $525 per family in the East South Central States to $1,047 in the Pacific region, and to $1,555 in the Middle Atlantic States. For the country as a whole, the amount collected averages $1,073 per family.

The amount of money spent by the Federal Government is so staggering that most persons have no conception of its magnitude and in consequence have not been too much concerned about national fiscal affairs. The figures carry more meaning when it is pointed out that, for the calendar year 1948, Federal internal revenue collections were equal to all the wages and salaries of the 15,000,000 or so workers employed in all the factories and mines of this country. Whereas now Federal collections take the equivalent of all the wages and salaries of the workers in the aforementioned groups, in 1939 the proportion was one-half, and in 1929 it was about one-fifth.

Remember that the foregoing data cover the expenses only of the Federal Government. State and local receipts for the calendar year 1948 exceeded $17,000,00,000. This is nearly the equivalent of the total wages and salaries of more than 6,000,000 workers employed in construction work, communication, public utilities, and transportation. The total outlay for Government services and activities of all kinds is equal to every cent of wages and salaries of more than 21,000,000 persons in this country. This includes the income of every person employed in the lines indicated from the lowest paid worker to the highest paid executive. In other words, it would take the entire wages and salaries of 40 percent of all persons engaged in gainful non-Government pursuits to pay all the bills of Government.

The data on Government revenue are issued by the United States Treasury and the Department of Commerce, while those on employment and wages and salaries are from the Department of Commerce. All of their data are available to anyone upon request.

Yet in the face of irrefutable evidence revealed by official sources that the bills of Government are paid for by all the productive efforts of all the people in all parts of the country, the illusion still prevails that the Government has some mysterious means of providing an unlimited source of funds.

This illusion would not be of serious consequence if the Nation had a comfortable leeway for lavish expenditures of public funds. But our margin of safety is critically narrow. Taxes of all kinds have been absorbing one-fourth of national income in the boom period. This proportion would sharply rise should the amount of income undergo even a moderate decline, as governmental costs are notoriously inflexible and rise even in times of recession or depression. Our Federal debt of more than $250,000,000,000, or $6,297 per family, is a mortgage on future income. Notwithstanding this situation, additional staggering commitments are being recommended under the Fair Deal program which would ultimately cost as much as the estimated current combined wealth of all the countries in the world.

It should be obvious upon sober reflection that this Nation has embarked upon a reckless and dangerous course that is dissipating our resources, undermining the wealth-creating powers of the people, and siphoning seed money that should be plowed back into business for tools and equipment to increase our productivity and keep our economy in a strong and healthy position.

The nonpartisan Hoover Commission, after an exhaustive and careful survey, found that Federal expenditures could be cut by at least $3,000,000,000 annually without impairing in any way the essential services of government. This estimated saving is equivalent to the total average annual Federal expenditures in the 1920's. The many millions of American people who are concerned about Government finance should grasp this opportunity to do something constructive about getting our national fiscal affairs in better shape by writing to their Congressmen and insisting that there be a stop to the squandering of the taxpayers' money. The American people in every section of the country, as a matter of enlightened self-interest, should join in the crucial battle for the preservation of the solvency of this Nation, for upon this depends not only the survival of free enterprise and the democratic form of government, but also the hope of freedom-loving people everywhere.

Government Reorganization

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 3, 1949

Mr. HOLIFIELD. Mr. Speaker, I would like to call two recent editorials on Government reorganization to the attention of the Members of the Congress.

One discusses the apparent attempt to sidetrack the Hoover Commission's and the President's recommendations for increasing efficiency and giving Cabinet status to the present Federal Security Department by diverting the debate to the controversial issue of health insurance, an issue not directly involved in the President's reorganization plan.

The second editorial deals with the necessity for managerial reforms to effectuate the organizational reforms recommended by the Hoover Commission. The Advisory Committee on Management Improvement appointed by the President on July 30 is composed of men having a wide diversity of experience in the field of management, and the committee should prove an invaluable aid in carrying through on the task we are beginning now by taking action to put the Hoover Commission recommendations to work in the various Government agencies.

Under unanimous consent I insert these editorials from the Washington Post of July 29 and August 1, 1949, along with my remarks, in the Appendix of the RECORD:

[From the Washington Post of July 29, 1949]

WELFARE DEPARTMENT

The barrage laid down by spokesmen for assorted medical organizations in testimony on the Department of Welfare proposed in the President's reorganization plan was aimed in reality at the existing Federal Security Agency and at the idea of a national health-insurance program. It had little relevance to the subject before the Senate Executive Expenditures Committee, to which the reorganization plan had been referred, and its extravagance was so great as to make it seem not quite rational.

It appears that the physicians, surgeons, and dentists—at least those representing the official professional bodies—don't want a Department of Welfare because it would enhance the prestige and elevate to Cabinet status the only existing Government agency which can provide the machinery to operate the administration's health-insurance program. What they do want is a separate department of health; and they insist that this be administered by a doctor. The benefits of such an arrangement are much more obvious from the point of view of the medical associations than from the point of view of the public.

It is hard to see what special qualifications for administration are conferred on a man by internship in a hospital and medical practice. This kind of training qualifies him admirably to diagnose and treat the physical ills of individuals; it does not give him any special fitness for dealing with the social ills of a Nation. In our view, health is not an isolated national problem, but is closely related to education and social security. These problems can best be dealt with on an integrated basis. And the head of the department dealing with them, whether in background a lawyer, doctor, or merchant chief, ought to be a man distinguished for his familiarity with and understanding of the cancerous social as well as physical conditions threatening the health of the American people.

[From the Washington Post of August 1, 1949]

MANAGING GOVERNMENT

Extensive changes in the cumbrous machinery of the Government are required to increase its efficiency and eliminate waste. Organizational reforms, such as those recommended by the Hoover Commission, are only preliminary to the much harder work of internal managerial reforms that must follow, if the objectives of the reorganization program are to be attained. Recognizing the essentiality of such internal administrative improvements, the President has appointed a special advisory committee to assist department and agency heads to simplify and modernize their methods of operation and to keep him informed as to the progress being made.

Wisely, we think, the President has enlisted the services not only of businessmen and experts in public administration but of Government officials as well. The mixed character of the committee should greatly enhance its usefulness. For it will afford opportunity for an appraisal of administrative performance by outsiders whose standards of efficiency are based on their knowledge of what constitutes efficient management in private business organizations. At the same time, the presence on the committee of seasoned Government officials will act as a deterrent to overharsh judgment and impracticable reform proposals making insufficient allowance for the limitations imposed on Government executives by laws and regulations.

Nevertheless, the Hoover Commission studies have shown that a great deal of the bureaucratic red tape that consumes time and manpower and results in a mountainous mass of paper records is due to failure to use modern mechanical methods and "insufficient attention to the problems of internal administrative management." Government officials who have become habituated to slow-moving and wasteful methods of operation will find it difficult to mend their ways. They need the spur of objective criticism and suggestions for improvement. The new advisory committee to which that task has been assigned has a challenging duty to perform.

Slovakia's Right to Independence

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 3, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a letter which I have received from Mr. John Sedlacek, chairman of the Southern Illinois Slovak Fed-

eration, on Slovakia's right to independence:

EAST ST. LOUIS, ILL., *July 12, 1949.*

Hon. MELVIN PRICE,
House Office Building,
Washington, D. C.

Subject: Slovakia's right to independence.

SIR: As the Slovak Nation prayerfully awaits the fate that befell their greatest historic figure, Msgr. Josef Tiso, reports have come repeatedly that the Bolsheviks of Czechoslovakia are about to surrender Slovakia to the Soviet Union.

The Soviet juggernaut wants to suppress, not only the Slovak peoples' liberties, but their religious rights as well.

This will be the Soviets' greatest error, for the greatest gift of the Slovak Nation to the Christian heritage of Europe is its unwavering fidelity, its loyalty to the apostolic see of Christendom and its stanch defense of the citadel of Christian Europe above the Danube.

Slovakia has an ancient history which begins in the eighth century. She was a considerable political power at that time under her kings, the most glorious being the King Svatopluk. The Slovaks turned to Christianity, as first from the central European peoples, as the following: 50 years before the Czechs; 150 years before the Poles; and 200 years before the Hungarians. The first Christian church in Slovakia was consecrated in 830 at Nitra.

In the tenth century, for the first time in world history, Slovakia's national independence was destroyed by the Hungarians and since that time, until 1918, Slovakia was incorporated into Hungary. The Slovaks took active part in repelling the invasions of Tartars. It is worthy of note that from the entire former Hungary, only Slovakia remained unoccupied by the invading hordes of Turks. Slovakia at that time already represented a natural bulwark of central Europe.

In 1918 Slovakia was incorporated into Czechoslovakia without a plebiscite. Frauds and forgeries were made use of to create the so-called Czechoslovakia, which had never existed before. The period of 20 years (1918–38), Slovakia had to struggle against the tyranny of Prague. The so-called Massryk's republic, was anti-Slovak and oppressed the most elementary political, national, economic, and social rights of the Slovak people.

Until now, experience has shown to the Slovaks that the Czechs have broken with every obligation they have taken upon themselves in respect to the Slovaks. They did not honor the Pittsburgh pact of 1918, signed by Masaryk, which granted autonomy to Slovakia. They did not hold the pledge taken by Benes at the peace conference of Paris, 1919, concerning creation of a Czechoslovakian federation following the Swiss model. The Czechs have violated constitutional laws governing Slovakian autonomy from 1938. The Czech Bolsheviks have infringed the Kosice agreement, concluded by Benes and Gottwald. It has proved that in the Czech chauvinism there is no difference in the attitude of the different Czech political parties. The abyss existing between the Slovaks and the Czechs has become unsurpassable as a result of the violence over the Slovaks practiced by the Czechs in their zeal on services of international bolshevism. Therefore the discontent of the Slovaks with Czechoslovakia is understandable.

On March 14, 1939, Slovakia proclaimed deliberately her independence and thus ended centuries of long struggles for national freedom. The Slovak Republic proved during the Second World War to be economically a compact unit and possessed natural prerequisites of a safe economy.

In 1945 Slovakia was annexed by the Czechs through the intermedium of the Soviet armies. No plebiscite was permitted by the Czechs who were supported in their anti-Slovak policy by Moscow as a reward for their services to the cause of backing interest of international bolshevism in the duration of the last 30 years.

Slovakia has 3,500,000 inhabitants. Thus, she has more inhabitants than Albania, Costa Rica, Dominican Republic, Estonia, Honduras, Ireland, Iceland, Luxemburg, Norway, Panama, Salvador, Transjordan, and New Zealand. She has nearly as many inhabitants as Bolivia, Denmark, Finland, Guatemala, Iraq, Venezuela, Yemen, and Switzerland.

Slovakia's area is 49,000 kilometers. Thus, she is larger than Albania, Belgium, Estonia, Haiti, Luxemburg, Netherlands, Switzerland, Salvador, and Palestine.

Ethnically the Slovaks represent a different group from the Czechs by their history, popular culture, and language. The Slovaks are deeply democratically minded and faithful Christians, whilst the Czechs do not allow other peoples to enjoy the benefits of democracy, which they only want for themselves. The Slovaks favor a peaceful cooperation of the Danubian people—as a federation of Danubian nations following the Swiss model. On the other hand, the Czechs provoke trouble in central Europe by their collaboration with the Bolsheviks. The Slovaks were and are anti-Bolshevik, whilst the Czechs already before 1938 has favored the penetration of the Soviets into central Europe. During and after the Second World War, they openly adhered to the Bolshevik system (as stated publicly by Churchill of England) and Moscow's political plan of a pan-Slav Europe. So you could see that the Czechs or pro-Bolshevik or Communist by the number that belong to the Communist Party. The Czech membership in the Communist Party is 1,186,098, or 13.5 percent of their population; in Slovakia only 48,527 members could be found, or 1.4 percent.

Slovakian people are longing for the reestablishment of the Slovakian state; the Czechs try to mislead the influential quarters of the other nations of the world. Therefore, they declare the Slovaks are Fascists. If to believe their propaganda, only those few Slovaks are democrats who for money put themselves at their service. These few traitors do not represent the political will of the Slovak Nation. The so-called Czechoslovakian Republic was reestablished only by an open violation of the will of the Slovakian population.

The Slovaks want democracy and freedom, whereof they were deprived by a common Czech-Bolshevik fraud. Away with this fraud. Let democracy be victorious. Let Slovakia have the right to be independent.

Sincerely,

JOHN C. SEDLACEK.

Welfare Department

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. McCULLOCH. Mr. Speaker, the President recently submitted his reorganization plan No. 1 to the Congress.

Certain features of the plan are most objectionable to many people, both in and out of Government.

Ernest E. Irons, M. D., president of the American Medical Association, forcefully set forth some major objections to the plan in a letter to the editor of the Washington Post which was carried in the issue of July 29, 1949.

The letter follows:

To the EDITOR:

WELFARE DEPARTMENT

It is imperative that Americans be alerted to the dangerous implications of the President's reorganization plan No. 1.

The President's plan seeks to give Cabinet status to the Federal Security Administration. It would establish a department of welfare which would assume all the functions and duties of the present Federal Security Agency. The Federal Security Administrator would become acting secretary of welfare until the President made a permanent appointment.

The plan states that the Hoover Commission "recommended the creation of a department to administer the social security and education functions of the Federal Government." The President's plan recommends far more, however. It states, "This new department will perform the functions and conduct the programs now administered by the Federal Security Agency."

The American Medical Association has, since 1884, advocated the establishment of a Federal Department of Health headed by a Secretary who is a physician.

We believe the Nation's health is important enough to justify such a department. A physician could best administer the department, in our opinion. We believe, furthermore, that health should not be subservient to other department interests within a single executive body.

One of our principal objections, however, is that in view of the announced stand of the Federal Security Agency on compulsory health insurance, giving this bureau Cabinet status would only implement the aspirations of those who seek to make America over in the pattern of the bankrupt welfare state.

The President's reorganization plan No. 1 lumping together as it does health, education, social security, and welfare activities in a single department administered by a layman—does not meet the Nation's health needs. Inasmuch as this reorganization plan automatically takes effect if the House of Representatives or the Senate does not take majority action against it before August 19, the only answer is prompt rejection by the means at hand.

ERNEST E. IRONS, M. D.,
President, American Medical Association.
CHICAGO.

Dangerous Drivers Are Different

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks I wish to include the following article from the Standard, Montreal, Canada, July 30, 1949:

DANGEROUS DRIVERS ARE DIFFERENT

(By Jacqueline Sirois)

If you are antisocial, aggressive, intolerant of any authority or discipline, you shouldn't be driving a car. You're probably "accident-prone," a term devised by two London, Ontario, psychiatrists to describe those people who have more accidents than can be explained on chance alone.

The two London doctors, W. A. Tillmann and G. E. Hobbs, set out to discover the personality characteristics of safe and unsafe

drivers. What they uncovered throws out all the established rules for measuring the efficiency of any driver. There is no relation between a good driver and a safe one. A man drives as he lives and if his life is erratic and unstable, his driving will be the same, yet he may know all there is to know about a car, its motor, and how to drive.

Tillmann and Hobbs got a grant from the accident committee of the Canadian Life Underwriters' Association to make a study of the personalities and driving habits of London bus drivers and taxi drivers. To determine if the same characteristics were to be found in the general driving public, 96 drivers with histories of four or more accidents in the London district were checked by social and law-enforcement agencies. These were compared with a control group of 100 accident-free drivers.

Sixty-six percent of the high-accident group were known to these agencies in contrast to 9 percent of the control group. The findings were similar to those of the taxi group. The doctors concluded that personality characteristics and social background must be considered in any over-all attack on the accident problem. They stressed that this could be done at a sufficiently superficial level, without specialized psychiatric training.

London is a city with a population of about 100,000. It was difficult for the two doctors to get records of the municipal bus drivers, but they did discover that 10 percent of the total number of drivers accounted for 25 percent of the total number of accidents.

It was easier to work with the taxi drivers. The local taxi firms, plagued by high accident rates, and high insurance costs, welcomed any study which would bring relief. The drivers were classified first into high, low, and averge accident-frequency groups. Dr. Tillmann spent 3 months with them, riding in their cabs, talking to them, checking their stories. Some 40 drivers, constituting the high and low groups, were interviewed.

Each driver's personal history was obtained. His parental background, childhood, and adolescence was gone over and his adult adjustment was checked. Information was received from the police department, the juvenile court, and the social agencies. Notes were made on the cleanliness of the cab and the presence of undue accessories. Certain drivers, particularly those in the high accident group, tend to minimize the number of their accidents and exaggerate the magnitude of their driving experience, the doctors discovered. They made no effort to determine if the driver was at fault.

"We agree," they said, "that those with high-accident rates appear to have more blameless accidents than the low group. The fault of the accident-prone driver is that his driving habits leave him little chance for protection against any unexpected happening."

What is the accident-prone driver like? Here is his history, and all of them fit into the general picture.

The divorce rate of the parents is high. There was gross disharmony between the parents. One or both was excessively strict. The father often was a poor provider, with a record of being an excessive drinker, with few friends.

Eleven of the accident-prone drivers gave a history of childhood instability of an aggressive type. They had temper tantrums, frequent fights. Many of them showed bully characteristics and were leaders of a gang with frequent appearances in juvenile court. An equal number gave a history of nonaggressive anxiety—fear of fights, bed-wetting, the dark, deep water, excessive dangers.

In school, their scholastic standing was average but there were frequent records of truancy and disciplinary infractions. They showed interest in sports involving group activity and bodily contact. Most of them left school to seek independence.

Their work records showed frequent, short-term employment, with the driver often saying that he had been discharged. Their adjustment to employers is poor. As a group, they are satisfied to stay in their present jobs. It offers the line of least resistance and it allows a freer play of their aggressiveness, more so than do settled, routine jobs.

Socially, they have made many acquaintances, few friends. Their emotional attachments are superficial and vary from day to day as their impulsiveness dictates. In a group, they always attempted to be the center of the stage. Their interest in hobbies is rare. Their main activities are found in sports, drinking, gambling, and occasionally, dancing.

If they are married, they tend to be unfaithful and show little interest in or responsibility toward their families. A history of promiscuity is common but the venereal disease rate is not particularly high. They have little anxiety or feeling of guilt over sexual misdemeanors.

They were subject to the usual childhood diseases, and personal injuries from accidents are common, but otherwise their health is good. There are few functional complaints.

As a group, they behave in an immature manner. They use filthy language freely and are good conversationalists but they take advantage of every occasion to try to impress others with their importance. They show no concern over their problems and their personal dress tends to be eccentric.

As drivers, they are easily distracted while driving. They are readily annoyed at other drivers, often criticize their own driving mistakes in others. Horn-honking and racing other cars away from a stop light are specialties. They show a marked interest in the mechanical aspect of the car but express no concern over the possible mechanical limitations of it. Their cars often are untidy, dirty, and contain flashy accessories. They tend to be discourteous to passengers.

Philosophically, their thinking is dominated by fatalistic ideas and an interest in the material aspects of life. They dislike discipline, abhor routine, and express a strong desire to be their own bosses. They consider only the immediate future, think only of the satisfactions of each day.

In contrast to the high-accident group, the low-accident drivers are serious, stable, well-adjusted and well-integrated in home backgrounds.

The parental divorce rate of the group is low, and harmony between the parents was usually considered adequate. Their parents were firm, understanding individuals, who were considered stable and well-adjusted.

As children, some of them possessed features of mild instability but these were always of the nonaggressive type—fear of the dark and heights, fear of fights, excessive shyness. Usually, they were followers in a gang but active delinquency was rare.

They were average students and there is no history of truancy. There was a common interest in group sports and usually they left school because family finances demanded it.

They have a record of long periods of employment with adequate adjustment to previous employers. They express the desire to better their situations by changing to more stable jobs.

They possess a group of friends but are quiet and conservative in a crowd. They express an interest in a hobby, such as gardening, sports, church groups and the like. If they drink at all, they do it moderately and seldom gamble.

The married men are faithful to their wives with a marked interest in home and family. Sexual promiscuity is not common and if it is present, it is associated with worry about these misdemeanors.

They had the usual childhood diseases but this group has a higher incidence of sickness, such as minor respiratory infections, than the accident-prone group. Functional complaints are relatively common and they tend to be health-conscious.

They are quiet, reserved and it is difficult to establish contact with them. They are conscientious about their work and tend to brood over their problems.

They are serious while driving and often refuse to talk. They are courteous to other drivers on the road and conscious that the other driver might do the wrong thing. They appreciate the mechanical limitations of the car but as a group do not show strong mechanical tendencies. Their cars are clean and conservative and they are courteous to passengers.

They are interested in the welfare of others and concerned about their problems. They think of the difficulties of the future and adjust well to any discipline involved in their occupation.

The two London doctors found out that the accident pattern is no more rigid than the personality pattern. If there is an event in a person's life that changes this pattern of reaction and philosophy, then the accident pattern will change with it.

As an example, they point to one taxi driver who was accident-prone. At 27, he married a girl who was very religious. He stopped drinking, became interested in his home and his wife. From the age of 27 to 39, he drove 550,000 miles, with one minor accident.

As far as the general driving public is concerned, the same pattern is followed. The two doctors picked out 96 male drivers in London who had four or more accidents. They got the information from the Ontario Department of Highways and only accidents involving $50 or more were used as a basis for the study. Another 100 drivers were chosen as a control group. They were accident-free but of the same age and sex as the 96.

Sixty-six percent of the accident-prone group was known to one or more of the several agencies queried: the juvenile court, the adult court, public-health agencies, the venereal-disease clinic, three social-service agencies, the credit bureau.

Only nine members of the control group were known to any of the agencies and in no instance was a person known to more than one.

Of the accident-prone group, the credit bureau had contacted 34.3 percent; the social agencies, 17.7 percent; the public-health and venereal-disease clinics, 14.4 percent; the adult court, 34.3 percent; and the juvenile court, 16.6 percent.

Of the control group, the credit bureau knew six and the social agencies, adult court, and juvenile court, one each.

"It has been shown," concluded the doctors, "that because of their high accident rate, their importance in contributing to accidents far exceeds their numbers. In other words, a few drivers account for a disproportionate number of accidents, year after year."

What is the solution?

The London doctors think they have a plan. Their study, they feel, is important to commercial organizations who now use tests "such as reaction time to specific stimuli. These cannot differentiate between high-accident rate and low-accident rate drivers."

They feel there is a fundamental error in these tests. They are based on driving skill, not on safe driving—and there is a world of difference.

The type of individual, they point out, is much more important than mere skill. They stress that any personnel manager could check the history of a prospective driver, based on the general outline of the London study. The time it would take would more than be made up in the decrease of the accident rate.

As for the general driver, the doctors feel that after one, two, or three accidents within

a short period of time, the driver's license should be revoked indefinitely, if, after a study based on the London experience, he fits into the accident-prone category.

The general driver should be allowed to apply for reinstatement at any time. There should be no limit on that—but he must prove that there has been a change in his life. It is not a matter of learning a lesson, the doctors feel. The basic personality is involved—and that must change. They realize that their plan would meet with a certain amount of opposition but they believe it is the only way to cut the rate.

"Until society is convinced that accidents are not always chance happenings and that sometimes they reflect the basic personality of the individual," they say, there will be more and more accidents.

The Military Assistance Program

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include an article by Gen. Bonner Fellers, which appeared in the July 27 issue of Human Events, on the arms program now under consideration by the Foreign Affairs Committee, as follows:

When ratified by the Governments of France and the Netherlands, which are about to act, the North Atlantic Treaty will stand, side by side with the Constitution, as the supreme law of the United States. The Eighty-first Congress must now pass upon the President's military-assistance program. In the language of the Department of State, this program is "separate and distinct from the North Atlantic Treaty."

It is the view of the State Department, however, that western Europeans need, as a gift from the United States, military equipment "adequate to control internal disorders and to convince an aggressor that he would pay dearly for any attempt to cross their borders." It is further argued that confidence in western Europe "is based on the belief that through the North Atlantic Pact security from external aggression can be attained." But, "the preponderant military power which could be brought to bear upon an aggressor is centered in the United States, 3,000 miles from western Europe." So, the State Department concludes: "We cannot count on our friends in western Europe to resist if our strategy in the event of war is to abandon those friends to the enemy with a promise of later liberation."

In the interests of the American people, and in fairness to our allies, the Congress will do well to ponder objectively and professionally every implication of the President's military-assistance program.

II

The North Atlantic Treaty, in itself, has enormous psychological value. It is the symbol of unity and determination of the western powers to resist aggression from a source which President Truman now openly defines as Soviet Russia. But there are grave implications in the proposed military implementation.

It would prove disastrous to send weapons to peoples whose governments are likely to change so radically that our weapons might be used against us. Nor would it be in keeping with American traditions to supply European governments with weapons which might be used against colonial peoples.

The peoples of western Europe are understandably fearful of being overrun by the Red Army. The type of military equipment which they want traces back to a frantic desire to hold the Rhine, possibly the Elbe, with tanks, artillery, machine guns and bayonets, with air support. They know that only by successful ground combat can invasion be prevented. Being desperate, and very human, they rely heavily upon the United States to help. But a realistic appraisal of the combat effectiveness of the potential aggressor, as opposed to that of our allies, discloses the futility of the strategy.

In the last war—before lend-lease—11,000,000 Red soldiers, equipped entirely by soviet industry, were thrown against the Nazi attack. When the war ended, Stalin was using 502 Red Army divisions to push Hitler back into Germany, while on the western front the allied strength was 91 divisions, of which 63 were American.

The purpose of the military assistance program, we are told, is to warn Soviet Russia that we mean business. Let us look at Mr. Stalin's always logical reaction. In view of his vast Red Army he will scarcely be impressed with any peactime Allied ground force mobilized on the Rhine. While, for political purposes, he may oppose American military assistance to Europe, he surely rejoices in its economic consequences.

There are other factors favoring Russia. Her greatest allies are distance, winter, and manpower. Russia without its satellites is nearly three times the area of the United States. Russian winters are so severe that Americans and western Europeans cannot stand them. Russia has an inexhaustible supply of manpower, which its leadership deems expendable.

Terrain favors Russia. Europe is actually a tapering peninsula on Russia's western frontier. As armies advance westward the front narrows, the road and rail nets become more dense, the climate milder, and the Atlantic puts a stop to further retreat. But as armies move eastward the front rapidly widens, from 750 miles between the Baltic and Black Seas to 2,000 miles from Murmansk to Caucasia. The road and rail nets thin out. Winter immobilizes ground action, and for 6,000 miles there are no barriers to an eastward retreat.

To present even reasonably effective discouragement to the Red Army would require a peacetime garrison of at least 60 divisions. Since the cost of one division, from inception to combat readiness, is about $400,000,000, the financing of such a force, even without tactical air support, would approximate $24,000,000,000. Were this country to furnish its proportionate share of troops we would certainly need universal military training, with all its moral and material cost.

Even if our allies had all the American equipment needed they could never hold against the Red army. It would be less than honest if the United States Government were to endeavor to hoodwink them into believing they could hold. It would be less than honest to permit our allies to believe that our assistance will do the job.

Nevertheless, inherent in the proposed military-assistance program is the constant risk, which I presume we have calculated, that Stalin will be tempted to strike the Allied Rhine forces at a time when his occupation of western Europe would be quick and certain. The treaty binds the United States to assist. Our resultant losses would be enormous. The American people would recoil in horror, and then belatedly examine the quality of our leadership.

III

Fortunately, there is a brighter side to the picture. The United States has a powerful deterrent to aggression. It is our atomic bombs and the long-range bombers which can deliver them. This, and not our ground and sea forces, is the one threat which impresses Stalin. Russia's eternal allies—distance, winter, and manpower—are important against air power. From World War II air power emerged as the greatest striking force known to warfare. So long as we maintain the lead in bombs and bombers, this war deterrent is likely to continue effective.

Against the active opposition of the administration, the Eightieth Congress approved a 70-group Air Force program. Now a cut-back to 48 groups is contemplated. It seems that the $1,450,000,000 initial military-assistance program, plus the $15,000,000,000 current defense budget of our own, total more than we can afford. The future security of this country hinges on how the essential cut is made.

We can achieve national security, and at the same time cut expenditures, if we create a tailor-made force to meet the combat characteristics of our designated enemy. The formula is simple, yet the Defense Establishment has not so far found it: The best Air Force in the world supported by an adequate Army and Navy. Since Russia is immeasurably strong on land, we must avoid large-scale ground combat. A ponderous and expensive ground force, therefore, is unnecessary. Russia has only a small fleet; our Navy is exceedingly powerful.

For the present, therefore, we can hold back on Army expenditures; we can safely skimp the Navy budget. But Russia has announced that she will build the most powerful air force in the world and our Moscow observers recently have been deeply impressed by the progress already apparent. It is vital to the survival of the United States that we retrieve and maintain air supremacy.

The use of air power as the striking force, supported by ground and sea forces, is in keeping with the necessity of economy. An annual expenditure of $6,000,000,000 for the Air Force, $3,500,000,000 for the Army, and $2,500,000,000 for the Navy would, within 5 years, place us in a position to insure the peace of the world. This is a total of twelve billion as against fifteen in the present budget. This we can afford. It is a drastic cut for Army and Navy, but this is no time to let tradition and sentiment overshadow the proved trends in strategy.

IV

The placing of our principal reliance in air power would not mean that the United States is abandoning the western European peoples. Since the attempt to hold the Rhine would be futile, it might actually be better to permit the Red Army to occupy Europe than to suffer the devastation which inevitably follows in the wake of tanks and guns and bombs. One more sweep of ground forces locked in combat across Europe would be all too likely to end its civilization permanently.

To Stalin, the peaceful occupation of western Europe is actually a war deterrent. There his Red soldiers would see a way of life, a freedom, a dignity of the individual beyond their widest stretch of imagination. Never again would they submit with docility to totalitarianism.

The proposed military assistance program places the State Department in the role of determining military strategy, in that it has invited our allies to requisition military equipment to hold their frontiers. Assistance to this program commits us to ground combat should war come. The situation parallels Pearl Harbor. It was a diplomatic rather than a naval decision that the fleet be stationed at Honolulu to deter Japanese aggression. Then the Hawaiian commanders were not advised that an attack was imminent. The proposed administration program could lead to far greater humiliation than the Pearl Harbor debacle.

The task of the Eighty-first Congress is to make sure that our allies understand precisely what help we intend and do not intend to give them. We must not be placed where we can be accused of welshing on the treaty. Clearly the administration has not found the formula for lasting peace. Its failure magnifies the responsibility of Congress.

(Brig. Gen. Bonner Fellers (retired), West Point, 1918, DSM with oak leaf cluster, was military observer with the British in Africa (1940–42) and on General MacArthur's staff as a ground officer (1943–46).

Pay Day for Jones

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 3, 1949

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following monthly economic letter of the Northeast Farm Foundation:

PAY DAY FOR JONES

Jones regarded his 2 weeks' pay check and the little accompanying slips thoughtfully. Slightly over $10 out for Federal income tax alone. Twenty dollars a month going to Washington to take care of big and little bureaucrats, big and little handouts, big and little countries overseas. Plus $3.50 out for this thing called social security. Plus the State income tax still to be piled on top of this.

"Could use some of that myself," mused Jones, as though the thought were a new one. He repeated the general thought aloud to his fellow worker, Smith.

"You're only smelling of the cork now," observed the other drily. "There's a lot more poison in the bottle."

"I suppose so," agreed Jones rather vaguely.

"Ever take any note of the taxes you pay out in the course of a day?"

"No, I never did. Be happier not to, I guess."

"Yeah. But it might be smarter if we did." Smith spoke with a little edge in his voice. "I'm getting to the point where it's nip and tuck to make ends meet. This tax load is just simply getting bigger than we're equipped to handle."

Jones considered this. The more he considered it, the bigger and tougher it loomed. He recalled his own monthly struggle to get the bills paid, the annual battle to pay local taxes, school taxes, State and county taxes on his home, the annual bout with the income tax bureaus. All of a sudden the burden of running this biggest and most expensive of governments seemed to weigh upon his particular shoulders. He felt oppressed by it.

At coffee time, he bought a carton of cigarettes, the price being 19 cents a pack. Slightly tax-conscious by this time, Jones queried the clerk as he broke open a pack:

"How much of this 19 cents is tax?"

"Well," answer the tobacco man, "somewhere around 9 cents of it goes to the Federal Government and around 3 cents to the State. Roughly 12 cents of it is tax."

"You mean to say I could buy this pack for 7 cents instead of 19 cents if it weren't for the tax?"

"Yes, a little less than 7 cents right now."

"Sure," said his friend back in the office when Jones commented on the item. "Tobacco is loaded with taxes. Believe it or not, the Government collected almost twice as much taxes on tobacco last year as the farmers got for the whole crop. The farmers got about a billion dollars. Then the tax men piled on near two billion for you and me to squirm under. Saw the figures in a Government bulletin."

(The Agricultural Situation. USDA, June 1949, p. 10.)

"Fine thing," said Jones. This load on his daily smokes was insult added to injury.

It was this frame of mind which prompted him to eye the sign on the gasoline pump where he stopped to fill up at noon. "Price 17 cents per gallon, tax 7 cents."

"Gimme 10 gallons of high-tax," he said rather sourly. The filling-station man had heard it before. He merely grunted sympathetically. He didn't like it, either.

"The Government take was plenty on this bus you're using it in," he commented.

"Right. Tax on this car was $120, come to think of it."

"Don't forget a $20-a-year license to run it, plus driver's license."

"Two billion a year motorists pay in taxes, so I've heard."

"Expensive country, ain't it?"

"You said it," answered Jones.

He stopped to telephone Uncle Jim in New York. The girl at the switchboard handed him a slip that read, "toll charge 60 cents, tax 15 cents." Well, he had business in New York on Monday and he had to make some plans by word of mouth, tax or no tax.

To get his transportation arranged he drove around by the railroad station and bought a ticket. The ticket with berth, had an item on it, "tax $3.99." Jones crammed it in his wallet and while at the station went around to the freight office to see about the new sink he had ordered from the mail-order house. It was there. The clerk made out a bill and handed it to him. Yes, the inevitable trimming—"tax, 35 cents."

"Doggone taxes jump at you from everywhere. Sneak up on you," muttered Jones to himself as he paid the freight.

This being Saturday afternoon, Mary had come into town to do some shopping and they went about it together. His impending trip to New York caused a window full of leather luggage to catch Jones' eye.

"Could use a new bag like that," he remarked. But a second glance took the joy out of it. The sign said, "Price $30, tax $6, total $36."

"Sure, I see what that sign says. I could use a new fur coat, too," observed his wife in like vein, "but who's going to pay $40 tax on top of a $200 coat? Not the likes of us. If they want ordinary folks to buy things like this, let 'em take off those ridiculous taxes and get prices down to reason."

From which it appeared that the Jones family was becoming slightly resentful of the white man's burden. And somehow they had begun to feel rather uneasy about the whole thing, too, a vague feeling as though some giant octopus had them in its clutches and was applying the squeeze.

In a drug store Mary bought a roll of film, tax 15 percent, and some toilet preparations, tax 20 percent. In the window of the jeweler next door she regarded the tempting gems, tax 20 percent. They passed a bright-fronted movies and Jones read aloud the admission price: "Seventy-five cents, tax 15 cents."

"A fifth of it's tax," he remarked as they passed by.

Mary bought a few household articles and some cloth to make dresses for the girls. The clerk made out the sales slip, adding the final item: "Sales tax 12 cents." Jones regarded that meager item as though it might sting him, which, in fact, was not far from the effect.

They talked it over further as they finally entered a restaurant.

"Never realized what a racket this has got to be," observed Jones thoughtfully, "goes right on, day in and day out, no let-up."

"Why, it's terrible. Every single move you make they snare you with a tax. Seems to me about time this thing ought to have something done about it."

Jones was beginning to be of that mind, too.

"Here's the light bill with a tax hitched on to it. Of course, the gas bill does, too, and the phone bill. And notice of a tax to pay on the dog. License tax if I so much as go fishing. Can't have a cocktail even, without swallowing about three big taxes."

Jones' tone was that of a man slightly puzzled by it all. Somehow that high cost of being an American citizen seemed to have overtaken him all at once. He knew, however, that this wasn't so sudden. It had been going on quite a while.

They caught sight of Smith in the restaurant and he came over and joined them. Evidently he had done some thinking on this subject.

Jones regaled him with some of the things they had been noticing.

"Can't maintain half the populace on a charity basis and on top of that support most of Europe and some of Asia, without taking it out of our hides," summed up Smith.

"Who's reaching into our pockets like this? Is it the city or the State or Washington?"

"Well, all of them, of course—but most especially Washington. Before the war (1940) the total State-and-local-tax haul was eight and a half billions, Federal Government five and a half billions. But now that Potomac camel has grown till he's pushing everybody else out of the tent—now State and local alone take fourteen and a half billions, but Washington takes $40,000,000,000. That's in 1 year, you understand. One year's bite out of the people."

"How can those Government boys spend it, with only 300 working days a year to write checks in?"

"Well, sir, believe it or not, they're actually spending more than that. Even more than they take away from us. The Government closed its books this year almost two billions in the red. And this coming year they're set to spend probably five billions more than they rake in, in taxes. They'll just have to go to the banks and borrow. Can you beat that? The fact is, the Government has spent more money these last 4 years than in all the preceding 169 years since the founding of the country. Talk about spenders."

"What's the matter with those fellows down there? Are they insane?"

"No, they're about the same kind of folks as you and I. But there's a new philosophy floating around the last dozen years. A socialistic idea that the Government can support the people. The idea is to take property away from everyone who has any, by this taxation process, and give it to favored groups. Pass it out in pensions, subsidies, cheap food, free medical care, partly free housing, free college education, unemployment relief, social-security doles, and so on."

"Plus a big hand-out for Europe?"

"Oh, sure, a big piece of pie for Europe. Twenty-eight billions dished out to our friends overseas in the last 3 years. Eight billions more to be given to them this year."

"What do they do over there with all that money?"

"Oh, the most of it goes across, not in cash but in goods. What they take from us is more valuable than money. The money only serves as counters, like poker chips. What they take is our real wealth: Our steel, lumber, oil, coal, grain, meat, fertilizer, machinery, and the like. Yes, it's a mighty big piece of pie for Europe. And, of course, you and I have to pay for it. Let's hope it's a good investment."

Mary broke in to ask, "What's our biggest expense here at home?"

"Well, our military machine is the biggest single item. The Army, Navy, and Air Force take over a third of the whole budget. Costs money to keep up a good defense machine. But the services waste a pile, too. Those brass hats spend money like water. They could tighten up on the waste a whole lot without hurting their efficiency the least bit. Every man who's been in the service knows that.

Jones nodded. He'd seen plenty of such waste at first hand.

"What about the ordinary cost of running the Government?"

"Twice what it should be. I've done considerable work in Government service. I know how it is. There isn't a civilian department in Washington but what could be cut in half and still perform its necessary functions."

"Yeah, but Congress keeps right on appropriating more and more money, not only for running the Government, but for all kinds of new things. How about that?"

"True. One socialistic project after another. This new housing law is a sample—810,000 new houses to be built—financed with taxpayers' money. Will cost ten to twenty billions, nobody can figure how much. Same idea I mentioned—theory that Government can support the people, instead of other way around. Takes some tall taxes out of us little fellows to play that kind of games.

"Well, they're tall, all right. Here's one—family named Carter moved into our block last week. Nice fellow. Told me the tax on his moving bill amounted to over $10. Had to pay taxes on his deed, of course, and on the mortgage. Literally can't move without being taxed.

"Yes, taxes are piled on everything. These particular things are out where you can see them. But back of them are a whole jungle of hidden taxes that we are stuck with and can't even see. Take this margarine here on the table. We know that's taxed. But we don't think about the same taxes we have to eat in bread or cake or anything that has shortening in it.

"This bread, made probably from Dakota wheat, has some high railroad and corporation taxes in it, too, and these oranges from Florida are loaded down with special truck and highway taxes. Ditto the cream and the vegetables. The clothes we're wearing have got a lot of hidden taxes in them. My shirt cost $3 and somewhere around a dollar of that is taxes on one kind or another.

"That's an outrage," interjected Mary.

"The politicians kid us along by piling taxes on the corporations," Smith went on. "The corporations don't really pay those high taxes, they just serve as tax collectors. The fact is that we working folks pay virtually every one of those corporation taxes. All these high charges levied on the manufacturers and processors and distributors actually come right out of you and me. They're passed right along to us in the price of the product.

Smith leveled a finger at his friend.

"Do you know there are 6,250,000 people on the public pay rolls? Six million two hundred and fifty thousand of those living off you and me? Do you know that you work every single Monday all day, and Tuesday forenoon besides, just for them—that they eat up your and my and every other workingman's entire earnings for 1 day out of every 4? That's how it is. A year's taxes now amount to $1,450 levied on every average family of four people."

"Well, by George, this whole thing has reached the point where it scares me. You know it wouldn't be hard for a government operating like this to take away everything that we small fellows have. It isn't necessary for our people to be bled like this. Can't the expenses of Government be cut?"

"Of course they can be cut."

"Where is the place to begin?"

"The way to cut is to cut. Say, 10 percent right across the board, for a starter. Of course, every officeholder in the country will howl like a coyote, but let 'em howl. This thing is serious for you and me. We don't have to be complete suckers and do nothing about it. When our forefathers were taxed beyond endurance they did something about it."

"How're you going to make that idea register?"

"By pressure on the politicians—on every one of them, from the President down. Rise up on our hind legs and tell 'em so they understand it: Cut taxes or we'll defeat you next time up."

"These so-called have-nots, these folks on the receiving end—and there are a lot of them—they won't like it."

"Correct. They won't like it. So what? Let's have a showdown and see which side of the fence the people of this country are on. I think you'd find that the sane, sensible, hard-working people who pay the bills are in a majority. They have a cause, all right. They've got to have leadership. They've got to have the issue presented squarely. And after that they've really got to fight for themselves."

Smith paused and regarded his plate thoughtfully.

"The one most direct and practical attack on this whole socialistic idea," he said slowly, "is to cut taxes. It's the unlimited power to tax you and me that gives these spenders their leverage. Clip their fantastic income once and we'll have a lot less socialism in this country."

"Well," said Jones, "that pay check I got this morning has got to last 2 weeks, and some besides. Either it actually does that or I'm sunk. But it spreads thinner every time. Pay day has gotten to be merely payout day."

He paused to buy a paper from a polite little newsboy. Spreading it out on the table, all three diners stared at the headline.

The bold, black letters that looked up at them read: "Washington thinks higher taxes are a must."

Jones regarded it a moment, then uncapping his fountain pen, scratched out the word "higher" and wrote in its place the word "lower."

"Natural mistake of the politicians, under present conditions," he observed gently. "We'll have to set them straight."

The Unworried West

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Wednesday, August 3 (legislative day of Thursday, June 2), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article written by E. C. K. Read, associate editor of Steelways, entitled "The Unworried West."

This article deals with an attitude and is not wholly descriptive or historical, but it shows that the spirit that made the West what it was in pioneer days is still there, and it shows, above all things, that the industrialization of a community does not necessarily mean dinginess, crowded conditions, the polluting of rivers, and the filling of the air with sooty smoke and noxious gases.

The article carries a picture of the great steel plant in Geneva, Utah, which shows that the farms next to the plant have not been disturbed.

When workingmen can live in their own homes, send their children to schools from the kindergarten through the graduate schools, go fishing whenever they have leisure to fish, working conditions have at last reached the level about which men have been dreaming.

The West may give to our Nation its greatest need: the necessity of thinking of our citizens as being entitled to live complete lives, regardless of their occupations.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE UNWORRIED WEST

(By E. C. K. Read, associate editor of Steelways)

If you want to go West this summer and enjoy it, take some suntan oil, a bathing suit, and a fishing rod. If you want to understand the West, take an adding machine. As long as you don't touch the subtraction key, it will speak the western tongue.

For the West today is one region of the country which refuses to worry about disinflation. The mere fact that markets for paper, chemicals, glass, furniture, and rubber have fallen in California, that sales of storage batteries are slow in Oregon, that farm machinery orders are off in Denver, that carrots are overplentiful in Utah; and that other signs of economic downturn have appeared is no reason the westerners can see to be pessimistic. They cannot believe this decline will last. All the lines on all their charts have been rising for so many years that the upward look and the large statistic have become a state of mind.

There is more to this than a psychological trick. Beneath the bubbling confidence lies the purchasing power of 18,650,000 people—more than four for every three who lived there before the war. Along with this population growth, in which almost as many migrants crossed the Rockies as in 25 prior years, has gone a comparable expansion in industrial investment. Bank assets have nearly trebled in the 11 Western States since 1940. In California alone, factory employment has risen by 84 percent and factory pay rolls by 285 percent in less than a decade.

Not being an economist or a seer, I am unprepared to state that the West's economic millenium has arrived. But after a tour of Washington, Oregon, California, Idaho, Utah, Arizona, Montana, Wyoming, Colorado, and New Mexico, I will say that a visit to the West is a cheering shot in the arm. And I can report some observations to support the view that western optimism seems well-founded.

Our major factor is the quality of the western workingman. He has a reputation for high productivity, enthusiasm, and skill sharpened by war work. New industrialists in the West volunteer testimonials on this point. The western worker likes the climate, wants to stay. He is more likely to own his own home than is his eastern colleague, hence has a personal stake in his community.

Western industry has taken steps to make his working conditions good. At a luggage factory in Denver, I saw a recreation center being built for the employees. In steel mills along the coast, I saw machinery painted in colors to rest the eye and cut down accidents. A new 40-acre industrial site in Culver City, Calif., makes its steel scaffolds, electrical equipment, and gas furnaces in low, modern, pastel-tinted buildings—set about with green lawn.

Learning from eastern mistakes, the West is steering clear of one-factory or one-industry towns. There is strength for the long pull in diversification. That industrial site in Culver City is a case in point. Another is Portland, Oreg.

Portland's waterways to the sea and inland tended to make her topheavy in distribution. Now she is building up manufacturing—chemicals, metals, and machinery. Her old standbys, lumber and farming, are looking into byproducts from waste: bark and sawdust make alcohol, tannin for leather, fertilizers, cattle feed, filler for plastics; fruit seeds are being turned into tannin, pear peelings into marmalade. Into these and other enterprises, Portland has absorbed most of its 100,000 wartime shipyard workers, thus having the last laugh on pessimists who said the town would be two-thirds of a ghost in the postwar world.

The diversification trend can be seen in individual companies. An outfit in Seattle that specialized in garbage cans before the war has spread out. Today it makes downspouts, then switches to buckets and space heaters, then goes into mail boxes. Last Christmas it knocked out a couple of hundred scooters just before the holiday. In Colorado a small machine shop got tired of relying on job work from other firms. It put together a little cement mixer for residential housing and sold 40,000 in 2 years. Next it come up with a planer and a table saw, which have been shipped as far as India. Now the firm plans to add to farm windmill. Faith in the future? It has bought one of the biggest casting machines in the country—to speed up making of parts and bring down unit cost.

A great part of the strength of the West's new expansion comes from its being built on the needs of the West itself. Products are being developed or adapted to fit regional peculiarities.

One man has built a special transmission to fit eastern-made tractors; it gears them down to a mile an hour for spinach cultivation. Another man has an attachment which makes a three-wheeler out of an eastern four-wheel tractor to suit lettuce farmers.

The West is irrigation territory. So the West makes big-disc harrows for dry farming, springler pipe to water the land, long land levelers to engineer the fields for even flow of ditch irrigation.

There are makers of food machinery in south San Francisco who will design and build a gadget to peel, slice, pit, or package anything the vast farming population cares to grow. Portland makes high-legged trucks that carry lumber under their bellies and logging trucks that wear their trailers on their backs as they go back empty into the woods.

The West, in short, is no mere stamping ground for branches of eastern concerns. It's on its own feet.

With fields and forests from which to feed and house itself, the old West needed one thing to insure self-sufficiency—a solid foundation of basic industries that could take raw materials from western earth and hand them over to western manufacturers in useable form. The new West is acquiring this foundation with the help of steel.

Brigham Young, Moses of the Mormon people, founded the steel industry west of the Mississippi. He sent settlers into southern Utah in 1849 to find iron ore. In 1852, this little frontier post set a blast furnace going to make the West's first pig iron. In 1884, native iron was being converted into steel as far out as the Pacific coast.

Dozens of pioneers tried their hand at steelmaking, made their small contributions to American greatness, and passed into dust. But one, more tentacious than the rest, built a furnace in Colorado in 1881 and kept it at work. Around it grew a mill which is still growing today; the oldest western mill that takes iron ore and makes steel in semi-finished and finished form.

That mill was by far the largest in the 11 Western States in 1940, when the region's ingot capacity was 2,370,000 tons. Then came war, and new expansion. To supply coastal shipyards with plates and structural shapes, two new integrated mills were built in 1943 and 1944—at Geneva, Utah, and Fontana, Calif. And, though shipyard demand has dwindled, these 2 plants now are in the midst of expansion that will cost nearly $90,000,000. Together, they account for three-fourths of the increase in the West's steel ingot-making capacity over the last decade: from 2,370,000 to more than 5,000,000 tons.

To feed its blast furnaces, Geneva gets almost all its raw materials in Utah: Coal from Horse Canyon, 120 miles southeast of the plant; iron ore from Iron Mountain, 225 miles southwest; limestone and dolomite from Payson, 35 miles distant. Fontana is farther away from her coking coal (it comes 800 miles from Sunnyside, Utah) but only 163 miles from Eagle Mountain iron ore in Riverside County, Calif., and 12 miles from the limestone quarries. Geneva and Fontana both send most of their finished steel to western fabricators. It ends up as oil, gas, and water pipe lines, storage tanks, farm machinery, and tin plate for the canning industry.

The only railroad rail mill west of the Mississippi is part of the West's oldest integrated steel mill at Pueblo, Colo. Rising near it today are a new rod mill and expanded wire-making facilities. For these operations Pueblo draws its coal, fluorspar, dolomite, and limestone from inside Colorado, but goes afield to Sunrise, Wyo., and Cedar City, Utah, for iron ore.

Altogether, seven Western States contribute nature's makings for western steel and collect the bill for labor and materials. Nevada chips in with its manganese, Oklahoma with its coal, Arizona with its fluorspar. Pig iron cast at Geneva and Fontana feeds some non-integrated mills in Washington and California, but most west coast furnaces—both electric and open hearth—rely heavily on man-made scrap. Some of it still comes from shipbreaking, some from battle wreckage as far off as Japan.

Steel expansion not only gears into the expanding economy of the West but gives it impetus by diversifying to serve the West's diversification. Along with heavy tonnages in plate and strip and structurals, the mills scatter a lot of steel into barbed wire, bale ties, and fencing for the farmer, wire rope for the logging industry, nuts and bolts and light structural shapes for construction, steel netting for Northwest salmon fishermen, grader blades for road building, special nails for orange crates, electrodes for aluminum smelters, even the braided wire for those San Francisco cable cars.

The automobile assembly industry is an example of how the effect of the growing steel supply ripples across the western economy. Los Angeles now turns out more cars than any other United States city except Detroit. One Los Angeles motor plant alone subcontracts work on 512 parts to 48 metal-working firms. The subcontractors turn to local suppliers of iron and steel for the hot-rolled strip and sheet which goes into bumpers and wheels, cold-rolled strip for hub-caps, spring-steel flats for springs, and so on. This auto maker is trying to interest other western firms in making frames, and conceivably the whole car may some day be made on the coast in one integrated operation.

The industrial lure of the Northwest is cheap hydroelectric power. Washington, Oregon, Montana, and Idaho have 20 percent of the Nation's supply and almost half the estimated undeveloped potential. Western steel is a prolific source of reinforcing bars for the concrete dams. Some steel mills have shops that do nothing but fabricate transmission towers, while others turn out trusses, trestles, and cranes for the likes of Grand Coulee and Bonneville.

Steel's role in the rise of the West is further reflected in oil and mining machinery, in logging trailers and lumber handlers, in farm implements and food processing. But there is a young firm in San Francisco that perhaps conveys the new tempo better than all the others.

The three owners are Hans Goldschmidt and the Chamber brothers, Robert and Frank. Goldschmidt came to America from Germany in the thirties, did woodworking, then wound up building ships on the coast during the war. Robert Chambers was his boss.

After the war Goldschmidt cast about for something to do. A magazine article gave him a quick answer—there would be a boom in home-workshop equipment. That sort of thing he could make, and make well. But he needed money and merchandising ability. Chambers had both.

Starting in March 1947, Chambers underwrote Goldschmidt's salary and development costs on a machine that combined a lathe, a circular saw, a horizontal and vertical drill press, and a disc sander. Montgomery Ward liked the very first model. So Chambers signed up some ship-repair people who had equipment, steel, a war-born ability to improvise—and not much to do. By November, the first batch of machines was finished and Frank Chambers had left a New York department store to join the firm.

How did things turn out?

To date, the two brothers and Goldschmidt have bought 2,500 tons of iron, steel, and aluminum. Their Shopsmith, retailing at less than $200, has been signally honored with a full page in Montgomery Ward's catalog. Their backlog is beautiful.

That, in a nutshell, is the formula that is building the postwar West. A little capital, new skills acquired during the war, a desire to create something, and a wartime business in search of a key to prosperous peace.

Unlike the traditional promotion magician western industrialists frankly say they have many things up the sleeve—from that Denver man with the portable steel sawhorse to the projected atomic energy plant at Arco, Idaho.

Colorado is doing research at Rifle on oil shale, from which practically unlimited amounts of petroleum can be taken when the need arises. Extraction of oil from coal is also under study.

Utah, rolling in minerals from coal to copper, is already the center of the nonferrous smelting industry. Sulfuric-acid byproducts of that industry are being combined with huge potash and phosphate resources to build an integrated fertilizer industry. Pile lines from the Rangely oil fields in Wyoming are expanding refinery operations around Salt Lake and 36 companies are looking for oil this year under Utah itself.

Not everything is going to happen tomorrow. In the Northwest, long-term expansion will suffer until hydroelectric projects close the gap between potential and developed power. In California the water supply is spotty. Heavy industry will have to choose its locations with care, pending completion of the $100,000,000 Central Valley project. The navel of the national marketing area is still east of the Rockies, and many big industries are better off shipping western material east for fabrication than integrating their operations in the West and paying the higher freight on finished products.

Western steel mills will not be able to meet all of the West's demand for steel plate until the Texas-New York pipe line is complete. For plate makes pipe. And even while some markets seem saturated with reinforcing bars, wire products and nuts and bolts, there is still more call for steel sheet and pipe than can be met from current output.

Despite these limitations, most of them short-term, the West has a young, enthusiastic and independent look in its eye. Railroads, public utilities, chambers of commerce, steel companies, and resource development councils are pitching in to help find sites for new industries, even to do market research for them. Civic groups are bringing small local manufacturers together with big fellows who have opened branch plants, to encourage subcontracting.

If the mere thought of moving west crosses your mind, and you mention it aloud, you are likely to find industrial-development people from half a dozen different towns on your doorstep—all singing Abide With Me.

Let's Examine Our Santa Claus Complex

EXTENSION OF REMARKS
OF

HON. FRED. L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 22, 1949

Mr. CRAWFORD. Mr. Speaker, this Nation's Santa Claus complex deserves an even more thorough re-examination than William Vogt, author of Road to Survival, has given it in his article in the Saturday Evening Post for July 23, excerpts from which I offer for the RECORD under leave to extend my remarks.

The emphasis on the bold new program on material welfare as against the moral issues involved could well afford a strong basis for a virile opposition to the Fair Deal. If Republican leaders would stop, look, and listen to the argument of Dr. Vogt that the problem of human society is to provide, not for, but against, more population, their "me too" complex would fade.

It should be pointed out that this implies also a reconsideration of the issue that is central to the dispute with Communism, namely, private property and its essentially monopoly income. There can be no peace on earth until this issue is settled, capitalistically, by a clear denial of the Marxist labor-cost theory of value. Property can have value only as it is productive of an unearned income which is not determined by what the industrial set-up has cost its owners. Modern industry is the product of intelligence, not of thrift.

Those whose initiative, restrained and guided by a stable system of property and prices, brings about increases in welfare must be able to control the extent and nature of the resulting increase of population if we are to have peace under law and order.

The article referred to follows:

LET'S EXAMINE OUR SANTA CLAUS COMPLEX

(By William Vogt)

President Truman is easily the most effective extemporaneous speaker of our day, and his slightest utterance is often sped around the world with the speed of light. The inaugural address with which he ushered in his first full administration was, of course, not off the cuff. But the fourth of the various points spelled out in the address, the proposal of a "bold new program" to provide "triumphant action * * * against hunger, misery, and despair" for the world's free people came as such a surprise that it was printed by most of the world's newspaper and discussed in all its capitals.

No matter what programs develop, the President's proposal is certain to affect the American people for years to come. In the Atlantic Charter we expressed a pious hope for a world free from want, and our failure even to begin to realize this has resulted in bitter disappointment. Especially in Asia it is being used by the Communists to turn millions toward the Red orbit. The ostentatious distribution of dollars and soft soap in Latin America, and its virtual termination as soon as the war was over gave support to the cynical forecasts of our southern neighbors that we were trying to buy them merely because we needed them. At the moment, in many parts of the world, the attitude toward the value of Uncle Sam's word is bearish, to put it mildly. In a very real sense, Mr. Truman's plan is a means of making good on the Atlantic Charter. We cannot afford to fail again.

Yet, if under point IV our foreign activities are fumbled, as they often have been in the past, we may do more harm than good to the so-called undeveloped areas and once more raise a crop of the resentment that so easily springs up against a rich and powerful nation. If we are to succeed, we shall need for greater wisdom than we have sometimes displayed; an effort sustained throughout decades of changing Congresses and administrations; a realistic adjustment of our foreign policy to take full cognizance of geographical and biological processes hardly dreamed of in diplomatic philosophy; and finally the expenditure of millions of dollars earned in the sweat of the American taxpayers' brow.

The American people themselves, from New York to San Francisco, should ask questions about point IV. We are all too apt to forget that government is only the citizens' functional arm, and that ours is the right and responsibility to guide it. To ask the right questions, the voters heed to know much more about the plan and the problems it is intended to solve than is now common knowledge. Some of the most powerful influences and controlling processes will be discussed here, though the subject is too vast for us to show more than a few of the peaks rising above concealing fog.

Problem No. 1 is unquestionably people—hundreds of millions of them. They are not figures in a census, or labor pools, or potential markets, or that vague abstraction of the academic planners called human resources. They are men and women and children, in some ways very like ourselves, yet in important ways very different. They must be fed every day, have houses to live in and clothes to wear. They should also have, according to our notions, schools, and newspapers, doctors, and enough clean water so that they can have a bath every day. These last amenities are largely unknown to hundreds of millions.

About 1,500,000,000 of these men and women and children with living standards far below ours are concentrated in the so-called undeveloped areas. Few of them have even been touched by scientific thought. The Africans are reported to be 95 percent illiterate, and the Indians and Chinese about 85 percent. Scores of millions who are able to read and write—like millions here at home—could be described as educated only if that term were stretched to the snapping point. If we provide them with tractors, they will probably be wrecked in a few weeks, as the British discovered to their sorrow in East Africa. If we give them hybrid corn seed, we shall have to break down an age-long apathy toward fertilizers, if the new plants are not to exhaust the fertility that remains in overworked soils. If we help them to find new products in their forests, we must—though we have failed to do it at home—somehow make certain they do not turn vast areas into deserts.

Hundreds of millions of these people are dominated by ancient superstitions and beliefs, and extreme conservatism. In most of the undeveloped areas such devices as our Soil Conservation Service and Extension Service—and even the one-room schoolhouse—are nonexistent, and years will be required to develop them, to make an impression with them, and to change the ways consecrated by generations of forefathers. The sacred cow of the Hindus is matched by hundreds of ideological counterparts.

It is these people who own and control the undeveloped lands, and it is through them we must work. They are often proud and independent, and resent our do-gooding to the point of violence. We spent many millions of dollars in Mexico, in the interest of both that country and our own, trying to wipe out hoof-and-mouth disease. Instead of being welcomed by the Mexican people, hoof-and-mouth-disease fighters, including young North Americans, have been murdered. The Mexican peasants simply did not understand what the technicians were trying to do.

It is not only the undeveloped peoples who are a problem but our own. The very lack of humility implied in offering such a program to the rest of the world is not likely to make us more welcome. The undeveloped peoples might well point to the Puerto Rican slum in our front yard and the Navajo slum on our doorstep, and ask us what we have to offer when we cannot meet such problems at home.

In terms of our relationship to the rest of the world there is a very real danger in the ineptness of Americans we may send abroad. A charitable Peruvian once remarked to me, "The American who leaves the ship in Callao is a very different man from the one who went aboard in New York." I know from personal experience that many years will pass before the bad manners and superciliousness of North Americans in the southern Republics during the war years will be forgotten. Far too many reports are now reaching the United States of the unhappy impact of American ostentatiousness and discourtesy in many parts of the world where we are supposedly making friends and influencing people.

A Soviet reaction to Mr. Truman's suggestion was an immediate and stereotyped cry of "American imperialism." While we may be sure that, from the President's point of view, such a charge is without justification, there is considerable danger that it may be deserved. Our traditional policy is one of hands off American business operations abroad, on the assumption—which some of our State Department people understand to be fallacious—that the respective governments can protect their own interests. Should our "development" plans turn into a rape of foreign resources, we should lose whatever good will might be developed under point 4. I have received disturbingly plausible reports that a large American corporation that piously talks of its high social purposes has "sold" to an undeveloped country a fantastic plan for building roads that are not needed and that the country cannot possibly maintain—the work contingent on a loan of American funds. Should this loan be granted, the country will be saddled with a heavy debt that will at the same time victimize the American taxpayer.

One of the problems that should give the American citizen, already staggering under the load of taxes and the national debt, a healthy skepticism is the possible place of loans in the point 4 plan. Government in vast undeveloped areas is unstable, corrupt, devoted largely to exploiting its subjects, and often already overburdened with debt and with little prospect of solvency. In some countries, millions of dollars are already in default to American investors. Are we, in the name of philanthropy, to

push additional millions down the same rathole?

Responsible citizens of the undeveloped areas do not themselves want to be laden with additional debts. I well remember the last plea of a woman in one of the "backward" areas as my wife and I boarded a plane to go home: "When you get to Washington, please ask them not to lend us any more money." As we poured out millions during the war, we sparked the inflationary blaze in more than one small country. One of the yardsticks we should apply in granting foreign aid is the measurement of the tax practices of the various countries against our own. Is the American taxpayer to be soaked, while the foreigner pays only a disproportionately small share of the cost?

The confusion in Government circles immediately following the announcement of the President's plan was unquestionable evidence that it had not been carefully thought through, and that the problems it might create had not been thoroughly explored.

It has been seriously suggested by both Americans and foreigners that we distribute mail-order catalogs to create a demand for goods that will make people work harder. Have we any right to assume that there is an intrinsic value in hard work? Industrialization in some foreign countries has resulted in a greater ease in satisfying the people's needs and desires. Instead of expanding their desires, they have bewildered Americans and Europeans by contracting their working hours. Instead of working 6 days a week, they have been satisfied to work only 3—and neither wheedling nor cursing would break the pattern. Statistics are not available, but these people probably have far fewer nervous break-downs than we.

It is more than a little possible that a good many people will not want their areas to be developed, and we shall not be doing them a service if, blindly or otherwise, we try to force them into our way of life. The problem is far more complex than the parochial-minded may realize. For example, most people would assume that the extension of improved health measures would be desirable. Such simple prophylaxis as spraying with DDT or chlorination of water supplies may, however, have a shattering impact on the life of the people involved.

We restricted the Navajos to about 25,000 square miles of poor land, and, by maintaining peace and instituting what we think of as mere token health measures, set the population spiraling upward. Whereas a few years ago the reservation probably provided a satisfactory living for 8,000 Navajos, today there are 60,000, with vast numbers suffering from physical and spiritual malnutrition. The suppression of tribal wars in British Africa had the same result, and whereas a much smaller number of natives once thrived under a way of life that had been developed over milleniums, now vastly increased numbers live in misery, nearer to the edge of disaster than most people realize.

Indeed, the greatest danger in trying to carry out the President's point 4 may well lie in speeding up population increases. Populations are growing most rapidly in undeveloped areas, and if we succeed in raising the living standards of these people, we must, at least for some decades, count on a more rapid increase in the number of men and women and children who will have to be cared for. At the current rate of increase, Latin America will double its population in about 40 years. India increased by 15 percent—or more than the total population of Great Britain—between 1930 and 1939. Java, which is bursting out at the seams, jumped from 4,500,000 to 46,000,000 in little over two centuries.

It is probable that a similar pattern exists in Africa, though for most of the Dark Continent we do not have satisfactory data. A recent report from West Africa, an area in which Communists have been particularly active, indicates, however, that the Ashantis have increased about 40 percent per decade through the last 30 years. Egypt, with its millions hemmed in by the sterile wastes of the desert, grew about 500 percent in 100 years, and the misery of the masses probably outstripped population growth.

Such an increased rate is almost certainly not the maximum possible. Sir Henry Tizard, according to the Population Reference Bureau, tells how the use of DDT in a suburb of Georgetown, British Guiana, so reduced the death rate that the population is expanding about 10 percent per year. Our effort to improve people's living standards is certain to be drowned in a tidal wave of hungry mouths in many areas unless populations are controlled.

For there is no hope, short of a miracle that is not in sight, that production can be increased to meet such growing demand. "To put the matter in extreme form," said Isaiah Bowman, writing of Africa, "if millions are saved from tribal war, malaria, and tsetse fly, only to be permitted to die of starvation, the controlling white has not improved the status of the population; he has only changed the categories of the vital statistics."

In the United States, in the years between the wars, food production increased about 1 percent per year. Since then, with phenomenally favorable weather and Government price supports that have resulted in overcropping of our land to a "murderous" extent, to use the word of CLINTON ANDERSON, the rate of increase has been sharply stepped up. These advances have, of course, resulted from a highly developed technology, a literacy rate of nearly 100 percent, almost unlimited amounts of capital, and one of the most favorable geographies anywhere on earth. Can we hope that the Zulus would approach it? Anyone who has read that great novel Cry, the Beloved Country would give an unqualified negative answer.

Is there any likelihood that Latin America can increase its food production 2½ percent a year? Or British Guiana 10 percent a year? Or India, which for 150 years has had the benefit of British science, 1½ percent a year? I should be profoundly surprised if anyone who has personal acquaintance with these areas would give an affirmative answer. Anything that we do to speed the rate of population increase without assuring a parallel increase in the necessities of life imposes an extremely grave responsibility upon us. This relationship between mounting appetites and the possible means of satisfying them is one that must have fundamental and controlling consideration as we develop a program under point 4.

The second major problem is, in my opinion: Why are the undeveloped lands undeveloped? Africa was occupied by Europeans long before the first settlers lost their preliminary skirmish at Jamestown. Two universities had been established in Latin America years before the Pilgrims landed on Plymouth Rock. Both Africa and Latin America have larger populations—larger labor forces—than the United States. India and China had produced great civilizations while the ancestors of some of us North Americans were still running about clad largely in blue paint. Commercial and industrial task forces from Europe and the United States have invaded these areas, time after time, over the past 150 years. The fact that they remain undeveloped, I can only conclude, is primarily that they are intrinsically poor and require far greater investment of capital, labor, and management to produce a much smaller return than could be had in the United States.

In all of Africa there is nothing comparable to the rich belt of soils of our Midwest. In Latin America a similar area is found only from Southern Brazil to Central Argentina. The magnificent and extensive pure stands of hardwood and white pine that supported not only an export trade but a shipbuilding industry at home in the United States are without counterpart in the Tropics, where several hundred species of trees, enormously complicating the lumberman's problem, may be found in a single square mile. In tropical lowlands a host of diseases is rampant and the climate is largely distasteful to Europeans and North Americans.

To get enough technical men to lead the point 4 program in such areas, where their own health and that of their families may be jeopardized, will require the payment of high salaries and the maintenance of costly developments. The improvement of conditions in undeveloped areas is not a simple matter of producing more food, industrializing, or setting up TVA's. It is an extremely complicated task that must be attacked on a number of fronts at once. For example, China now has only one-tenth of an acre of accessible timber per capita; it is estimated that we use 4 acres of timber per person every year. Trees are needed not only for railroad ties and construction but to protect river banks, stabilize the flow of rain water, make possible the publication of newspapers and books, and so on. How long will it take to grow the trees that China needs, when even saplings must be guarded by watchmen against wood-hungry people?

India has a quarter of an acre of accessible timber per capita—and has had a forest service for more than 50 years. What chance is there that enough timber can be provided, if India's population continues to grow? In Latin America there are 75,000,000 to 100,000,000 people dependent on charcoal and cordwood for cooking, heating, and some industrial purposes. It is quite likely that within 40 years there will be 150,000,000 dependent on the same but shrunken supplies. Yet, in no Latin-American country has forestry even approached sustained-yield management. In Africa, according to a publication of the United Nations Food and Agriculture Organization, forests which are shrinking rapidly at the present time have already been reduced to a third of what they probably were originally.

The diseases of the Tropics that have delayed their development are not entirely the enemies of mankind they are considered to be. Sleeping sickness carried by the tsetse fly has long been a barrier to development in great areas of Africa. The recent announcement of the discovery of a new cure for the disease was received by the British with understandable enthusiasm, because it was believed that this would open thousands of square miles to cattle production. Such a cure may, however, prove to be a double-edged sword. Reports from many parts of Africa show that where grazing is carried on, it is almost universally excessive. The African native has small faith in banks and apparently few desires that require the use of money. By tradition, his wealth is invested in herds, and where we might buy a station wagon or a mink coat, he will settle for a dozen heifers.

In the old days of tribal wars, rustling, abundance of leopards, and so on, this particular form of conspicuous consumption was relatively harmless. Today, if one may trust the reports of ecologists, tens of thousands of square miles have been as badly overgrazed as has our own Navajo Reservation. If the cure really works, it is very probable that unless the natives can be controlled and their customs radically changed, a mere 35 to 50 years will be required to destroy the potentially important grazing lands. Not only will their capacity to support cattle fall but their value will decrease as watershed and water-table protection, and

a higher rate of run-off, down-stream siltation, increased floods, and periods of drought may be expected. It has happened elsewhere, over and over again. Here is a notable example of the two problems combined: a highly vulnerable environment, and millions of people wedded to ways that, as science changes the environment, become suicidal.

In view of the President's hope that, through point 4, the people of the world may participate in growing abundance, many specific proposals for TVA's, irrigation projects, and so on, make small sense. Their promoters, looking merely at isolated trees that may be excellent in themselves, lose sight of the forest—the fact that while, with billions of dollars, they may bring into production a few million acres of agricultural land, virtually uncontrolled and ignored erosion is destroying soil fertility and silting rivers and reservoirs faster than the engineers can possibly develop new resources.

Like most planners, these people build from blueprints down, instead of from the grass roots up. And without exception, as far as I have been able to determine, they have refused to face the problem of how to provide growing abundance when the demand—populations—is outstripping the means of providing food, housing, water, clothing, education, forests, schools, books, and newspapers. We may spend hundreds of millions of dollars moving forward a hundred steps, but what is the point of it if at the same time we slip back two hundred?

British Socialism Plans the Nation Toward Disaster

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Wednesday, August 3 (legislative day of Thursday, June 2), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD an editorial entitled "British Socialism Plans the Nation Toward Disaster," published in the Saturday Evening Post of August 6, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRITISH SOCIALISM PLANS THE NATION TOWARD DISASTER

It is now plain that the Marshall plan, which kept the bear from the door in western Europe, has not solved the economic problems of Europe. The British are still in varying degrees of crisis, while the economies of France, Italy and Germany appear no less in need of the American crutch than they were when the Marshall plan was formulated 2 years ago.

The truth is, of course, that Europe is suffering from changes and dislocations which are far too serious to be brushed aside under a heap of dollars. It is a mistake to pretend that the Marshall plan is more than a palliative adopted to tide Europe, and especially England, over a period of transition. What has been needed in England is a vast amount of private investment in all sorts of industries and enterprises. But England herself, under Socialist leadership, has done everything conceivable to destroy the confidence of American investors in the security of the British economy. British investors, too, have lost confidence, and the recent loss of Britain's gold and dollar reserves reflects a flight of capital out of England which bureaucratic restriction has been unable to prevent. An overambitious Socialist program helps price British exports out of the market.

The ECA, caught between the pressure of domestic producers, for whom subsidized exports become more and more important, and the horror of complete collapse in western Europe, finds its hands tied. Mr. Hoffman and Secretary Snyder undoubtedly wonder how we got into the position in which we are required to back a Socialist welfare state with free-enterprise money and to support a $2.75 pound at $4.04. But, with Stalin looking hopefully over the wall, they are forced to go along, even to the extent of consenting to a sterling-bloc offensive against the country where the dollars come from. Presumably they share the prevailing doubts of the outcome and may even agree with the gloomy prediction by the Wall Street Journal that this crisis will be followed by another and that in turn by another. And each recurring crisis will be made the excuse for more and increasingly drastic restrictions. Nevertheless, the British economy is still such an important chunk of what is left of the free world that we can't sit back and let it slide.

Like the majority of Americans, the Post supported the Marshall plan on the understanding that it was a necessary prop under the European economy while that economy was provided with the long-term solutions mentioned by Sir Stafford Cripps in his July 6 speech. Unfortunately, not enough has been done on either side of the water to bring about the necessary reforms. England, as the former workshop of the world, may be unable to continue to maintain 50,000,000 people on the British Isles, now that the world has become its own workshop. She will need time to readjust her colonial relationships and to reestablish some of her foreign investments. All this will require the sympathetic cooperation of other nations, cooperation which certainly has not been wanting up to now. While that is being accomplished, we can afford to wait and continue Marshall aid. But the Socialist regime in England, which regards investment as immoral and insists on backing the welfare state to the point of national bankruptcy, is a weak instrument for carrying out the necessary adjustments.

British Socialists, naturally enough, seek to put the blame for their plight on the uncontrolled economy of the United States, without asking themselves whether a controlled American economy could have extended to Britain more aid than has so far been supplied. On the other side of the fence, the London Economist reminds the Labor Party that it would have been out of office long ago if American capitalism had not been willing to subsidize it. It is true that falling prices in America have dampened the demand for British exports, since a $15 Bond Street tailored shirt has less appeal when you can get a tolerable United States shirt for $2.50. Our tariff also has some effect, but is hardly the vital factor. The real issue is whether a controlled economy can compete with a relatively free economy. By their fruits ye shall know them.

Things would be a lot easier in 1949 if we had been less squeamish in 1947 about setting down a few reasonable stipulations as the price of our aid. We didn't have to be ruthless, just realistic—like an Englishman lending money to foreigners. We could certainly have insisted upon an end to British dismantling of German industrial plants which once produced the very things the Marshall plan expects America to provide, if we had put an end to our own part in this shabby business. We could also have made it plain that American investment should be on a capitalist-profit basis with reasonable exemption from the interference of the planners. Conceivably also, we might have done more to discourage Britain's imitation of Dr. Schacht's trade and currency operations. Trade is difficult when it is necessary to use three kinds of money.

At any rate, these are a few of the conditions an American Government might attach to loans of the taxpayers' money to foreign countries, if we ourselves were less bogged down by devotion to bureaucratic messing, planning, and most of the National Socialist Katzenjammer that is itching the British.

United States Imports Hold Key to World's Economy

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of July 24, 1949, by Joseph A. Loftus:

UNITED STATES IMPORTS HOLD KEY TO WORLD'S ECONOMY—HOW TO CLOSE GAP BETWEEN WHAT WE SELL AND WHAT WE BUY IS PROBLEM

(By Joseph A. Loftus)

WASHINGTON, July 23.—American foreign trade since the end of the war has been the great factor in the world's economy. American exports have fed the peoples of western Europe and provided the essentials of recovery. American imports, on the other hand, nowhere near balance the exports. It is this gap between our exports and imports which is now troubling the nations which trade with us.

Last year we sold about $12,600,000,000 in goods abroad, and bought a little more than $7,000,000,000. That's a tremendous difference. The $5,600,000,000 gap is called the balance of trade. In the old days we would consider that in our favor.

The object of this Government now is to close that gap. We are making headway under ERP, but in the last quarter of 1948 the gap began widening again. That trend has continued into 1949, resulting both from increased exports and reduced imports. The figures for the first 6 months of this year are: Exports, $6,600,000,000; imports, $3,400,000,000.

The dollar value of merchandise imports in the first half of the year fell almost 10 percent below the rate of the last quarter of 1948.

OUR NEEDS SATISFIED

Until recently it was possible to regard the relatively low quantity of imports as a temporary result of the war-caused reduction in foreign capacity to export. If that were still the case, a fall in business activity at home might not reduce imports correspondingly.

The decline of imports in the first half of this year, however, indicates that the demand of the United States market for foreign goods was being substantially satisfied at the existing prices and exchange rates. Carrying that reasoning a step further, if business at home continues to decline we will cut imports still further, unless foreign prices and exchange rates should become more favorable.

ERP countries supply relatively few of the major items on our import list. At the top of the list are nonferrous ores, metals, and ferro-alloys. They accounted for about 10 percent of the materials we brought in for consumption last year. The most important item in that group is copper, which comes

from Chile, Mexico, and Canada. Shipments showed an increase in the first part of 1949.

THE MAJOR IMPORTS

The tin we import comes from British Malaya, Bolivia, Indonesia, the Belgian Congo, and Siam; lead from Mexico and Canada, although a little came from Australia last year; nickel, zinc, and aluminum from Canada; chrome ore from the Soviet Union, and manganese from the Soviet Union, India, Union of South Africa, the Gold Coast and Brazil.

Going down the list in the order of importance are coffee, from Brazil and Colombia, a small increase; petroleum, chiefly from Venezuela; sugar, Cuba, up a little; crude rubber, British Malaya, Indonesia, Siam, and some from Ceylon; unmanufactured wool, showing a drop, from Australia, Argentina, and Uruguay.

Imports from ERP countries in the last quarter of 1948 totaled $280,000,000, or nearly 15 percent of all our general merchandise imports. In the first quarter of 1949 we bought about $250,000,000 worth of goods from ERP countries and in the second quarter the total probably dropped below $200,000,000.

What is the prospect of importing more goods, particularly from ERP countries? If business at home picks up, so will imports. The demand for metals, paper, and so forth naturally will be greater to meet our own greater production needs. Our greater national income will lift the demand for foreign luxury goods.

ASKS HIGHER IMPORT GOAL

Paul G. Hoffman, Economic Cooperation Administrator, told the Senate Appropriations Committee a month ago that we ought to increase our volume of imports from western Europe by at least $1,500,000,000 a year by 1951 or concede the failure of the ERP. That would mean more than doubling the rate of the last quarter.

Our major imports from ERP countries are textile fibers and manufacturers, supplied by the United Kingdom, France, Belgium, and Italy; foodstuffs, United Kingdom, Italy, and France. These imports are declining, with the possible exception of foodstuffs.

Take the case of the United Kingdom. Her shipments of textile fibers to the United States dropped from $5,800,000 in January to $4,000,000 in May; automobiles, from $2,000,000 to $300,000. Aluminum and manufactures, chemical products and wool manufactures are down, too. Only foodstuffs and whisky are up.

The reasons for promoting imports are both economic and political. We cannot sell goods to foreign countries unless we buy from them. We need certain strategic things from the other countries. They need some things we have, from a strategic point of view.

Aside from the political dangers of letting Europe fall into greater difficulties, the exchange of goods seems to be good business. It is not a case of taking in each other's washing. Everybody is improving his standard of living by the exchange.

When we import certain goods that compete with American products, a domestic industry sometimes complains that it is being hurt. The complaints have come not only from the employers but from labor unions, too, because their members were laid off.

The Government acknowledges that this sometimes happens, but says its duty is to look at the economy as a whole. The money we pay for imported goods is being spent here for goods that go into export. Imports, it is argued, shift employment, but do not cause net unemployment. The objective is to avoid hurting any one industry badly while trying to stimulate the economy as a whole.

BALANCING THE ACCOUNTS

Maintenance of prosperity and full employment at home undoubtedly require that great quantities of American products find their way into export channels. The chief obstacle to this is the inability of people in other countries to pay for such a flow of goods.

In the past, absorption abroad of American goods was balanced largely by United States imports from other countries. While the value of exports of goods for decades has exceeded the value of imports, other important sources of dollars enabled foreign countries to balance their accounts with us.

These included United States loans to and investments in these countries; United States purchases of services such as transportation, banking, and insurance; spending by United States tourists abroad, and income received from foreign investments in this country.

There are only a few methods of maintaining foreign buying capacity at a high level:

1. We can lend (or give) these countries the funds to enable them to purchase American products. That can't be continued long—we could not stand it indefinitely. Too, the countries themselves must decline loans beyond a certain point at which there arises the fear that their economy must become intolerably subject to our own. Even now there is a rising cry of "dollar imperialism" in some areas.

2. Through the travel of our citizens in these foreign countries a large number of dollars can be made available. Travel is being stimulated, but the most favorable prospect for travel expenditures is about 15 percent of the annual goal for United States exports.

3. We can buy goods and services from these countries. That is the broadest and most substantial way of tackling the problem. Practically very nation in the world produces some things we need, want, and can use without detriment to our domestic production. The dollars we pay them for these goods they will use, in some part, at least, to buy our products.

REVIVAL OF WORLD TRADE

The conclusion seems inescapable that now and in the foreseeable future a large export trade will require a large import trade, not merely because we need raw materials, but because this is the only way in which countries abroad can buy our exports. Only in this way can the United States contribute to a revival of world trade with its opportunities for world-wide specialization, high-living standards and perhaps even peace.

No substantial change in our basic tariff structure seems likely in the near future, but through the Reciprocal Trade Act authority this Government, working with other nations, has done much to lower trade barriers throughout the world.

The Reciprocal Trade Agreements Act, now up for renewal, permitted the President to negotiate cuts in our duties as much as 50 percent below those in effect at the beginning of 1945. The Geneva trade agreement of 1947 is a major case in point. Efforts are being made today to broaden that in the conference going on at Annecy, France.

Overtime on Overtime

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 3, 1949

Mr. POULSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of July 21, 1949:

OVERTIME ON OVERTIME

More than a year has passed since the Supreme Court handed down its so-called overtime-on-overtime decision. This case grew out of claims for back pay brought by a number of New York dock workers. The Court held that premium payments for work done on Saturday afternoons, Sundays, and holidays were not overtime rates in the legally accepted sense of the word but payments for working at undesirable hours. As a result, it concluded that these premium rates must be included in computing regular wage rates, which constitute the basis for determining the rate of pay for work in excess of 40 hours per week. The effect of this overtime-on-overtime ruling was to validate claims for back pay that stevedoring companies claimed would ruin them, even though the Portal-to-Portal Pay Act set up certain good-faith defenses against such claims that would have protected the industry to some extent. That act, it will be recalled, was passed to rescue the victims of the Supreme Court's decision in the portal-to-portal cases.

A futile attempt to persuade the Supreme Court to rehear the overtime-on-overtime case was backed by both employers and the AFL, the latter fearing that the decision would result in throwing out highly advantageous wage contracts providing for week-end premium payments. Since then efforts have been concentrated on remedial legislative action, assured by passage of a bill signed yesterday by the President prohibiting payment of overtime-on-overtime to all employees coming under the Fair Labor Standards Act, and retroactively outlawing pending claims for back pay.

It is unfortunate that Congress has had to rely on this kind of declaratory legislation invalidating claims that the highest court of the land has upheld. The difficulty lies partly in the obscurities of the Fair Labor Standards Act and partly in the strained and unrealistic interpretations of its meaning by the Supreme Court. Congress has chosen the lesser of two evils. Enactment of this remedial measure will benefit not only employers but labor, too, since bankrupt industries are in no position to provide jobs for workers.

Sale of Washington Times-Herald

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 3, 1949

Mr. VURSELL. Mr. Speaker, as a member of the congressional delegation from the State of Illinois, I want to commend Col. Robert R. McCormick, publisher of the great Chicago Tribune, for his action in purchasing the Times-Herald, which in the future will largely be managed by his niece, Ruth McCormick Miller, and her husband, Peter Miller, Jr.

The history of the Chicago Tribune in the great Midwest since before the Civil War has been one of devotion to and support of American ideals and principles of representative government that has made this the foremost nation in the world.

Through his direction as president of the Times-Herald organization, the voice of America will speak louder and with greater force and power in support of American policies of government here in

Washington where it is so much needed.

Mr. Speaker, Colonel McCormick's niece, Mrs. Miller, the vice president of the Times-Herald organization, was cradled and educated in an atmosphere of journalism, public service, and national problems. She is the daughter of the late United States Senator Medill McCormick and the late Ruth Hanna McCormick, who served as a Member of the House of Representatives as Congresswoman at Large, and is the granddaughter of the late United States Senator Mark Hanna, of Ohio.

Is Unification a Snare and Delusion?

EXTENSION OF REMARKS
OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. GROSS. Mr. Speaker, on Tuesday of this week the House approved the conference committee report, thus completing congressional action on new military unification legislation.

I voted against this legislation for several reasons, but chiefly because I am convinced it is virtually a moral betrayal of the democratic processes of this Republic to place almost unlimited military power in the hands of one man in peacetime.

We decry military dictatorships in Russia, Spain, and elsewhere; who will say that the lock has not been broken and the door left ajar to a similar government in these United States?

Mr. Speaker, in my brief experience in Congress, I have never listened to more qualified statements in behalf of a measure of such vast importance than those offered Tuesday afternoon in apparent support of this so-called unification bill.

The distinguished chairman of the Armed Services Committee [Mr. VINSON] in setting forth the objectives of this legislation, time after time resorted to the qualification of "we hope" this measure will do thus and so. Seldom did we hear positive statements as to the positive effects that could reasonably be expected.

During the limited debate, it was brought out by a member of the Armed Services Committee [Mr. ENGEL] that Secretary of Defense Johnson was already vested with full authority to eliminate duplication in health matters in the armed services. Despite this authority, and instead of consolidating the offices of Surgeon General of the Army and Navy, the Secretary of Defense has approved an order allowing the Air Corps to establish a Surgeon General—in other words, there are now three surgeon generals instead of two.

Questioned as to why the Secretary of Defense approved a third surgeon general instead of consolidating the two offices already in existence, the chairman of the Armed Services Committee [Mr. VINSON] replied: "I cannot answer that."

Mr. Speaker, in view of the foregoing, it is completely logical to ask why anyone should have reason to believe that under the terms of this new law there will be any less duplication and waste than there has been in the past? Is that another snare and delusion?

Another speaker, the distinguished gentleman from Missouri and ranking minority leader of the Armed Services Committee [Mr. SHORT] said this: "I do not like the vast powers granted to one man."

I quote another excerpt from Mr. SHORT'S speech:

> I still believe that it is not sound legislation, that it is not correct principle of good government, that it is a shocking thing indeed, for the United States Congress to grant additional powers to an office, and—indirectly at least—by that act give a vote of confidence to the incumbent of that office, immediately before conducting an investigation of serious charges against the individual occupying that office.

The gentleman from Missouri was, of course, speaking of the impending B–36 investigation, involving Secretary of Defense Johnson, who, under the terms of this so-called unification measure becomes virtually the supreme military authority with complete control over the spending of $15,000,000,000 a year.

Mr. Speaker, I submit that the Joint Chiefs of Staff, with a minimum of implementing legislation, could end the duplication, waste, and extravagance that is apparent in the Military Establishment of this Nation. The important factor that has been lacking is the will and the courage to do the things that are morally right to be done.

Under the guise of unification and reorganization the public is now being led to believe that the dumping of vast, undreamed power into the hands of one man is going to solve these problems. I predict a sad awakening.

In conclusion, Mr. Speaker, I recall the recent statement of Secretary of Defense Johnson in which he expressed his intention of using his powers to cut out wastage, among other things.

I suggest that he might well make a start by halting the use of military planes for the hauling of oranges from Florida to Washington, and the use of military planes and personnel for purely pleasure purposes, including the hauling of certain people to week-end golfing spots.

The taxpayers of this country are entitled to a look at the airplanes which their money provides, but they do not want their view obstructed by orange crates, golf bags, or pleasure-seeking individuals, whether or not they are adorned with gold braid.

Dismantling of German Industry

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dorothy Thompson from the Washington Evening Star:

ON THE RECORD—CONGRESS URGED TO HOLD UP ECA FUNDS UNTIL REICH DISMANTLING IS REVIEWED

(By Dorothy Thompson)

There is a movement in the Appropriations Committees of Congress to hold up the ECA bill until the administration reviews its policy on the dismantling of German industry.

The administration opposes this, arguing that it interferes with commitments to British and French. In addition, it spread around the gossip that the review of dismantling was planted in the bill by "Nazi cartellists."

Among the "Nazi cartellists" opposed to continued dismantling are: The American Federation of Labor, the Congress of Industrial Organizations, the United Mine Workers, the National Association of Manufacturers, the National Grange, the United States Chamber of Commerce, the Christian Century and the World Council of Churches (Protestant), and the Commonweal (Catholic).

The argument of the appropriations committees is that we are pouring American money into Germany to supply things which Germans can manufacture themselves. The administration may make all the "commitments" it pleases, but it is Congress which decides whether to pay the bills for such commitments.

NOTHING TO DO WITH "CARTELS"

The dismantling issue has nothing to do with "cartels." Dissolving a cartel is not the same as wrecking a plant.

Behind the dismantling of German industry are British industrial interests who fear German competition. They fear it because of the low efficiency of British producers, the readiness of German managers and workers to run appalling risks, and the recognition by German Socialists—in contrast to British—that it is pure illusion that a country in the British or German situation can find salvation through shorter hours and less intensive labor.

These facts and fears are not secret, they are aired repeatedly in the British press. Even British interests that oppose dismantling for political reasons are against any substantial revival of German industry unless under a cartel-like agreement with Britain to control the international market.

BOARD OF TRADE PRESSURE

In the discussion of British policy which led to the formation of policy, it was the ministry of supply and the supply departments of the board of trade which pressured the British Foreign Office, which, at one stage, was reasonable, seeing the political dangers in such a policy of resumed wrecking. There are high British officials—and those who know most about Germany—who have considered resigning unless Foreign Minister Bevin halts this policy. Gen. Lucius Clay has expressed himself forcibly, in private at least, against the nonsense of dismantling German fertilizer industries while thousands of tons of fertilizers are shipped as compensation at American expense.

And when it comes to "commitments," dismantling is a violation of the Potsdam agreement.

The present world situation makes strange bedfellows. Keeping down German industry is one thing on which Mr. Bevin agrees with the Kremlin—though the Kremlin has successfully angled to have Britain and America take the responsibility.

REVENGISTS INCLUDED

Communist fellow travelers in the United States are for continuation of dismantling. There were numbers of them in the original anticartel division of the American military government. These gentry also supported the Morgenthau plan. Their reasons are not

those of British industrial competitors. They merely want the western allies to ruin themselves in Germany, and no policy is better calculated for this end.

Added to these are fanatical revengists who want to go on wrecking Germany even if they wreck the American economy and western policy simultaneously.

There are elections in Germany in August. If my readers had been with me in the Ruhr in June they would have seen what effective campaign material the Communists were making out of the western reopening of dismantling after it had been halted in the Russian zone.

The congressional appropriations committees are, therefore, financially and politically right. They should refuse to vote further foreign relief until dismantling is halted and reviewed in the light of technical and economic information forthcoming since it began again in June. Congress should send a commission to Germany, including important labor leaders such as Walter Reuther and John L. Lewis. Mr. Lewis already has been invited by the German coal miners, as exclusively reported in this column from Dusseldorf some months ago.

And Congress should inquire carefully into the forces and personalities who insist on a program suicidal to us.

Increase in American Legion's Rehabilitation Work

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Wednesday, August 3 (legislative day of Thursday, June 2), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD an article entitled "Legion's Rehabilitation Work Increased Fourfold; Cannot Continue To Operate in 1949 on 1919 Basis," written by Mr. Edward A. Hayes, past national commander, published in the American Legion magazine for August 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LEGION'S REHABILITATION WORK INCREASED FOURFOLD; CANNOT CONTINUE TO OPERATE IN 1949 ON 1919 BASIS

(By Edward A. Hayes, past national commander)

Rehabilitation of our ill and disabled veterans is the unheralded, unsung, little publicized program that is the very heart and soul of the American Legion, which is dedicated to consecrate and sanctify our comradeship by our devotion to mutual helpfulness.

Yet, rehabilitation is the most vital of the many patriotic services rendered by the Legion.

As the late great Abel Davis so aptly said, "They cheer and forget. There are too many kind words on tombstones. We are pledged to a duty that is above every other duty—to see that the men who gave without stint to their country are properly cared for and their families properly protected."

Rehabilitation of our ill and disabled is a bigger, tougher job today than ever before; more than four times greater than in 1940. And in the face of this tremendous increase in labor and responsibility, the American Legion today is operating on a 1919 per capita dues basis, under 1949 conditions.

INCREASED FUNDS NEEDED

That is why it is imperative that the Legion have an increase of 25 cents per capita in its annual national dues; we must maintain the reputation of which we are so proud.

To maintain this reputation it is believed that every cent of this 25-cent increase should be earmarked for rehabilitation service, and rehabilitation only.

If we keep insisting that the public must not let our disabled down, we must do that, then the American Legion itself cannot let them down.

Let's take a look at the rehabilitation picture presented to the American Legion today:

VET POPULATION QUADRUPLED

In 1940 the Nation's veterans population was around 4,000,000. Today it has more than quadrupled, to almost 19,000,0000.

The increase in Veterans' Administration hospital beds, however, has been only 75 percent over the number in 1940 or 105,000 today as against 60,000 then.

In 1940 there was projected a hospital bed for each 40 veterans. As World War II sick and disabled started returning, this figure was raised to 147,000 beds—or, one bed for each 127 veterans. The recent cut-back of 16,000 projected beds leaves provision for only one bed for each 142 veterans. This cut-back was the unkindest cut of all.

In addition, disability claims have taken a tremendous climb since 1940. More than 6,000,000 such claims have been filed to date. In one month—May 1949—13,462 claims and powers of attorney were received, reviewed, and processed by the National Rehabilitation Commission.

The Legion's rehabilitation service is much broader than the mere filing of claims or obtaining hospitalization and other benefits for veterans entitled to them. Its activities include legislation, employment, standards of treatment and care—in fact all matters affecting the welfare of veterans, their widows, orphans, and dependents.

The American Legion must ever be on guard and keep financially able to resist such ruthless attacks against veterans' rights as are being made today.

The American Legion must constantly battle for the rights of our disabled. And, it must continue its accomplishments in other national programs.

We are proud of our Americanism activities in behalf of our youth, such as junior baseball in which more than a half million boys have annually participated since it started in 1928. From junior baseball hundreds of lads have graduated into major leagues. Many have remained to become great stars—such as Lou Boudreau, Bob Feller, Stan Musial, Phil Cavaretta, Bill Salkeld, Johnny Vander Meer, Pee Wee Reese—just to mention a few.

SPARKED HEART PROGRAM

National Commander Perry Brown has pointed out in his article, Are We Big Enough for the Job, in this number of the magazine, the part the Legion played in vitalizing the program of the American Heart Association. A letter to the Legion from the American Council on Rheumatic Fever this summer said: "The foresight of your committee in recommending this contribution ($50,000) will always be remembered, since without it the present development of the American Heart Association would also have been impossible."

We are proud of many other Americanism activities of the Legion—community service, its countersubversive endeavors, its naturalization and citizenship work, its educational program, including sponsorship of National Education Week. The Legion and its auxiliary point with pride to Boys' and Girls' State; the Boys' National Forum and the Girls' Nation, the National Constitution Oratorical Contest in which hundreds of thousands of high-school students compete for national and State scholarships and other awards.

MUST FACE FACTS

But how many of us are aware that the American Legion purchased the first radium used solely in a VA hospital for the treatment of cancer? Everyone knows the great part radium has played in the crusade against cancer.

The vast benefit acquired for the World War II veterans proves the GI bill of rights is another accomplishment of the Legion. But no program is more vital than rehabilitation.

We must face the fact that the present rehabilitation budget of $443,000 will not permit adequate discharge of the National Rehabilitation Commission's responsibilities. The proposed 25 cents per capita increase in annual national dues, however, will enable the Legion to do its job—and do it well.

Objective Teaching

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. LANE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the National Tribune-Stars and Stripes of August 4, 1949:

OBJECTIVE TEACHING

Not long ago in Boston the National Education Association went on record against permitting Communists and their adherents to teach in our American school systems. The question came up, we understand, because of objections to singling out classroom teachers and compelling them to take oaths of loyalty to their country, a controversy that is raging up and down the land and opposed by some as a checkrein against academic freedom. The association took the position that persons who pledge their minds to the international conspiracy of communism, give up their intellectual integrity and their freedom to think and who submit to party-line thought control, have forfeited their right to teach the youth of this Nation.

Immediately thereafter in Washington this stand was challenged by the American Association of University Professors. They are said to have protested that Communists and fellow travelers can entertain their private beliefs without necessarily prejudicing the right to teach. Some admit having embraced Marxist philosophies for a score of years. They maintain in effect that the 23 States, 3 Territories and the District of Columbia, which require loyalty oaths from those who influence the schoolroom, are entirely wrong, that they should be able to obtain and keep their positions of trust even though they have lost their warmth for American ideals and despite the fact that they may seek the company of seducers of right. They contend, in short, that they can teach objectively and fairly the very ideals in which they do not believe.

The whole question seems to boil itself down to whether it is possible for any teacher bound by Soviet discipline to fail to use his or her influence among students for whatever purpose the party may direct, and, if not, whether steps taken to eliminate Red teachings will ultimately demoralize the whole profession. To the veterans of America there can be but one answer, but it appears that some of them are taking a long

time to reach a logical conclusion. We recall incidents some years ago when these things were being debated in national meetings of the major organizations of veterans. The few who came from hotbeds of Communist activity rose to make fiery speeches about the dangers of Commie infiltration, whereas the many from the hinterlands pooh-poohed the whole thing as a tempest in a teapot. We, too, have frequently been accused of being a little too much concerned about the problem and of consequently seeing a Red behind every bush, but positive evidence that has been uncovered and proven should make everybody sit up and take notice. Of course we know that Communists as such are too few now to win a majority in any free election for public office, but we are desirous that they never will become strong enough and that is where we fit in helping to see to it that they never shall. It is why we are interested in this school-teacher proposition.

Nobody who is at all versed in the Communist record can longer pretend that there is any good in communism insofar as it relates to our civilization. It is no longer a secret that the Reds are at war with religion and with every democratic ideal upon which America and its great institutions were founded. The conflict in ideologies is so striking that everybody involved ought to know more about it if he has any desire to continue to have the freedoms he enjoys. Therefore, it is essential that we all learn everything we can about its virtues, if any, and about its evils that are known to be many. Communism should be taught in our schools.

In the abstract, Communists believe that our type of living has run its course and that their philosophy is a historical necessity. They play heavily on man's hopes and fears. Their purpose is to foment discontent, inspire opposition to existing law and order, create strikes and civil war. They would condition the minds of men and then destroy their bodies. All of this is admitted and is on the record for anybody to see. The Reds, moreover, fail to point out that communism is a revolutionary conspiracy employing any kind of strategy, legal and illegal, to destroy government. They do not divulge that their means of operation is to create cells of activity in vital places to the end that a minority will rule the majority. In this operation they employ the use of falsehood, infiltrate the Government, national and local, and the school systems are their best possible means of new education to their standards and, therefore, the best possible source of converts to their cause.

To permit the source of supply to continue unbridled is to admit that academic freedom means violation of freedom of speech and implies countenance of a freedom to lie for selfish ends. It means a willingness on our part to allow a proselyting of fertile minds, encouragement to some to rob that they might help others. Such a philosophy is absolutely unsound. It is devilishly false, and its results could lead only to disaster. If we are to preserve human values, there must be defeated conditions that promote agitation for economic and political change. New devices must be found to teach the truth. The saving of American youth, and even adulthood, are at stake.

It is fundamental reasoning to state that one cannot possess one belief and teach another. Especially is this true of persons who are imbued with a spirit of revolution and dedicated to a change in the existing order. Real knowledge has never promoted turbulence and unbelief, but learning is folly unless it is guided into proper channels. Teaching by the artful cannot lead to proper education. Our school systems must be fumigated, and there must be killed off the vermin that has infested too many of them. Let us teach communism, if we would save the future of the world. Let us teach it objectively—tell our children and our college students what the Reds believe, but tell them also why the Reds believe it. That sort of teaching cannot be done by adherents to Soviet principles. So let us insist upon declarations of loyalty and trust the teaching job alone to those who have proved themselves loyal. And while we are at it, let us get to the root of the trouble and outlaw the Communists.

The Pace-Brannan Bill

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 3, 1949

Mr. HOEVEN. Mr. Speaker, on Monday evening, July 25, my colleague, Congressman WILLIAM S. HILL, of Colorado, with whom I serve on the Committee on Agriculture, discussed H. R. 5345, the Pace-Brannan bill over the Mutual Broadcasting System.

Mr. HILL and I were members of the subcommittee that considered this legislation and I feel that we were in a position to judge rather completely the total concept and the general principles underlying the changes as proposed by the Pace-Brannan legislation. In fact, this Pace-Brannan bill suggests fundamental changes in the legislative approach to agricultural problems.

I particularly call the attention of my colleagues to the revolutionary changes as proposed by the Pace-Brannan legislation. Under this legislation you find a new concept as to what price supports and marketing agreements would accomplish. Congressman HILL discusses three radical and revolutionary proposals in this bill.

The quotations Congressman HILL uses in closing his address are very enlightening. His address follows:

Mr. HILL. I very much appreciate this opportunity to speak over the Mutual Broadcasting System on the farm program.

Last week the House considered the Pace-Brannan bill, a bill reported from the Committee on Agriculture, of which I am a member. This bill would make revolutionary changes in our present agricultural legislation—in fact it provides the beginning of the Brannan farm program—the Brannan farm program in the embryo.

The third line of this bill reads: "The term 'income-support standard.'" For the first time in agricultural legislation this language is used, meaning you would find first what the mean annual farm income was on every farm before you could figure out what the general farm subsidy payments would be. This is the farm subsidy payment approach of the Brannan farm program, and the record is there to speak for itself.

Reading this bill carefully you discover that it lays the basis for total and complete control of agricultural production within the Department of Agriculture at Washington. Under this bill the Secretary of Agriculture becomes monarch of all he surveys; when he sends his swarms of Federal agricultural agents all over the country to check the average allotments on each farm, the cash receipts, compliance with marketing controls, and carefully audits the entire farm operations to arrive at the annual deficit upon which the farm payments will be based; who can question the absolute power given to the Secretary of Agriculture under this type of a farm program? Were you surprised that the National Grange and the Farm Bureau were opposed to this legislation? Of course you were not if you understand the thinking of farmers. They are not in favor, and never were in favor, of a farm program that would place farmers in a strait-jacket or control them from the Nation's Capitol. Subsidies, of course, when necessary to save our economy, but not Federal appropriations as a steady diet.

I was deeply impressed by the remarks of Congressman WADSWORTH, of New York, when he addressed the House. He said: "Why do men cling to that vocation? Why do they work 60 hours a week, or more than that if they happen to be dairy farmers? Because they like to plan their own lives. They like to sit on the porch on a Saturday evening after supper and gaze across their fields, noting the development of their livestock and the growth of their crops and the condition of their pastures. They like to sit there and plan freely not only as to what they will do on next Monday, or next month or in the next 6 months, but what they will do the next year, and the next 2 years, and for 3 years or more. Farming has to be planned. You cannot close down a farm the way you close down a factory. The man who does the planning is a man who must be free, and his most precious possession is his liberty."

With me on this program this evening is Mr. Lee R. Pritchard, master of the Colorado State Grange. We take you now to Denver, Colo., to hear from Mr. Pritchard.

Mr. PRITCHARD. Thank you, Congressman HILL.

The farmers of this great Rocky Mountain Empire and the entire United States is anxiously awaiting the adoption of a long-range agricultural program by our National Congress. The Brannan proposal (S. 1971) has one feature that we like, i. e., that it proposes to preserve the family-type farm. However, the main part of the bill is basically unsound and undemocratic.

It would put drastic controls on agriculture, which is a dangerous trend of the times. All of us are too prone to look to the Great White Father in Washington to do the things for us that we should properly do for ourselves. This leaning applies to communities, counties, and States.

The philosophy of the Brannan program is wrong, in that it would encourage individual and political selfishness at the sacrifice of patriotic statesmanship to class politics. The adoption of such a plan could well lead to an era of regimentation and Federal controls such as we have never seen before and would stifle our free-enterprise system.

Subsidies lower the morale of the recipient and are misleading to the consumer. Letting agricultural commodities seek their price level of the law of supply and demand sounds good to the consumer. What the consumer does not think of, is that they will have to pay additional taxes and prices for other goods and services to make up the difference. Let's not demand more of our Federal Government than Government can afford to give.

Another danger of subsidies to agriculture is, that the farm people might be swayed into voting for those candidates that offered the choicest subsidies without regard to their qualifications. Too often political campaigns are waged on this premise.

We believe in an economy of plenty. Every step of progress civilization has made has been marked by greater consumption of goods and services. We cannot attain high standards of living in a world of shortages. If we are to have enough food, we are sure

to have many surpluses. These surpluses are the best assurance the Nation has against hunger, and a marketing system which penalizes those who produce the abundance the Nation needs, is all wrong. We believe that farmers are entitled to protection for the service they render in constantly producing enough food for the Nation's needs with a bit to spare.

While we believe in protecting the farmers from the impact of surpluses, we do not contend that farmers who persistently produce more than can be used of any commodity should be protected in such practices.

The farmer who persistently produces more than can be used does not contribute to the general welfare as much as he might under a sound production program, and is not entitled to the protection that should be accorded farmers who endeavor to produce intelligently and adjust their production to the Nation's needs as far as practicable. Farmers who do so produce, are entitled to compensation in proportion to the service they render. We believe that farmers are entitled to receive this compensation through the regular channels of trade, and that marketing practices which do not return fair compensation for the service rendered are unsound and should be corrected. We do not believe the public should expect to get its food at less than cost, or at less than a reasonable price. We think the farmers' services deserve a fair price at the market place. We resent any program which would set him apart as one whose services need not be compensated at their full worth, and we don't want to go to the Treasury for part of our compensation.

Subsidies are degrading. Once started they are most difficult to end. They are attended by a serious element of risk in the possible failure to secure sufficient appropriations. This is recognized in the bill before us which provides protection for certain crops, and for a second category of crops if, and only if, the appropriations provided by Congress are adequate.

I now return you to Washington and Congressman HILL.

Mr. HILL. Thank you, Mr. Pritchard.

And now for a look at the new and revolutionary ideas worked into the Pace-Brannan bill. However, before discussing the provisions, I might add that the House defeated this measure by a large majority last Thursday. Our Committee on Agriculture voted this bill out of committee by a vote of 9 to 17, but when you check the roll call of the House on the Gore amendment you discover that 5 additional Members were added to the 9 of us that opposed the bill. So, really a majority of the Committee on Agriculture, or 14, actually supported the Gore amendment.

Let me assure all my farmer friends listening to this program that the entire Committee on Agriculture is mindful in its wishes and desires to serve the interests of the agricultural producers of this Nation. Make no mistake about this. Agricultural programs should not become a partisan political issue—it is too important to our economic well-being to be tossed about by any partisan—biased or political demagog. God forbid it should ever become popular to play partisan politics with agricultural issues.

Now let us look at the principal changes as proposed by the Pace-Brannan bill:

First. The bill proposes to abandon the present parity-price formula and substitute "an annual minimum farm support standard." This standard would be based on the purchasing power of the farmer's dollar over 10 of the immediate past 12 years, each succeeding year would have a new and a changed parity, practically on every crop. Who could figure out what crop to plan and what prospects he might have as to making a profit on his farm operations? Do you see where this is leading? Our present farm-parity formula may be somewhat lacking in its up-to-date application, but certainly it has much to recommend it over any such parity formula as suggested by the Brannan-Pace proposal. We had better take a good look at this new parity formula. And remember that producers would have to comply with soil-conservation practices, acreage allotments, when required by the Secretary, follow marketing quotas; all these, and many more regulations that might and could be required by the Secretary before a farmer could participate in a benefit-payment program. All revolutionary changes in the farm-program operation.

The second radical change the Pace-Brannan bill proposed is that the Secretary must take into consideration six factors when making price supports available to what are usually termed the Steagall commodities—farm commodities upon which the Government had requested increased production and acreage during the war and had agreed to protect the producers on price declines for a period of 2 years after the war.

1. The supply of the commodity in relation to the demand therefor;

2. The price levels at which other commodities are being supported, including the feeding values of other grains in relation to corn;

3. The perishability of the commodity;

4. The ability to dispose of stocks acquired through a price support operation;

5. The need for offsetting temporary losses of export markets; and

6. The ability and willingness of producers to keep marketings and supplies in line with demand.

Here you have expressed in six factors, spelled out in law, providing the Secretary with unlimited authority to control to the minutest detail whether he will provide price supports to a producer. How he may provide for them, and last but not least take into consideration "the ability and the willingness of the producer." Such language has no place in law, yet the proponents of this measure expected us to accept such language.

The third unusual provision in the Pace-Brannan bill proposed to authorize a trial run on an experimental basis of the production-payment plan on three commodities. Our subcommittee was unable to obtain any accurate estimate of the annual cost of any of these programs. Some estimates were one-half billion dollars, others $10,000,000,000. Neither the Secretary nor the Bureau of the Budget nor members of the committee supporting this bill could give us any estimate as to the cost of this experimental program.

I opposed the experimental program, feeling we have had some 20 years of experimental work on price-fixing of agricultural products and certainly by now we should have come to some basic conclusions as to certain things we should and should not do. When we had no possibility of learning the cost and with the present condition of the Federal Treasury, I felt I could not go along with any such experimental authorization.

There are many other questionable phrases of doubtful meaning and implications in this bill—but time forbids their discussion. Undoubtedly the broad application of the language used in writing this Pace-Brannan bill created doubts in the minds of many Congressmen, therefore, its overwhelming defeat.

I quote Congressman MURRAY of Wisconsin:

"In 1939, the seventh year of the more-abundant life, what did you have? That was the first year I was a Member of the House of Representatives. In August 1939 we had 5-cent-plus hogs and 8-cent-plus cotton and you had your 54-cent wheat, and you had to pay 27 cents per bushel export bounty in order to get rid of the wheat."

Congressman MONRONEY, of Oklahoma, said:

"I am afraid of the Brannan plan. When we accept the Brannan program we accept the principle of food subsidies, of high producers' prices, low consumers' prices, and the Government making up the difference out of money from the Federal Treasury. If we can accomplish this trick of high producers' prices and low consumers' prices without the out-pouring of billions of dollars from the United States Treasury, then we have discovered something as great as the discovery of perpetual motion, and I do not believe we have found it yet.

"This program, the more I study it and look at it and see it, makes me think of the OPA, production payments, subsidies, low consumers' prices, high producers' prices, billions from the Treasury. It seems to me we are inadvertently drifting back to the old days of the OPA again.

"Do you remember the millions of pages of regulations that any such program entails? You talk about bureaucracy. This program cannot be self-enforced and self-maintained."

I will close my remarks by quoting farm leaders of unimpeachable character, unlimited experience in the field of agricultural legislation, leaders of farm organizations who feel their responsibility and represent the thinking of the farm people. First Mr. Allan Kline, president of the American Farm Bureau:

"The proposal would place a ceiling on opportunity in agriculture. This, in turn, would result in penalizing efficiency. Food prices eventually would reflect this inefficiency. We view any limitation as dangerous precedent, an opening wedge which eventually would result in Government supervised and stabilized agricultural poverty."

Mr. Albert Goss, master of the National Grange, said:

"They (subsidies) tend to make beggars of us. * * * Subsidies would throw agriculture into politics. * * * The annual volume would run into billions, and there would be the constant necessity to besiege Congress, to make sure more funds were available for payment. * * * The availability of funds, and their extent, would inevitably become campaign issues. * * * Many would doubtless vote for the candidates promising the juciest subsidies. * * * Reckless taxation is one of the greatest threats to democracy."

In the face of the evidence placed before our Committee on Agriculture, and the House of Representatives, I could not support this program. Thank you.

Letter of Hon. Hamilton Fish

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JULY 15, 1949.

Hon. HARRY TRUMAN,

White House, Washington, D. C.

DEAR MR. PRESIDENT: On January 6, 1949, you wrote to me that you had read my "letter of December 25 with a lot of interest and sometime or other I shall explain just exactly the situation to which you refer."

That was 6 months ago. Since then the first trial of Alger Hiss has been concluded, and by a vote of 8 to 4, according to the press, the jurors believed him guilty of perjury in relation to certain documents stolen from the State Department and given to Communist spies.

Mr. President, do you still consider the Hiss case a "red herring"?

Is the Judy Coplon case also a "red herring"?

And what about Henry Julian Wadleigh, of the State Department, who declared in open court that he had stolen secret State Department documents for the Communists? Is he to get off without trial of any kind?

Who appointed Alger Hiss to the State Department?

Who appointed him as adviser to F. D. R. at the Yalta Conference?

Who appointed him as executive secretary of the Dumbarton Oaks Conference in 1944?

Who appointed him as Secretary General of the San Francisco Conference for the Organization of the United Nations in 1945?

These questions, Mr. President, are still unanswered. Who is the State Department trying to cover up?

Mr. President, the American people are entitled to know how Alger Hiss and numerous Communist sympathizers, fellow travelers, and Red stooges infiltrated into important key positions in various departments of our Government.

Treason is not a partisan issue. There can be no compromise or appeasement with treason against the United States by officials sworn to uphold and defend the Constitution and our country against its enemies within and without.

This applies to the legislative, executive, and judicial departments.

Mr. President, you had a fine combat record in World War I, and even your Republican opponents know of your loyalty and Americanism.

Is it not time to withdraw the "red herring" charge, and to cooperate with the Un-American Activities Committee in helping drive every last Communist and fellow traveler out of the State Department and other positions within the Federal Government?

With kind regards,

Respectfully yours,

HAMILTON FISH,

Chairman of the House Committee To Investigate Communist Propaganda and Activities in 1930–31.

Statement on the Effect of a Budgetary Limitation on the Program in Biology and Medicine

EXTENSION OF REMARKS

OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

A STATEMENT ON THE EFFECT OF A BUDGETARY LIMITATION ON THE PROGRAM IN BIOLOGY AND MEDICINE

Any substantial curtailment in the funds available for the Atomic Energy Commission's biological and medical program will have a serious effect on the national welfare.

The most serious impact of a curtailment will be on the program which safeguards the health of the individuals who work in the atomic energy project. This includes all individuals—those who process uranium ore, those who process plutonium, those who work with nuclear reactors and those who assemble atomic bombs. The health and safety record of the atomic energy project has been and must continue to be outstanding so that popular misconceptions about the insidious effects of radiation are not supported by the presence of hazards to health in the atomic energy program itself. While this requires careful day-to-day supervision of conditions affecting health, it is of equal, if not greater, importance to conduct continuous research on the many critical problems relating to health. For example, on the basis of previous knowledge the wartime human tolerance for radiation was established as 0.1 unit per day. This allowed a safety factor of 10; in other words, it was evident that 1 unit would not cause damage. However, research conducted under the program of the Division of Biology and Medicine has revealed a decrease in fertility and the production of tumors in animals exposed daily at the 1 unit level and indicates that the present health safety factor could be increased by another factor of 10.

Another example of the health problems with which the Atomic Energy Commission is concerned grows out of the use and indispensability of the metal beryllium in the present operations of the atomic energy project. Within the past few years it has become evident that beryllium is damaging to the lungs even in very small concentrations—so much so, for example, that the dust discharged from the stacks of plants processing beryllium may cause serious lung disease in individuals living in the environment. The Commission immediately initiated a broad research program into the hazards created by the use of beryllium. This research has shown that beryllium affects other parts of the body other than the lungs, that fluorine and beryllium in combination are extremely poisonous, but that it is possible with modern ventilating appliances to reduce the concentration of the material well below the dangerous level. As a direct result of this research, a model beryllium plant is being constructed which should be free of health problems. A reduction in the funds allocated for this program will result in a lowering of the health standards in the project.

A great deal of the research which is being carried out under the program has important implications for the national defense and security, particularly, for the protection and treatment of the civilian population of this country against the effects of atomic warfare. Results of this research would be of fundamental importance to civil defense planning of the National Security Resources Board. In several instances, projects which were initiated in the cancer research field are producing results which are of the greatest importance in civil defense. For example, during the course of investigating the use of radioactive iodine in treating cancerous goiters, it was learned that individuals receiving radioactive materials secrete excessive amounts of a pigment which imparts a reddish fluorescence to the urine. The procedures for detecting this fluorescence are simple and are being studied intensively as a means by which individuals exposed to radiation, such as would occur in an atomic attack, might be detected and treated before they became seriously ill. It has also been demonstrated by research that the individuals exposed to radiation will excrete excessive amounts of certain hormones in the urine. Again, physicians using radioactive phosphorus in studies on the utilization of fats in the body have learned that this material may produce subtle changes in liver function. These changes are being investigated to develop simple tests for liver function which will make possible the early diagnosis of overexposure to atomic radiation. Intensive studies are in progress on the treatment of the changes which occur as a result of exposure to atomic radiation. These are, in many instances, long-term experiments which must extend for a period of years before reliable results appear. However, there are already indications that progress is being made. The mortality rate from atomic radiation is significantly lowered by the administration of a female sex hormone or by an acid substance. The often fatal hemorrhages may be prevented by the administration of the drug protamine. The maintenance of an adequate supply of salt and water is essential. In Japan, the Atomic Casualty Commission is studying the long-term effects of the bombings at Hiroshima and Nagasaki with funds supplied by the Atomic Energy Commission. For this work to be of value it must carry on for a time sufficient to determine if there are to be any deleterious effects in the offspring of those who were exposed to atomic radiation. It has been found that many of the children show lines of arrest of bone growth, that the disfiguring scars from the heat burns improve with time, and that the sterility which resulted from heavy doses of atomic radiation may recede with time. Many other research and development projects carried on by this division are important for the defense of civilian populations against atomic warfare. Examples include studies of the burns caused by an atomic explosion, the study of methods of decontaminating materials exposed to atomic radiation, the safe disposal of radioactive wastes and the development of instruments for the detection of radiation. If funds are reduced many of these studies will be curtailed.

Another major program for which the Atomic Energy Commission is responsible is the program for cancer research. Atomic energy bears a unique relationship to cancer—it may cause it, it may detect it, it may cure it. The cancer program of the Commission includes the free distribution of radioactive materials for cancer research, support of cancer research projects and the establishment of clinical research facilities at several Atomic Energy Commission national laboratories. To carry out this program a heavy investment in men and materials has been required. The final results in a cancer research project require several years. But already the use of radioactive materials provided by the Commission has brought about some promising developments. It has been demonstrated that certain chemical compounds introduced into the body will concentrate in some forms of cancer. By attaching a radioactive element to such compounds a new means of diagnosis, and perhaps treatment, may be developed. Brain cancer has always carried an extremely high mortality, for the methods of diagnosis are frequently inadequate so that patients are often operated on too late. Brain tumors will pick up radioactive phosphorus in detectable amounts and brain surgeons have been able to locate a very high percentage of brain tumors with this procedure. In the course of studies on the effects of radiation on humans, it has recently been learned that in patients with cancer there is a change in the content of certain enzymes in the body if the tumor were growing, and quite a different type of change if the tumor were receding. This should assist in judging the benefits of treatment and the necessity for further treatment.

Any considerable reduction in funds would also curtail the research program in agriculture. The production of new plant forms by exposure of plants to radiation has been already proved of great value to scientists. During the war it was found that the existing molds did not produce large yields of penicillin. The molds were exposed to X-ray—mutational changes were induced and new molds developed which gave a four times greater production of penicillin. The production of new plant forms by radiation holds similar promise for the farmer. For example, scientists have induced mutations in mushrooms which produced plants that bear a much larger number of mushrooms. The promise in this work is immeasurable.

In addition, it is important to know the effects of radioactive materials on our crops in the event that an enemy nation would use these agents as a means of warfare.

The atomic energy program of this country cannot move forward in any of the areas cited nor can proper measures for civilian defense against atomic warfare be developed without an adequate number of scientists who are trained in this field. The research projects which are being supported in the universities, medical schools, and colleges of this country afford scientists an opportunity to become familiar with its techniques and problems.

It should be recognized that no scientific establishment, any more than an industrial concern, can operate successfully on allotments of funds which change substantially from year to year. It requires considerable time to recruit scientists for a program. This is especially true in a field as new as atomic energy whose possibilities scientists themselves must frequently be told about. The curtailment of funds for the Commission's biology and medicine programs means releasing highly competent scientists from the laboratories supported directly or indirectly by the Commission. Such men will certainly not be disposed to return to work which does not offer an opportunity to complete long-term research.

Allies Can't Be Bought

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include an article which appeared in the Christian Century of July 27 relating to the arms program, calling attention to the fact that "the tie that unites free men has to be something stronger than gratitude for guns":

Four assumptions underlie the administration's proposed gift of arms to European nations. One is that a grant of weapons necessarily creates gratitude to the giver, and that this gratitude will take the form of a resolute defense of the West, including ourselves. A second is that such donations will strengthen, extend and preserve democracy. A third is that gratuities of this kind will cause Russia to accept the predominance of western power and govern herself accordingly. A fourth is that return now to an arms economy will solve the economic problem which is causing unemployment here and something like panic in Britain.

Each of these assumptions is highly dubious, to say the least. A foreign policy built upon these four expectations is a compound of uncertainties. Our recent experience in China strongly suggests that it may collapse in the first international storm. It is not too late for Congress and the people of the United States critically to appraise these official postulations.

Nobody doubts that Europe rests under a cloud of insecurity, and that this is the biggest single factor retarding recovery. Russia and her satellites have 6,000,000 men under arms, according to our State Department, and this contributes to the uncertainty. None of the countries of western Europe desires to be overrun by the hordes from the east. With greater or less effectiveness they may be counted on to resist if attacked from outside. But the attack may not come from outside, and, Atlantic Pact or no Atlantic Pact, the dominant consideration in their resistance will be to preserve their own existence, not to defend western Europe or the United States.

These nations are grateful for Marshall plan aid, and they have demonstrated that fact by placing communism on the defensive everywhere west of the iron curtain. But that kind of assistance provides jobs for men in factories, puts bread on their tables, and strengthens their capacity to govern themselves. Giving weapons to their governments takes men from productive labor and mobilizes them in the nonproductive ranks of conscripted armies. It weakens recovery and adds to the regimentation of their political and economic life. It reverses the good effects of economic aid.

If one is to judge from continued administration pressure for its proposed gift of military aid amounting to $1,450,000,000, nobody in Washington has read the accounts of the parade which the victorious Communist armies staged in the greatest city in Asia on the twelfth anniversary of the Marco Polo Bridge fight which began the Sino-Japanese War in 1937. For miles and miles through the streets of Shanghai the Communists displayed thousands of trucks, cannon, and other accoutrements of war—made not in the U. S. S. R. but in the U. S. A. These Communists were Chinese. They came into possession of the supplies without which they could not have conquered China so quickly through civil war. If the arms-aid bill passes, something similar could happen in Europe.

Will arms aid strengthen democracy in Europe? No. Rather it will build up the military caste in every recipient nation. It will buttress the influence of this element in the political and economic life of their countries. The administration in Washington proposes to spend the sum it seeks (1) to increase military production programs of the European nations; (2) to supply arms directly from this country; and (3) to give American technical and training assistance. Thus this money would swell the armament industries. Since the military have always been closely allied with the "merchants of death," arms aid would strengthen their power. It would also greatly expand the armed forces of Europe, which would further intrench the military. It seems not to be generally understood that one-third of the entire amount proposed is to go for arms already in stock here. These would be sold to European nations at around 10 cents on the dollar. So the prospective gift would have a money value in arms alone, if honestly appraised, roughly equivalent to the entire amount made available this year in Marshall-plan aid. Such quantities of arms will inflate armies and increase the power of their leaders.

It might be observed in passing that this effect of the arms program will not be confined to the receiving nations. It will, as we stated in an editorial on February 23, go far to deliver our own foreign policy into the hands of the generals. While this appropriation is being discussed in terms of its cost for the first year, the State Department says this would be only a beginning. So a vitally important question is being decided: Shall the generals run our foreign policy?

What will Russia be doing while all this is going on? She will not accept western military predominance without a struggle. Instead she may be expected to increase her own armaments and to equip her allies as rapidly as we equip our own. Thus, the arms race, which is already under way in atomic weapons, will be expanded and speeded up. Concerning this rivalry, Quincy Wright, the conservative professor of international law at the University of Chicago, says: "This is the aspect [of military aid] which gives me the greatest concern. I have studied the history of wars and their formation, and I must say that an arms race is a dangerous thing. There was an arms race started when the Triple Entente and the Triple Alliance faced each other in 1907 and 1908 before World War I, and that arms race led to World War I. Arms races are dangerous things, and if the Soviets respond to military aid by increasing their armaments even more, as they well may, we may have an arms race. That is, I suppose a risk we must calculate, but I must confess that I look to it, especially in a bipolar world, with a good deal of concern." Professor Wright might have added that, as each side moves to meet the threats raised by the other, neither gains the security or advantage it seeks, but both are driven to ever greater desperation by the burdens they assume. Sooner or later these burdens become unbearable, and at the present rate of expenditure for arms it is likely to be sooner. It is inconceivable that this country can carry on at the present level for more than a few years, to say nothing of raising the level.

An important but usually hidden reason for arms aid to Europe is that, given the general insecurity, it is justified on the ground that production of military implements is needed to give our lagging economy a shot in the arm. So the June 17 New York Times noted that "the orders for equipment that would follow passage of the enabling [arms aid] legislation would encourage United States producers to retool their plants for the production of military equipment. It is hoped that this would lead to providing the armed services with mass-production advantages for their own procurement. It is now felt that the stimulus of the proposed industrial activity might be beneficial to the national economy as a whole."

But where does this lead? No one believes that war constitutes an immediate threat. The diversion of resources into an armament program therefore postpones recovery and delays our facing of the economic problems whose solution is a necessary antidote to communism. From an economic standpoint, it gears a substantial portion of the economy to the production of waste. It therefore keeps from the people the essentials of wholesome living which a free society ought to make available to them. It reduces our capacity to provide economic assistance to other democratic nations, and to that degree fails to take advantage of a method of counteracting the appeal of communism whose effectiveness has been abundantly proved. It moves our own country further along the dangerous road of regimentation by diverting to waste and destruction energies that should contribute to human welfare, by increasing debt and taxation and by postponing the solution of problems until we may discover that they have become insoluble. When that happens, nations generally take the final plunge into insanity by going to war, which settles nothing.

These four assumptions underlying the proposed arms aid to Europe are therefore all open to the gravest question. They deserve to be thoroughly debated in Congress and in the press before that body accepts the administration's leadership. We believe that public discussion will demonstrate that they are all fallacious, and that the proposal should be defeated.

America needs friends. The American people have no intention of returning to "splendid isolation"—a term which was coined a half-century ago to describe Great Britain, but which the postwar disillusionment of the twenties domesticated in this country. That attempt to insulate ourselves brought its own disillusionment. We want no more of that. Now we know we share a common destiny with all freemen. But allies can't be bought. The tie that unites freemen has to be something stronger than gratitude for guns.

Division of Waters of Colorado River

EXTENSION OF REMARKS
OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. POULSON. Mr. Speaker, it is my purpose in speaking here today to tell my colleagues how officials of a Government department are illegally participating in an inter-State controversy, and are seeking personal power by publicly discrediting one State to the advantage of another State.

There exists between the States of California and Arizona a vital conflict over division of the waters of the lower Colorado River. Arizona has before the Congress legislation to build a billion and a half dollar reclamation project. The water necessary for this project is owned by the State of California under Federal contracts of long standing. Arizona proposes to break these contracts, and take the water for the benefit of a few private landholders.

The seriousness of this controversy cannot be overstated. It means economic life or death to southern California.

The officials of the Interior Department, from Secretary Krug down, have consistently discredited California in favor of the immense Arizona project. They have used their well-oiled publicity machinery to inject into the controversy totally irrelevant issues for the purpose of concealing from the Congress and the public real facts and real issues.

I shall reveal the deceitful actions of these officials, but first let me place in the RECORD a few actual facts about the controversy.

The State of California is not seeking more water from the Colorado River. California wants only to retain the water awarded to it by Federal contracts.

For more than two generations California has planned its water projects with a thoughtful eye on the future. We have built—not for the present—but always for the future. Because we had contracts with the Federal Government, we—the people of California—invested more than half a billion dollars in projects which would bring water to us for years to come.

Now the wisdom of our foresight is apparent. The share of Colorado River water awarded to us is our guaranty of an adequate supply for many years.

Arizona wants a large part of this water, and should Arizona get it, the economy of southern California would face ruin. And I might say here that despite the efforts of the Interior Department, the State of Arizona, or any other force, this water will be taken from California only over our dead bodies.

Now, without an assured water supply for it, Arizona is asking the Nation's taxpayers to put up a billion and a half dollars of public money for a project. Arizona would not pay one cent for this gigantic work, the largest and most costly of its kind ever proposed. The only people who would benefit from the project would be private landowners of Arizona, and they would contribute nothing to its cost.

Those are indisputable facts, Mr. Speaker, and they may be substantiated in the voluminous records of hearings which have been held during this session of the Congress.

What has the Interior Department been doing in this controversy? How have its officials engaged actively in this conflict?

I shall tell you.

The extensive publicity machine of the Bureau of Reclamation, using public money contrary to the law, has never stopped working to the favor of the proposed Arizona project.

The Interior Department's program supporting the project was well planned in advance.

In the beginning of Arizona's campaign for the project, Secretary Krug and Reclamation Commissioner Straus permitted the use of their photographs in Arizona propaganda. They wrote statements to be used with their photographs in booklets issued by Arizona promoters. Secretary Krug and Commissioner Straus, and their regional representatives, issued statements to the press favoring Arizona.

While the controversy was being debated in the last Congress the Interior Department officials not only continued their publicity campaign for Arizona but they testified for Arizona before congressional committees which were attempting to find out the facts of the matter. In this testimony they sought to conceal the facts from the Congress; they injected extraneous and irrelevant issues as smoke screens. They have continued this atrocious program through hearings in the present Congress.

The deceitful and incomplete assertions by these officials have been thoroughly discredited by the most qualified and honest witnesses, and anyone who desires may learn this by reading the record of hearings before the House Public Lands Committee.

Meanwhile, up and down the land have gone Interior Department and Reclamation Bureau representatives spreading vicious propaganda, dreaming up fantastic schemes, and giving breath to issues which have no bearing whatever on the controversy.

These activities are shrewdly designed to lull the people and the Congress into false beliefs.

One of the favorite themes of the Department of the Interior propagandists is the statement that southern California is so desperate for more water that a tunnel will have to be dug to the Pacific Northwest to tap the rivers of Oregon and Washington.

This is an outright untruth, and the men who have spoken it know it is an untruth.

But to the citizen or Congressman who is unfamiliar with the facts, this scheme might appear at first thought to be a solution to the controversy.

I wish to say right here, and without qualification, that no agency of California has ever suggested such a scheme; that southern California does not need water from the Northwest; that all southern California wants is to retain the water from the Colorado River already awarded to her; and that California does not want more water from the Colorado than already is awarded her under Federal contracts.

That is not the first time this statement has been made by representatives of California. It has been made innumerable times, but the Department of the Interior propagandists keep right on spreading their false assertions and proposing their fantastic schemes.

Let us look briefly at the record.

In January of this year, Under Secretary of the Interior Oscar Chapman stated that California was in such bad shape for water that the State was thinking of pumping and tunneling to get water from its northern rivers to the southern part of the State.

My colleague, Representative CECIL R. KING, promptly challenged Mr. Chapman's statements.

Said Mr. KING:

> Where Mr. Chapman got his information, I do not know. He did not get it from any responsible State official of California. In presuming to speak for California, Mr. Chapman did not take advantage of the facts available to him, and he did not present the facts to the Senate Committee on Interior and Insular Affairs, before which he testified.

Continuing, Mr. KING stated:

> Southern California does not need to go anywhere but the Colorado River for enough water to meet demands for years to come. And southern California already has that water through contracts with the Government.
>
> If southern California can stop this raid by Arizona on its water resources, there will be enough water for southern California for years to come.

I concur unequivocally in the words of Mr. KING.

The fantastic and inconceivably costly scheme to bring water from the Columbia River Basin into southern California has been advanced by Mr. Chapman, his boss, Mr. Krug, Commissioner Straus, Assistant Secretary of the Interior Warne, and several of their satellites. The tenor of their various statements is identical, and reveals a preconceived pattern.

Mr. Warne has been one of the busiest officials in spreading this smoke-screen to deceive Californians into believing they may safely give away some of their precious water to Arizona because there are numerous other solutions to the California problem.

In the interest of saving time, let us take a look at one of Mr. Warne's speeches, for it is typical of those made by the others on the subject.

On March 30 of this year Mr. Warne spoke at Riverside, Calif., and this is what he said:

> I personally visualize a climbing of the ladder to the north. One stream after another might be reached to take surplus supply of water which would suffice for years. At last the Columbia might be reached. That great river could then begin to make the contribution that it can make to the whole arid region.

In face of the fact that southern California does not need Columbia River water, and that California has never suggested such an idea, only one conclusion can be reached: The Interior Department has brought up this scheme only for the purpose of promoting the proposed Arizona project.

And why does the Interior Department want the Arizona project? The reason is clear, Mr. Speaker. They want it because the Arizona project would give the Department life and death control over the economy of Arizona. The destiny of the people in Arizona would be in the hands of a few bureaucrats in Washington.

Quite justifiably my colleague the gentleman from Oregon, LOWELL STOCKMAN, was angered by the proposals of Mr. Warne. The gentleman from Oregon [Mr. STOCKMAN] took exception to them in pointed language. Now, on behalf of the State of California, I wish to assure the gentleman from Oregon [Mr. STOCKMAN] that:

First. The proposal to take Columbia River water for California has no support from any responsible California authority.

Second. The scheme is purely a Warne-Reclamation Bureau grab for more power and for the purpose of projecting the Bureau into the affairs of another State.

Third. If California can protect its legal share of Colorado River water, any scheme for going elsewhere for water need never be considered.

Here let me read an editorial which illustrates the attitude of California toward Secretary Krug and his cohorts:

[From the Long Beach Press-Telegram of July 26, 1949]

KRUG SPEAKS UP AGAIN

Secretary Krug, of the Interior Department, has once more done harm to California's position in the dispute with Arizona over diversion of Colorado River water.

The Secretary put his oar on the Arizona side by bringing up at this time the subject of transferring Columbia River water to California. He made it sound all right by saying only excess water will be brought here. But he added the unnecessary prediction that eventually water from the Pacific Northwest would be used as far south as San Diego and as far east as Denver.

These comments, made in a letter to Representative STOCKMAN, of Oregon, came at a time when (a) the Interior Department still contends it is neutral in the California-Arizona controversy and (b) that controversy is likely to flare up again in either House. Krug said he was interested in only a scientific utilization of all water available to the west coast. Maybe so, but he could hardly have made his remarks at a time better calculated to swing the votes of all the Northwest States, whose Members of Congress naturally want to protect their own water supply, against California.

Actually the Colorado River Association of California, along with other spokesmen for this State, declared months ago that California has no plan or intent to seek water from the Columbia. The Interior Department evidently has taken it upon itself to refute such assertions, though without the consent of California.

The unspoken point of Krug, and of his aides on several occasions, seems to be that California has no need for the Colorado River water sought by Arizona in its Central Valley project; that if it does need more, it can get it from other sources; and that therefore there is no reason why the claims of the respective States should be adjudicated by the Supreme Court. This attitude, besides being prejudicial, is an infringement of judicial functions by an executive agency. Californians who are ready to stand up for their own rights will resent it.

Now, Mr. Speaker, another favorite smoke screen which the Department of the Interior has sought to spread over the facts of the California-Arizona controversy is the scheme to make fresh water out of sea water.

The conversion of sea water has been accomplished. It has been done on battleships at enormous cost. It can be done in small quantities for some special uses, but only at prohibitive expense.

But the Bureau of Reclamation has spread the false report that it "may be" the solution to California's water problems. In this underhanded task the Bureau has been aided and abetted by Arizona promoters.

The facts are these:

It requires enormous amounts of valuable fuel to convert a small amount of sea water.

There is not enough fuel of all kinds in all the world to convert enough sea water to meet the demands of southern California.

I do not say the time will never come when science will devise the means of converting sea water at a price low enough to permit its use domestically, industrially, or for irrigation. But I have the word of the country's outstanding engineers that such a time is a long way before us.

Whatever the case, the Bureau is using this idea to deceive the people and the Congress into believing that the salvation of southern California is at hand through the use of converted sea water, and that Arizona safely can be given a large part of California's share of the Colorado River.

Mr. Speaker, if this were true, then also is the salvation of Arizona at hand, for the sea is not far from Arizona—the Colorado River empties into the sea not far below the Arizona border. If this were true, why give Arizona a billion and a half dollars from the Public Treasury as an outright gift, for that is what the proposed Arizona project would be.

To illustrate how utterly absurd the Bureau of Reclamation officials have been, let me mention the scheme to bring water from the Northwest to southern California in tankers.

No, gentlemen, I am not joking. That scheme was advanced by Mr. Warne in one of his propaganda addresses to a western audience. The tankers would be specially built, run down the coast, and discharge their water to the thirsty people. Nothing in Alice in Wonderland beats this, but the Bureau officials have no conscience when it comes to deluding the good people of the West, and I might say the rest of the Nation as well.

In support of this serious accusation of mine, let me cite an example.

President Truman has said that the proposed central Arizona project is not in accord with his program. This statement of the President was deliberately omitted from the report on the project which the Interior Department sent to Congress.

Here are the facts in this case:

On February 4, 1949, Budget Director Frank Pace, Jr., wrote the Secretary of the Interior as follows:

He (the President) has instructed me to advise you that authorization of the improvement is not in accord with his program at this time and that he again recommends that measures be taken to bring about prompt settlement of the water-rights controversy.

On March 18, 1949, in the Interior Department report to Congress on the project, which is signed by Acting Secretary Oscar L. Chapman, the President's statement is emasculated as follows:

By letter dated February 4, the Director of the Bureau of the Budget advised me that he had been instructed by the President "to advise you * * * that he again recommends that measures be taken to bring about prompt settlement of the water-rights controversy."

Deliberately the order of the President, that the Arizona project was not in accord with his program, was omitted from the Interior Department report to Congress. Here is a typical example of how the Interior Department seeks to deceive Members of the Congress.

During the hearings on the proposed Arizona project before both the House and Senate committees, the Bureau of Reclamation sent witnesses to testify for the State of Arizona and against the State of California. The record contains the statements of these biased witnesses, so I shall not repeat them here.

However, I wish to inform my colleagues that a Government bureau has entered vigorously an interstate controversy of a legal nature, a controversy that can be settled only by judicial action. California has proposed that the conflict be submitted to the United States Supreme Court for adjudication. The Bureau of Reclamation has joined the State of Arizona in opposition to this fair and constitutional manner of settling an interstate dispute.

With the knowledge that there can be no water for the Arizona project unless the Supreme Court rules against California, the Bureau of Reclamation has steadfastly promoted the project. The Bureau is asking the Congress to give a billion and a half dollars of the taxpayers' money to the land speculators of Arizona.

I repeat, Mr. Speaker, that there could be only one reason why the Bureau would promote such a fantastic scheme. That reason is a lust for power. The Arizona project would be built by the Bureau, and the Bureau would therefore have absolute control over the economy of the State of Arizona.

The land speculators of Arizona do not care who builds the project, or who controls it. They would get the water, and would make millions of dollars.

I appeal to my colleagues to look into this attempted raid on the Treasury, a raid supported by a Government bureau. The Arizona project is a speculator's dream, and it is the dream of power-hungry bureaucrats in the Interior Department.

There can be no compromise in this fight. There can be only a just decision made by the highest court of the land. I can say without qualification that we of California intend to fight with every means at our command, not only for our just and legal rights, but for the protection of the citizens of other States who would be bilked out of a billion and a half dollars should this Arizona Bureau of Reclamation scheme be approved.

I ask the Members of this House to investigate this outrageous project for the protection of their own constituents, who would be forced to give the land speculators of Arizona this enormous amount of public money should this nefarious scheme be consummated.

Amending Natural Gas Act

EXTENSION OF REMARKS
OF

HON. OREN HARRIS

OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. HARRIS. Mr. Speaker, H. R. 1758 to amend the Natural Gas Act of 1938 was reported by the Committee on Interstate and Foreign Commerce by a vote of 14 to 7, seven members being absent. This bill has a very limited purpose—to clarify the original intent of Congress exempting from the jurisdiction of the Federal Power Commission, independent producers and gatherers of natural gas sold at arm's length to a natural-gas company.

Apparently there is a great deal of misinformation being disseminated as to the objectives and the effects of this legislation. I think that the Members of Congress should clearly understand the issue and not be persuaded by any prejudices, misinformation, or great waves of propaganda.

Information is being circulated that this is being fostered by the big oil companies; that it is an attempt to permit them to make huge profits at the expense of the consumers; and that outrageous and excessive costs to the consumers will be the immediate result.

This is not the purpose of the bill; neither will it be the effect of the bill. The facts are quite the contrary, as the record shows.

This bill provides precisely the same policy that has been pursued since the history of the act 11 years ago, and it is necessary only because the majority of the Federal Power Commission has changed its mind and threatens to extend its jurisdiction into the competitive field of our American system.

It is being said that the consumers' prices will immediately go up. This positively is not a fact and will not affect any consumer who is already obtaining its gas by and through existing and long-term contracts. In fact, this will permit more people in certain areas to have natural gas.

Let us analyze this bill as to the actual facts, its real purpose, and only objective.

PURPOSE OF THE BILL

This bill has a very simple and limited purpose.

The Natural Gas Act specifically provides that it shall not apply to the "production or gathering of natural gas." Consequently, since the passage of the act in 1938, it has been consistently administered and applied by the Federal Power Commission, in accordance with the intent of Congress, so that independent producers and gatherers of natural gas have not been subjected to regulation with respect to arm's length sales, made during the course or upon completion of production and gathering of natural gas which is subsequently transported and sold by regulated interstate pipe-line companies—that is, "natural-gas companies" within the meaning of the Natural Gas Act. As the term is here used an "independent" producer or gatherer is one who is neither a natural-gas company, by reason of other operations, nor affiliated with a natural-gas company.

The sole purpose of this bill is to make certain that the Natural Gas Act will continue to be so administered and applied by the Federal Power Commission.

NECESSITY FOR LEGISLATION

Section 1 (b) of the Natural Gas Act, which specifies the jurisdictional scope of the act, reads as follows:

(b) The provisions of this act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas.

Until the decision of the Supreme Court in the Interstate case—*Interstate Natural Gas Company* v. *Federal Power Commission et al.* (331 U. S. 682 (1947))—it was assumed by all concerned that the specific declaration that the act shall not apply to "production or gathering" contained in section 1 (b) was broad enough to exclude from regulation arm's-length sales of natural gas by independent producers and gatherers, made in the course, or at the conclusion, of their production and gathering operations, and, consequently, to exclude such producers and gatherers from regulation. That this was intended by Congress appears to be generally conceded. That the Federal Power Commission itself took this position is clear from numerous statements made by the Commission, including statements made in its Order No. 139, issued on August 7, 1947, which is set forth in full in appendix III of the report. In that order the Commission said, in referring to various bills being considered by Congress during the Eightieth Congress:

At the hearings on these bills before the Senate and House Committees on Interstate and Foreign Commerce, the Commission likewise stated its view that independent operators who produce or gather natural gas and sell it at arm's length to natural-gas companies subsequently transporting such natural gas in interstate commerce are exempt from the provisions of the Natural Gas Act.

The first test of the jurisdictional scope of the act, in this regard, was made less than 2 years after the act was passed in the Columbian Fuel Corp. case in 1940. In that case the Federal Power Commission concluded:

* * * that it was not the intention of Congress to subject to regulation under the Natural Gas Act, all persons whose only sales of natural gas in interstate commerce, as in this case, are made as an incident to and immediately upon completion of such person's production and gathering (2 FPC 200 (1940)).

No subsequent determination by the Commission has overturned this initial finding. No recommendation has come to Congress from the Commission during the past 11 years requesting that the jurisdictional authority in question be extended. No instance has been cited where the Commission has been thwarted, by reason of prevailing jurisdictional limitations, in its efforts to protect consumers or regulate industry operations.

While the Interstate case, above referred to, involved regulation of a natural-gas company, and did not present the issue of the power of the Commission to regulate arm's-length sales of natural gas by independent producers and gatherers, the Court couched its opinion in such broad terms that it immediately became the basis for diverse interpretations, by interested persons, as to its implications regarding the jurisdictional status under the Natural Gas Act of independent producers and gatherers. The views expressed by the Court gave rise to the fear that if the Commission should depart from its theretofore consistent practice and attempt to regulate arm's-length sales by independent producers and gatherers, the Court might uphold such action by the Commission.

During the period of more than 2 years since the Supreme Court rendered this decision, confusion and uncertainty have prevailed to such an extent that it is imperative that Congress act without further delay to clarify the situation. The present bill will accomplish this by clearly and unequivocally reaffirming the original legislative intent and well-settled administrative practice.

CERTAIN DEVELOPMENTS LEADING TO THE PRESENT SITUATION

Owing to the course of the proceedings in the lower courts in the Interstate case, confusion and uncertainty prevailed within the oil and gas industry regarding the scope of the Commission's jurisdiction. Various bills, accordingly, were introduced in the first session of the Eightieth Congress, attempting, among other things, to correct the doubt and ambiguity then being cast on the correctness of the Commission's past administrative policies and practices. These bills (H. R. 2185, H. R. 2235, H. R. 2292, H. R. 4051, and S. 734) were accorded extensive hearings.

During the course of those hearings, the Federal Power Commission recommended delay, taking the position that the legislation proposed was anticipatory of the results and recommendations which it felt it would be in position to make to the Congress upon the completion of its then pending investigation of

the natural-gas industry (Docket G–580).

The Supreme Court, however, rendered its decision in the Interstate case on June 16, 1947. The Chairman of the Commission, accordingly, under date of June 23, 1947, advised the committee that:

Under these circumstances, as we have stated previously, your committee may now wish to consider the adoption of an amendment to clarify this situation. Therefore we are submitting to you and your committee the attached legislative proposal, which is in accord with the Commission's interpretation that the Congress intended independent producers and gatherers to have a nonjurisdictional status under section 1 (b) of the Natural Gas Act, and is likewise in accord with previous rulings and determinations by the Commission regarding this matter.

Pursuant to the recommendation, a member of the committee, Hon. J. PERCY PRIEST, of Tennessee, introduced the Commission's proposal as H. R. 4099, which was subsequently proposed on the floor of the House as a substitute for H. R. 4051.

The full membership of the Commission urged the enactment of this bill to make clear the exemption of independent producers and gatherers, as is indicated in a letter of July 10, 1947, to the chairman of the committee:

MY DEAR MR. CHAIRMAN: This is in response to your request of July 9 for an early comment by the Commission regarding H. R. 4099, a bill introduced by Congressman PRIEST, of Tennessee.

The Federal Power Commission urges the enactment of this bill at this time to make it perfectly clear that independent producers and gatherers of natural gas are exempt from the provisions of the Natural Gas Act and the jurisdiction of this Commission.

The enactment of this bill would dispel the uncertainty regarding the status of such independent producers and gatherers which has been created following the recent decision of the Supreme Court in the Interstate case. Such action by the Congress now should dispose of this important and noncontroversial matter.

This procedure would enable the Congress to defer action on the many other aspects of natural-gas regulation involved in the complexities, uncertainties, and ambiguities of H. R. 4051 (the Rizley bill), to which we referred in detail in our statement of July 1 to you and the members of your committee. As you know, all these problems are being carefully analyzed by the Commission, in cooperation with all interested parties, in the natural-gas investigation (Docket No. G–580). A full report on this investigation will be submitted to the Congress for its consideration within the next few months.

I am authorized to state that the position of the Commission in this matter is fully in accord with the legislative program of the President.

Respectfully yours,

FEDERAL POWER COMMISSION,
By NELSON LEE SMITH, *Chairman*.

It will be noted that in this letter the Commission characterized the matter of clarifying the status of independent producers and gatherers as a "noncontroversial matter."

The first session of the Eightieth Congress adjourned without any clarifying legislation being enacted. The Federal Power Commission, accordingly, on August 7, 1947, less than 2 months after the Interstate case was decided, in Docket No. [redacted], issued an order, No. 139, which in the language of the Commission, was "designed to relieve any existing uncertainty regarding the Commission's position." This order was signed by Commissioners Smith, Olds, and Wimberly, with Commissioner Draper dissenting. The rule adopted by the Commission to implement this order, stated:

The Federal Power Commission is of the opinion that it was the intent of the Congress that the control of production or gathering of natural gas should remain a function of the States and that the Natural Gas Act should not provide for regulation of those subjects.

For the purpose of administering the Natural Gas Act, the Commission will construe the exemption contained in section 1 (b), to the effect that the provisions of the act shall not apply to the production or gathering of natural gas, as including arm's-length sales of natural gas by independent producers and gatherers, made during the course or upon completion of production and gathering. The Commission, consistent with this construction, will not assert jurisdiction solely because of such sales.

The Commission stated in order No. 139 that—

It is also our intention, in keeping with the position heretofore taken, to continue to recommend to the Congress that it take appropriate clarifying legislative action regarding this matter.

Since the issuance of Order No. 139, one of the signers has changed his interpretation and now believes that independents are subject to regulation under the Natural Gas Act. Another Commissioner, who was not a member of the Commission at the time the order was issued, has stated that he considers the rule a nullity—absolutely meaningless. A majority of the Commission, which has the power to do so, has stated, through their spokesman, that order No. 139 will be rescinded when proposals now before Congress are finally disposed of.

Hence, during this session three members of the Federal Power Commission have adhered to a new interpretation restricting the exemption in question solely to the physical functions of producing and gathering; the other two members of the Commission have adhered to the interpretation consistent with past and prevailing practices of that agency. Actually, as of today, the membership is divided two to two because the term of one member of the majority recently expired and, while he has been renominated, his reappointment has not been acted on by the Senate. Previously, therefore, a 3 to 1 majority prevailed in support of the original interpretation; a change of interpretation by one member, together with the addition of a new member to the Commission, resulted in the reversal of Commission majority opinion. As a consequence, the Commission's views on this question of jurisdiction derive not from explicit direction of Congress but, rather, from changed views and shifts in personnel of the Commission.

Since no court has made a judicial determination of the specific question in point, the responsibility for resolving the differences that now exist is clearly one which must be discharged by Congress.

Full hearings were held on this bill and on H. R. 79 and H. R. 982 during 5 days in April of this year, the printed record of those hearings running to 282 pages. Testimony was presented by Members of Congress, by the Federal Power Commission, by representatives of State regulatory agencies, by representatives of the industry, and others. In addition, the Subcommittee on Petroleum and Federal Power of the committee, in order to obtain all possible light on the problem, later held executive hearings in which it heard representatives of both the majority and minority of the Commission, as well as lawyers from the Commission. These executive hearings are being printed. Hearings on this subject have been held also by the Senate Committee on Interstate and Foreign Commerce, and on June 24, 1949, that committee reported favorably to the Senate a bill (S. 1498) having the same objective as the bill here reported to the House.

LIMITED SCOPE OF THE BILL

This bill, which is limited strictly to clarifying the status of independent producers and gatherers, differs materially from the much broader legislation proposed in the Eightieth Congress, as exemplified in H. R. 4051, which was reported by this committee and passed by the House. That proposed legislation dealt not only with the subject matter of the present bill but, in addition, (1) would have extended the exemptions also to producers or gatherers affiliated with natural-gas companies; (2) would have modified the "prudent investment" formula which the Commission with approval of the Supreme Court has applied to gas produced by integrated systems, by requiring allowances as an operating expense of the prevailing market price in the field; (3) would have restricted the Commission's jurisdiction over interstate transportation of natural gas following interstate trunk-line movements; (4) would have imposed on the Commission, in connection with the fixing of rates of natural-gas companies, detailed and strict requirements as to segregation of properties and facilities; (5) would have added new requirements as to the duty of natural-gas companies to furnish and supply service to distributing companies; and (6) would have, in effect, transferred to the Interstate Commerce Commission jurisdiction over companies engaged in transportation of natural gas by pipe line solely for others for hire and not engaged in selling natural gas.

While sponsors of the bill here reported indicated that its aim, as it was originally introduced, was solely to make clear the exemption of independent producers and gatherers, there developed in the hearings in connection with testimony by members of the Federal Power Commission some questions whether the particular choice of language did not lend itself to uncontemplated breadth of interpretations.

Accordingly, numerous sessions were held with members of the Commission, and with lawyers of the Commission's Bureau of Law, to develop exact language which could be construed only as doing what was contemplated, and no more. The result of such conferences is embodied in the committee amendment to

the bill as now reported, which is a substantial modification of the bill as introduced. While there remains a difference of opinion among members of the Commission as to the policy involved, it is believed that all Commissioners agree that the bill as amended will accomplish the expressed purpose and no more.

EFFECT OF THE BILL

In the event the proposed legislation becomes law, there can be no further questions regarding this phase of the Commission's jurisdiction. Doubt and concern in the minds of independent producers and gatherers of oil and natural gas, arising from the fear that the Commission might seek, with judicial approval, not only to regulate their sales of natural gas, but also to intrude into their operations to determine allocations of cost and investment in regard to both oil and gas production, will be dispelled.

Considerable testimony was adduced to the effect that this concern is and has been of no little moment. It is alleged that numerous independent oil companies have felt it necessary to withhold sales of concurrently produced natural gas from a waiting market owing to fear that such sales might be held subject to regulation and that this would involve Commission jurisdiction over their oil operations.

While representatives of the present majority position of the Commission have sought to indicate that if sales of natural gas by independents were subjected to regulation the Commission's investigations for rate-making purposes could and would be limited, their presentation has not been sufficiently clear or persuasive to the committee. This committee is unable to see how this type of regulation of the gas-producing end of a joint oil-gas operation can be obtained by the Commission, involving as it does allocations of capital, expenditures, and income between the two, without complete examination of the oil as well as gas operation and the making of necessarily arbitrary allocations.

Whether there ever would be necessity for such regulation of the oil industry, this committee is not now prepared to indicate. The entire field of petroleum policy is now undergoing scrutiny by the committee in its continuing fuel investigation directed toward recommendations for a national fuel policy. We are of the firm belief, however, that if ever the day arrives that there should be regulation of the oil industry, it should be as the result of congressional determination, not as the result of administrative fiat.

PUBLIC INTEREST DOES NOT REQUIRE EXPANSION OF COMMISSION'S JURISDICTION

Competitive conditions in the gas-producing areas of the country have confirmed the soundness of the view held when the Natural Gas Act was orginally enacted, that regulation of arm's-length sales by independent producers and gatherers is unnecessary. Vague fears have been expressed that at some time in the future a situation might conceivably arise when it would be desirable for the Commission to be able to exercise this regulatory authority, but this segment of the industry should not be kept in a constant state of apprehension and uncertainty because of such a speculative possibility. If developments at any time in the future indicate a need for the exercise of such regulatory authority the situation can then be met, as it should be, by appropriate action by Congress.

No evidence has been presented to indicate that the Commission has been hampered in its efforts to protect natural-gas consumers or regulate natural-gas pipe lines by the jurisdictional policies followed up to this time. Witnesses testifying before the committee concurred in the belief that administrative practices of the Federal Power Commission, under the Natural Gas Act, have been beneficial to both consumers and independent producers and gatherers for the past 11 years.

The Commission's majority report included in the hearings showed that the average retail price of natural gas to residential and commercial consumers has declined from 68 cents per thousand cubic feet in 1938 to 60 cents in 1947, or by nearly 12 percent, as compared with increases of 61 percent for anthracite coal, 69 percent for bituminous coal, and 79 percent for fuel oil. Over the same period the average well-mouth price of natural gas in the seven leading producing States increased 1.25 cents per thousand cubic feet. The average price paid by interstate pipe lines to independent producers in the southwestern producing States is about 4.6 cents per thousand cubic feet, while the domestic consumer in the District of Columbia now pays about $1.51 per thousand cubic feet.

The current indecision and uncertainty is conducive to nothing but uncertainty, confusion, and hesitancy on the part of all affected by the act, both consumers and producers. Clarification within the framework of past experience and past necessity will serve to perpetuate the beneficial results achieved under the administrative practices followed for the past 11 years.

Protecting Federal Employees' Retirement Funds

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. BOGGS of Delaware. Mr. Speaker, in the Senate last year the distinguished senior Senator from Delaware [Mr. WILLIAMS] directed attention to the fact that certain legal loopholes in Federal retirement pension legislation permitted payments to be made in some cases which were almost unbelievably out of proportion to the sums which had been contributed by employees. The proposal made at that time by Senator WILLIAMS to eliminate such a situation was opposed by the Civil Service Commission as being unnecessary.

In the meantime, Mr. Speaker, new and even more startling cases of retirement payments out of all proportion to employee contributions have arisen. With this additional evidence the Civil Service Commission has reversed its previous position and requested the enactment of legislation such as was proposed in 1948 by the Delaware Senator. Senator WILLIAMS has been happy to sponsor this legislation, and it is my hope that it will be speedily enacted by the Congress in order to safeguard and protect Federal employees' retirement funds.

As a part of my extension of remarks I include an editorial on this matter which appeared in the Wilmington (Del.) Journal-Every Evening of Friday, July 29, 1949. The editorial follows:

DUTCH BOY FROM MILLSBORO

Back in 1948, when the Senate was considering the United States employees retirement pay bill, Senator JOHN J. WILLIAMS, of Delaware objected that it had a weak spot where serious leakage could result. He told his colleagues he could foresee times when an employee of very brief service might stand to gain retirement benefits out of all proportion to his contribution.

The Senate must have regarded him as a modern counterpart of the fabled Dutch boy with his finger in the dike—for it took his advice and plugged the hole. The House refused to accept the change. The bill passed with the hole still in it.

Time also passed. Then, the other day, we heard the moans of the Civil Service Commission. A person who had been employed for a month, and had paid a total of $7.43 into the kitty, was eligible to take out maybe $150,000 in a long lifetime.

Who was the Senator that put in a new bill on Wednesday to make a permanent repair? Right. It was JOHN WILLIAMS. This time we bet the House will follow through and seal up that hole good and proper. Nice going, Senator.

Every Dollar Congress Gives the Indian Bureau in California This Coming Year Is a Public Waste

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from Adam Castillo, president of the Mission Indian Federation at San Jacinto, Calif., describing the predicament in which California Indians find themselves.

Their case is so clearly and logically stated that I need not add anything to it. Mr. Castillo's letter follows:

SAN JACINTO, CALIF., *July 25, 1949.*

Hon. USHER BURDICK,
Member of Congress,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: The American Indian, and especially, California Indians appeal to you for the help needed to eliminate and forever abolish the un-American Indian

Bureau in its century of dishonor and bureaucratic control over the lives and property of my Indian race.

Therefore, at the insistence of my Indian people of southern California, I make this appeal to you, and, through you to the Members of the present Congress, ere they adjourn, to take drastic and firm action toward entirely eliminating the Indian Bureau from California.

There is absolutely no need or excuse for the Indian Bureau to be allowed to continue to operate in California. California Indians are all citizens, taxpayers, and voters, and have shown in every test that they are just as fully able to look after themselves in every manner as are other citizens. It will be remembered that in February 1947, when this writer was before the Senate Civil Service Committee and demanded complete freedom from all Bureau wardship, I was followed on the stand by Mr. William Zimmerman, Jr., Acting Commissioner of Indian Affairs, who had been subpenaed by the committee, and then Mr. Zimmerman frankly acknowledged that all California Indians, including the Mission Indians, should be immediately discharged of all Federal control. He went into detail and without reservation, gave his approval to "eliminate and abolish the Indian Bureau in California."

The grounds on which we would urge the Congress to act at this time, and entirely eliminate from the budget now before it for the present year, any and all requests for funds, are sound and readily understood. There are principally two main reasons why this should be done now:

1. The some 20,000 California Indians have demonstrated over the years that we are entirely capable of taking our places as responsible citizens of this State. In this, Mr. William Zimmerman, Jr., the Acting Commissioner of Indian Affairs, under oath, as a witness before the United States Senate Committee on Civil Service in February 1947, and his statement and recommendation has been concurred in by his own superiors and numerous Members of Congress, that all California Indians are ready to be relieved as Federal wards.

2. Supporting our contention that Congress should not give the Indian Bureau any public funds to continue to operate in California, we point out that insofar as relief and welfare aid, health and hospitalization, and education, California Indians are fully protected under the laws of California. Let us briefly make our reasons clear on these three items:

(a) Under the State Welfare Code of California, adopted in 1937 (ch. 2, art. 1, sec. 2500—Welfare Code), under the heading "Duty and power of county to give aid," the law states:

"Every county and every city and county shall relieve and support all incompetent, poor, indigent persons and those incapacitated by age, disease, or accident, lawfully resident therein, when such persons are not supported and relieved by their relatives or friends, or by their own means, or by State hospitals or other State or private institutions."

California, under the clear meaning of this State law, stands apart from all other States—it has already adopted legal measures by which it accepts the full responsibility—and we agree justly so, to care for its needy and unfortunate people. No person would today urge the abolishment of this law. Yet, through Indian Bureau interference by claiming California Indians as its own wards and that the Congress furnishes funds to care for all California needy Indians, the counties of the State (some 12 of them) refuse to allow Indians of the State to get the benefits of this welfare law. The Indian Bureau in California, however, now ask county welfare agents to report any needy Indian cases and "report them to the Indian Bureau State headquarters at Sacramento" and then weeks and months later, usually, some of these needy, starving Indians receive a dole or check which is usually down to one-third as much as a white person in the same circumstances gets under the standard set up by the welfare departments.

When Indians and their friends complain of the monthly check of about $10 per month to such needy Indians, the answer is that it is "the fault of Congress—that is all they gave." The director of the San Diego County Welfare Department has stated on many occasions that if it was not for the Indian Bureau, San Diego County would give Indians the same relief aid it gives all other citizens. The above refers to Indians under the age of 63 who are in need—those over that age get the old-age pension in California. We have reported that in this needy class of Indians under 63 years of age in San Diego and Riverside Counties of southern California alone, there are about 500 needy Indians. The Indian Bureau in its last State report claims that it only found in all California 90 needy Indians in this class, for which Congress only gave $24,000.

(b) Under the heading "Hospitalization and health aid," California Indians have the same right to go to county hospitals as indigents, etc., the same as other poor people. However, the Bureau has had approved in its budget last year some $300,000 or so, in order to perpetuate its existence. It makes agreements with some counties and pays such counties for Indian health and hospitalization. This is entirely a waste of public funds. The State welfare law, as above quoted, gives Indians the right to care, etc., the same as other needy citizens. By giving the Bureau welfare and hospital care funds you are actually depriving Indians of first-grade service and paying out public funds where it is entirely unnecessary. It should be eliminated.

(c) Under the heading "Indian education," there is set up in the California Indian Bureau Budget some $250,000, which as we have shown in statements before congressional committees over the years, is wholly unnecessary. No California Indians would legally be deprived of a public-school education, if Congress eliminated this grant to California. California Indians, the same as all other persons, pay the State sales tax, now 3 percent, and which all goes for public-school taxes. Real estate does not pay all the school tax in California, as is the custom in many other States. The Indian Bureau (the Interior Department) made a contract with California in 1934, before the sales tax was made a law, by which the Government pays to California for Indian education this sum of some $250,000 annually. This was under the original Johnson-O'Malley Act. At the time, the Bureau would not enter into a contract for Indian welfare and health aid, although the act authorized it. Thus, the Bureau continued its hold over welfare, and hospitalization for Indians.

We have shown the Congress in this brief report, how the Government is actually wasting public funds when it continues to give the Indian Bureau funds to operate in California.

As stated above, the Bureau reports that there are some 15,000 California Indians who do not live on Indian tribal lands, and that Indians own their own lands, pay taxes on such lands, etc., and therefore, really the Indian Bureau has nothing to do with these 15,000 Indian citizens. Yet it will not approve the Government giving to such Indian citizens their full share of the $6,000,0000 in the United States Treasury. Congress surely does not understand this mistake, it could not want to withhold the share of each of these 15,000 Indians who have absolutely proven in all walks of life they are not Bureau wards.

There is no need for the Bureau to remain 1 day in California, in the face of the facts which we briefly outline here. The Indian Bureau over the past century, under all administrations, seem to defy and bypass Congress, even in the face of reports from each and every congressional committee which investigates Indian conditions. Where does the Indian Bureau get its power over the Congress? If one will but read the famous address delivered in 1933 by the former Utah Senator, Hon. William H. King, chairman of the Senate Indian Committee, a very clear understanding can be had of the infamous Indian Bureau system. For the Congress to continue to listen to the schemers of the Indian Bureau, that "now we are just about ready to end all Bureau control over the American Indian," or some similar misleading promise, and continue to give it the $50,000,000 annually to further enslave and ruin the American Indian, supports the contention of leading Indians of the Nation and their white friends, the Bureau octopus has almost destroyed the great Indian race. It's America's shame.

Therefore, I plead for justice and equality for California Indians—break and forever sever the bonds of wardship, and turn my people free.

Respectfully,

ADAM CASTILLO,
President, Mission Indian Federation.

Amending Natural Gas Act

EXTENSION OF REMARKS
OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my minority views as to H. R. 1758, the bill to amend the Natural Gas Act, which has been granted a rule and will be scheduled for debate on Thursday, August 4.

The matter referred to is as follows:

On January 26, 1948, the Committee on Interstate and Foreign Commerce filed a preliminary committee report of its fuel investigation which it had undertaken on December 12, 1947 (Rept. No. 1270, 80th Cong., 2d sess). It is my judgment that no consideration of H. R. 1758 would be complete except in terms of that preliminary report. I shall quote certain brief but highly important excerpts.

"Referring to the four most important energy resources—petroleum, coal, electric power, and natural gas—the committee stated that it would study each of these fuels in detail in order to gain a complete picture of anticipated supply and demand. The committee expressed the hope that on the basis of the accumulated information it would be in a position of making recommendations to the Congress with respect to a national fuel policy.

"In mapping out this program, the committee is aware of the fact that the task it has undertaken is no easy one which can be completed in a matter of days or weeks. The committee, however, is convinced that a comprehensive study of this nature by the Congress is imperative if the Congress is to discharge properly its responsibility of formulating legislative policy. As far as our national economy and our national security are concerned, no problem looms larger than the question of the adequacy of our energy resources.

* * * * *

"Thus prepared, the committee is again undertaking a general study into fuel supply and demand. The committee desires to

emphasize from the outset that its study is definitely designed to be a fuel study or, using another term, an energy-resources study, and not a series of four separate studies into petroleum, natural gas, coal, and electric power. After concerning itself over a period of years with the problems peculiar to each of these four fuels, the committee realizes that each of these four energy resources affects the others, and that it is imperative, in the interest of the Nation's prosperity and security, for the Congress to think, and, if necessary, to act, in terms of a national fuel policy rather than a national petroleum policy, a national coal policy, a national electric-power policy, and a national natural-gas policy."

In the report the committee included a comprehensive topical outline covering the general scope of the proposed further study. This outline indicates clearly the complicated nature of the problems involved in the development of any adequate national fuel policy. Moreover, it presents convincing evidence of the necessity of a complete and comprehensive study rather than any limited action such as would follow in H. R. 1758 should become law.

It is true that the committee recommended in this report the immediate establishment of a congressional committee to be known as the Joint Committee on Fuel Policy and that a resolution to that effect was introduced. However, throughout the report, the committee recognized its primary responsibility in this field, and it is still my opinion that the members of the committee recognize that responsibility at this time, even though they differ as to the wisdom of action now on H. R. 1758. Indeed, in the majority report there is significant language with reference to the problem as to whether there should be, as has been advocated by some, any measure of regulation of the oil industry.

That language is as follows:

"Whether there ever would be necessity for such regulation of the oil industry, this committee is not now prepared to indicate. The entire field of petroleum policy is now undergoing scrutiny by the committee in its continuing fuel investigation directed toward recommendations for a national fuel policy. We are of the firm belief, however, that if ever the day arrives that there should be regulation of the oil industry, it should be as the result of congressional determination, not as the result of administrative fiat."

I believe it unnecessary to submit here any complete list of problems which must be faced by Congress sooner or later. However, it might be useful to mention a few. I think everyone is aware of the recommendations which have been made in connection with tidelands legislation, in connection with the impact of imports of petroleum and with the administration of the ECA program so far as refinery expansion overseas is concerned, in connection with any effect upon the public interest by reason of control exercised by producing companies over retail outlets, and in connection with power supply throughout the country.

The vital importance of recognizing the complex nature of this problem and of discharging this responsibility was made most significant on June 20 when the Supreme Court of the United States, by a 5 to 3 decision in the case of *Federal Power Commission* v. *Panhandle Eastern Pipe Line Company et al.*, ruled that a natural-gas company, subject to the Natural Gas Act, could sell leases of its gas reserves without the approval and contrary to the order of the Federal Power Commission. The case involved construction of subsection 1 (b) of the Natural Gas Act—the very subsection which H. R. 1758 would amend. The majority of the Court held that Congress, in exempting the production and gathering of natural gas, intended to exempt the producing properties and gathering facilities of a natural-gas company, and that leases are an essential part of production. The minority of the Court stated:

"The Court's judgment and opinion in this case go far toward scuttling the Natural Gas Act. * * * The Court's sterilizing interpretation rests on an exception to Commission authority appearing in section 1 (b) of the act. * * * It was the physical acts incident to the "production and gathering" of gas—local activities—that our prior decisions emphasized Congress intended to leave States free to regulate. Today the Court reads this congressionally granted privilege of States to regulate the act of 'production' as an absolute bar to the Federal Power Commission's regulation of the ownership of gas-reserve properties. Gas reserves are indispensable to proper service of interstate customers of an interstate natural-gas company. And in thus limiting the Commission's jurisdiction the Court leaves the Commission impotent to protect the public's interest in having interstate companies maintain adequate gas reserves. This disabling interpretation reads the Federal Act as though it contemplated 'ineffective regulation,' an interpretation directly opposed to that we gave the act in *Panhandle Eastern Pipe Line Co.* v. *Public Service Commission* (332 U. S. 507, 520). * * *

"It seems inconceivable that Congress would have passed an act to regulate natural-gas companies with a wholly neutralizing exception to bar regulation of the gas reserves upon which the whole gas business depended. I cannot attribute such a meaningless and deceptive action to the Congress. While the act itself grants broad Commission powers effectively to regulate gas companies, the Court's interpretation deprives the Commission of power essential to fixing fair rates and to protecting continued services during the life of a company's gas reserves."

The majority construction of this exception in section 1 (b) is the law. But the minority's estimate of the results of that construction places a very heavy responsibility upon the Federal Power Commission and the Congress. Even the majority of the Court clearly emphasizes that such responsibility exists, in the following language at the end of its opinion:

"If the Commission is of the opinion that it should have power to control the disposition of leases by natural-gas companies, it is authorized to call the attention of Congress to that fact."

The significance of that responsibility, in the minds of the majority of the Court, is high-lighted by the following annotation to that sentence:

"In an analogous situation before the institution of this litigation, there had been uncertainty of opinion in the Commission as to the reach of the act toward sales by independent producers and gatherers to natural gas companies for transportation in interstate commerce. See reports of the Federal Power Commission on its Natural Gas Investigation (Docket G–580), transmitted to Congress on April 28, 1948. In part IV of the report subscribed to by Commissioners Smith and Wimberly, it is concluded at pages 38 and 40.

" 'No reasonable basis is found in the act or its legislative history for a conclusion that, although the activities of production and gathering are exempt under section 1 (b), sales of natural gas which are made at arm's length by producers and gatherers who do not thereafter transport it in interstate commerce may be regulated. Unless such a distinction is specifically disclaimed, doubts and uncertainties will continue to be felt and expressed regarding the possible jurisdiction under the Natural Gas Act of those who only produce and gather natural gas and then sell it to others transporting such gas in interstate commerce. (Pp. 38–39.)

" 'In view of the present unsettled state of this matter, it is desirable, as the Commission has heretofore recommended, that the Congress should adopt appropriate amendatory legislation to make it clear that independent producers or gatherers of natural gas, and their sales thereof in interstate pipe lines, are not subject to the provisions of the Natural Gas Act. Such action will confirm what clearly appears to have been the original intent of Congress when it enacted the Natural Gas Act in 1938.' (Pp. 40–41.)

"See also the report subscribed to by Commissioners Draper and Olds, pages 12–14.

"Congress is now giving consideration to this problem. See H. R. 79, H. R. 1758, H. R. 982, S. 1498, and S. 1831, Eighty-first Congress, first session, and committee hearings thereon."

It is to be noted particularly that reference is made to H. R. 1758—the legislation we are now considering—and the committee hearings thereon. The Court is pointing clearly to congressional study of the uncertainty of opinion following the Interstate case as to jurisdiction of the Federal Power Commission over sales by independent producers and gatherers to natural-gas companies for transportation in interstate commerce. It declares the question of jurisdiction of the Commission over the disposition of leases by natural-gas companies is analogous.

Proponents of H. R. 1758 maintain there is an immediate urgency for congressional action in this one limited field. I do not understand they admit there is any comparable urgency for congressional action in the other field. It does not seem to me they recognize any comparable urgency for comprehensive congressional action at one time in connection with the establishment of the national fuel policy. Yet the majority report does include the following sentence which I repeat because of its significance:

"The entire field of petroleum policy is now undergoing scrutiny by the committee in its continuing fuel investigation directed toward recommendations for a national fuel policy."

It is my considered judgment that the Committee on Interstate and Foreign Commerce was both far-sighted and eminently sound when it reported on January 26, 1948:

"No piecemeal approach to the problem at hand, however, is practical."

While the piecemeal reference was to unrelated action by several committees, I submit it applies with even more force to the action now recommended.

The problems existing within the field of production, transportation, and distribution of natural gas are interrelated. In turn, they are interwoven into the field of production, transportation, and distribution of coal, electric power, and petroleum.

To enact H. R. 1758 without relation to its effect upon these other important phases of the natural energy resources would be unrealistic and inconsistent with the committee's recognition of the necessity of developing a comprehensive national fuel policy. It might well carry with it very serious results so far as the over-all public interest may be concerned in such a national fuel policy.

The majority report states:

"The resulting confusion and uncertainty [following the Interstate case] have been such that this committee feels it is imperative that the clarifying legislation here proposed be enacted into law without delay."

This, I think, should be carefully weighed with the admitted confusion and uncertainty prevailing as to other aspects of any national energy resources policy and the imperative necessity of developing and recommending a sound national fuel policy.

I therefore dissent from the recommendation of the majority and urge that the bill

be recommitted to the committee so that it may undertake this complete investigation and study with the objective of bringing before the House its recommendations in terms of the over-all problem now facing us.

The Education Bill

EXTENSION OF REMARKS
OF

HON. ANTONIO M. FERNANDEZ

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. FERNANDEZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excellent editorial appearing in the Washington Post on yesterday, August 2, 1949. It is my hope that the committee will report out the Senate bill on Federal aid to education so that the House may have an opportunity to vote on it before the end of this session. In urging this, I make my own the concluding sentence of the editorial which states:

We think it is important not only from the viewpoint of improving schools in backward areas but also for the sake of withdrawing fuel from interdenominational feuds that, if allowed to gather momentum, will undermine the foundations of our American society.

The editorial is as follows:

THE TIME IS NOW

Special commendation goes to the two freshmen members of the House—HUGO SIMS, JR., and TOM STEED—who induced the Labor Committee to try once more to get the education bill out on the floor. Chairman LESINKI had said that the bill was dead for this sesison. Some other committee members, along with Speaker RAYBURN, seemed to agree that the bill was too hot to handle. But the two freshmen legislators induced the committee to meet again this morning and give itself another opportunity of screwing up its courage and sending the issue to the House.

The argument for dropping the bill at the present session of Congress is that the controversies on the extrinsic as well as the intrinsic merits of the bill may have subsided by next year. This is wishful thinking of a dangerous sort. It cannot reasonably be supposed that the sponsors of this constructive effort to draw up Federal funds to patch the weakest parts of our public education systems will give up their objective because it has met with determined opposition. Nor is it likely that the foes of Federal aid to education will withdraw from the field so long as the question remains unsettled. Nor will postponement assuage the church-state conflict. Instead of subsiding, the controversies are thus likely to spread until a decision has been reached, and it would not be surprising if the acrimony surrounding those controversies should be intensified. Since 1950 is an election year, Congress would fly into the face of all experience if it should assume that emotions would be less aroused and judgments more trustworthy then than now.

It is true that the problem is very difficult. The sponsors of Federal aid to education are divided between the Thomas bill passed by the Senate, which would allow the States, where their laws permit, to use Federal funds for bus service and nonsectarian textbooks for children in parochial schools, and the Barden bill, which would deny any such auxiliary aid to either public or private schools. These differences can be resolved, however, if those who are interested in buttressing the education systems of the States have the courage of their convictions. They can subordinate the relatively minor differences between the two bills to the major objective of getting an education measure on the statute books.

While we think the Thomas bill is preferable, a favorable House vote on the Barden bill would send the two measures to conference, where a satisfactory compromise could doubtless be worked out. The important thing at the moment is for the House Labor Committee to act. We think it is important not only from the viewpoint of improving schools in backward areas but also for the sake of withdrawing fuel from interdenominational feuds that, if allowed to gather momentum, will undermine the foundations of our American society.

Agricultural Adjustment Act

EXTENSION OF REMARKS
OF

HON. JOHN H. MARSALIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. MARSALIS. Mr. Speaker, I am in favor of this legislation and I am most appreciative of the special efforts put forth by the members of the Agriculture Committee in attempting to relieve to some degree those cases of extreme hardship that will result from the application of acreage allotments which are based chiefly on a historic basis. I am not personally cognizant of this situation as pertains to cotton and peanuts, but I am as to wheat.

Eastern Colorado is partly a semiarid region a large part of which had been devoted for years to the raising of cattle although wheat was also raised in some of these counties. Due to the great need for wheat during and just subsequent to the war experiments were made which disclosed that these counties were all adaptable to this crop. As a result a great portion of this land was plowed up and put in wheat. Excellent crops resulted and due to good prices this section of the State enjoyed a period of sound prosperity. The towns and cities also experienced substantial growth and many investments were made based on the continued use of these lands for wheat.

Many of the farmers in this area have been planting only part of their land in wheat, reserving the rest for summer fallow, thereby cooperating with the Department of Agriculture in its program of soil conservation. If the historic basis of 10 years is applied in determining the acreage cut in conjunction with the last 3 years as the only other adjustment for trends, it will result in acreage cuts for some of these counties of as much as 50 percent and higher, whereas the national average so far as this cut is concerned will be approximately 17 percent. This is too great a cut for these counties to take and would shake the whole economy of the State. Some of the towns and cities in eastern Colorado would practically wither away since wheat today is that State's No. 1 industry, producing more wealth than any other.

I might also point out that in event such cuts were made the greater portion of these lands would stand idle. Being semiarid there is no other cash crop that could be produced. It would take many years for the buffalo grass to return in sufficient stand to support grazing of cattle. And it would take at least 3 years or more for even a fast-growing and more hardy type of grass to make a sufficient stand for grazing cattle. With no other crop to turn to and these lands lying idle, many farmers in the eastern part of my State would be forced into bankruptcy.

This acute situation was recognized in the Senate which on July 6 adopted an amendment to its cotton marketing bill which provided that in those areas in which no other cash crop could be grown the ensuing year, the acreage allotment should not result in a cut greater than that of the national average. Those Senators not in full accord with this special amendment agrees to its adoption, however, with the understanding that hearings would be had on this amendment when the bill was taken up by the House committee.

Hearings were had by the House Agriculture Subcommittee under its able chairman, the distinguished gentleman from Georgia [Mr. PACE] and a substitute for this Senate amendment was adopted and became a part of H. R. 5738.

This substitute while not as liberal as that of the Senate, at the same time attempts to protect those wheat farmers who have no other cash crop they can turn to and who have been farming their lands in accordance with good soil conservation practices. It was felt by the committee that those farmers who have faithfully practiced soil conservation should be protected from undue hardship as a result of the crop-reduction program. In view of the Senate's previous action and remarks on the floor of the Senate at that time, I feel they would be amenable to this House amendment. I am grateful that the committee has recognized the plight of the wheat growers in my own as well as other districts and has taken these steps to alleviate the undue suffering which might otherwise have resulted—at least as to those who have been applying sound soil conservation practices.

War Scares

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial which appeared in the Washington News of July 27. The American people

are being scared again into a war by propaganda emanating from the Department of State. The time has come to halt this effort to create a psychology which will ultimately prepare the way for an armaments race.

President Truman and the State Department are undermining the public's confidence in their foreign affairs leadership by blowing "hot and cold" on the Russian situation.

In Chicago on July 19, Mr. Truman told a Shriners' convention the Russian threat was waning. Six days later, in support of his arms-for-Europe program, he told Congress the "massed might of the Soviet Union" was such that it might again resort to the threat or use of force.

To back that up, the State Department has disclosed that it will lay before Congress secret intelligence reports indicating United States agents had broken through the iron curtain and found that Russia is arming for war. Oddly enough, however, no responsible official in the Army could be found who seemed aware of any new information on this subject.

The President resorted to the dire-warning procedure when he was seeking reenactment of the Selective Service Act in March 1948.

The Russian problem is serious enough without whipping up war scares to frighten the American people into supporting the administration's program. Moreover, this "wolf, wolf" business has worn so thin that a reaction is inevitable if there is much more of it.

There is every reason to assume that communism will continue to be a threat to world peace for a generation or longer—if a showdown does not come sooner than that. Our plans should be made accordingly, for a long, trying, costly period of continuing vigilance. If the public understands that, support for essential preparedness measures will not be lacking.

But distrust and distaste will be created if the policy of recurring crises is pursued further on the theory that the American people are a lot of "boobs" who have to be artificially alarmed whenever the President wants an act passed by Congress.

Mr. Churchill's Speech

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Thursday, August 4 (legislative day of Thursday, June 2), 1949

Mr. ROBERTSON. Mr. President, on July 23 Mr. Winston Churchill delivered an address at Wolverhampton in which he outlined the position of the British Conservatives. I feel that his statement has a vital interest to us, in view of our close economic and other ties with Great Britain. I ask, therefore, unanimous consent that there be printed in the Appendix of the RECORD the account of Mr. Churchill's speech printed in the London Sunday Times of July 24.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

MR. CHURCHILL ON MUDDLE AND WASTE—SOCIALIST INCOMPETENCE: RESERVES CUT TO VERGE OF INSOLVENCY—NATION'S VITAL CHOICE IN COMING ELECTION

Mr. Churchill delivered a devastating denunciation of Socialist falsehoods, extravagance, muddle, and incompetence when, before a gathering of 40,000 at Wolverhampton yesterday, he presented the Conservative statement of policy "in the advent—and perhaps on the eve—of one of the most vital general elections which has ever taken place."

The Socialists, he declared, had no claim to any achievement in the field of social reform, but had merely added "biased and sterile measures of restriction and nationalization" to the policy devised by the National Government.

"From her high and proud position at the end of the war," he declared, "they have brought Great Britain low alike in prosperity and reputation, both at home and abroad."

By squandering our resources, using up in 4 years the subsidies of £1,750,000,000 given us by the United States and Canada, raising taxation to a higher level than at the height of the war, and reducing our dollar and gold reserves to the verge of insolvency, they had "darkened and narrowed the future of every man, woman, and child in this famous island."

In contrast to this policy of waste, austerity, and frustration, the Conservative policy aimed to restore the greatness of Britain, to "set the people free from Government control, wrong-headed planning, and official interference."

ELECTION IN AUTUMN?—LORD WOOLTON'S WARNING

Lord Woolton, introducing Mr. Churchill to the widely cheering throng, warned them to "be ready for a general election in the autumn of this year."

"Recruit your membership and remember we fight for more than party advantage. Slowly but surely, the tide is turning in our way."

Mr. Churchill, who was cheered for several minutes, said that the Socialist Party had tried to spread two "gross and palpable falsehoods—that before they got a majority, Britain was a backward and miserable country, and that they were the authors of social reform.

"The truth is," he said, "that our British system before the war was in advance of any other country in the world in its social services, and of any other country in Europe in its standard of living.

"The vast experiment in social organization and the improvements in the standard of living which have marked the twentieth century, in spite of its terrible wars, have been the work of the Conservative and Liberal Parties, mostly through Parliaments with large Conservative majorities. The Socialists never had a majority or the power to do anything till the landslide of 1946.

"All they have done in their cramping and disastrous rule is to carry out, with many partisan distortions, the policy devised by a national government, sustained by a Conservative House of Commons. All they have added to this policy are their own biased and sterile measures of restriction and nationalization."

DOLLAR DRAIN PERIL—"NO EFFECTIVE PLAN"

It was amazing that they should have brought Britain down and given her people hard times during 4 years, when they had been not only eating up the nation's savings but had enjoyed outside help on a scale never known in the history of any country in time of peace—nearly £2,000,000,000 from the United States and Canada.

"In addition," Mr. Churchill added, "our Socialist spendthrifts and muddlers have exacted and extracted from our people a higher rate of taxation than was required in the very height of the war. Never before in the history of human government has such great havoc been wrought by such small men."

Today the Nation was approaching a grave and formidable event. The last gold and dollar reserves of the sterling area, for which it was responsible, were running out.

"These," Mr. Churchill warned, "are the last reserves that stand between us and insolvency. If they go, we shall not be able—even with the existing American subsidies—to import enough raw material to keep our factories busy and our people at work or enough food to maintain our health. Widespread unemployment and more privations are inevitable unless this catastrophe is averted."

But the Government had no effective plan to deal with this imminent peril. The reckless expenditure in which they had indulged at home and abroad was the main cause of Britain's difficulty. Sir Stafford Cripps had recently admitted that we had spent £900,000,000 in gifts and loans to foreign countries to assist world recovery.

EUROPEAN RECOVERY—BETTER EVERYWHERE THAN HERE

"What was the sense, or, indeed, the sanity," Mr. Churchill asked, "of borrowing a thousand millions from the United States with one hand, to enable us to get on our feet again, and giving it away to foreigners with the other? The greatest help Britain can give to the world is to stand erect in her native strength."

Everyone of the countries of Europe outside the iron curtain—behind which socialism and communism prevailed—including our former enemies forced to surrender unconditionally and others which had been overrun by foreign invaders, had got its life going in many ways better than we had done under a Socialist government, with its mania for regulation and restriction, and its delusion that it could plan the details of the daily life of every family and of every industry. In Holland, Belgium, France, Luxemburg, Norway, Denmark, the ordinary daily supply of food and conditions of civilized society were better than those we had to endure here on the morrow of our overwhelming victory, and their people suffered less austerity and frustration.

"Socialism," he declared, "with its vast network of regulations and restrictions and its incompetent planning and purchasing by Whitehall officials, is proving itself every day to be a dangerous and costly fallacy. But if socialism is a fallacy, its most direct expression, nationalization, is a failure.

"Every major industry which the Socialists have nationalized, without exception, has passed from the profitable or self-supporting side of our national balance-sheet to the loss-making debit side."

The coal board had recently boasted that it had made a nominal profit of a million last year—but that was not a real economic profit. Anyone could make a profit if he had a monopoly of some vital necessity and could charge the public what he chose.

BURDENS, NOT ASSETS—SERVICE TO PUBLIC WORSE

"All nationalized industries, I assert, have ceased to be assets to the public and have become instead burdens upon it. The losses they make will be paid for either by the taxpayer through the Exchequer, or by the consumer, who is also a taxpayer, in higher prices. In all cases, a worse service is given to the public."

The state-run air lines had proved a costly failure. The prices of gas and electricity had been increased. The railways seemed likely to show in their first year's working a loss of over twenty millions, and a large rise in railway fares seemed inevitable.

For this reason the Government wanted to get the whole of road transport in their control, so that they could raise the fares and rates and thus force the public back on to the national railways, whether they liked it or not.

It was a remarkable fact that the workers in all these nationalized industries were far from content with what they had experienced so far. The railwaymen, gradually led into recording machine-made votes for nationalization— which many of them thought meant

that they would own and run the railways themselves—were making wage demands which the Socialist Government were refusing.

This demand was naturally based upon the ever-increasing cost of living—which was an inevitable result of the "frightful overtaxation" practiced by the Government and their "lush and lavish expenditure" in so many directions.

The establishment of a stable and durable purchasing-power for money in Britain would be one of the first objectives of Conservative Chancelor of the Exchequer.

THREAT TO UNIONS—LOSS OF CONTROL

"It is indeed the irony of fate that the men who are worst hit by nationalization are the great trade-unions and their leaders. At the present time, the trade-unions never had more influence with the Government and never had less control over their own members.

"That is because, as nationalization proceeds, they lose their position of bargaining in the interests of their members with the private employers, and have to play in with the all-powerful state which is being built up. In the nationalized industries the trade-union leaders, for many of whom I have the highest respect, are being more and more drawn into the position of being on the side of the state employer, instead of facing a much more pliable and flexible private owner while the state stands aside to conciliate and mitigate the process of collective bargaining.

"Can you wonder that we are threatened with a wave of labor unrest manifesting itself in unofficial strikes and go-slow practices, and that the trade-union leaders, because they are identified with Government ownership, are unable, for all their courage and good sense, to cope with these new developments? Nothing is more clear than that nationalization spells the doom of trade-unionism.

"We Conservatives regard the trade-union movement, which we have always fostered from its earliest days, as a characteristic feature in British life. We believe in collective bargaining and the right to strike. We believe in the independence of the trade-union movement from Government policy.

"If we should become responsible for the conduct of affairs, it will be our aim to maintain the closest contact with the trusted and able trade-union leaders and to discuss with them means of improving working conditions. But we shall not ask them to compromise their position with their members by becoming the agents of Government-owned monopolies."

All knew that private enterprise was far more efficient and fertile than State-management by bureaucracy—because it was managed by people who were impoverished or made bankrupt if they failed to make things go successfully, whereas, under Government ownership, everything was managed by officials who ran no risks and had no interest in the success or failure of the concern. For that reason, private enterprise was vivacious and self-correcting, while State monopoly was morbid and hide-bound.

To maintain the value, the responsibility, and the independence of the British trade-unions was one of the principal aims of Conservatism and Tory democracy. They urged all Conservatives to join the trade-unions and take an active part in their organization. Today, more than 40 percent of trade-unionists were Conservatives, Liberals, or non-Socialists, and the more this process continued, the more would the trade-union movement become truly national and cease to be, to its own cost, individiously associated with any one political party.

SET THE PEOPLE FREE

On top of all these failures of nationalization, they were threatened with a new cataract of state monopolies—steel, cement, sugar, and insurance. But these depended upon the result of the election, since, if the Conservatives achieved power they would reverse or prevent every one of them.

"The main aim of all Conservative policy," Mr. Churchill declared, "is to restore the greatness of Britain. The first step is to regain our economic independence by earning our own livelihood.

"We mean to set the people free, so far as possible and as soon as possible, from the oppressive weight of Government control, from wrong-headed planning and from official interference with our daily life and work.

"Our Tory faith is that the gifts and genius of our men and women, if released, will not be found unequal to the first task and duty of every community—namely to earn its daily bread. We shall return to a system which provides incentives for effort, enterprise, self-denial, initiative, and good housekeeping.

WANTON STEEL BILL

Expressing regret that the Chancelor of the Exchequer had temporarily broken down under the strain he had been bearing of having his errors and those of his predecessor come home to roost, Mr. Churchill told of his astonishment at hearing Sir Stafford Cripps say recently that the ever-rising steel output was due to the encouragement given to that industry by the approach of nationalization.

"On account of his illness I will not deal with this strange pronouncement in the terms which it deserves," he added, "but I must place on record the truth, that no more wanton act of party malice has been known in our public life than the Government's persistence in nationalizing the steel industry at a time like this. It is a base and unworthy deed into which no thought of public interest, patriotism, or national unity has been suffered at any stage to enter.

"We cannot uphold the principle that the rewards of society must be equal for those who why try and for those who shirk, for those who succeed and for those who fail," he continued.

"But we also must strive to maintain the social services which Conservative and Liberal governments have called into being and which assure the whole mass of the people, whether successful or not, a minimum standard of life and labor below which no one is let fail."

PILLAGE OF INDUSTRY

The threat to nationalize the highly efficient cement industry, the sugar trade, and our world-famed system of insurance, represented further blows to national solvency—"the naked pillage for party purposes of great and growing concerns, the prosperity of which can be used to offset the heavy losses they are making in other parts of their nationalization policy.

"They cannot bear," he asserted, "to see the profits made at low prices by British cement, although over half of those profits already go directly to the Chancelor of the Exchequer in the form of taxation, and thus provide the funds from which the social services alone can be administered. With greedy eyes they gloat upon the enormous mass of investments possessed by the industrial assurance companies and societies.

"The Socialists want to get hold of the shares by which these investment are represented, so as to be able to knock about and liquidate every private industry in the country."

BULK PURCHASE MUDDLE

Turning to the waste and muddle of bulk purchasing by officials, Mr. Churchill said that, when he asked in the House of Commons about losses on the purchase of lead, zinc, and copper, an under secretary was put up to reply that, instead of losses, the Government had in fact made a profit of about £6,000,000.

"This brazen misstatement," he added, "was hailed with rapturous cheers by the Government supporters. But almost at the same moment the Minister of Supply was saying in Birmingham that the Ministry had been involved in a loss of £7,000,000 and that the total effect of the fall in prices would mean a loss of more than that.

"I can recall no parallel to this incident in nearly 50 years' experience of the House of Commons," he commented. "It is a measure of the confusion and disorder into which our public political service has fallen under these ungrateful inheritors of the treasures of the centuries."

HOUSING FAILURE

Mr. Churchill went on to review in detail the program outlined in the party's statement of policy, outlined in the Right Road for Britain, published yesterday. Of housing, he said: "Mr. Bevan has lamentably failed to live up to his party's election promises or his own sneers at the plans of the national coalition. There can be no doubt that the resources devoted to housebuilding in these last 4 years could have produced more and cheaper houses."

For agriculture, Conservatives intended to secure even greater opportunities, reserving for the home farmer first place in the home market, with empire producers next.

They intended to restore a proper balance to home agriculture by encouraging the raising of more livestock giving farmers the feeding stuffs the Socialists had failed to provide. They would also give the farmers clear guaranties, protect horticulturists from foreign dumping, and progressively improve conditions of life in the countryside.

"I believe," he concluded, "that a Conservative Government will be able to give not only a less oppressive but also a more efficient administration. The mismanagement and incompetence of the Socialist Ministers would be beyond belief were it not thrust upon us day by day.

DOCK STRIKE VACILLATION

"The vacillation, weakness and discord in their handling of the dock strike during the last 3 weeks is typical of the lack of leadership which marks every single part of the vast organization over which they preside and which they are continually trying to enlarge. If you seek the cause of the difficulties and misfortunes under which we are plunged, practical incompetence, not excluding sheer stupidity, must certainly take a high place among them.

"The theory of socialism is contrary to human nature. The more it is enforced upon the British people, the worse the results will be. The Socialist Party make a great parade of their quarrel with the Communists but there is no real difference between a full application of the Socialist system and communism.

"We do not know when the general election will come, but it is certain that within a year—perhaps much sooner—the British nation will have had to make one of the most momentous choices in its history. The choice is between two ways of life; between individual liberty and State domination; between concentration of ownership in the hands of the State and the extension of ownership over the widest number of individuals; between the dead hand of monopoly and the stimulus of competition; between a policy of increasing restraint and a policy of liberating energy and ingenuity; between a policy of leveling down and a policy of opportunity for all to rise upward from a basic standard.

IF WE COLLAPSE

"But it is not only Britain and her Empire and Commonwealth that will be affected. It is no exaggeration to say that what we do here on the day of trial will not only determine the future course of British history but will influence the immediate future of the world.

"If we sink through socialism into economic decline and collapse, not only will our

own sufferings be intense, but we shall carry many other nations with us into chaos and communism.

"The great Mr. Burke said: 'People will not look forward to posterity who never look backward to their ancestors.'

"So you will pardon me if I say that it is a comfort to me in my old age, when only the duty of preventing all we have won and preserved from being cast away holds me to the plow, to reaffirm as leader of the Conservative Party the faith which my father proclaimed in words which ring as true this afternoon as when they were spoken nearly 70 years ago. 'This party,' he said, 'this Tory Party of today, exists by the favor of no caucus, nor for the selfish interests of any class. Its motto is "Of the people, for the people, by the people." Unity and freedom are the beacons which shed their light around its future path, and amid all political conflict this shall be its only aim—to increase and to secure within imperishable walls the historic happiness of English homes.' "

MESSAGE TO YOUTH

Prolonged cheers from the vast crowd acclaimed Mr. Churchill at the conclusion of his 80-minute speech. He briefly acknowledged a vote of thanks and was about to leave when he turned back to speak directly to a group of boys and girls standing at the side of the platform.

"I have been watching you throughout my speech," he said, "and thinking that you are the people who are most concerned with what is now taking place. It is your right to make your way in the world and give all you have to the service of your fellow men. Freedom alone can give you that chance."

Then, raising his voice to a shout, Mr. Churchill concluded, amid renewed cheers: "For that freedom we have fought triumphantly abroad and we will fight no less triumphantly at home."

Mr. Churchill traveled by air to Wolverhampton and cheering crowds lined the route to and from the airfield. Shortly after the meeting he flew back to Biggin Hill Airfield, motoring from there to his home at Westerham.

Mining Legislation

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. BARING. Mr. Speaker, once again it is my desire to comment briefly on mining legislation, so vital at this time to the whole economy of my State of Nevada.

Along with other western Representatives I have devoted many weeks in a vain effort to pry loose from the House Committee on Rules the Murray-Engle mines-incentive bill. This bill I sincerely believe to be the best of a score or more of measures designed to give a boost to our decadent domestic mining industry.

We have not given up hope as yet. I fully realize the very critical status of our mines and our mining people. I intend to use every effort at my command to see that some laws of benefit to our miners are passed at this session.

In no sense of the word is the mining problem a political issue. It concerns the welfare of all of our people in the western mining areas. And I propose to go along with those in the Congress who are seeking to help us in this drastic situation.

Unfortunately not all mining people are united on a definite plan for mining legislation. There has been some evidence of friction in the mining fraternity as to what methods should and could best be used to restore the prosperity—or at least the normal operating conditions—of our smaller operators.

The Murray-Engle bill, H. R. 976, and my companion measure, H. R. 2047, are known as the National Minerals Act of 1949.

They would provide for the establishment of a mines incentive payments division within the Department of the Interior. The proposal is designed to provide stimulation, stabilization, and maintenance of a sound and active mining industry in the United States proper—and, of course, to decrease our dependence upon foreign sources of supply.

Enactment of this bill, now resting in the rules committee, would put the small, marginal producer in a position to continue his operations successfully and to contribute to the economy and security of our country.

It would help prospectors and mining syndicates to locate new high-grade, low-cost mines which could compete in the world markets and which could meet America's emergency requirements. At the same time this legislation would help alleviate the metal shortage for industrial enterprises by utilization of the increased marginal production for stockpiling purposes.

A concise description of what the Murray-Engle bill proposes to do, is:

The bill establishes an agency to pay money to any mine operator who finds that his production costs and grade of ore do not allow an adequate profit margin at metal prices as of the time of payment.

Under open market conditions, the ordinary operating calculation is: At the present metal prices, what grade of ore can be mined to make a profit? Under this bill, the operator will calculate the costs of extraction of his average grade of ore and present an estimate of those costs and of the revenues to be obtained from the market.

The Administrator then will authorize payment to bring the revenue up to where an adequate profit will be obtained by mining the average grade of ore.

I believe this expresses the full intent of the bill in the fewest words possible. Nevada's mining people may rest assured that I, for one, have not given up the fight to obtain enactment of this important legislation.

In direct contrast to the Murray-Engle bill which I am cosponsoring, the Senate has a bill by Senators O'MAHONEY of Wyoming, MALONE of Nevada, and others, which would set up a board similar to the Munitions Board. This group would consist of the Secretaries of Interior, Defense, Commerce, and Treasury—with Interior Secretary Julius Krug in the driver's seat.

For the reason that this bill contains no real standards and would leave to the discretion of the board—in fact to the Secretary of the Interior—the establishment of any limits on payment for production or exploration of metals and minerals, and in fact to make such payments or not make them as the board sees fit, I am unalterably opposed to this legislation.

As I have said before, the laws should be written by the elected representatives of the people, in the interests of all of the people, and should not be dictated by downtown Washington bureau chiefs who play the political game for their own political benefit.

The Senate bill might help big business in the mining field. It leaves the little fellow out in the cold.

The facts are that the Secretary of the Interior insists that Congress hand him a blank check and permit him to decide arbitrarily who shall be helped, and to what extent such help shall be granted.

The House Public Lands Committee, having before it the Interior Department proposals, rejected them as undemocratic and voted unanimously that the Munitions Board should specify what metals and minerals are eligible and that any producer of such metals and minerals, regardless of how small or how large he may be, who can operate within the premium formula set up in the bill, shall be benefited, just as long as the stockpile aim for the particular item has not been used

My stock-pile bill provides that all stock-pile acquisitions of strategic and critical minerals shall be made, whenever possible, from domestic sources. The contracts for such stock-piling would be made directly with the producers. I cannot see where any serious objections can be made to this proposal, and I can see where it would be of great benefit to our Nevada mine operators.

Words à la Mode

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. GWINN. Mr. Speaker, James Patrick McGovern, attorney of Washington, D. C., is a patriot who pictures the modern scene on occasion in poetry as he did in Words à la Mode which I have asked leave to introduce in the Appendix of the RECORD:

WORDS À LA MODE

Why read, why hear, why spur our youth to college,
Why strive for wisdom, built on shining knowledge,
When words mean not our freedom but our fetters,
And savages, illiterate, are our betters?
In books and papers, radio and presses,
All except the candid truth obsesses
Debunkers who daub on a panorama
Flaunting seamy lives and melodrama.
They always ride upon the winds of fashion;
They have a canny sense what they can cash in.
In every realm, from art to politics,
Propaganda takes most of the tricks.
Words a la mode seem gilded with such lying
In martyrdom now most true men are dying.

—*James Patrick McGovern.*

What Is the Lawful Price of Milk Used for Manufacturing Purposes?

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, many, many times during the present session of Congress I have called to the attention of the Members and the Department of Agriculture the fact that milk used for manufacturing purposes was not being supported according to the law. The point I make and have made is that the law should be followed and that it is not a question nor a contention of whether the support price is too low or too high.

The law says that milk and its products should be supported at 90 percent of parity. The parity factor at this time is 2.44, although it was 2.60 up until this month. As of today the parity price for milk used for evaporated milk is $3.66 per hundredweight, as shown in the official letter from the United States Department of Agriculture. My letter of inquiry and the official letter follow:

JULY 26, 1949.

Mr. ORIS V. WELLS,
Chief, Bureau of Agricultural Economics, United States Department of Agriculture, Washington, D. C.

DEAR SIR: It will be appreciated if you will kindly supply me with the following information:

1. If a commodity brought $1.50 per bushel or 100 pounds, during the base period of 1909–14, what would the parity price be as of July 26, 1949?

2. If a commodity brought $1.45 per bushel or 100 pounds, during the base period of 1909–14, what would the parity price be as of July 26, 1949?

Sincerely yours,
REID F. MURRAY,
Member of Congress.

UNITED STATES DEPARTMENT OF AGRICULTURE,
BUREAU OF AGRICULTURAL ECONOMICS,
Washington, D. C., August 2, 1949.

Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: This will acknowledge your letter of July 26, to Mr. O. V. Wells, requesting information on parity prices. Mr. Wells is out of the city at present.

This Bureau calculates and publishes parity prices for a list of major direct agricultural commodities each month. These parity prices pertain to the fifteenth of the month and are published about the twenty-ninth of the month. Heretofore the parity price concept has applied only to direct agricultural commodities as sold by farmers and has not applied to processed agricultural products. Parity prices as published by this Bureau are national parity prices and are comparable to the national average prices received by farmers for all classes and grades of the commodities as sold by them in their local markets.

In answer to your direct question, if the United States average price received by farmers for a commodity during the period August 1909–July 1914, was $1.50 per bushel or per 100 pounds, the parity price as of July 15, 1949, would be $1.50 times 2.44, or $3.66 per bushel or per 100 pounds. If the United States average price received by farmers during the period August 1909–July 1914, averaged $1.45 per bushel or per 100 pounds, the parity price as of July 15, 1949, would be $1.45 times 2.44, or $3.54 per bushel or per 100 pounds.

I assume that your request for parity prices as of July 26 means that you want the latest parity prices available. Technically the parity price of a commodity on July 26 would be the latest published parity price at that time or the parity price as of June 15, since the July 15 parity price was not published until July 29.

In administering a support-price program, it is possible to determine differentials for grade, location, season, and other factors which can be applied to the national parity price when it is necessary.

Despite the fact that the parity concept does not apply to processed agricultural products, it is, of course, possible in the administration of a support-price program to purchase processed products at prices which will reflect the support price to the producers of the direct agricultural commodity.

Sincerely yours,
F. F. ELLIOTT,
Acting Chief.

Milk for evaporating purposes brought $1.50 per hundredweight during the base period, so, as the letter indicates, this is the basis of computing the parity price of $3.66 per hundredweight. Ninety percent of $3.66 is $3.29, which, according to the official letter, would be the lawful support price for milk used for evaporating purposes.

The letter also gives information as to what the support price for cheese should be. Since cheese brought 14.5 cents per pound during the base period, 90 percent of $3.54 provides practically the same amount as the support price announced for cheese on July 28, 1949.

Butter prices have been supported in accordance with the law and cheese support prices have now been announced according to the law. Whether or not it will be necessary to announce a support price for milk used for evaporated milk depends on how the butter and cheese support prices are reflected in the price paid for milk used for evaporated milk. One fact remains certain, and that is that $3.29 is the present legal lawful support price for milk.

I have never asked, nor do I now ask, for any special privilege legislation for the milk producers in my district. However, I do feel that it is my responsibility to call attention to the fact that the products in my district are entitled to be supported in accordance with the law. The average price in the United States for milk in July of the year was $3.72 per hundredweight, while in Wisconsin it was $3 per hundredweight. This $3 per hundredweight represents about 6 cents per quart, and included city or bottled milk, as well as milk used for manufacturing purposes. Millions of pounds of grade A milk are being used for manufacturing purposes in Wisconsin, and if cities like Washington, D. C., wish to erect and maintain artificial trade barriers that is the responsibility of the Eighty-first Congress.

I have tried to approach this problem constructively, and there is nothing constructive in dangling a $4.22 per hundredweight promised price in front of the farmers, especially, when the $3.22 to $3.29 per hundredweight price provided by the present law is not being carried out.

The following excerpt is from an official crop-reporting letter from Wisconsin on August 21, 1949:

During the month of May which is the last one we have, the decrease for Wisconsin was 21 percent from the same month in 1948 as compared with 8 percent for the United States.

This difference turns on the fact that milk prices have declined more than other farm products. In June, for example, the Wisconsin milk-price index stood at 233 compared with a high point of 350 reached in July 1948.

The milk producers are entitled to the legal lawful support price and I expect to continue to call attention to this fact on all and sundry occasions. The law states that "the support is for milk and its products" and this law should be followed.

Communism Would Destroy All Religions

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. McDONOUGH. Mr. Speaker, the Kremlin is waging and will continue to wage unrelenting war upon the one group which has stood fast against the encroachment of the atheistic doctrine of Marxism and has had the courage to defy the power of the Soviet. This group comprises the clergy of all denominations, Catholic and Protestant, and the effectiveness of their determined devotion to the cause of individual liberty and freedom is proven by the persecution they are enduring; however, the Communist influence is dominant.

The men of the clergy have kept the faith of the people, have spoken fearlessly and constantly, and have wielded the one instrument most dangerous to communism, the weapon of truth. The trial and conviction of Cardinal Mindszenty, the sentence of death imposed upon two priests of Yugoslavia, the trial of the Rumanian bishops, as well as the imprisonment and trial of priests and ministers in other countries under Communist regime testify to the self-sacrifice of these men of faith who will never surrender to communism.

The following article is worthy of attention as it emphasizes the basic reasons for the Kremlin's determination to destroy all religion and to eradicate the freedom of criticism of its own workings, which is manifest in its attack on the church:

COMMUNISM IS ITS OWN RELIGION

Americans viewing the current proceedings against clergymen in central Europe are inclined, perhaps, to measure the significance too narrowly. We have known some who, despite what's happening in Sofia, have considered this a political quarrel between the several Communist governments and the Catholic Church. Others, taking cognizance

of the trials of the 15 Protestant clergymen in Sofia, have nevertheless felt that states were simply weeding out individual political recalcitrants. Some have said that, while they didn't much care for the proceedings, there did seem to be a degree of merit in some of the charges.

All such attitudes miss the forest by their overzealous attention to the trees. These are not scattered happenings; they are part of a great pattern. Carefully, systematically, ruthlessly, the Soviet Union is endeavoring to tear out religion by the roots throughout its newly won domain. The reason is logical enough from the Kremlin's viewpoint. The syllogism runs like this: Communism demands the undivided loyalty of its subjects; the various religions place God before Marx doctrine; therefore the worship of God must be stopped.

The evidence that this is the core of the struggle is conclusive.

The trial and conviction of Cardinal Mindszenty was merely the most dramatic (because of the Cardinal's high office) of a mass of similar proceedings throughout the satellite countries.

In Budapest several other Catholic priests are currently on trial on similar charges. In Sofia 15 Protestant clergymen—including Congregational, Baptist, Pentacostal, and Methodist—are on trial on almost identical charges. In Warsaw two Catholic priests were sentenced to long prison terms this week on generally similar charges. And in Belgrade the Communist press reports two priests sentenced on charges of offering wartime aid to occupation forces.

This coincidence of dramatic proceedings indicates a stepping up of the tempo of the purge throughout the Communist empire; but nowhere is the trail being freshly blazed.

It was almost 2 years ago that the Yugoslavs sentenced Archbishop Stepinac to 16 years at hard labor. A little earlier in the same country six priests were convicted of sabotage, two of them sentenced to death. In Hungary a year and a half ago the Catholic newspaper Uj Ember was suppressed. And only recently in Hungary Bishop Lajos Ordass of the Lutheran Church was arrested and tried on the same charges (black marketeering) as Cardinal Mindszenty. For some reason it has suited the purposes of the Hungarian Government to hide the fate of the Lutheran bishop.

Rumania, while unrepresented in the current set of trials, has had its share of persecution. Last fall Rumania reduced the number of Rumanian rite bishops from 12 to 4, and shortly afterward arrested the remaining 4. Recent reports from Rumania estimated a total of 120 priests are being held in civil and military jails.

These are random examples of what has been in progress in the Cominform nations since their absorption into the Soviet political orbit. The significance—indeed, the brutal, powerful logic—of the pattern must be grasped throughout the democratic world if the menace of the Communist program is to be properly appraised.

The Kremlin's fear and hatred of the spiritual leaders of western religion is not based upon jealousy alone. That may enter, but the Kremlin's basic motive is to eradicate the freedom to criticize its own workings. No group has been so outspoken in its criticism of communism as the clergy; nothing could be so dangerous to the Communist order as the truth, constantly and fearlessly spoken by the men who have won and kept the faith of the people.

It is a grim but reasonable prediction that the Kremlin will continue its campaign, if necessary, until there remains throughout its domain no free and articulate clergyman. If there then survives (as appears to be true in Russia) a small, slave church and a clergy trembling lest it slip forth a word out of harmony with Marxist doctrine, this will not differ notably from the status of the political institutions and agencies that operate within the totalitarian regime.

No point is served by reflecting that this persecution is pursued by a government which pledged itself solemnly to cooperate "in promoting and encouraging respect for human rights and for fundamental freedom for all without distinction as to race, sex, language, or religion." It was expedient, when the United Nations Charter was being drafted, to sign the pledge; it is expedient now to disregard it, and expediency, not truth or honor, is the rule of the Kremlin.

Good Proposals

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein several pertinent articles, including two timely editorials from the celebrated Boston Post for which I am very grateful, and also a very thoughtful item from the distinguished Worcester Daily Telegram:

[From the Boston Post of July 29, 1949]

UNFAIR PRACTICE

Congressman PHILIP J. PHILBIN has scored a big accomplishment in having the military services agree to stop their mail-order business in metropolitan centers, in getting expensive household goods and personal items at near-wholesale prices. But he is not satisfied. As chairman of a House Armed Services Subcommittee, he says that unless this practice is completely given up, even at remote military posts, Congress will be asked to pass legislation to prevent it.

The issue has raised quite a storm of protest, because it is felt this mail-order business is discriminative and not fair to retailers. It hurts their business, and they point out that while there might have been some excuse for it in wartime, there is no reason why it should continue indefinitely to their disadvantage. Congressman PHILBIN feels that the Government should not continue to interfere with private business.

[From the Boston Sunday Post of July 31, 1949]

A GOOD PROPOSAL

The proposal by Representative PHILIP J. PHILBIN that the Navy's giant plane *Constitution* go on a world good-will tour is a good one. And, while the Navy is about it, it might be a good idea to send a task force with carriers equipped with the lastest Navy jet planes.

The finest kind of good will for a nation in the spot that the United States is in now—a world leadership challenged and doubted by coalitions inimical to the future of the West—is a demonstration that on the sea and in the air the United States keeps the flag flying in whatever quarter of the world it chooses to visit—either as friend or foe.

The round-the-world trip of the great white fleet in Theodore Roosevelt's day served notice that the United States had become a first-class power. It is not jingoism or chauvinism to serve notice in friendly fashion that the United States is now a world leader and intends to perform that role in firm but peaceful fashion.

[From the Worcester Daily Telegram of July 29, 1949]

NAVY SECRETARY LIKES PHILBIN TOUR PLAN

WASHINGTON, Friday.—Secretary of the Navy Matthews says he likes a suggestion by Representative PHILBIN, Democrat, of Massachusetts, that the Navy's huge plane *Constitution* make a world tour bearing replicas of the Constitution and other historic democratic documents.

Matthews wrote PHILBIN that his proposal for the tour and for basing the ship at Boston "is a most interesting project which I assure you will be considered and evaluated."

The Secretary said the Navy is "justly proud of both the frigate and plane *Constitution*." He said the success of the plane's visit to Boston "was due in no small measure to the Boston Chamber of Commerce, for which I express my deep appreciation."

The Navy Secretary also advised PHILBIN that the Department still is considering the advisability of assigning three destroyers to the Boston naval shipyard for conversion. He said PHILBIN will be kept informed on this or other decisions to bolster the work load at the yard.

PHILBIN and other Massachusetts Congressmen have sought construction or repair work for Boston to avert lay-offs due to reduced appropriations. Thus far they have been unsuccessful.

It has been indicated effort will be made to have three aircraft carriers, which Defense Secretary Johnson has said will be converted to handle heavy bombers, assigned to the Boston shipyard.
